CANADIAN HOME JOURNAL

JULY NINETEEN-EIGHTEEN

PRICE FIFTEEN CENTS.

MAGIC
BAKING POWDER
NO ALUM

THE Ingredients of Magic Baking Powder are of the highest quality obtainable, and it is guaranteed to be the best and purest baking powder possible to produce. Contains no alum or other injurious substitutes. Is an efficient, healthful and economical leavening agent, and foods containing it have an increased nutritive value.

E. W. GILLETT COMPANY LIMITED
TORONTO, CANADA

WINNIPEG MONTREAL

ADVERTISEMENT GUARANTEE

Readers of the "Canadian Home Journal" are fully protected when buying from any of our advertisers. We know that every advertiser in this issue is reliable, and that our readers will be dealt with fairly and honorably. Should any of our readers have an unsatisfactory dealing with any of our advertisers, we will undertake to have a satisfactory adjustment made or the money refunded. This absolute guarantee is good only when our readers tell advertisers when dealing with them that their advertisement was seen in the "Canadian Home Journal." We welcome letters from subscribers giving their ideas of how we can improve the journal.

The Canadian Home Journal

NOTICE TO SUBSCRIBERS

Yearly subscription price for Canada and Great Britain is $1.50; United States, $2.00; Foreign, $2.10. Remit by Express or P. O. Order. Add collection charges to cheques.

Subscriptions must be paid in advance.

To change address we must know former and new address. No address changed later than 15th.

We have discontinued the sending of receipts for money paid by subscribers. The first figures on the wrapper of your journal will show to what date your subscription is paid.

The Canadian Home Journal is published on the 25th of each month preceding the date of issue by

The Canadian Women's Magazine Publishing Co., Limited

Volume Fifteen WILLIAM G. ROOK, President, Toronto Number Three

Copyright, July, 1918, in Canada by The Canadian Women's Magazine Publishing Company, Limited, Toronto.

The August Number will contain a specially attractive and helpful Cookery Department. There will be three interesting articles.

Dr. Laura S. M. Hamilton has prepared an article on "Teaching Truths Concerning the Beginnings of Life" for the August Journal.

Marion Harris Neil has prepared articles of great value to the housewife during the hot days of August, when cooking is ever a wearisome task. The recipes published in these articles are quite new, but thoroughly tested by the writer.

SAVORY AND SWEET MONEY SAVERS

tells how to prepare vegetable salads, also gives recipes for a Nut Roast, Pear Salad, Cheese Savory, Pineapple Custard, and several other tempting dishes. This article contains five illustrations showing how to prepare the food described.

Another article,

PICKLE THESE VEGETABLES AND USE THEM DURING THE WINTER,

gives recipes for Beet Pickle, India Relish, Apple Relish, Lemon Pickle, Pickled Beans, etc.

A third article contains fourteen Fish recipes, and some valuable information regarding this useful food, ideal for the summer menu.

Are you tired of the worn-out methods usually employed for the raising of money for the various needs of the present day? Do you want some new ideas and suggestions for a Food Sale, and the promotion of the Food Conservation propaganda? If so, do not miss Edith Halsted Lorway's article which will appear in the August number:

SET THE PACE IN YOUR OWN HOME TOWN.

The suggestions are all practicable and workable—in fact they have been tried with success once, and the writer passes them on to you in order that you may also benefit by them.

See page 29 and note the number of people who will answer your questions through Canadian Home Journal.

"Hot Weather Drinks." By Marion Harris Neil	54

L. M. MONTGOMERY.

From the time that little "Anne of Green Gables" came skipping into the hearts of Canadian readers, L. M. Montgomery's stories have been eagerly sought. Something new from her pen is a treat, indeed, and her story,

OUR NEIGHBORS AT THE TANSY PATCH,

which will be published complete in one instalment in the August number, will be no exception. After you have read this exceedingly delightful sketch of rural country life you will feel you know the Conways—Timothy Benjamin, better known as T.B., Joe, Aunt Lily, but most of all Granny—"every-one of them," as Salome expressed it, "crazier than the others." Crazy they may have been, but very human and interesting when pictured by L. M. Montgomery.

MARY BRITTEN WRITES,

by Sara Jeanette Duncan, will appear in the August number. As in this issue it is a personal letter from Mary Britten, living in London, England, to her sister in Canada, in which she describes the happenings in London. In this letter it is an air raid, next month she tells of Flossie's young man, and of their opinion of "slackers" in general. It is a delight to Canadians to again have some stories by Sara Jeanette Duncan Cotes.

Both Fashions and Fancy Work will be given an important place in the August number, in order that our readers may see several of the late Summer styles. These influence to a large extent the early Fall models, and it is wise to study them carefully before deciding upon one's clothes for the cooler months.

After July 31st, the price of Canadian Home Journal will be Two Dollars a year. See page 53.

Serving Economy, Health *and* Fashion

How to save money on shoes and still have her feet smartly clad—

How to keep her feet dry on wet days and still have her feet as trim as on dry days—

These are the two greatest shoe problems for every woman.

Neōlin Soles answer both these problems amazingly well.

Shoe economy is largely a question of longer-wearing soles.

And Neōlin Soles *are* longer-wearing soles. Good-looking shoes with Neōlin Soles now cost you no more in price—and finally cost less because of greater service. And even light-weight Neōlin Soles will not let water through.

Yet wear and waterproofness are but two of the important virtues of Neōlin Soles. They provide a better grip on walking surfaces. They are quiet.

Don't you think that you should wear Neōlin Soles, now that you know these facts?

Get new shoes built on Neōlin for yourself and for all the family.

Have Neōlin applied to your present shoes as full-soles or half-soles.

The Goodyear Tire & Rubber Co., of Canada, Limited

Most merchants have shoes with Neolin Soles. But you are sure of getting them wherever you see this price-ticket in the window.
But when you buy Neolin Soles be sure you see the Neolin trademark underneath. If it is not there the sole is not Neolin.

Neōlin Soles

EDITORIAL

July, Nineteen-Eighteen

A NOTE OF WARNING IS SOUNDED BY THE COAL MAN. In the midst of our enjoyment of soft summer breezes, flowers, bird-songs, and swiftly fleeting clouds between the blue of sky and sea, there comes a cruel, discordant note—sounded by none other than the coal man. Without any conscience whatever, he hurls at us a warning (disagreeable, but nevertheless beneficial), and immediately we shiver and shake in the memory of last winter's empty coal bins, frozen water pipes, plumbers' bills, etc. The picture is brought back all too vividly as the coal man warns: "Remember last winter." We certainly do. Then he emphatically asserts: "Next winter there will be less coal."

There is no use fooling ourselves, conditions as far as coal goes will be bad—very bad, next winter.

There is one way in which every consumer can assist in relieving the situation, states C. A. Magrath, whose entire time is given up to the interests of the people of Canada in seeing that they get the best and largest supply of coal possible, and that is in placing his coal order at once. Now—not to-morrow. Do not delay a day in this important matter, for if those in authority know the exact number of tons ordered by the Canadian people, they are then in a better position to secure that amount. They can do their work intelligently, not merely assuming that a certain amount will be needed, but the orders will actually be in for a definite quantity.

All through Quebec and along the Ottawa River the cutting and storing of wood is going on, and every one is asked to secure wood if possible instead of coal for next winter. This should help materially, and Ontario people should be as far sighted.

In short, the Fuel Controller's advice can be summed up as follows:

Secure as much wood as you can.

Place your order for coal with your local dealer at once.

Don't hound him. He wants to do his best for you. He can't run away—he has to stay and see it through.

Don't haggle over the quality of the coal. Take what you get and be thankful for it. Conditions are not normal—you cannot expect a normal supply of coal.

Have your furnace and pipes thoroughly cleaned before lighting. Now is the time to do this.

Do not light the furnace during the Summer, except when there is illness, if a cold spell should come. Make the best of it—much coal is wasted in starting and stopping a furnace, and every ounce will be needed for the Winter months.

WASTE OF FOOD IS NOW ILLEGAL. A new order has now come into force which makes it not only a sin to waste food, but a punishable offence. The legal authorities have power to take action when they are notified that anyone has been discovered wasting food. It is interesting to note that municipalities who secure the conviction receive half the fine, while provincial officers securing the conviction receive half the fine for the Province.

LETTERS THAT SMILE. French women, we are told, strive to say good-bye to their soldiers with a smile upon their lips. Hearts may be breaking, but there is no tear to add one pang to the sorrow of the departing men.

Are we Canadian women as careful to always write "smiling" letters to the boys at the front? It is incomparably easier than the French woman's task. No matter how great our burdens here may be, don't add to theirs by telling them. Write letters that smile. Put in all the brightness and cheer that can be crowded into one small envelope, and send it on its journey.

HATS OFF TO QUEEN'S UNIVERSITY WAR WORKERS. The splendid war work of the Levans Society of Qucen's University has received much praise, not only from Canada, but congratulatory remarks have been coming from our United States sisters, and certainly the soldiers themselves cannot speak too highly of the work of these women in providing them with vermin-proof underclothing.

The work is carried on under the guidance of Miss Gordon, who is particularly interested in work done by English university women. The formula furnished by Miss Gordon was given to the "British Medical Journal" in May, 1917, by Captain Gunn, M.D., D.Sc., R.A.M.C.T. of Oxford.

Undervests are made of ordinary cheese cloth and dipped in a solution of 1½ ounces napthalene and 1½ ounces of sulphur to one gallon of benzoline or gasoline. They are wrung out of this solution and hung up to dry when the gasoline evaporates, leaving the other ingredients in minute particles. These should not be shaken off. Fold the vests and wrap in grease-proof paper. These vests are worn next the skin and are not irritating, but afford an almost complete protection against vermin. Miss Gordon says: "Mrs. Gerrans of Oxford has made, dipped, and sent to the front many thousands of these undervests and has received many grateful letters testifying to their remarkable and unique efficiency. No field comforts could be more welcome."

The dipping must be done out of doors and on no account must be undertaken where there is an open fire or even a lighted match or cigar or cigarette. In cold weather the rapid evaporation of the gasoline will permanently injure the skin and at all times some method should be devised for handling the cloth without coming into too direct contact with the gasoline. The making of these comforts in quantities offers profitable work for societies, and even the dipping of garments previously made should furnish an appreciable source of income to bodies engaged in raising war funds.

OUR AIM

To publish a magazine which will be worthy of Canadian womanhood.

To at all times keep both editorial and advertising columns clean, wholesome, and truthful.

To be a leader in thought, and a fearless speaker in all vital questions.

To, as far as possible, publish and reproduce the work of Canadians that our readers may become familiar with their own people, their own literature, and their own country, with its wonderful possibilities and glorious history.

For oily skins—*how to correct them*

FIRST cleanse your skin thoroughly by washing it in your usual way with Woodbury's Facial Soap and warm water. Wipe off the surplus moisture but leave the skin slightly damp.

Now work up with warm water a heavy lather of Woodbury's Facial Soap in your hands. Apply it to your face and rub it into the pores thoroughly — always with an upward and outward motion. Rinse with warm water, then with cold—the colder the better. If possible rub your face for thirty seconds with a piece of ice.

This treatment will make your skin fresher and clearer the first time you use it. Make it a nightly habit and before long you will see a marked improvement—a promise of that lovelier complexion which the steady use of Woodbury's always brings.

Your skin is what *you* make it

HAVE you ever wondered why it is that some girls are blessed with naturally lovely complexions—the charm of clear, fresh color?

The truth is that your skin, too, can be clear and radiant. Your skin is what *you* make it.

If your skin is *not* fresh and clear, if it has been gradually growing coarser, it is because you have not been giving it the proper care for its needs.

Find out just what is the matter with your skin—then give it the proper treatment

Your skin is being renewed every day. As old skin dies, new forms to take its place. Begin at once to give this new skin the proper treatment to keep it clear and lovely. You will be surprised to see how quickly it improves.

Three of the famous Woodbury treatments are given on this page. Begin tonight to use the one which your skin needs. Use it every night. The very first time you try it, you will feel the difference in your skin—a promise of the greater clearness and freshness that the steady use of Woodbury's always brings to the skin. Within ten days or two weeks you will notice the improvement in your skin.

You will find treatments for the various other troubles of the skin in the booklet wrapped around every cake of Woodbury's Facial Soap. Get a cake today, and begin at once the treatment for your particular trouble. A 25 cent cake is sufficient for a month or six weeks of any Woodbury Facial treatment and for general cleansing use for that time. Woodbury's is on sale at drug stores and toilet goods counters throughout the United States and Canada.

Enlarged pores

How to make your skin fine in texture

Dip your washcloth in very warm water and hold it to your face. Now take a cake of Woodbury's Facial Soap, dip it in water and rub *the cake itself* over your skin. Leave the slight coating of soap on for a few minutes until the skin feels drawn and dry. Then dampen the skin and rub the soap in gently with an upward and outward motion. Rinse the face thoroughly, first in tepid water, then in cold. Whenever possible, rub the face with a *piece of ice*. Always dry carefully.

Use this treatment persistently. You can feel the difference the very first time you use it. Within ten days your skin will show a marked improvement—a promise of that greater smoothness and finer texture that the *steady* use of Woodbury's always brings.

Skin blemishes

How to get rid of them

Just before retiring, wash in your usual way with warm water and Woodbury's Facial Soap and then dry your face. Now dip the tips of your fingers in warm water and rub them on the cake of Woodbury's until they are covered with a heavy cream-like lather. Cover each blemish with a thick coat of this soap cream and leave it on for ten minutes. Then rinse very carefuily with clear, hot water; then with cold

Use Woodbury's regularly in your daily toilet This will make your skin so firm and active that it will resist the frequent cause of blemishes and keep your complexion free from them.

Send for sample cake of soap with booklet of famous treatments and samples of Woodbury's Facial Cream and Facial Powder. Send 5 cents for a trial size cake (enough for a week or ten days of any Woodbury Facial treatment) together with the booklet of treatments, "A Skin You Love to Touch." Or for 12 cents we will send you the treatment booklet and samples of Woodbury's Facial Soap, Facial Cream and Facial Powder. Address The Andrew Jergens Co., Limited 2207 Sherbrooke St., Perth, Ontario.

MADE IN CANADA

THE DRIP OF THE HONEY

By ARTHUR STRINGER.

Illustrated by
MARY ESSEX.

A Little Interruption in the Honeymoon Which Made it all the Sweeter

"I've been thinking about this a great deal to-day, Elmer," she said, more in sorrow than in anger.

THEY were leaning on the stone balustrade of San Tritone de Monti. The sun was going down on the dome of St. Peter's and on the thirteenth day of their honeymoon.

He sighed heavily, not because it was all so beautiful and new, where before them lay the city and the Seven Hills and Mount Gianicola bathed in golden dusk and Soracte pencilled far to the right, but because something momentous had happened. As to what this momentous thing was he was still in the dark. Yet the moment he had stepped out of the Borghese Gallery that afternoon he had felt its presence, dim and gigantic and foreboding, felt it just as sailors feel the approaching iceberg long before it is in sight.

And it was not two weeks since they had left New York (they had been light and careless then, he told himself) in a shower of telegrams and roses and good-bys. And until to-day, he remembered bitterly, there had not been one hour, one moment, when life had seemed anything but sun and happiness for both of them. But it had come at last—he all along had felt secretly that it was bound to come—and now he wondered, whatever turn things might take, if the old feeling could ever be brought to life again.

"Just to think," he said at last, throwing a stab of wistfulness into it, "it's not two weeks since we left New York!"

"Does it seem so long?" she asked, succumbing to the stab. Her voice was neither the Charybdis of ice nor the Scylla of open tears, but it carried with it no expected touch of finalities. So in his bewilderment he only sighed again—this thing, he held, would have to work itself out, now. He began reading from his guide-book calmly and with great deliberation. "Then climb these historic steps," he waved the open guide-book down toward the Piazza di Spagna, "at sunset, when they are bathed in the last rays of the sun. From a hundred ancient belfries the mellow bells ring for *Ave Maria,* and up out of a blaze of twilight glory gleams and towers the great dome of St. Peter's."

"Rubbish!" he thought he heard her say under her breath.

He stopped and looked at her. Her nose seemed tilted in open defiance of all Rome and its traditions; her little pointed chin was nestling in the clasped hollow of her hand; her arm, in turn, was resting on a ledge of cold and unappreciative stone; and her eyes were gazing down the long straight line of Via Condotti. He had a sudden temptation to surrender everything and incontinently seize her. But he thought better of this, and opened his guide-book with careful fingers and slightly uplifted eyebrows.

"Deary," she said at last cooingly; yet he marveled at the fact that a once endearing diminutive could be made so sepulchrally cool and lifeless, and all by one little trick of intonation and voice.

He punished her accordingly by not answering in at least ten long seconds.

"Deary," she said again, with an acidulated sweetness that smote him to the heart, "how long have you known Constantia Fleming?"

"Why?" he asked vacuously.

That was like him, she told herself, seeking escape in side issues. "Oh, I was only wondering," she said carelessly.

"Yes, but wondering what?"

"I was only wondering if there was any reason why she should come over and speak to you first in the Borghese this afternoon."

"Did she?" he asked, trying in vain to recall that phase of the meeting and blinking a bit over the effort.

His wife did not even deign to answer, but pursued her own narrow and rigorous course. "And what did she mean by pointing to that Titian and asking which we had found, our sacred or our profane love?"

"Isn't that the name of the picture?" he suggested inspiredly.

"But will you please tell me why she should ask anybody such a personal question as that? And you of all people?"

He could not answer, of course. There followed another silence.

"Elmer Pitts," she said at last, "was it accidental that you and Constantia Fleming met here in Rome?"

"Accidental? Of course it was!" he declared stoutly. "I didn't even know she was in Europe. Good Lord, we ourselves didn't even expect to be in Rome this week!"

"I'm not used to being sworn at," she retorted.

"But, Frances, you're so—so confoundedly unreasonable to-day!"

Her brooding and indignant eyes were still turned down the straight and narrow line of Via Condotti. "I've been thinking about this a great deal to-day, Elmer," she said more in latent sorrow than patent anger. "And I never thought you would try to deceive me, after—after everything we have been to one another!"

He looked at her helplessly.

She swallowed hard, before she could go on. "And I told you everything, from first to last. I didn't keep back a thing from you."

"But how could I help being decent to Constantia Fleming? She'd always been—been considerate, and all that, with me."

"Considerate!" with withering scorn. "That is not what I should care to call it!" And again she swallowed hard before she could go on. "It's no use pretending I don't know things, Elmer. I've been thinking about them all along. You used to play golf with her, and you were on the Appleby's yacht with her as well."

"But what of that?" he demanded. "Other girls—"

"It's different from other girls," she declared.

He looked at his shoes helplessly.

"And you were always trailing about after her"—then, in a half-assuaging afterthought—"before you knew me."

"Wasn't it she who did the trailing after me?" he had the effrontery to suggest, chuckling cruelly.

"Oh, I don't doubt it! That sort of girl usually does!"

She looked at him studiously from under lowered eyebrows. Then she shuddered a little at the sting of some new thought that had come to her. "Yes, it would serve you right," she said absently.

"What would serve me right?" he asked.

"If—if I had never known you, and you had kept on and on in the old way, and had married Constantia Fleming, and had had to spend your life with that sort of girl!"

His first impulse was to groan out an unhappy "Don't" but he steeled himself against any such bending to her will.

"Why, Constantia isn't such a bad sort, is she?" he asked innocently.

Her gaze, which had been fixed on dimly pencilled Soracte, swept around to him determinedly. "Elmer Pitts, did you ever kiss Constantia Fleming?" she demanded.

"I don't know. I forget."

"You forget?" she said bitterly. Then a little relieving sigh escaped her. "But I suppose a man always forgets—with that sort of girl."

"Of course!" cried Elmer, as he tried to take her hand. But she drew it away.

"You haven't answered my question. You are trying to hoodwink me and deceive me."

He was about to open his mouth to reply, when she stopped him with a passionate little gesture.

"No, don't! Don't commit yourself! I couldn't bear the thought of you ever being soft and mushy and moonshiny with a woman. It's so unlike you."

He drew the corners of his mouth down and his shoulders up, wondering if after all he didn't a little resemble the portrait busts of Cæsar Augustus.

"Elmer," she said dolorously, moving away from him, "do you think you would have married anybody but me, if you had never met me and known me?"

"Never!" he declared with heat.

"I can't believe that," she said dreamily. "No. I can't believe it." And the unhappiness in her voice made him miserable. He essayed an effort to speak, but a lump in the throat of Cæsar Augustus was making it hard for him to begin.

"We have been too happy," she went on quaveringly. "We thought it could last and be just always the same. But, you see, it can't!"

"No, it can't!" he agreed as dolorously.

She clasped her hands in a little wringing motion of despair.

"Perhaps these last two weeks have been too happy," he ventured more hopefully.

"Yes, too happy," she echoed drearily.

"And perhaps this little—er—this little set-to will make things all right again," he ventured, still hopefully.

She searched his face through the twilight for some slight sign of mockery, but none was there. "Oh, you don't understand!" she mourned vaguely.

"I know it!" he said bitterly.

She made a dash at her eyes with the back of her hand. He could see her shaken bosom rise and fall on the stone balustrade.

"Frankie!" he said miserably, putting his arm about her sobbing figure.

"Do you understand?" she pleaded, in open tears now, on his shoulder.

He gulped a little, before he could answer. "I only understand one thing, my own: that I love you more than anything in all the world, more than life itself!"

"Do you, Elmer?" she said solemnly.

Then a silence fell over them, and far out over the Campagna an early star or two, shining brightly, came out.

(*Continued on page* 59.)

PEACE—THE STRANGER

By M. EUGENIE PERRY.

A Story of the New and Tremendous Problem Which the War is Forcing Upon Young Womanhood

"AND to this hand is Peace ever a stranger—" Clearly articulated in a low contralto voice, this sentence pierced through the conglomeration of sounds to the boy's consciousness.

Close beside him, on the gallery which would presently be the "mezzanine floor" of one of Canada's stores, was one of the many fortune-telling booths with which the Red Cross Association coaxed shekels from the passers-by.

"Peace, a stranger;" the words rang in his mind; to whom, just now, was peace not a stranger? Aye, and further, to what country was peace not a stranger?

The contralto murmuring went on, but indistinctly now, and he turned his dark gaze once more upon the seething crowd on the ground floor.

The Home Products Fair, held in the big unfinished building, had scored an immense success; and, as the week drew to a close, all who had contributed to its being had the happy consciousness that not only had the home-grown and home-manufactured exhibits received a vast advertisement, but the Red Cross fund was being augmented by several hundreds of dollars daily from the door receipts alone.

Round and round the main floor the crowd surged, admiring the fruits and vegetables, or the manufacturers' displays, and pausing to purchase raffle tickets or to listen to and obey the calls of the zealous spielers for the side-shows under the gallery. ("All for the good of the cause," they apologized, as each additional quarter or dime slipped through their fingers.)

It seemed the merriest of gatherings, yet underneath the current of gaiety stalked always the grisly phantom of war; the black garb of a woman; the crepe band on a man's arm; the haunted look in a mother's eyes; the numerous men in khaki—all spoke of the grim conflict so far away, yet so near, so tragically near, to every heart and mind.

The important bearing of a group of soldiers in embryo just below him brought a smile to the face of the boy, but an ache to the heart which beat beneath his most welcome recently acquired civilian clothes. Then perhaps a mist obscured his vision, for the uniforms below grew faded and blurred, their wearers grew footsore and weary, and increased until thousand after thousand, they swung doggedly adown the roads of a foreign land—past ruined home and hamlet; past field and forge deserted, past fatherless babe and sonless mother, who were almost too sad, almost too cowed, to cheer for the brave boys who had come so unbelievably far to fight the brutal Hun.

Then on the dream horizon rose a cloud, sea-green and weird; the staunch line wavered and swayed, and then pressed bravely on, leaving the fallen, choking and faint, upon the ground—a sudden spasm of coughing brought the boy back to the present, for the dastardly gas still made its presence felt, a ghastly souvenir of hate he would not quickly lose.

In the Government Exhibit corner below (of which he had charge) the friend who was substituting for him was almost obscured by a bevy of pretty girls. "Seems happy," thought the boy. "Too bad to disturb him," but he turned from the railing.

As he paid for his tea, an elderly woman came out of the aforementioned fortune-telling booth—and then he noticed the sign:

"Mademoiselle Lorna; Palmistry; 25c."

Just twenty-five cents to make the acquaintance of the contralto voice which had spoken of "Peace, the Stranger" and brought him visions of the battle-field.

"I'm on," said the boy, and raised the curtain. The orange-shaded light gave to the atmosphere a suggestion of storm which was further emphasized by the gypsy's haunted eyes.

"Two bits' worth of thrills here, all right," he said, boyishly, in an effort to buck himself up against the vague disturbance in the air.

Then the gypsy laughed, the trinkets on her little red cap jingled cheerfully, and the tension relaxed.

"Oh, thank you," she said, "for the laugh. I seem so far from the world in here, with only a muffled medley of sounds proclaiming the human presence beyond my door, while only the weary and troubled cross my threshold, that I had almost forgotten gaiety existed; and so, thanks, many thanks, for coming. I don't like reading men's hands as a rule, they have so few lines, but just now if I had one more elderly woman coming to ask if her son would return in safety from the war—I feel I should shriek aloud."

"You couldn't tell them that, could you?" he enquired curiously.

"I can't," she admitted. "Perhaps a professional can, but it's a little beyond my powers—and who would wish to bring them a heartache sooner than necessary? It will come all too pitifully soon to many of them. I confine myself to character-reading, past events, and a sketchy touching on the future. But, oh! the life stories I've had unfolded to me to-day—again, thank Heaven for you," and she waved him toward the easy chair reserved for her "victims."

He slipped into it with the air of ease which was his birth-right, and put the usual question, "Right or left?"

"Both," she answered, and quoted: " 'The left is the hand we are born with; the right is the hand we make.' "

As she touched his fingers an electric thrill tingled up his arm. "First thrill," he murmured.

"I'm not usually a dynamo," she apologized, "but there's been enough electricity discharged in this limited space this afternoon to light the town."

"And I'm charged with gas," he interjected flippantly.

"An artist, but not a hot air artist," she parried, failing to catch his meaning; for his hands were soft from the months in hospital and failed to suggest the soldier. He let it pass.

"Yes, the distinctly artistic hand," she went on, "and marvelously many lines, for a man's hand—that suggests temperament, or, at least, the capacity for great suffering and equally great enjoyment. The long and jointed fingers suggest music; the long, sloping head line, literature," an unconscious movement of assent greeted the last mentioned talent. "Literature, decidedly," she pronounced with more assurance, "but music, too?" she challenged.

"Yes, but mostly by ear, and merely as an amusement."

"The spatulate third finger points to dramatic instinct—that would, of course, prove valuable in—reporting, for instance."

"You've hit it," he admitted.

"You'll die a long way from your boyhood home."

"I'm that now."

"You've always been independent of action, and started out for yourself fairly early. You will have two serious love affairs, according to the lines; the second is perhaps your marriage line—the first, perhaps, has occurred—let me see, you'd be twenty-five or twenty-six?"

"Guess again; I'm not quite twenty-three, and the time is not yet."

"Ah! you'll take the first attack pretty hard—you're made that way—but you'll recover, and live happily ever after with the later love—that is, if such a temperament is ever happy. You'll become an editor; and, perhaps, will inherit some money."

"Probably."

"You're rather fond of the opposite sex; you have a good deal of tact, and are able to work the other fellow without his resenting the fact. You've lately had, or are to have, a long journey fraught with much consequence to yourself."

"Rather!" he admitted.

"And your health is poor."

"Some."

Suddenly the military band struck up a martial air, and the whimsical expression faded from his mobile face; he straightened his shoulders, and his mouth drew into a straight line. The boy had changed suddenly into a man, stern and set of face. Of the change he was quite unconscious, as he was, at that moment, of her, but with a flash of intuition she read it all—saw, with him, the weary files of marching men, heard the bands playing to raise their flagging spirits.

Then back into her own heart crept the weariness, the sadness his gaiety had dispelled—for, far away on the field of Flanders her man of men had marched to his death.

The boy caught the counter-wave of mind currents and sensed her tragedy; and the words she had spoken to another seemed so applicable to her own case that he spoke them aloud: "And to this hand is Peace ever a stranger."

Surprise routed pain from the gypsy's brown eyes. "A quotation?" she asked.

"I quote *you*," he explained. "I was standing near, and that sentence pierced the surrounding din like an arrow, and lodged—in my heart, perhaps. That's why I came in."

"Ah! You were curious about the gypsy, rather than about your future life—unlike most of my clients—for instance, a woman who came in here a while ago said, immediately upon entering, 'I don't want to know about my past, please just tell me about my future.' Her past probably wouldn't bear resurrecting."

"Also unlike me," he hastened to state.

"Well, we'll hope so. And now, your time is more than up; there are others waiting, and though I would rather talk to you, I must consider the Cause."

At this moment one of the women in charge of the tea room came in with a tray.

"Old Mill" Falls, one of Canada's picturesque nooks, at Ancaster, Ontario.

THE BIRDS WILL MISS HIM

(TO SAMUEL T. WOOD.)

The birds will miss him when they come again;
He was the first to greet them, for he knew
Their every whim in sunshine and in rain,
And noted all the little things they do:
He loved their verdurous haunts by wood and stream;
'Twas his delight to take them unaware,
Or muse with them, and with mind adream
Worship the God who thought of things so fair.

The birds will miss him—nay, for with the spring
He shall awaken and go out once more.
His was no death that calls for sorrowing;
His spirit shall go wandering as of yore
Beside the streams or in the songful woods,
The genius of his native solitudes.

The King of Evil is Slain by the Prince.

The Princess and Merilla are Set Free.

WHILE I had often seen Miss Kellerman on the film in her many productions, it was not until she was playing in the New York Hippodrome that I had the pleasure of having my first interview with her. I was very fortunate in seeing Miss Kellerman at the time, as she was playing two performances a day, and was naturally a very busy woman. However, I thought there was nothing like trying, so made the request at the Hippodrome office. When the object of my visit was disclosed, word was sent to Miss Kellerman and her manager, Mr. Sullivan, came from behind the scenes to conduct me through the maze of underground passages, the Hippodrome menagerie, back of the stage, up through the dressing rooms to Miss Kellerman's own private room.

I must confess I was agreeably surprised. Some of my friends had been good enough to inform me that about the only thing Miss Kellerman could do was swim and dive, but this idea was soon dissipated as the interview progressed. Miss Kellerman has a charming personality, and her accomplishments are numerous. She informed me that while in New York she takes a one and a half hour ballet lesson every day. She is also making wonderful progress in singing, so that some day we may expect to see her put on an entire show of her own in which she will swim, dive, impersonate a mermaid, dance and sing. Possibly if the truth were known, she may be an accomplished pianist—that is one thing I forgot to ask her.

Miss Kellerman became somewhat reminiscent during the interview, and

Are We Reincarnated After Death?

By A. E. S. SMYTHE.

The Real Belief of a Theosophist

THEOSOPHY can be stated in the terms of any religion if it be so desired. Experience shows, however, that people who belong to any particular religion are more concerned about the name of their faith than its substance.

It does not commend itself to the ordinary religious person to hear that the same truths are taught in all religions. The phrases and terms may differ; more emphasis may be laid on one doctrine than another, but latent or implied one finds the same truths in them all. Many scholars of an intellectual rather than a spiritual turn, and anxious to exclude any religion but their own from the category of Religion, have defined religion in the terms of their own faith. Some Christians, for example, decline to recognize any religion as such that does not use the Bible as a text-book, overlooking the fact that all religions have their sacred books which convey the same spiritual truths in one form or another to the mind and heart and soul that reflects on such matters. For it must always be remembered that no one finds in any Bible or Sacred Book anything but what he brings to it or reads into it. It is the reader that brings the inspiration, not the book that gives it. One could not account otherwise for the differences of opinion and the four hundred sects more or less that have arisen over the study of the Bible. Each one reads into it what he has been trained to see, and he is earnestly warned not to listen to any interpretations that have not been endorsed by the body to which he belongs.

The exact contrary is the case with the Theosophist, who understands that truth is universal and that he has it in his own soul, but can only know it to the extent that he lives it. "A clean life, an open mind, a pure heart, an eager intellect, an unveiled spiritual perception, a brotherliness for one's co-disciple, a readiness to give and receive advice and instruction," are, therefore, in the words of Madame Blavatsky the first steps on the Path. It will be observed that these things apply to any religion, the Christian as well as another, and it is this fact that commends Theosophy to reasonable and unprejudiced people.

It should be clearly understood that Theosophists do not desire to tempt people away from the religion to which they belong. They only wish each person to try to understand his own religion better, and to seek its deeper spiritual meanings, instead of being content with its conventional forms, its stereotyped creeds, or its ritual routine. These should all convey more and not less to the student of Theosophy. If it be objected that many Theosophists do not belong to any religion and do not attend church regularly, such critics may be reminded of the fourth chapter of the Gospel of St. John. "Woman, believe me, the hour cometh, when neither in this mountain, nor in Jerusalem shall ye worship the Father. Ye worship that which ye know not: we worship that which we know: for salvation is from the Jews. But the hour cometh, and now is, when the true worshippers shall worship the Father in spirit and truth: for such doth the Father seek to be His worshippers. God is spirit: and they that worship Him must worship in spirit and truth" (R.V.).

It is very largely because Theosophists lay stress on this truth that their views have been unpopular, because people like ceremonial and set beliefs and having things cut and dried. The other great religions of the world have the same teachings, as indeed the New Testament recognizes, and Jesus explicitly states (John x. 16).

Once this unity of thought and aspiration underlying all religion is grasped, a profound satisfaction takes hold of one. The world is no longer a chaos, but a place of order and system and progress. No man is out of place. No man suffers unjustly. No man is favored above his merit. Nothing is gained without effort. The universe is seen to be the abode of honesty and justice and right. How and why is this?

The question is an urgent one for all who begin to take thought about life and who have to face such world tragedies as the war with Germany. One need not go into the profounder metaphysics of The Secret Doctrine for the answer to this question. It is, in brief, that there is only One Person in the whole world. In the New Testament we are told that the Kingdom of Heaven is inside (*entos*) us, and that we are to pray to the Father which is in Heaven. The name given to Jesus, Emmanuel, means this truth also, God is in us. It is often repeated in that most spiritual scripture of India, the Bhagavad Gita, that "the Lord is seated in the heart of every creature." This Lord is called by some the Oversoul, by others God, by others Christ, and the various religions have each their own names for Him. Their conceptions vary as human ideas do, but it is in our spiritual identity with Him, that the brotherhood of the race, the brotherhood of Man, has its foundation. Our relation to this Person is the beginning and ending of religion and is the key to the understanding of all other religious questions.

The Secret Doctrine teaches "the fundamental identity of all Souls with the Universal Over-Soul," and it is sufficient in an elementary account of Theosophy to say that all religions find their way back to this Divine Source. To know this unity is life in the highest and deepest sense. To be ignorant of it or to deny it, is death in the mystical sense. "For as many as are led by the Spirit of God, these

THE second of a series of articles descriptive of various religions and faiths about which there is often much misunderstanding and controversy. The writer of this article, A. E. S. Smythe, is one of the foremost speakers on Theosophy in Canada—his assertions regarding their views may therefore be accepted as authentic.

Again let us emphasize that "Canadian Home Journal" neither advocates nor endorses any of the religions described—the articles are published to give information, not to arouse controversy.

are sons of God," says St. Paul, whose eighth chapter of the epistle to the Romans is a treatise on this mystery, and of our interest in Him who is "the first-born among many brethren."

Popular Christianity has curiously distorted the teaching of Jesus in regard to men's souls. Much of our preaching is exhortation to save one's soul. This is due to a misapprehension of the facts, for which the translators of the New Testament are largely responsible. For all this talk of saving one's soul is wide of the mark. I have been in the habit of saying that the ninth chapter of the Gospel of St. Luke (like the eighth of Romans) contains all the occult teaching any one needs. At the 23rd verse one reads: "And He said unto all, If any man would come after me, let him deny himself, and take up his cross daily and follow me. For whosoever would save his soul (the word in Greek is *psyche,* though the translators render it "life") shall lose it; but whosoever shall lose his soul for My sake, the same shall save it."

The Cross is a very ancient symbol, long antedating Christianity. We ought to remember what St. Augustine said: "What is now called the Christian religion, has existed among the ancients, and was not absent from the beginning of the human race, until Christ came in the flesh: from which time the true religion, which existed already, began to be called Christian." This "true religion" is what Theosophists call The Secret Doctrine. The Cross was the ancient symbol of the descent of spirit into matter; the Incarnation; the Word or Logos, becoming Man or flesh, as St. John expresses it; and "the Lamb slain from the foundation of the world." In the mystery by which all Souls are in fundamental identity with the Over-Soul, by which those who are not conscious of their divine origin are "dead, and their life is hid with Christ in God" (Colossians iii.), we are all partakers in the Incarnation, which is the Cross and Passion of the Divine Life. We are the agents of the redemption of the world of matter into the world of Life; the Atonement is the at-one-ment of the lowest and the highest.

It is obvious that if men as individuals advance and evolve they will attain levels of power, of consciousness, and of wisdom far beyond anything in the experience of the ordinary man. It is idle to say that we cannot conceive such an expansion of our faculties. We see that there is a difference between the consciousness of the mineral, as Prof. Bose has shown us, and the consciousness of the vegetable; and between the consciousness of the vegetable and the consciousness of the animal; and between the consciousness of the animal and the consciousness of man.

There is a stage, many stages indeed, beyond the consciousness of the ordinary man and the consciousness of the Over-Soul, and it is our destiny to attain these successive stages by our own effort and according to our own will. Some people who do not understand the laws of growth think they might lose something by entering into a higher stage of consciousness. Would a dog lose anything by being endowed with the consciousness of a man? Does a boy or a girl lose anything by becoming a man or a woman? To become possessed of the consciousness of Christ is a forward step in evolution, the next goal of the race. As we do not lose our identity because our sense of sight is merged in the consciousness of light, so neither will we lose our identity when our sense of self is merged in the consciousness of Christ, or the Over-Soul.

One of the difficulties some people have in this connection is about the loss of memory. Memory has not so much to do with identity as some think. We forget most of the things we do, the thoughts we think, and the words we utter in the course of our lives. We are totally oblivious of most of the events in our commonplace existence in years gone past. But this loss of memory is the chief and practically the only objection most people have to the thought that they have lived before, that they are immortal.

The writer of the second epistle of Peter refers to this (i: 9), saying we are blind, short-sighted, having taken the draught of Lethe ("Lethe having taken" is the Greek phrase) and been purified from our ancient short-comings. So it comes about in the merciful dispensation of the universe that every life is a fresh start, and while we bring back the character we have formed by our previous actions and decisions, and have to meet the results of our former deeds, whether for good or ill, we are relieved of the worthless memory of these ephemeral things, though their essence is preserved in our heart of hearts. Some think also that it is not just that we should suffer for things that we have done in past lives and which we have forgotten, or of which, at least, the brain is not conscious. But the real Self knows and is satisfied, because justice is one of the principles of its being, since, as we have seen, it is essentially one with the Over-Soul, and therefore desires justice above all things. It is no outside authority, no power outside ourselves, that brings us face to face with our old debts and requires their payment, with our old unlearned lessons and requires us to know them thoroughly. It is the Self within us which is just and requires justice, and which is wisdom, so that it leads us to know.

Desire for the world of sensation and of material life generally is very strong in us, and it is this desire that usually brings us back into bodily life again. This desire for life, or thirst for physical existence in the soul is called fire, and is symbolized by the tongue in the east. The Sanscrit word is *tanha,* and this force has to be conquered before we can attain what Christians call salvation. In the Epistle of James, chapter iii., there is an interesting passage on this point, obscured in the authorized version, however, by the translation. "The tongue (desire) is a fire; the world of iniquity among our members is the tongue, which defileth the whole body, and setteth on fire the wheel of birth, and is set on fire by hell." Until desire is conquered we are bound to the wheel of birth. It can be conquered only by turning to the spiritual world for the Master who is within. United with Him there is no further need for reincarnation, and it is for this reason that little mention is made of reincarnation in the New Testament. Those who have entered into the Christ consciousness, or Nirvana, as the Buddhists call it, who have extinguished desire, do not need further births. This is what is meant in Revelation iii: 12, "Him that overcometh will I make a pillar in the temple of my God, and he shall go no more out."

Those who have entered into this state of Nirvana, the extinction of desire, the "peace that passeth understanding," have nothing more to do with this earth in the present stage of creation or evolution. But there are some who participate in the active side of the nature of the Christ who said—"Lo, I am with you always, even until the end of the aeon," and they, when they have attained mastery over desire and the lower vehicles of the personal self, voluntarily incarnate again on earth, following the example of the great Teachers and Messengers, like Krishna, the Indian Christ, who said—"I produce myself among creatures whenever there is a decline of virtue, and an insurrection of vice and injustice in the world: and thus I incarnate from age to age for the preservation of the just, the destruction of the wicked, and the establishment of righteousness."

This was written long anterior to the Christian era, and Christians who believe that Christ came down from heaven and was born a little human infant, should have no difficulty about understanding incarnation, or in following the example of reincarnation and sacrifice which voluntary reincarnation for the sake of rendering service to others, implies.

There is nothing in religion, philosophy, or science, that Theosophy does not embrace and explain. It is obvious, therefore, that only a few aspects of it can be touched upon in a short article. The whole universe is open to the student who would unfold his inner faculties for such study. There is an organ in the brain called the conarium, or pineal gland, the activity of which depends on living according to the divine laws of nature, and the injunctions of morality, temperance and chastity which all religions preserve. This organ is sometimes called the third eye, and serves when active to convey to the brain such knowledge of the inner world as the ordinary eyes convey of the outer. The Master Jesus spoke of it in the Sermon on the Mount (Matthew vi. 22), when He said: "The lamp of the body is the eye; if, therefore, thine eye be single" (active or perfect, would be a better rendering) "thy whole body is full of light." This is expounded in St. Luke xi. 34, 35, which may be rendered freely. "When thine eye is active thy whole body is full of light, but when thine eye is useless (*poneros*) thy body also is full of darkness. Take heed, therefore, that the light that is in thee be not darkness. If thy whole body, therefore, be full of light, having no part dark, everything shall be full of light, as when the bright shining of a candle doth give thee light." There is no occult gift more important than this of the inner vision, "the light that never was on sea or land, the consecration and the poet's dream," as Wordsworth describes it. There are still many who disbelieve in it, but all the prophets and the seers and the saints had it, and it was no imaginary faculty but a real gift. It can be exercised only by those who have abandoned all desire for self, who are in fact utterly unselfish. There is an automatic

A London Air Raid "Close Up"

MARY BRITTEN WRITES

By SARA JEANETTE DUNCAN.

36 *The Buildings,*
Angel Road,
N.W., England.

MY DEAR SISTER:

I would have written before in regards to the late air raid, knowing you would be in a way about us all here in the midst of it, as the saying is; but what with Alfred bein' laid up with his old complaint of V.D.H., which he has been subject to ever since buried in France, and Flossie getting rid of her gentleman friend, there seemed almost more than one pair of hands could do, let alone letters. Well, when the police whistle went, Alfred must needs contradict me.

"You're always agoing to meet them," he said, and up he got and went out and ast. We was just setting down to supper, and he left as tasty a piece of haddick as you could wish for; in his hurry to put me in the wrong. But you know Alf. Back he came.

"You're right, as usual, old lady," he says; "Fritz is aloft. My tea's got cold," he says.

"Never mind your tea," I says; and Flossie began putting on her things.

"Oh, mother, hurry," she says. We must remember that F.'s nerve was a bit gone on account of her young man, him being her first, and a terrible scene with him only three nights before.

"Hurry nothing," her father told her. "Mother's got to hot up my tea," which I did, me legs shaking a bit, I don't mind telling a relation. Mabel and young George they was for going on the roof, but their father put a stop to that, and no more said.

"Ain't we agoin' to the Tube?" ast Flossie. It did seem as if we ought to be doing something besides sit around and watch father eat that haddick.

"Are we agoin' to the Tube, old lady?" says Alf, speaking to me. "Along of them aliens," says he, "where you'll like as not hear German talked," says he, "and see things not fit for publication," he remarks.

"Well," I says, "It ain't as if there wasn't a floor and a God above us," I says, "and these buildings ain't too badly built against a bomb," I told him.

"No," says he, "that was why you took this place ten years ago, wasn't it?" he says. You know Alf. On that he lighted his pipe.

"Young George, you go to bed," he said, but I wasn't having none of that. "Don't go breakin' up the family," I told him.

"I won't if Fritz don't," Alf said, and that set Mabel off. Being in the T-and-T, she don't hardly care what she laughs at.

Well, by now there wasn't hardly a sound, not so much as a footstep. The buses was all stopped, and if a train come along, it was in an awful hurry and seemed to wish to get to its destination. Young George up and lifts a corner of the blind.

"I can see a special goin' down Scrubb Lane," he says.

"You come away from that window, or it'll be the worse for you, sonny," says Alf. So Young George come away, and we set quiet.

"There!" says Flossie. "Was that a bomb?"

"You hold your noise," says her father. "That was one of ours. They're beginning." Like a door shut heavy in an empty house it was.

"Not much in that," says Mabel.

"You wait," says Alf, so we set and waited.

"Look here," I said, "while we *are* waitin', why not have a bit of a prayer?" I said, and Alf he remarked that he didn't see it would do any harm.

"Which one, mother?" says Young George. "The Lord's Prayer?"

"No," says I, "that's for every day. It'll have to be just what comes. There's no time for lookin'," I says, and I opened the book, my hand shakin' a treat, I've got to say. Father he knocked his pipe out and come and set beside me on the sofa. The girls was anywhere, and only Young George had the sense to go on his knees.

It wasn't the right place, but I read as follows:

"I will lift up mine eyes unto the hills, from whence cometh my help. My help cometh even from the Lord."

Just then the guns began close by, and I missed some, but Alf took hold of my hand, and I went on:

"The Lord Himself is thy keeper, the Lord is thy defence on thy right hand. So that the sun shall not burn thee by day, neither the moon by night. The Lord shall preserve thee from all evil—" and there I give up and drop a tear, and Alf said, "That's enough, old girl," and put it away. And just on the top of that came the one close by, that you've read about in the paper, and broke the windows in the next street. I didn't scream, but I must have went pretty white, for Young George he gets his arms round me, and "Sit tight, mother," he says; "we've said our prayers, and there's nothing more we can do."

His father looks at him kind of proud, and "Well, if that don't put the lid on," he says. I can't think why Alf said that.

We was none of us hurt, and next morning kippers had gone up a penny.

Your affectionate sister,

MARY BRITTEN.

Illustrated from Photograph.

By KATHERINE HALE.

Would You Learn to Dream True?

WOULD you, in the darkest hour of the world's history, glimpse a secret of light? In an hour in which life and death are interwoven so that we can hardly tell where one ends and the other begins, would you search a strange magic which annihilates space, distance, time—even death itself? Then learn to "dream true."

Most of us know Du Maurier, son of a French father and an English mother, who wrote, after the age of sixty, three of the most remarkable English novels: "Trilby," "The Martian" and "Peter Ibbetson."

"Peter Ibbetson" contains much of Du Maurier's biography, though the famous illustrator and story-writer went afield for his plot, as he never killed an objectionable guardian nor fell into danger of hanging. Still, he might easily have done so under like provocation. And, after all, the murder and Peter's subsequent imprisonment for life are necessary as the banishment from an encroaching world which every soul that attains a cosmic or spirit consciousness must undergo.

It took twenty years for the dramatist to reduce the singular novel, "Peter Ibbetson," to what he considered a successful play. Part of the time Du Maurier himself worked with him, but by a strange irony of fate, the aged novelist had died, and also the young dramatist before the play was bought and produced by the best loved of English actresses, one who carried out the Du Maurier tradition more fully than would be possible to any other woman in the theatrical world to-day. After a warm reception on its first appearance in London, the play was enthusiastically received in New York, is now touring Canada, and will be seen in the Western States the beginning of next season.

Do you remember the lovely old story—a perfect picture of the early eighties? An English-French family were living in Paris, Ibbetson, his beautiful wife and the little Peter, and their great friend was Madame Seraskier, her wee daughter, Mimsey, being the adored playmate of Peter. And there was old Major Duquenois, who used to tell them wonderful stories. Then Peter is left an orphan, and falls into the hands of the dissolute rake, Major Ibbetson, his father's cousin. Transplanted to London from his beloved Paris, and longing for the haunts of his boyhood, he meets by chance his old-time Mimsey, disguised under the title, "Mary, Duchess of Towers." They meet and love just as naturally as of old, but Mary is not free. What might have been a tragedy is averted by the fact that she tells him how, without even touching hands, they may meet in the loveliest companionship in dreamland—that silvery country that is called the astral plane. Only, to "dream true" one must be true—the soul must remain as white as a pure and selfless flame.

Constance Collier, a wonderful Duchess of Towers, shows Peter how to dream. "It's quite easy," she says; "my father taught me. You have only to go asleep with your feet crossed and your hands behind your head. You must never leave off thinkIng where you ought to be in your dream, and when you fall asleep you get there."

They experiment, and find that they possess the inherent power which opens a magic gate of enchantment.

Then comes the tempest, in which, to avenge an insult to his mother's name, the boy kills the black maligner and is condemned to imprisonment for life. The sentence is too awful for him to bear until Mary reminds him of the power they both possess.

Then occurs a succession of the most exquisite stage pictures ever seen since play-acting began. Peter and Mary are able to summon the vision of pure love, and again they are children in the woods of Passy, time is discounted, distance is defied, they live again in that golden, golden light of faith and love and joyous purity, for all sweet things, all true things are deathless—that is what this dream-play keeps saying over and over again. When at last Mary dies, and Peter feels that for a moment he has lost her, she comes back in spirit to tell him that he is really just beginning to live, because she has found that death is a joyous going on, that "we fly away with our memories about us" to a very dear and wonderful beyond.

It is one of the extraordinary revelations of the time that great audiences everywhere should accept what would have been called pure phantasy a few years ago, with a realization that the whole drama is symbolic of experiences that human hearts are actually undergoing to-day.

The youth of our country, boys, many of them as unusual and poetic as Peter Ibbetson, have gone out to kill. They, too, have murder in their hearts against a blackness that would stain pure love. We are all banished from normal joys to-day. Death stands beside sweet life, the two seem to draw closer and closer as each moment goes by and the apparent darkness thickens about us.

What of the outcome if souls must remain speechless through earth's enveloping grey mists to the bright beyond? Shall we, too, learn to dream true?

Hon. Dr. Cody, Ontario's New Minister of Education, Outlines His Plans

(Exclusive Interview With Canadian Home Journal)

His First Official Statement of Program for Pushing Ontario to the Front---He Will Meet the People and Learn Their Views---Plans to Make the Public School Fit the Needs of the Masses---A Great Movement

By THOMAS BENGOUGH,
Secretary, Toronto Vocational Committee.

I had the honor of an invitation from Ontario's new Minister of Education, Hon. Dr. Cody, to talk over with him some educational subjects in which he knew I was interested, he having read some of my views as expressed through the "Canadian Home Journal." As we have been intimate for many years, the meeting was quite informal and unofficial, being held in Dr. Cody's private library at his residence on Jarvis Street, Toronto; but as all the matters we discussed were of public interest, especially to readers of this Journal—some of them having been touched upon by the Minister a few days later in his address to the Canadian Press Association—I secured his consent to the publication of the interview which follows. Dr. Cody is not responsible in any way for this Introduction, which he has not seen, but at my request he revised the Interview which follows, and which may be taken as his first official pronouncement of policy on these matters since his selection by Premier Hearst, who is to be congratulated on the choice of so able a colleague.

I wish to bear my personal testimony to the unusual equipment which Dr. Cody brings to his new and onerous task. He holds one of the most responsible offices that could be allotted to any man in Canada, for the advance steps taken by Ontario are watched and imitated by other Canadian provinces, and even by other nations. But if the work of the Ontario Education Department should influence no people outside this province, it would be supremely important, for the training of millions of our young people will be decided very largely by the new Minister of Education.

The training of Dr. Cody himself has been exceptionally good. His home-life was ideal. I had the unique privilege, when a boy, of spending some months in that home, in the village of Embro, Ontario, in which his father, an honored merchant, and his godly mother, maintained all the best traditions of fidelity to duty as sung by Robbie Burns in his "Cottar's Saturday Night":

> And certes, in fair virtue's heavenly road
> The cottage leaves the palace far behind.

I was deeply impressed, as a lad, when present at the simple and devout family worship, at the Cody fireside, when, after reading a chapter from "the big Ha' Bible, ance his father's pride," the homely scene so well described by Burns was re-enacted, and "the saint, the husband and the father prayed" for guidance in the bringing up of this precious boy, as well as for help in the daily affairs of the family. I well remember also attending a small meeting of men of Embro at a society which I believe they called a Young Men's Christian Association. Dr. Cody's father was the leader, and opened the discussion on "The Advantages of being a Christian," by telling, in the simplest language, how at every step in his life he asked for Divine guidance, and how he had been helped at every stage in his journey. I am glad to know that this worthy father still lives to view with proud satisfaction, and also with humble gratitude to God, the great work which his son has already done for Toronto in connection with St. Paul's Church, and which is now to be enlarged to take in the Province in its most important department of Government.

The young student, who got such a fine start in life, went to High School in Galt, a town made famous for education through Dr. Tassie's noted work. During his university career Mr. Cody was fortunate in having as his "guide, philosopher and friend" the late John E. Bryant, M.A., a brilliant educationist, who was editor of "The Educational Weekly," and later on founded the Bryant Press in this city and the Booklovers' Library in Philadelphia.

Young Cody's motto all through his life has been "Thorough," and it is needless to say that at examinations all through his career he swept the papers and took the highest standing. As an example of his thoroughness I may mention that I reported his address before the Empire Club on "The National Anthem," which gave evidence of the deepest research into the history of that production, and an examination of many questions relating to its disputed authorship. When a request was made by Dr. Goggin for a copy of the address to be used in the public school reading books—for it was a classic—Dr. Cody revised it so completely that not a single page of the transcript could be sent to the printer without entire re-copying. Every date had been verified, every statement reviewed, every literary period rounded out, every sentence perfected. This is a typical illustration of the unstinted labor which Dr. Cody bestows on everything he undertakes.

Hon. Dr. Cody, the new Minister of Education, in his study.

Dr. Cody has been blessed by nature with an all-round bounty—a physical constitution that can stand any amount of work; a happy heartedness, mental alertness, buoyant joy in work, open-mindedness, sympathy, concentration, keenness, thoroughness, and absolute frankness and fairness. He has no arts or wiles, and is a decidedly new type in politics. He will "play the game" all right, but in a new, frank, broad-minded, lofty-spirited way. That he will succeed in his new sphere goes without saying, for he knows the Science and Art of Education from A to Z, and he has already put himself *en rapport* with teachers and educational officials as well as the general public by his frank desire to meet the people and get their suggestions and constructive criticisms — an attitude which at once disarms captious criticism and gives him a fair chance to "make good" on some of his strongly-held views.

Dr. Cody feels that his "call" to his present task is as clear as his original call to the ministry of the church; for he is essentially a missionary, a crusader, a knight with lance ready for the conflict with evil in any form; and I am sure he will enjoy a tilt with the Dragon of Ignorance, and that he will rouse his army of officials, inspectors, and teachers of all ranks to enthusiasm in the holy war against illiteracy, and to the task of fitting our naturally bright Canadian youth for conquest over material difficulties, and in the search for hidden riches in the wonderful natural resources of Ontario. His program for fitting the public school specially to the needs of the ninety per cent. of children who get no further education will, if carried out, result in a great uplift to this Province.

THE INTERVIEW

(As submitted to and revised by the Minister of Education.)

The reasons which led Rev. Dr. Cody to assume the office of Minister of Education, and enter politics have naturally been much discussed. On this point Hon. Dr. Cody said:

"I feel that in these great days everyone is called on to serve his country to the best of his ability; not only to do 'his bit,'—that may seem to be the minimum amount that he can do—but more than his bit, his very utmost. Probably at no other time, under no other circumstances, would it have been possible for the Prime Minister to have invited me to undertake this work, or for me to attempt to undertake it. But I am trying to do this in all humility as a piece of public service to my native Province and this Dominion, which I so dearly love. Believe me, I am undertaking this task not from any ambitious motives, and I think I may honestly add from any selfish consideration, but solely and wholly to try to render a service in this day and generation to the cause of education in Canada."

"But your entry into public life, while still retaining your position as rector of St. Paul's church, puzzles some people."

"It is a somewhat unusual step, I know," replied Dr. Cody, "but under our political constitution membership in the Legislature is the only way through which one can exercise the executive power in connection with the Department of Education. Ample provision is being made for the carrying on of the work at St. Paul's, so that I can devote myself, as I intend, with fullest energy to the Department of Education."

"What is the chief feature of the many-sided work of your Department that has most impressed you?" I asked.

"Three things stand out in great prominence in my mind," replied the Minister of Education; "first, the great importance of keeping public opinion in our Province so strong on education that great and progressive measures may be projected and sustained, as was the case with the Fisher Bill in England; next, the great need of heartening and properly supporting teachers of all grades with public sympathy and substantial recognition in money and influence; and thirdly, the special value in Canada to-day of the growing boys, who must be trained so as to be able to discharge the double responsibility which is now upon them—that which they would have to bear under normal conditions, and also the extra burden of trying to do part of the work that would have been done by the gallant fellows who will not come back to us in Canada. Therefore all that we can do for our boys of to-day in the way of sound education is a patriotic service of the highest possible character."

I told Dr. Cody how I had been trying to do my "bit" in the way of creating public sentiment in favor of progressive measures in education through the "Canadian Home Journal," the "Home and School Council," and in public addresses, and I asked him his intentions in these directions. His reply was cheering.

"I feel," said Dr. Cody, "that I have a 'brief' for teachers, trustees, and all who wish to see educational interests pushed forward; and I intend personally to visit teachers, schools, and the general public, and not only learn what is going on, but do what I can to show my sympathy with every effort to advance and improve education in this Province. I do not propose to be merely an office man; I intend to let the officials of my Department attend to the routine matters, while I keep in touch with those who are doing the work of training, pushing their local projects for the improvement of education, and paying the taxes for schools and educational property and

THE CANADIAN TOMMY ON LEAVE IN ENGLAND

How the Y. M. C. A. Solves His Problems

By JOHN MELDRUM.

CONSIDERABLE attention has been directed of late to the work of the Canadian Y. M. C. A. in France, and the public may be pardoned if they subconsciously arrive at the conclusion that in no other direction do the ramifications of the Association extend.

As a matter of fact, the fields of operation are four in number. In the training camps in Canada, on board the transports conveying men to Europe, in the British Isles, as well as in the immediate theatre of war, the Canadian Red Triangle "hangs out," and its officers and men "carry on" for the boys.

Unsettled Conditions.

In some respects the service rendered in Great Britain is the most important of all. It is there that the most permanent results of "Y" influence and service are obtained, because the conditions are very much less unsettled than they are in France. While the service to the boys in the fighting line stands unique, and is a contribution to the efficiency of the Canadian army, of which the Association is justly proud, at the same time the constant movements of the troops make anything like prolonged intensive work almost an impossibility.

It is no uncommon thing in a Canadian area in France for the labor of many months on the part of the Red Triangle staff to set up a complete organization to be completely upset. Owing to some suddenly arising military contingency, carefully laid plans have to be abandoned, and equipment dismantled and removed to another location. The result is that, although the Y. M. C. A. has all along rendered an ever-increasing service to the men, much that has been planned to be done has never seen accomplishment.

This unsettled condition of things does not apply to the work in London and Great Britain generally, or in Paris. The Canadian Y. M. C. A. covers Forestry units from the north of Scotland to the large training camps in the south of England, and it embraces in its care convalescent camps and hospitals, as well as hospitality and "on leave" problems in London and elsewhere.

In all of these centres men may come and men may go, but the "Y" keeps at it from sun-up to sun-down, from one year's end to another. Obviously under such conditions the programme of the Red Triangle in ministering to the mental, moral and spiritual welfare of our boys has a far better chance of reaching a high point of efficiency than it has in France, although it may not manifest itself in such striking and dramatic ways.

The Moment of Danger.

In dealing with the moral aspect of Y. M. C. A. work, it is important to remember that the moment of supreme danger to the soldier does not occur in Canada, or on the high seas, or in the hell of the trenches. Most men have sufficient moral stamina to resist the temptations peculiar to such surroundings. The hour of subtle temptation comes when the boys are released from the training camps, or from the trenches, and given ten days' leave.

The men are turned loose, strangers in a strange land, knowing nobody, unsettled in their minds what they are going to do with their time, and in the majority of cases quite unable to make the most and the best of the opportunity unaided. Right here the men of the Red Triangle turn up smiling with a proffer of service that may lack the dramatic appeal to the public imagination presented by the "Y" service to the boys in the trenches and elsewhere in the battle zone, but which unquestionably is a service for which thousands of Canadian parents and wives have cause to thank God. The "Y's Men," as they have been christened, unobtrusively but effectively stand between the soldiers and those human sharks who regard every man in khaki as their natural prey.

Princess Patricia of Connaught and Princess Helena Victoria visit the London Y. M. C A. centres for men on leave.

How They See the Old Country.

As soon as the Canadian troops arrive in England they are placed in a Segregation Camp and kept there until all danger of disease is past. At the end of their quarantine the men are sent on leave for ten or fourteen days. Before their departure the boys are addressed by a Y. M. C. A. officer, who explains to them the arrangements that have been made for their convenience during the holidays. Copies of the illustrated booklet, "Seeing the Old Country Through the Red Triangle," are distributed. This gives an itinerary of tours in London, the beauty spots of England, Scotland and Wales. When a man has "signed up" for a particular tour he is given a folder containing a map of the route, train times, and other information. In connection with these tours an arrangement has been effected with the Co-operative Holiday Association whereby nine guest houses in various parts of the country receive Canadians on leave. Before setting out the boys know exactly the minimum amount of money they must spend, and the programme for every minute of their time is in their hands. As a rule the men proceed in a body to London, where they are met by "Y" officers who conduct them in groups to their respective railway stations and see them on board their trains.

London the Supreme Attraction.

London, is, of course, the supreme attraction, and the facilities for serving the Canadian Tommy on leave in that great City have been perfected to a high degree. In the Strand, the Beaver Hut, presided over by Miss Helen Fitzrandolph, of New Brunswick, has 200 beds and can serve 2,000 meals daily. The Little Theatre, Adelphi, serves 15,000 meals every month, and is a centre for Canadians and other overseas troops on leave. Millbank Hut, close to the Canadian Pay Office, serves 16,000 meals daily. At Grosvenor Gardens Kit-Store the men can leave their kits and any other impedimenta free of charge. At most of these centres a constant programme of concerts, piano recitals, lectures, etc., is put on for the boys, and at all of them there are facilities for reading, writing, resting and meeting friends. Each club is also an "Enquiry Upon Everything" Bureau.

The Hospitality League.

Many of the boys who do not care to tour under the auspices of the Y.M.C.A., and prefer to "do London on their own," generally come, sooner or later, into touch with the Hospitality League organized by the Red Triangle. They find the vastness and loneliness of the metropolis overpowering, and are generally glad to be taken in hand and receive an invitation from a hostess whose hospitable door is ever open to the men from overseas. Through this league several hundred hostesses from the best London homes extend a welcome to any who care to spend an evening under the happiest and best auspices. Many hundreds of Canadians take advantage of this opportunity, and one-third of all the men dealt

The Big Scene of The Picture is Filmed, The Burying Alive of The Princess

Synopsis on page 16

CHAPTER XX (*Continued.*)

"I FEEL that I shall never be afraid again," Jimmy added, after a moment. "Never again—whatever happens!"

So that was the change we had sensed in him—he had shaken off fear.

"You mean that you have been afraid?" I asked.

"Oh, desperately. It wasn't the heat, Billy, that sent me off like that. It was fear—fear and bewilderment—a sort of feeling that Fate had brought me here after the lapse of centuries for some awful purpose of its own. I seemed to recognize this oasis; the first time I looked down into that excavation, it somehow looked familiar; when we dug out that ghastly mummy, I knew that I had seen it before . . ."

"Of course you had seen it before!" I broke in.

"No, I hadn't. I'd never laid eyes on it till Creel and I dragged it out of that hole."

"It was manufactured in our work rooms about a month ago," I pointed out, "so if you mean you had seen it out here, or in some former existence, or anything of that sort—why, it's ridiculous!"

"I know it," Jimmy agreed. "Perhaps it was one like it—I suppose they all look alike. But the biggest shock was when we laid it on the sand, and I stared down at it, and saw it change . . ."

He passed his hand before his eyes, and let the sentence trail away into nothingness.

"The trouble with you is," I said brusquely, "that this infernal picture has got on your brain. You've mulled over it so much that you are beginning to think it's true, and to imagine you really see what you are only supposed to see! It makes your acting better than I ever knew it—I'll say that—but it must be blamed hard on your nerves!"

"You may be right," Jimmy agreed. "As a matter of fact, I suppose you *are* right. But all that was nothing to the sensation I had when I crawled through that hole this afternoon—and it had nothing to do with the picture, either!"

"I could see that you were scared," I said.

"Scared! Scared isn't the name for it. I was in a blue funk. It was all I could do to claw my way through that hole, because I knew, clear to the bottom of my soul, that it was my own tomb I was entering, and that something was waiting for me inside." I felt the desert chill strike into me, and I snuggled back deeper into the sand.

"Well, was there?" I asked, in a voice I tried vainly to make unconcerned.

"Yes," answered Jimmy, in a low tone, "there was."

"What was it?" I asked, and all pretense had fallen away—I had slipped back shamefully into unreasoning fear!—and my voice was only a hoarse whisper.

"I don't know what it was," answered Jimmy, quietly; "but I know that it took me by the hand, as if in welcome, and raised me from the place where I had fallen, and led me through that narrow door, and along that corridor, to the spot where I lay buried; and it said to me, 'Kneel here!' . . ."

He broke off suddenly, and rubbed his head bewilderedly.

"There's a crook somewhere," he said; "I can't think straight—I can't disentangle reality from unreality—it's all mixed up. Do you suppose I'm going mad, Billy?"

"Mad?" I echoed. "Nonsense, man!"

But there was a chill in my blood; perhaps that was it!

"My mind seems extraordinarily lucid," he added, "and all my senses seem somehow more acute. That's one reason I wanted to go over there tonight—I could see things and hear things and smell things . . ."

"Nonsense!" I said again, and rose abruptly—he'd be asking me to accompany him, next! "You're going to bed—that's where you're going. We've all of us got a hard day ahead to-morrow, and we'll need all the rest we can get. Come along!"

He rose with an obedience that surprised me.

"Whether I'm mad or not," he said, as we started back, "there's one thing I'll promise you—I'll never be afraid again!"

CHAPTER XXI.

HE was as good as his word. Whatever he was after that—malign, demoniac, possessed—I am sure that not for one instant was he afraid. Right up to the end of the chapter, he carried a brave front—even a reckless one. Perhaps, in the final hour, when he found himself alone . . .

Next morning, while Davis and two or three of the natives were chipping away at the cemented lid of the sarcophagus of Sekenyen-Re, we made a retake of the discovery of the mummy, and Jimmy went through the whole gruesome programme without a shiver. The mummy was lifted through the hole, and then Jimmy entered, while Creel, again in khaki in the character of first assistant explorer, posed the natives, with the invaluable assistance of Mustafa. The scene, of course, was to follow immediately the one we had taken the day before, when Jimmy entered the tomb, and the audiences that viewed the picture would never suspect the exciting events which had occurred between!

Creel got everything ready, at last, and gave me the signal, and I started cranking, and then he went forward and peered through the hole; and then he backed away, and Jimmy appeared in the opening with the mummy in his arms. He held it closely, even lovingly, and as he passed it out to Creel and Mustafa, he cast a glance which I can only describe as exultant at Mlle. Roland, who was waiting, attired in her harem costume, to do the vision. Her attitude was one of calm detachment, as though the proceedings rather bored her; but Jimmy's eyes were shining as though he had somehow won a great victory.

Then the mummy was laid on the ground, and he went through the business of staring down at it, and tumbling in a faint; but he didn't do it half so convincingly as he had the day before! I don't mean to say he didn't do it well—Jimmy was too good an actor to do anything badly—but his performance lacked the gripping, hair-raising reality which it had possessed before. Then it had given me the shivers—now I watched it quite unconcerned.

It wasn't till Mlle. Roland came forward to do the double-exposure that I saw how pale she was. Creel noticed it too.

"Aren't you well?" he asked.

"Oh, yes, thank you, I am quite well," she answered, and took her place on the sand.

"For heaven's sake, don't *you* get to falling over!"

"Do not fear; I am not of that sort," and she smiled up at him much as she was supposed to smile up at Jimmy.

Creel stood looking down at her for a moment with a puzzled face—perhaps it was the gibe at

(*Continued on following page.*)

A King in Babylon

(Continued from preceding page.)

Jimmy which puzzled him!—then he turned away abruptly.

"All right, Billy," he said, and I made the double exposure, just as I had the first time.

Then we did a short scene of four natives carrying away the unconscious Jimmy, while the girl, materializing apparently out of the body of the mummy, sat up and leered after him in triumph—and, heavens, the way she did it! Then, as the sun had grown uncomfortably hot, we went over to the oasis, and gathered up Ma Creel and Mollie, and did two or three fillers with the palms and the native camp as backgrounds; and finally Creel dismissed us with the injunction to be ready at three o'clock in Oriental costume.

I knew that he was going to do the burying-alive scene—the biggest scene of the film, upon which its success would very largely depend—and I soon realized that he was nervous over it, for he actually came and asked me for advice—me, the cameraman!—as I was putting away my box.

"I don't half-like the idea of those natives handling the Princess," he said; "especially in that harem rig. You remember how they looked at her."

"Do they have to handle her?" I asked.

"Well, naturally, there has to be a struggle. She's not going to let herself be put inside that tomb without a fight. Of course, from the picture point of view, the more brutal the fight is the better—I'm afraid it will get too brutal."

"If we had some swords or spears . . ."

But Creel shook his head impatiently.

"That wouldn't do. She'd throw herself on the spears rather than be buried alive. Anybody would! No—she's got to be handled roughly—damn roughly! This is the big scene, and we've got to put it over. What the king would really have done would be to have his men strip her naked, and lash her with whips into the tomb. We can't go that far, of course, but we've got to get as close to it as we dare!"

"You'd better find out how much the Princess will stand for," I suggested.

"Oh, I'm not afraid of that—she's an artist—she'll stand for whatever is necessary. Digby can do most of it, with Mustafa to help. I think we can trust Mustafa. If that isn't enough, I'll have to put on a coat of bronze myself. Come along and let's look over the ground. You don't mind the sun, do you?"

"No," I said; "I seem to be sun-proof;" and Creel summoned Digby, and together we walked over to the excavation.

The natives had knocked off work, but Mustafa routed out a couple for us, and under Creel's direction, the entrance to the tomb was squared up, and the stones to fill the opening were piled up neatly close at hand.

"We'll have to have something for mortar," said Creel; "black mortar like that in the wall."

"Sand and water will do," said Digby. "I can darken it with some lamp-black."

"All right," Creel agreed. "You didn't forget those trowels, did you?"

"Sure not," said Digby who never forgot anything.

"There's one place up there where the masonry's broken. You'd better have that repaired, Mustafa, and then have the whole front of the tomb scrubbed off, so that it will look clean and new. And sweep up all this debris. I want it to look as it did four thousand years ago, when it was first built."

"Vurry good, saar," said Mustafa, and sent a native off for brooms and water.

"This stone with the oval in it," Creel added, "will be the last one in—the seal, as it were, closing up the tomb. You want to do some figuring, Digby, so that it will fit in properly. Do you know anything about masonry?"

"I know enough to pull off this job," Digby assured him. "I'll pile up the stones the way they go—it ought to be easy, then."

"That's right," Creel agreed. "And, of course, if you get stuck, we can stop camera. And get your props ready, Digby—we'll want the whole outfit, you know, to make the scene as impressive as possible. And get the sand cleaned off those steps, Mustafa—I want to take one scene there. If we had a strip of carpet . . ."

"I've got one," said Digby. "I put it in on the chance we'd need it."

"Good for you! Lay it from the steps over to the tomb; and spread some rugs here for the king to stand on. It wouldn't hurt to rig up a square of painted canvas for a shelter."

"All right," said Digby, and hurried away to carry out these multifarious instructions.

"I don't know what I'd do without Digby," said Creel, looking after him. Then he turned back to the tomb. "Come along; let's see what the professor's doing."

I hadn't seen Davis all morning—he had risen ahead of all of us, and had been too busy since to waste any time watching our performance. I knew what he was at, for intermittently I had caught the sound of his chisels chipping at the sarcophagus. Now, as we climbed through the hole, the sound came clearer and louder.

"If he does find a coffin in that thing, he'll have to tear this wall down before he can get it out," Creel remarked, as we squeezed through the narrow passage into the corridor. "Gracious but it's hot in here!" he added, and indeed the atmosphere was more stifling than I had ever felt it. "I don't see how Davis stands it. Look at him, working like a slave . . ."

He was crouched beside the sarcophagus, in a position which must have been acutely uncomfortable, and hammering away at the cement by the light of a torch held by one of the natives. He paused to wipe away the perspiration, as we came in, saw us, and greeted us cheerfully.

"I'll have it open by evening," he said, and showed us where the adamantine cement had been chiselled away for about half the length of the lid. "This is certainly the hardest stuff I ever tackled."

Three natives were helping him, and the impact of their chisels was of steel on steel.

"I'm going to do the burying-alive scene this afternoon," said Creel, "and we'll have to wall up that hole out there for a few minutes; but I guess you won't suffocate."

"No, of course not," Davis agreed. "Go ahead."

"Also I'll have to use about all the natives."

"All right. I can't use them in here," and he bent again to his task.

Creel watched him for a moment curiously.

"You really expect to find a mummy in there?" he asked.

"A mummy—yes—and much more," said Davis, between blows. "I hope to prove whether the book of Genesis is true or false."

Creel whistled softly.

"Come along, Billy," he said. "We'd better be off about our picayune affairs. This is too big for us!"

Davis answered with a short laugh.

"It *is* big," he agreed.

"Too big, I suppose," continued Creel, "to permit your stopping for lunch."

"Is it time for lunch?" and Davis looked up in surprise.

"It's almost noon."

Davis straightened his back slowly, laid his hammer and chisel regretfully on top of the sarcophagus, and mopped the sweat from his face.

"I might have guessed it by the heat," he said, and dismissed the natives, who scampered off with an alacrity which showed that they, at least, had not been oblivious to the passage of time and the pangs of hunger. "I didn't realize how tired I was," he added. "This sort of work takes it out of a fellow. It's a mistake to overdo it."

"Yes, it is," agreed Creel; "it's a mistake to overdo anything. You think you'll be ready to open that thing to-night?"

"Yes—there is only four or five hours' more work on it."

"And after that you are going to tear down that door with the 'Keep Out!' sign on it?"

"Yes," and Davis cast an amused glance toward the symbol of warning cut in the farther wall.

Creel hesitated a minute.

"You haven't seen any more ghosts?" he asked at last, in a tone he tried vainly to render merely casual.

"I haven't seen any at all," snapped Davis. "I never saw a ghost—I don't believe in them."

"Neither do I," said Creel slowly. "At least, I didn't think I did—but yesterday . . ."

"Do you really believe someone knocked that torch out of your hand?" Davis demanded.

"Did Billy tell you that?" asked Creel, and cast on me a reproachful glance. "As a matter of fact, I don't know what happened. At the time, I would have sworn that it was knocked out of my hand—and there was an ugly welt across my knuckles to prove it. But I've thought about it a good deal since, and of course it *does* seem absurd. Perhaps I *did* knock my hand against something—though what I could have knocked it against beats me. I was standing right here—you can see for yourself I wasn't within reach of anything . . ."

He stopped suddenly, his eyes on the floor. For Davis, with a sardonic smile, had turned the ray of his torch upon a jagged fragment of stone which lay almost at his feet—a stone which would weigh four or five pounds; and then he pointed his torch toward the roof, and we saw the hole from which the fragment had fallen.

"There's your ghost," he said drily. "No wonder it raised a welt!"

Creel stared at the stone a moment longer; then he stooped and picked it up and weighed it in his hand, and examined its sharp edges. Finally he cast it away into a corner of the tomb.

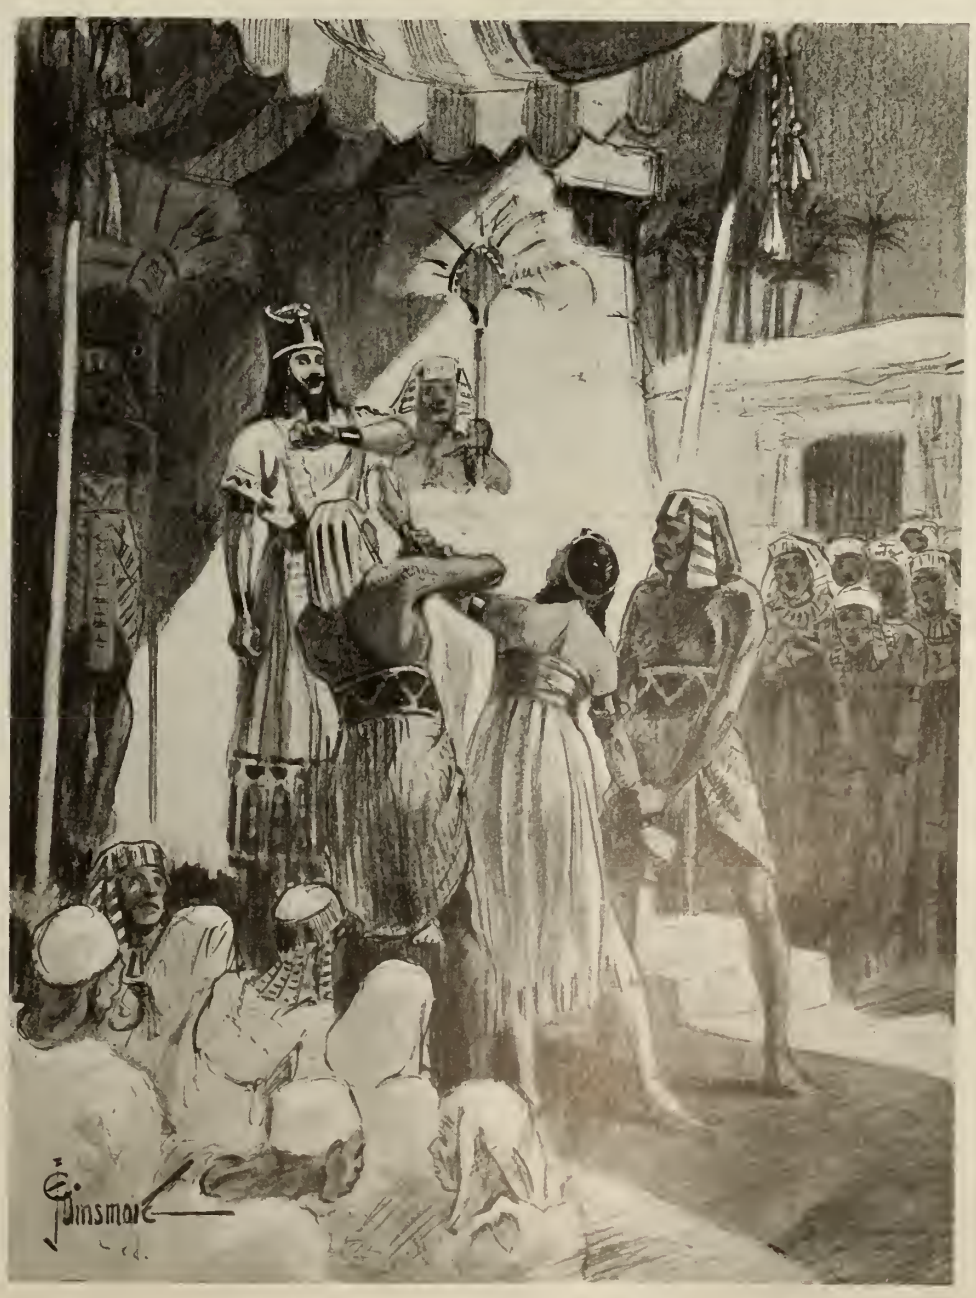
"No doubt you are right," he agreed; "and I suppose I seem an awful fool to you. Nevertheless there's one thing I want to say, and it is this: I understand in a dim way what you hope to find in this sarcophagus; it's a big thing—a tremendous thing—worth running some risk for . . ."

"What risk?" demanded Davis.

"I don't know; but I feel somehow that there is a risk . . ."

"Rubbish!" Davis broke in. "Even if there were, do you suppose I . . ."

"No, I don't," said Creel; "and I wouldn't ask you to. I'd take it myself. In fact, before you raise the lid, I hope you will invite me to be present."



"All right; I will," Davis agreed. "But what is it you're driving at?"

"What I'm driving at is this," said Creel, speaking with visible effort; "I feel, somehow, that the risk you run in opening this sarcophagus, great as it is, isn't a thousandth part of the risk you'll take if you tear down that door back yonder."

Davis stared at him.

"Nonsense, man!" he cried. "You're not developing a case of nerves, too!"

(Continued on following page.)

"She begged for mercy, the tears streaming down her face, 'Look—I am young—I am beautiful—see this body, so soft and tender—so full of delight—and it is yours—yours.'"

A King in Babylon

(Continued from preceding page.)

"Oh, Jimmy has got over his!" said Creel. "You should have seen him this morning hugging that mummy—quite as if he liked it! No, it isn't nerves—it is something deeper. What do you expect to find behind that door?"

"I don't know," answered Davis; "but I do know one thing, and it is this: there is something there—something unusual—something terrible, perhaps. That sign was never used without good reason. No Egyptian would dare disregard it."

"Ah, you see," Creel began.

"But I am not an Egyptian," Davis broke in. "I'm a scientist—I have left those old superstitions behind me. That sign, instead of warning me away, lures me on. I am determined to see what is behind that door!"

His eyes were shining with excitement. Creel gazed into them a moment without speaking.

"I see," he said, at last. "I dare say I should feel the same way, in your place. Well, let's go to lunch," and he turned away toward the corridor.

CHAPTER XXII.

CREEL and Mustafa had a strenuous time, that afternoon, getting our cohort of natives into shape. They were so excited by the prospect of dressing up in masquerade that they behaved like a lot of children.

Mustafa opened the proceedings by an oration in what I suppose was Arabic, and the fellahin listened respectfully, squatted in a semi-circle before him. It was the first time I had had occasion to observe them *en masse* and closely, and I was struck by their strange similarity of appearance—a similarity much greater than that of negroes or even Chinamen. The almond-shaped eyes, with their thick fringe of lashes, the smooth straight eyebrows, the wide-lipped mouth, the high cheek-bones, the receding forehead, the broad flat nose—all these gave to that circle of bronze faces a uniformity almost startling, especially since every face was crowned with a close-fitting skull-cap, converted into a sort of turban by winding a strip of dirty white cloth around it; and add to this the fact that their bodies, thin almost to emaciation, were all clothed alike in long brown smocks and baggy white trousers—why, it almost seemed as if Mustafa's audience was composed not of fifty men, but of fifty replicas of the same man!

They listened to the dragoman's remarks in silence and with impassive faces until, toward the end, he rose to what I supposed to be a more impassioned flight, for then they grinned and nodded approval, and chattered to each other like a lot of blackbirds. I found out afterwards that what had won this applause was not any trick of oratory, but the promise of an extra hundred piastres for the crowd, if it would do faithfully what was required of it. A hundred piastres runs all the way to five dollars, and Creel afterwards paid it cheerfully.

But our troubles were just beginning. The natives, under the stimulus of this brilliant reward, were willing enough and donned joyously the gorgeous raiment prepared for them, but to get them to do what we wanted them to do brought Creel to the verge of hysteria. All credit to him that he finally succeeded, except when . . . but I mustn't get ahead of my story.

The first scene we took was in front of the tent, showing the erstwhile favorite being dragged away to her fate, while the king looked cynically on, with his eunuchs and other minions in the background. Digby and Mustafa did the dragging, and they had their hands so full that it looked to me as though Creel would have to don that coat of bronze and help!

From the instant Mlle. Roland came in sight between her captors, I knew we were in for an afternoon of excitement. Her face was deathly pale, her eyes filmed with horror, her whole being vibrant with desperate agony. I have never seen a glance more heartrending than that she cast at Jimmy; but his cynical smile did not waver and he urged her executioners on. The effect on the natives was extraordinary—just the effect we wanted, as Creel observed delightedly, for they moved uneasily, staring with open mouths, evidently divided between fear of Jimmy, who looked very regal indeed in his purple robes, and sympathy for his victim, who had never seemed more beautiful.

"Great!" said Creel, when the scene was finished, and Mlle. Roland stood pale and panting, while Mustafa scraped the sweat from his face with a hooked finger. (Poor Digby didn't dare wipe his, for fear the bronze would come off!) "It couldn't be better, Princess. Now we'll take another, out at the edge of the oasis."

She walked away without answering, and there was something in her face which made me vaguely uneasy—the same look which Jimmy's face had had the day before—a look which seemed to say that this wasn't acting at all, but grim reality. And there was something in the look which Jimmy sent after her I didn't like, either—a kind of infernal gloating . . .

I got my camera set up with a beautiful clump of palms as a background, while Creel and Mustafa marshalled the players, and then we did a scene with the whole crowd starting across the desert toward the tomb. The Princess had ceased struggling, and walked with drooping shoulders and bowed head, as though she recognized the uselessness of resistance. As she passed the camera, she looked straight into it with the most tragic glance I ever saw. To look into the camera is usually an error of technique; but it wasn't in this case. I could guess how that glance would thrill the audience!

Then we did a third scene on the steps—a terrific close-up; for when she reached the steps, and looked across the court, and saw the open tomb waiting to receive her, she was like a mad woman, shrieking, clawing, writhing . . .

It was only by putting forth their utmost strength that Digby and Mustafa managed to drag her down.

"Look here," I heard Digby pant, "we can't help hurting you, you know, if you don't let up a little!"

But she didn't let up—only looked at him as though he had uttered an insult, and spat in his face; and I fancied I could see Digby go pale under his bronze as he bit his lips and dragged her on; and I heard something else that sent a chill over me—a sort of guttural murmur from the natives, as they realized what was about to happen.

Digby and Mustafa had dropped their prisoner the instant the scene was over, and when I got down the steps, she was leaning against the wall with staring eyes, her lips drawn back in an ugly snarl, her bosom rising and falling convulsively. To me she seemed on the verge of collapse—but she didn't even look at me when I asked her if there was anything I could do—just stood there, clutching at the wall for support, and staring toward the tomb . . .

Digby and Mustafa were expostulating with Creel.

"My God, saar," said Mustafa, "it iss too much—I can not do it!"

"She spat in my face!" growled Digby.

"Oh, shut up!" snapped Creel.. "It was great—consummate! Suppose she *did* spit in your face? That won't hurt you! No—don't you dare wipe it off!"

"But I don't like it. It's going too far! It's not right!"

"It's gloriously right!"

"But, saar," Mustafa protested, "the fellahin—they not understand. They make trouble."

"Trouble?"

"Did you not hear them? It iss bad when they make that noise—vurry bad! They think she iss to be killed!"

"Oh, well, explain that it is only make-believe," said Creel impatiently. "I thought they understood that!"

"It iss impossible," said Mustafa, "for them to understand. It iss something beyond them."

"Promise them another hundred piastres, then," said Creel, and while Mustafa began another oration to the excited natives, he walked over to Mlle. Roland. "It is perfectly gorgeous, Princess!" he said, and I saw that he himself was too excited to notice how near prostration she was. "It's the greatest scene I ever filmed! If you can only keep it up . . ."

She looked at him strangely, without replying, and he might have noticed something then, had not Mustafa hurried up, rubbing his hands.

"It iss all right, saar," he said. "What do we do now?"

"Line them up in front of the tomb, along the carpet. Put your camera here, Billy. Jimmy, stand here under the shelter. Ready? Now, Princess, the final struggle. Get hold of her, Digby; get hold of her, Mustafa. Shove her into the tomb!"

It must be by a sort of sixth sense a camera-man grinds out his foot a second; at least, when that scene was over, I could not remember that I had cranked at all, and for an instant turned sick and dizzy; but when I glanced at my indicator, I saw it was all right . . .

I thought they would break her wrists, dragging her forward. She dug her heels into the sand, she tried to throw herself prostrate, she twined herself about the men—and such cries, such shrieks . .

And then, when they got her to the tomb, she wrenched herself free and sprang at Jimmy, who stood looking coldly on, and I verily believe she would have clawed his eyes out if Digby and Mustafa had not seized her and dragged her back.

And then she begged for mercy, the tears streaming down her face . . .

"Look—I am young—I am beautiful—see this body, so soft and tender—so full of delight—and it is yours—yours . . ."

I swear I came within an ace of rushing forward and rescuing her myself! And I could have torn Jimmy limb from limb when he shook his head and motioned her away . . .

And then the struggle began again, more terrible than ever; and I saw her bend swiftly and sink her teeth into Mustafa's arm; and I saw the purple rage which flashed into his face, as he whirled her from her feet and thrust her into the tomb . .

"Bring your box up here, Billy," cried Creel. "Now, Digby, quick—the stones!"

And Digby, with shaking hands, began to set in place the stones which Mustafa handed up to him.

Once her face appeared at the opening, livid—scarcely a living face—and Mustafa thrust it back into the darkness with one ruthless blow; and then all the stones were in but the last square one, with its oval cartouche—and through the hole her hands were thrust, begging, imploring for mercy, and I could hear her voice, faint and inarticulate . . .

Digby hesitated, the stone in his hands, and glanced at Jimmy. It was the supreme touch,—how it would register!—and Jimmy nodded coldly.

"Put it in!" he said; and Digby dabbed it with the black mortar and thrust it into place.

"Now," cried Creel, "walk slowly away, all of you, out of the picture . ."

But that touch was destined never to be added, for with a hoarse cry, the fellahin swept over us, and began to claw frantically at that sealed opening.

"Crank, Billy, crank!" yelled Creel, and he told me afterwards that the thought had flashed into his head that he might use the scene somehow—but he never did. I saw it the other day, when we were testing out the film, and even on the screen, it gave me the horrors, for it brought that frantic minute so clearly back to me . . .

I cranked away during the sixty seconds it took those desperate blacks to claw those stones out again . . .

"By God, saar, she bit me!" I heard Mustafa saying, and saw that a dark stain was spreading across his white sleeve. "She iss no woman—she is a devil! She should stay in there!"

"Davis and three or four men are in there, too," answered Creel, with a smile. "We can't very well abandon them! Anyhow those blacks of yours have settled the matter. They've got the stones out—call them off, Mustafa, and get those clothes off of them before they're torn to shreds. My wife will dress your wound—and I'll give you ten dollars extra into the bargain . . "

Mustafa's face, which had been sullen and threatening, cleared as if by magic, and he waded into his men with some of the most energetic language I ever heard. And such is the force of habit, ingrained through long centuries of oppression, that his men slunk back and pulled off their gay attire and piled it in a heap under Digby's direction. But they were evidently not satisfied, for they hung about the border of the excavation, watching sullenly to see what would happen next.

For Mlle. Roland had not reappeared at the opening in the tomb.

I had expected to see her standing there, the instant the stones were pulled away, pale, panting and triumphant—but there was only the blackness of the tomb; and then Creel ran forward and disappeared inside. And then, as I unslung my camera with trembling hands—for I knew that it would not be needed again that day!—I was astonished to see Jimmy in all his war-paint as king of Egypt, calmly mounting the steps out of the excavation, as though he had no possible concern in the girl's fate. Or as though he knew that fate was settled—that he had buried her alive and was leaving her to die! That was what his look seemed to say, so cruel and impassive . . .

Then Creel's face re-appeared at the opening.

"Turn your box over to Digby, Billy," he called, "and come here."

A moment later, I was clambering through the opening.

"No! no!" called Creel's voice. "Stay outside—wait a minute!"

"What's the matter?" I gasped.

"Nothing serious; the Princess has fainted," and then he came toward me out of the darkness, with

(Continued on following page.)

THE STORY UP TO THE PRESENT

A NEW YORK company of moving picture actors goes to Egypt to film a great picture which it is believed will make a tremendous "hit." Davis, an Egyptologist, joins the party at Luxor, and with an outfit of camels, donkeys, etc., they journey into the desert. While Davis accompanies and directs them, his real object is to complete excavations in certain ruins in which he believes he will find the tomb of an ancient king.

He is correct in his supposition and the outer entrance of the tomb of Sekenyen-Re is unearthed. The plot of the picture and the real become strangely interwoven in this land of mystery and superstition, and it often remains for the old Egyptologist to give a reasonable solution of the many uncanny happenings. In the preceding chapter Jimmy disappeared within the opening to the tomb, and in searching for him Creel's hand was struck and his light knocked to the ground. He seemed to see a gray figure disappear just at that instant. On his hand there was a red welt,—something had certainly hit him.

A King in Babylon

(*Continued from preceding page.*)

the girl in his arms. "Take her when I lift her up to you—she's not heavy."

As I bent forward and passed my arms under her knees and shoulders, I caught, from within the tomb, the regular chip-chipping of Davis's chisel; and I shivered, for there was something curiously ominous in the sound—as though he were closing a sepulchre instead of opening one. And then the light fell on the girl's face, and I stared down at it in horror.

"She's dead, Creel!" I gasped, for it was ghastly, and across one cheek was an ugly bruise, already turning blue.

"Nonsense!" snapped Creel. "Don't lose your nerve, Billy," and he clambered through. "Mustafa," he called, "you will tell your men that the lady has fainted, but will soon be all right again. Then help Digby bring that stuff over to the tent. Now, give her to me, Billy," and he lifted her from my arms. "You bring your camera. We've got to guard that film—we'll never make another like it—not if we live a thousand years!"

As we mounted the steps, we could hear Mustafa imparting Creel's assurance to his men—that the lady had only fainted. But had she? As I looked down at her, lying so limp and ghastly in Creel's arms, I was shaken again by a great fear.

"Look at that bruise, Creel," I whispered. "Do you suppose that was where Mustafa struck her?"

"I shouldn't be surprised," said Creel, grimly. "It's an ugly bruise, I know—but the film was worth it. I know she'll think so! The bruise will heal in a day or two, but that scene will make her famous! And maybe it wasn't Mustafa at all—maybe she struck it when she fell. Anyway, she hasn't anything to complain of—she buried her teeth in his arm."

"I know," I said. "I saw it. Do you think—it was—just acting?"

"No," said Creel shortly. "It was better than acting. I think she went mad—I think she imagined she was really being buried alive; maybe that's her method—to let herself go."

"She made my flesh creep!" I said.

"It was gorgeous," Creel agreed; "and this is the reaction. It was bound to come."

I glanced again at the ghastly face.

"If she only comes around all right," I began.

"Of course she'll come around all right," broke in Creel angrily. "A little ammonia, or something of that sort. My wife will know what to do—women are used to this sort of thing."

And indeed Ma Creel took charge of the case in a matter-of-course way which was most reassuring.

"You men run along," she said, after Creel had laid the girl on the bed. "You're only in the way here. But I'm surprised at you, Warrie, letting her work herself into this state."

"Letting her!" echoed Creel. "Why, good lord, Mary, I couldn't have stopped her if I'd wanted to. She was like a wild-cat!"

"It's a shame, just the same! What made that bruise on her cheek?"

"I guess she struck it when she fainted," said Creel.

"Well, all I can say is I'm ashamed of you! Now you and Billy get out of here. Mollie and I will look after her."

Creel and I left the tent like a pair of criminals. Outside we came upon Jimmy, stretched at his ease in a canvas lounging-chair, and smoking a cigarette. To my surprise, he still wore his Oriental costume, though it must have been suffocatingly hot.

"You can get out of those togs, Jimmy," said Creel, shortly. "We're through for to-day. I thought you understood."

"I wanted to be sure," said Jimmy. "It's an infernal nuisance getting into this rig. Mlle. Roland all right?" he asked carelessly.

"She fainted," said Creel. "That final scene was too much for her. You certainly took it coolly enough."

"Oh, yes," said Jimmy; "I've got past the fainting stage."

Creel shot him a curious glance; as for me, I turned away with something very like disgust, for the conviction suddenly flashed upon me that his callousness during the burial scene had not been assumed; that he would have looked on just as calmly if it had been in deadly earnest instead of make-believe . . .

I went over to the property-tent and sealed up the film in an air-tight case, and labeled it. The heat made me a little uneasy about all the films. If anything should happen to them—but I didn't dare think of it.

Jimmy came in as I was putting my camera away, and began to strip off his robes, whistling softly under his breath. The sound enraged me, and I was about to tell him so, when Creel called me from outside.

"Billy!"

"Yes," I answered.

"Davis has sent word that he's ready to open the sarcophagus. Don't you want to go over?"

"I surely do!" I said, and hurried out and joined him.

Davis was waiting for us at the entrance to the tomb, his face convulsed with excitement.

"Come along!" he cried; "I've got the lid loose—I wouldn't have waited much longer!"

He led the way along the passage into the inner chamber. Four natives were waiting there, armed with long crowbars, and at a sign from Davis, they set to work prying up the great granite lid. Slowly it rose—an inch—two inches—and I caught a sudden gust of spicy perfume . . .

"Now, slide it over!" said Davis, hoarsely, and I could judge of his excitement by the way my own heart was hammering in my throat. "Careful! Careful!" And then he was clinging to the edge of the sarcophagus, staring down into it. "I've found it!" he whispered hoarsely. "By heaven, I've found it!"

For an instant I was dazzled by the glow of light and color which burst from within the tomb, under the rays of the torches; then I saw something vaguely like a human form, gilt from top to bottom; and a face staring up at me with wide-open eyes . . .

"Look at it!" gasped Creel. "Look at it!" And he pointed at the face with a shaking finger.

And my heart turned to ice within me, for the face was the face of Jimmy Allen!

CHAPTER XXIII.

Of the moment that followed I have no distinct recollection. I vaguely remember clinging to Creel, and I could feel his vise-like grip on my arm; and I suppose I must have closed my eyes, for when I opened them and looked again down into that staring face, that startling likeness had vanished. All that lay there was a dark hued countenance, with wide-open eyes of glass gazing placidly up at us. It was like a dissolving view, or a puzzle picture, which changes as one looks at it.

Then I saw that it was not the mummy I was staring at, but the outer case, or coffin, moulded to the lines of the human form inside it; and that it was upon one end of this outer case that the face—a portrait, presumably, of the man whose body lay within—had been carved and then carefully painted.

"Did you see it?" asked Creel, relaxing his grip and wiping the sweat from his face.

I nodded mutely.

"See what?" demanded Davis.

"The first glimpse I had of that face," said Creel, "I'd have sworn it was Jimmy Allen."

Davis squinted down at it.

"It's a portrait of Sekenyen-Re," he said, "if this is really his mummy; and it doesn't look the least like Allen." Then he looked at it again, and I could see by his startled expression that he had caught the likeness. "By George, it does, though!" he said.

"Better not let Jimmy see it," said Creel. "It will only send him off again."

"Better not let Jimmy see what?" demanded a voice, and there was Jimmy behind us. "I heard Creel invite Billy over," he explained to Davis, "and I came too, as soon as I got off my war-paint. I hope you don't mind?"

"Not at all," Davis assured him, and turned back to an inspection of the coffin.

"Now," said Jimmy to Creel, "what was it I wasn't to see?"

"Oh, nothing!" said Creel nervously.

"What was it, Billy?" asked Jimmy, turning to me. "Come, I'm not a child. What was it?"

"When we first saw it," I explained, "we thought that face painted on the coffin looked a little like you. Of course it doesn't really . . ."

"Why shouldn't it look like me?"

(*Continued on page* 33.)

The Baby

It is very easy for a baby's skin to become chafed and sore either from the bathing or from garments that have lost their softness in the wash, and it always is a troublesome matter to keep nursing bottles and other utensils sweet and clean.

The only safe way is to use the mildest, purest, whitest soap to be had. That is Ivory Soap. It is impossible to make soap of higher quality, no matter what the price may be. When you use it, you know that, so far as bathing and cleansing are concerned, you are doing your best to keep baby healthy and good-natured.

After the War—What?

By A. FRANK READE.

Reconstruction in Canada—The Great Opportunity for Women Who Think—Reforms Needed in all Directions—The World Must be Made Safe for Democracy—Democracy Must be Made Safe for the World—Is Democracy Workable in Canada?

Introductory Article.

A CANADIAN friend who spent some time "down south," tells a good story about the heat in that region. One morning he sat down to breakfast when the mercury was playing around the nineties, and he asked the big black cook, "Is it going to be hot to-day, Abbie?" The fat old mammy's sides shook with laughter as she replied, "It done hot right neouw!"

And so it is with reconstruction—it done reconstruct right now! Try to get a square meal at a restaurant, and find out. And it looks as though the food question, the liquor problem, and a host of others, will have still more restrictions applied to them.

The war has merely hastened the settlement of a host of problems that would have led to all sorts of trouble, if not actual revolution, in some of our so-called democratic countries. It is an open secret that not long before the war broke out there were serious fears of a revolution in Great Britain; and as for the United States, business men with whom I talked ten years ago shook their heads and spoke in bated breath over the fear of nation-wide trouble. I have before me an address delivered in 1908 before the Economic Club of New York, composed of the most powerful leaders in business, and the speaker, a European, warned them in these words:

"There is a form of socialism creeping now into this country—we are all too familiar with it in Europe—which is preaching war and provoking war. . . . I have been fighting it for nearly twenty years. Do not underrate the danger. It may be quite true that the American people will never stand anything like a violent revolution; I agree that the hope of an immediate overthrow of the present system, which some of these fanatics profess, is more illusory here than anywhere. Yet do not forget that even an attempt would be extremely deplorable, and would certainly cost a great amount of money and very likely blood."

The fact is that this old world, and even new America, and newer Canada, were ripe—in some cases almost rotten—for radical changes in attitude, thought and action in relation to many subjects. The basis of society was wrong, unjust, wasteful. Even the United States business, as a whole, was being run on a shop efficiency of only five per cent.—and this in spite of all the preaching and teaching and training that had been done in that country. This means that ninety-five per cent. of possible capacity was wasted; yet enormous private fortunes were being made, because of unfair distribution. Surely a more fruitful source of revolution could not be imagined.

Waste; increasing taxes on food and other necessaries of life; high cost of living combined with wages not raised to meet these costs; display and extravagance of the newly-rich; increase in luxuries and comforts of the few while the many live in hovels, tenements or cramped apartments, always on the verge of starvation and uncertainty from lack of full employment; to say nothing of the increasing frivolity, sensuality, materialism and Godlessness—all these causes combined to make the foundations of society most unstable. The same causes which brought about the terrible French Revolution were at work in our midst, and if long continued would have brought about a similar result.

What Reconstruction is Needed.

The newspapers of Canada indicate the various forms of reconstruction that are called for in this country. At church and other assemblies there are calls for reforms of all kinds—for the protection of girls, by raising the age of consent; for the saving, by proper housing, sanitation, fresh air, pure water, pure milk and other food at prices within the reach of the poor—of the annual "slaughter of the innocents"—35,000 children under five years of age dying in Canada each year (as large as Canada's losses in battle in the world's greatest war); for the prohibition of manufacture of intoxicating liquor; and shipping it into "dry areas"; for preventing labor on the rest-day; for the recognition of women in church councils; for church federation; for greater production; for better distribution; for utilization of labor; for curbing extravagance in dress and the display of wealth; for higher wages for workers; for conscription of loafers; for political, social and moral reform. In short, there are demands for drastic changes in everything, including the distribution of honors and titles, and entire abolition of hereditary titles.

The war alters our point of view, and makes us agree to changes that would otherwise have shocked us. This habit of accommodating ourselves to changes is one of the best things that could happen us, war or no war; for mankind is naturally conservative, stand-pat, let-well-enough-alone, and all that. This is why radical reformers always have such a hard time; and why institutions that fall in with the general smugness and self-satisfaction of humanity are fat and flourishing.

We must prepare for many fundamental changes, not only in our families, in our Provincial and Dominion relations, but in our national affiliations with the outer world. The British Empire will have a wider as well as a deeper meaning to us after the war, for we shall look upon it as the leader of the world in Democracy, and we shall be inclined to include in its scope and mission our big Anglo-Saxon cousin, the United States, and possibly even France and Italy; for we must think and plan not only Imperially but internationally in order to preserve the world for Democracy, and at the same time make Democracy intelligent, capable, and safe for the world.

Already there is talk of the Allies arranging a trade-compact that will prevent Germany and her associates from trading with the democratic countries; and it is quite possible that Canada's tariff and taxation methods may have to be altered to suit these new arrangements. This country having taken her place with the great nations of the world on the battle-field, her soldiers being admittedly the equal of the best of any nation, it is fitting that Canada should have a voice in the future settlement of world-policy. The Canadian people will surely not permit of measures being decided that will wrest from Canada the prizes which she has so well earned at such heavy sacrifice. We must keep in mind the two phases of Democracy—making it safe for the world as well as making the world safe for it. The winning of the war is only the beginning of the bloodless struggle to teach the peoples throughout the world just what Democracy is, and why it is best for them. Indeed, there have been very little teaching and preaching in Canada itself on this point.

The Key-Word—Democracy.

It would not be amiss to look at the key-word of all the proposed "reconstruction" problems—the word Democracy. It is a new word in Canada. We have never had Democrats here—at least nobody called them by that name. In the United States the two great political parties are called Democratic and Republican, though both words mean practically the same thing, the latter meaning "back to the people," (*i.e.*, not to a king), while Democrat is made up of two Greek roots—*Demos*, the people, and *crat*, rule or government. So Democracy—the rule of the people—is what we are fighting for, as opposed to Auto-cracy, the rule of one man, such as the Kaiser, who plays the "cracy" part (some Democrats think it should be spelled with a "z.")

Now, if we are to be true, real, simon-pure Democrats we must trust the people; laws must be enacted by the people, of the people, for the people, through representatives of the people:—the people in preference to kings, governors, prelates, and all rulers. As for titled gentry—what the farmers' convention in Toronto called "mock-aristocrats"—these will vanish as Democracy is understood and applied. Democracy must deal with all phases of the life of the community, and must understand how to regulate trusts, combines, mergers, and other forms of combination which tend to affect the people by hampering, even if they do not oppress and repress, their activities.

Democracy must always consider the great masses of the people, especially the producers. This means not only that workers should be properly paid, should be kept in constant work, should be provided for when unable to work through sickness, accident or old age, but it means a great deal more. It implies that workers should be properly trained, first at ordinary schools, then at special trade-schools, afterwards at classes and lectures, by reading, by demonstrations and other methods after leaving school and while at work. It means also that there should be, in every part of the country, methods and means for guiding young people into occupations in which they can do their best work for the community and themselves. It means, further, that tramps, hoboes, loafers, must be set to work, must earn their own honest livings. There must be service for service. It means, moreover, that the whole community shall be classified, controlled, guided, and managed so that the greatest good to the greatest number may result. Men who now make their living as "speculators," "exploiters" and as "professional" men in various lines, and whose methods are based on grabbing property and public rights (franchises) which belong to the community, and which should be controlled by and for the people for the public benefit—such men must be either controlled or eliminated.

Is Democracy Safe for the World?

Could the world be run on a purely democratic basis—leaving everything to the people, the masses, as they are called? Are the masses of the people able to carry on the business, the industries, the commerce, the banking, the legislation, the education, the religious institutions, the medical, scientific, and all the other necessary departments of and adjuncts to such civilization as ours?

This is a fair question; and any frank answer is, No, the people as a mass are not now able for such tasks. Here is where I decidedly disagree with all radicals who propose to have no leaders. There must be trained leaders in every department. The trouble in Canada to-day is that we have not sufficient trained leaders. We have so-called leaders, but most of them do not lead, for they are not only put in the position of leaders by accident or a poor political system that does not bring really able men to the top, but pushes up those who can best play the political game—which is very different from being trained for leadership. One of the changes we must make in our political system is to make sure that we will train leaders to manage national, provincial, municipal and local affairs, and then that we shall see that they are placed in those positions for which they have been trained. But in order to bring about such a change as that we must first train our people in the principles of democratic government.

A real democracy would be thinking all the time of the people—the masses about whom Abraham Lincoln said, "The Lord must have loved the common people, he made so many of them!" Our common people must themselves be made intelligent, so that they will not only do their duties faithfully in their own sphere, but will see to it that trained leaders are elected to fill the important duties in the community for which they have been specially trained. If the common people were intelligent they would not stand for the present order of things for a week. As Hon. Dr. Cody told the Canadian Press Association, the people must be made "intelligent and and honest" in order to make Democracy safe as a governing plan.

Good reconstruction work could be done in telling the people what Democracy is, what is required of the ordinary citizen, and what it will do for him if properly managed. Democracy in liberal doses should be administered to our people at every meal, and on every possible occasion. This is a work that each reader of the Canadian Home Journal could do, and it is a work that will tell mightily in the days of reconstruction.

Independent Thinking Wanted.

We would take a great step forward if we could get our Canadian people to think for themselves—to think problems through to their logical conclusions. There is now too much superficial guessing—which is not worthy of being called thinking at all—which jumps at conclusions before the facts are known; which takes the wrong meaning out of words; which misunderstands the relation of things; which is so tinged with prejudice or partyism that the mind becomes muddled and incapable of right conclusions; which magnifies trifles, and lets the big questions go.

The men's organizations of Canada, such as the trades unions, fraternal orders, various clubs, young people's associations connected with churches, and small groups of neighbors, should be studying and discussing the problems of this country, and trying to learn the meaning of them. Set speakers can easily be had everywhere, who have made special study of particular problems, and who are usually glad to give their views and lead off in discussions. The Canadian Problems Club has been organized in Toronto for the special purpose of guiding and helping small groups in any part of the country who want to study any particular problem.

Women, now that they are voters, should be keen on the study of this young nation's problems, and anxious to lend a hand in their solution. Now is the time to help mould the new order of things in Canada. The women can become potent factors in this work. Through the Women's Institutes, particularly, they could give voice to the sentiments of the plain-living, high-thinking, sensibly-dressed, sane and healthful part of femininity. (There is not much hope of clear thinking from the short-skirted, high-heeled, diaphanously-dressed females who think more of corns than corn, and of the feet than wheat).

The tremendous task before Canadians after the war will be to reorganize society so that this

B&B Dressings

Are Sterilized After Wrapping

This means B&B Absorbent Cotton. Also B&B Bandages and Gauze—the dressings which come in contact with a wound.

They are not only sterilized—and repeatedly—in making. They are sterilized to the innermost fibre after they are wrapped.

Our final process—after wrapping—is to place these dressings in a mammoth sterilizer. One of them is pictured above.

There we first create a vacuum. Then we force in live steam under pressure. Because of the vacuum, the super-heated steam penetrates the heart of every package, and every germ is killed.

We constantly prove this. From various parts of the package, including the center, we take out fibre for testing. These fibres are placed in a culture medium and kept for days in an incubator. Thus we know that every fibre is utterly sterile—and always.

For every package comes to you sealed against germs and all contamination.

This is costly—it is slow. But it seems the only way to bring you germ-free dressings. And they are vitally important, even on the smallest wound.

For Safety's Sake Always Ask for the B&B Double-Sure Products

Absorbent Cotton
Bandages, Gauze,
Adhesive Plaster, etc.

Buy Them From Your Druggist

B&B

Double-Sure Products

Be As Careful

As Your Doctor Is

Surgeons take endless precautions to have every dressing sterile. Gauzes in hospitals are sterilized after wrapping, and by this same vacuum process. The U. S. Army in its field dressings requires this final sterilization.

Be as careful in your home. Every cut or scratch—even a pin-prick—offers danger of infection. Have sterile Absorbent Cotton, sterile Bandages ever ready. Bring nothing else in contact with a wound.

Call the doctor for any serious wound. But in the meantime don't infect it.

Get B&B Safety Dressings—Absorbent Cotton, Gauze and Bandages. Get them now—have them ready for emergencies. Don't take chances when this protection is so easily available.

Our First Aid Book

tells what to do before the doctor comes, in every form of accident or emergency. It is written by an authority, and has 120 pictures, dealing with sudden sickness, poisoning or accidents. We offer it free.

Put it with your B&B Dressings. It may sometime save a life.

The Girls' "Carry On" Column

By BETTY O'HARA.

All Boys From Twenty to Twenty-two are Drafted—Our Girls Must Take Their Places.

THE MASSAGE COURSE.

In the north-east corner of the campus of the University of Toronto, stands a beautiful grey stone building, which was originally intended for one of the finest, most complete gymnasiums and club-house in the Dominion of Canada, destined for the use of the men and Faculty of the University.

The building itself is of Collegiate Gothic architecture, and a large amount of money for its construction was supplied by Hart Massey, after whom it was named.

The University, however, answering to the need of the military authorities, turned this building over to the A.M.C. for their use, and it is in these beautiful surroundings that the Massage girls have been located.

It is a long, difficult course, and unless a girl is content to give up all social activities and give her time unreservedly to her work, she should not for a moment consider taking it. The tremendous amount of stick-to-it-ive-ness and the desire to give up everything to gain success, are proof that you are in the army, and that means that you live a day at a time and know nothing but implicit obedience. For there are two places on earth where a mind of your own is never tolerated: one is the army, and the other a newspaper office. You must always obey your orders. "I forgot," or "I did not have time," is a sign of disobedience or incapability fatal to indulge in.

Uniform worn by girls taking the Massage Course.

Massage is a six months' course, and at the end of that time a student is obliged to sign up for one year's service anywhere in Canada. She is paid a salary that enables her to keep herself comfortably, and if it is necessary that she live outside the hospital, she is allowed what is known as a subsistence, the army term for bed and board.

Hospital uniforms are provided by the army, but negotiations are now on the way to provide all the girls at Hart House with street uniforms, though the color and style has not yet been definitely determined.

THE STUDIES.

Now as to the course. The studies are divided into three classes: Anatomy, which is the study of muscles and bones; Physiology, which consists of the study of the organs of the body, and their functions, and the Theory of Massage, which is the massage movements, and the reason and effect of such. Then there is the practical side of the course, and for this the girls are supplied with subjects on which to try these movements. Sometimes a member of the class is taken, and sometimes a person who is hired for the purpose, but always someone who is physically fit and not a patient. After two or three months, however, the girls are given a soldier who is treated under the watchful care of demonstrators.

In Hart House at present there are about ten demonstrators. These are girls who have taken the course themselves, and are ex-pupils who have had practical experience in some military hospital. Consequently, they understand every movement perfectly and are quite capable of taking the responsibility of seven or eight girls. No partiality is shown in this matter, for a girl, instead of being allowed to go into class with her very best friend, or take instructions from her favorite demonstrator, is sent to her class by an alphabetical arrangement. The school hours are from nine o'clock until twelve, and from two in the afternoon until four. Swedish drill is the first thing on the morning programme, for the girls, on account of their strenuous work, like soldiers, have to keep in condition. Then they are given lectures in Physiology and Anatomy by professors of the University, and altogether during the day they have on an average two hours of practical work and three hours of lectures.

After six months of study has been successfully completed the Masseuses are sent to any Canadian military hospital that the authorities have selected for them, where they give their treatments in a massage room fitted up for the purpose, but those patients who are unable to go there for their treatments are given treatment in the ward.

The majority of cases the girls have to deal with are the results of gunshot wounds received from shrapnel, rifle fire, or machine-gun bullets, and these are massaged to bring back life and encourag new growth of the nerves that have been shattered. This form of treatment also prevents the wastage of muscle, improves paralysis and encourages circulation by increasing the flow of blood, either arterial or venous, also when an arm has been in splints for a time it is sometimes partially useless, but this is much improved by massage.

One soldier who was taking treatment in a Winnipeg hospital had entire paralysis of the radial nerve, causing a drop wrist, and the arm was also wasted away considerably. He had one year's massage treatment and all traces of the disability disappeared so completely that he was able to play hockey last winter. Another interesting case was that of spinal meningitis. The patient had to be brought to the hospital in a wheel chair, but after he had been given a reasonable amount of treatment he began to steadily improve until now he can run or do any amount of strenuous exercise. Cases of joint stiffening are also treated in this manner. A very remarkable case of facial paralysis, from a gunshot wound behind the ear, the bullet coming out the other side of the nose, almost destroying the facial nerve, was treated after a skin graft to massage, the result being such steady improvement that the only noticeable disfigurement was a slight scar which gave the appearance of a hare lip.

The length of treatments in most cases is half an hour. If, however, the patient's condition is more serious, forty minutes is given.

Now don't you think it is worth six months' hard plugging, and serious application to be able to help even one of those brave boys? I do. And a girl cannot help but be attractive in her white uniform, especially if she has caught the army spirit, and has cultivated a cheerful happy smile.

Next month we will discuss still another course, which is another branch of military hospital work; just read it and tell me if you do not think the girls of Canada have a grand, glorious chance to help our boys. I am sure you did not think there were so many ways to serve, did you?

QUESTIONS AND ANSWERS.

DEAREST BETTY:

I am miles away from any place where I can help in war work. I keep house for my father, and we have a small farm. Can't you possibly think

Ashamed of Corns

As People Should Be—They Are So Unnecessary

The instinct is to hide a corn. And to cover the pain with a smile. For people nowadays know that a corn is passé. And that naught but neglect can account for it.

It is like a torn gown which you fail to repair. Or a spot which you fail to remove. The fault lies in neglecting a few-minute duty—just as with a corn.

Any corn pain can be stopped in a moment, and stopped for good. Any corn can be ended quickly and completely.

All that is necessary is to apply a little Blue-jay plaster. It is done in a jiffy. It means no inconvenience.

Then a bit of scientific wax begins its gentle action. In two days, usually, the whole corn disappears. Some old, tough corns require a second application, but not often.

Can you think of a reason for paring corns and letting them continue? Or for using harsh or mussy applications? Or of clinging to any old-time method which is now taboo?

Or for suffering corns—for spoiling hours—when millions of others escape?

Can you think of a reason for not trying Blue-jay? It is a modern scientific treatment, invented by a famous chemist. It is made by a house of world-wide fame in the making of surgical dressings.

It has ended corns by the tens of millions—corns which are just like yours. It is easy and gentle and sure, as you can prove for yourself to-night.

Try Blue-jay on one corn. If it does as we say, keep it by you. On future corns apply it the moment they appear. That will mean perpetual freedom. A corn ache, after that, will be unknown to you.

Alma College

Places Great Stress Upon Physical Development

Our young men will return from the trenches after their long military training and discipline with strong physique and hardened muscles. They will be fine and fit, keen of vision and ready to attempt great things for the land they have fought for.

Anticipating this, Alma College is giving the course of physical culture special emphasis in order that Canada's young women may not be weaklings in comparison. No matter how many academic degrees they may win, unless they have a constitution which will stand hard work, their usefulness is sadly curtailed.

Not less of music, art, literature, etc., but more of physical culture than in the past. It is necessary. It is vital. Alma College provides a complete teacher's course in physical culture under one of the finest physical culture teachers in Canada. The wide lawns permit of tennis, bowling and out-of-door exercises of all kinds, and indoor basketball.

Our aim is "Sound minds in sound bodies."

For all particulars regarding courses of study, teachers, school life, write for catalogue.

Principal R. I. WARNER, M.A.,
Alma College, St. Thomas, Ont.

The Sky Coaster

By ETHEL BAIN.

A Special Story for the Girls and Boys.

"Hello! Hello!" cried Blue Jay, "First time I've seen you this season."

"Is it? Why I arrived several weeks ago, but then you see I'm more of a night bird than you are."

"A regular night-hawk," remarked Blue Jay.

"I'm not a hawk at all," retorted the other hotly.

"Well, then, why don't you change your name?"

"Couldn't if I wanted to, for you know that I've too many names already. Some people call me the night-jar, others the bull-bat; surely they can see that I'm not batlike at all, whilst still others call me the mosquito-hawk. Now they are partly right, for I eat thousands of mosquitoes, but all the same I'm not a hawk."

"Then what are you?" chattered Bushy Squirrel as he sat listening in a near-by tree.

"I'm just an ordinary bird," replied the Night-hawk, "and not a bird of prey at all. Besides, Blue Jay, I do fly about in the daylight, only you're always too busy teasing the little birds to see me. Especially in September we Night-hawks get together in flocks, and then you will see us flying quite close to the ground. The upper air is getting cooler then, and we have to seek our food nearer to the earth. People seem to mix me up with my cousin, the Whip-poor-will. Now, he is really a night bird, for he sleeps all the day in a deep, shady place in the wood, then after dark he flies about as silently as any owl, yet, unlike the owls, he eats only insects as I do. We both love mosquitoes, and, oh, how they try to escape us, but we are too quick for them."

"But say!" cried the Red Squirrel. "That booming noise you make when flying. How's that done?"

"Oh, that's what mankind calls coasting. It's lovely, and all Night-hawks enjoy it. You see, when we are away up in the sky we suddenly make a headlong dive to earth on our half-closed wings. Our wing feathers are long and stiff, and it is the wind rushing through them as we dart downward that makes the weird sound you hear. Woe betide any insects that are in my way at such times, for that's how I get a good meal." As he finished speaking, he spread his long wings and flew lightly upwards. Higher and higher he went, until Bushy Squirrel saw him as a mere speck against the red gold clouds of the sunset land. The speck disappeared, then without warning came that strange, rushing sound, and seemingly out of nowhere the Night-hawk appeared. Down, down he came, until the squirrel felt sure he would dash his brains out, but no, for before he was anywhere near to the earth, Mr. Night-hawk took a sudden turn and gaily laughed as he flew round to perch beside the wondering squirrel.

"Oh!" gasped Bushy. "You scared me stiff. You'll kill yourself one of these days. I'm sure you will. Oh!" he cried again and shuddered.

"Why, Bushy," laughed the Night-hawk, "that's nothing It's no harder for me to coast down like that than it is for you to spring from one tree-top to another. Why you do that every day, don't you?"

"Yes," answered the squirrel.

"And think nothing of it! You don't think there is any danger now, do you?"

"Danger, oh, no, because I've always done it. Why, Mother Nature taught me how to do it."

"Our great Mother taught me also how to coast through the air," said the Night-hawk. "So you see that there is no danger in it for me. Instinct, that wonderful gift of God, has taught me just when to turn in my headlong dive, and who ever heard of one of my kind being killed whilst coasting?"

"Well, I've never heard of any accidents," replied Bushy Squirrel. "You stay here such a short time. Come late and go away early."

"I couldn't live if I stayed after the first heavy frost had painted the leaves. You see, it's no use my coming with Spring, for I don't belong to her at all. I am the messenger of Summer. You know the old saying—that one swallow does not make a Summer—but everybody knows that Summer has arrived when I appear. With the first breath of Summertime, myriads of insects come to life. Insects that mankind does not see, for they live in the upper air. Now my cousin Whip-poor-will and I have our work cut out to keep down these insects, so that is why we are so seldom seen near to the ground. We fly through the air with our mouths wide open and catch thousands of insects. The first touch of frost kills them, and that is a warning to us to leave the Northland, for if we did not heed that warning we would soon starve. So, whilst Canada is getting on her snow dress, we are far away in South America, where Nature never sleeps. We enjoy our sky-coasting just as much as any school boy, only you see he has to wait for a snow-storm, and we haven't."

"Awfully interesting," murmured Bushy Squirrel; then said he, "But where do you build your nest? I've never seen one."

The Night-hawk laughed as he replied: "Nest! We don't build a nest."

"What!" exclaimed the squirrel.

"Mrs. Night-hawk just lays her two eggs in a sunny place; if in the city, on the roof of some house; if in the country, in the hollow of a rock or merely on the bare ground. Now, don't think that she is lazy, but no nest is needed. The eggs are speckled beauties, and they cannot be seen, for in color they match the dead leaves so very well. Mrs. Night-hawk is a devoted mother, and loves her babies very much. We have the happiest times teaching our birdies to coast, but there, I must hasten, for my family will be anxious if I leave them alone much longer."

"Good-bye," echoed the squirrel, as he watched him swiftly disappear and listened to his nasal cry of "peent, peent," which is very much like the meadow lark's call. Bushy sat awhile, thinking over what he had learned. Suddenly he chattered, "I've got it. I've got it."

"Got what?" asked a solemn voice.

The squirrel looked up and down and here and there, but could see nothing. As his sharp eyes noticed a tree stump, he said to himself, "That's very funny, but I'm sure that I've never seen that stump before," and his little heart beat nervously. He never moved an inch, but watched the new stump with steady eyes, then as it slowly moved and two yellow eyes shone out in the twilight, he cried, "How do, Mr. Owl. I was just wondering why Night-hawk wasn't called the sky coaster. Anyway, I'll call him by that name, and—"

"You'd better coast, too, Bushy, for it's late for you to be out, and something might get you."

The squirrel gave Mr. Owl one frightened glance, then he laughed and chattered, "Get me! Not yet, Mr. Owl," and shaking his tail in defiance, scampered out of sight.

Camouflage is what one would call the Barn Owl's trick of pulling in his feathers so close that he looks exactly like the stump of a tree, but that is one of the peculiarities which belong to these strange birds. When other birds have left us for their winter home in the Southland, the owls remain to work, and happy is the farmer who makes friends of the useful members of the owl family, for he will be repaid an hundredfold. No cat can beat a Barn Owl at catching rats and mice, therefore these especially should be encouraged. The farmer will find that, although the friendly hawks (and all hawks are not good friends of the farmers, but there are some workers amongst them, and of these you shall learn at some future time) do their part in the daytime, the Barn Owls take up their work where the hawks leave off. As soon as the darkness falls the Barn Owls awake, and then it is we hear their sweet yet weird call, a trembling whistle. This is, perhaps, the most familiar owl to us in Canada. Many owls are useful, but they deserve a special story to themselves. Would you like to pay them a visit? It will have to be at night, for they sleep during the day, and it wouldn't do to disturb them; in fact, it would be a very unkind act, for then they would be too tired to work. But there is no need for any of us to be frightened, for the fireflies will have their lanterns ready to light us on our way. The star and moon fairies will be waiting to welcome us, so just think of the lovely visit we will spend amongst our friends, won't we?

Developing a Dream

By M. A. PEASE.

The True Story of a Woman Who Has Amassed a Fortune Through Her Own Efforts.

The richest negress in New York is Mrs. C. J. Walker, who by virtue of her remarkable foresight and business acumen has created and developed one of the most unusual business enterprises known to the colored race.

Mrs. Walker's early history reads like a Penny Dreadful. She was left an orphan at seven, and was so cruelly treated by those who had undertaken to care for her that she married at fourteen to escape what was worse than slavery. She was left a widow at twenty, absolutely penniless, with a little daughter to support.

As may be imagined, Mrs. Walker had known very little schooling in her life, but she was industrious, and she toiled early and late at the washtub that her daughter might have an education. Laundry work is an order of toil that makes greater demands on the body than on the mind, and as this ambitious mother bent over her tub, her mind persistently followed one train of thought: "I must improve my position in life. How am I going to do it?"

The Dream.

Strangely enough this question was answered through what seemed to be an overwhelming catastrophe. Mrs. Walker began to lose her hair, and was threatened with baldness. The hair of the colored people develops on the corkscrew plan, and is consequently very difficult to treat. After trying all sorts of so-called remedies without success, the afflicted woman took her troubles to the Lord in prayer, and claims to have had a direct answer. In a dream a big black man appeared to her and told her that if she would mix together certain ingredients, one of which was a herb grown only in Africa, the brew when applied would abolish all her hair troubles. With child-like faith, she obtained the ingredients, mixed and applied them, and her hair grew and multiplied, and—joy of joys—became less curly. She gave some of the mixture to her friends, who were most enthusiastic about it, and as each friend had a friend, it dawned upon her that at last she had found a way to fortune.

Mrs. C. J. Walker.

At first, of course, her output and returns were small, but Mrs. Walker proved to be an excellent business woman, and soon realized that it pays to advertise. She has spent enormous sums of money in bringing before the public through the medium of the press, the wonders of her wares.

When Mrs. Walker was thoroughly convinced that she had found a Boon for Baldheads, she went to Indianapolis, where she established a factory. The work up to the present has all been done by hand, but electrical machinery is now being installed, and the quaint old mammies, with their fantastic head-dresses, dexterously mixing the "Grower," will soon be superseded by the buzz and whirr of machinery. This factory is a most shiningly clean place. The rooms in it seem to be arranged on a rising scale according to the order in which the work is carried out. In the first room are a lot of old mammies plying wooden paddles vigorously on what looks like apple-green soft butter. Another lot are at work mixing up masses of putty-colored shampoo. The next rooms, two steps higher, are where the different preparations are boxed. Two more steps up and the shipping rooms are reached. On the next floor are the offices, presided over by most haughty colored ladies with luxuriant tresses. All the latest office equipment is employed to make the business run smoothly. The manager of the business in Indianapolis is a colored lawyer, who has proved himself to be a most efficient major domo.

The Secret of Success.

"Madam" Walker is convinced that successful people differ from those who are unsuccessful chiefly in the activity of their minds, and she keeps her brains working continually on her business, notwithstanding the fact that she has already amassed a large fortune. Her income from her "Dream-mixture" is said to be nearly a quarter of a million a year. In addition to this she owns much property and has made some very careful and shrewd speculations.

Mrs. Walker's Home.

Mrs. Walker has just completed the purchase of a beautiful property in Irvington-on-the-Hudson, at a cost of over a quarter of a million dollars. There has been no expense spared in the furnishings of the house which are most luxurious and represent the styles of various of the French and Italian periods. A player organ of vast proportions, several Victrolas, a harp and a grand piano are evidences of the musical tastes of the owner. There are wonderful conservatories, libraries, and, in fact, all the things that go to make perfect the House Palatial. An Italian gardener has been imported to make the gardens a feast to the eye, and if the lawns could speak as they roll, they might not be understood, for even they are said to come from foreign fields.

The garage boasts four motor cars for "madam's" personal use, and these are in charge of a very good-looking "white" chauffeur.

Philanthropies Are Not Forgotten.

Although she is the richest negress in New York, Mrs. Walker has never forgotten her early days of struggle, and does not devote her income to riotous living. She is constantly studying how best she can advance her race, and every year sets aside a certain percentage of her income for the maintenance of an Industrial Missionary School which she has established on the Continent of Africa, and for the many scholarships which she maintains at Tuskegee and other institutions. She has devoted thousands of dollars to the colored Y.M.C.A. of Indianapolis, and her gifts to the poor are many and varied, especially at Christmas time. Her greatest regret in life is that she did not have an education when young, but she has a tutor now, and is working hard to make up for lack of previous opportunity.

Mrs. Walker insists that her preparation is not put upon the market for the purpose of straightening the kink in the hair of the colored folk, but as a remedy for scalp troubles of every kind. The preparation being of a greasy order, does straighten the hair, however, and it is this feature of the cure that appeals most strongly to the kinky-haired. One of the men in the shipping room of Madam Walker's establishment told the writer that until he had used the "Grower" he had never been able to part his hair, but had always been obliged to shave a parting. Now he is a most fashionable person with straight shining hair brushed smoothly back from his dusky forehead, and even boasts a "widow's peak."

As may be imagined, there are many other preparations on the market which claim to be quite as beneficial as the one which Mrs. Walker has concocted, but she seems to be the Queen in this particular hive of industry, perhaps because she was one of the first to make the use of the "comb" possible to her race.

(Continued on page 30.)

The difference Gold Dust makes!

One picture:

A big stack of dishes to wash. A long face and a sigh of resignation. "Oh dear!—I wish these dishes were all washed and put away in the pantry!"

Another picture:

A stack of dishes—*and* a package of Gold Dust. A smile on her face, now, as she says: "It will take only a few minutes to get these dishes out of the way—with Gold Dust to help me."

HOW does Gold Dust "help"? By dissolving the grease.

Try a spoonful of Gold Dust in your very next dishpan of water. See what a difference it makes! See how easily the grease slips off the dishes!

Gold Dust is a wonderful help in housecleaning, too. A good rule is this: Use Gold Dust for all dirt that you can't sweep up or brush off.

Ask your grocer for Gold Dust—and make sure it really *is* Gold Dust he sends you. Large and small packages.

FRECKLES

Now Is the Time to Get Rid of These Ugly Spots

There's no longer the slightest need of feeling ashamed of your freckles, as Othine — double strength—is guaranteed to remove these homely spots.

Simply get an ounce of Othine—double strength—from your druggist, and apply a little of it night and morning and you should soon see that even the worst freckles have begun to disappear, while the lighter ones have vanished entirely. It is seldom that more than one ounce is needed to completely clear the skin and gain a beautiful clear complexion.

Be sure to ask for the double strength Othine, as this is sold under guarantee of money back if it fails to remove freckles.

A Patriotic Puzzle For July

By TOM WOOD.

In the conversations of the people represented in the pictures numbers 1, 2, 3 and 4, respectively, may be found the names of towns or cities as indicated beneath.

Numbers 5 and 6 represent "square words."

Each small picture represents one of the four words comprising a "square." If guessed correctly, when written down, the words read the same from top to bottom, and from left to right.

How many words can you think of which can be made from "Patriotic"—using only the letters which are in this word? Send them in with your answer. No proper names accepted.

Two prizes will be given, first one dollar and fifty cents, and second one dollar, for the best solutions, judged according to neatness and accuracy.

All are eligible to compete.

Answers must be received before July 31st to be included.

THE CORRECT SOLUTION OF THE MAY PUZZLE.

1. Stratford.
2. Canada.
3. Manitoba.
4. London.

ROSE	BIRD
OPAL	IDEA
SACK	RENT
ELKS	DATE

The following words may be made out of "Nothing":

nig	nog	oh	thio	ting	hin	hoing	hoy	it	git
nigh	noint	oint	tho	to	hing	hoit	I	io	gith
night	not	on	thong	tog	hint	hong	in	ion	go
ninth	non	onto	tig	ton	hit	honing	ingot	ghi	got
nit	noting	thin	tigh	tong	ho	hont	inn	gin	Goth
no	O	thing	tin	toning	hog	hot	into		

The first prize is won by Mrs. G. L. Terry, 171 Joseph Street, Chatham, Ont., who submitted a correct solution and 45 words made from "Nothing."

The second prize goes to Mrs. W. G. Alexander Adams, 188 Dougall Avenue, Windsor, who also had a correct solution and 42 words made from "Nothing."

All words accepted appear in Webster's Dictionary.

Address all answers to puzzle: The Puzzle Department, "Canadian Home Journal," 71 Richmond Street West, Toronto.

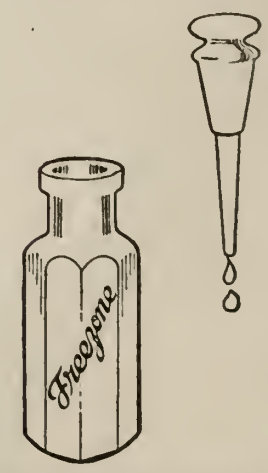
Tires $500 Apiece!

TIRES are selling at fabulous figures in Europe. War conditions may make them go almost as high here. You owe it to the country and to yourself to make your present set give the greatest possible mileage.

HASSLER
PATENTED
Shock Absorber
For Ford Cars

Hassler Shock Absorbers save tires because they support the weight of the car. When the car strikes a rut, they gently compress and absorb the jolt instead of forcing the tires to lift the car. The increased mileage from one set of casings pays for them. Hassler Shock Absorbers make your Ford ride as easily as a $2,000 limousine. They save gasoline, reduce up-keep cost one-third, and increase the resale value of your car. 300,000 Ford Owners recognize their economic necessity.

10-Day Free Trial Offer



Phone, write or call for FREE TRIAL BLANK and we will have a set of Hasslers put on your Ford without a cent of expense to you. Try them 10 days. Then, if you are willing to do without them, they will be taken off without charge. Don't ride without Hasslers simply because someone discourages you from trying them. Accept this offer and see for yourself. Over 300,000 sets in use. Do it now.

ROBERT H. HASSLER, Limited
Lock Drawer H.C. 7 HAMILTON, ONT., CAN.

CORNS LIFT OUT! COSTS FEW CENTS

Drops of magic! Doesn't hurt one bit! Drop a little Freezone on a touchy corn, instantly that corn stops hurting, then you lift it off with the fingers. No pain! Try it!

Why wait? Your druggist sells a tiny bottle of Freezone for a few cents, sufficient to rid your feet of every hard corn, soft corn, or corn between the toes, and calluses, without soreness or irritation. Freezone is the much talked of discovery of the Cincinnati genius.

Thought Seeds that are Being Cultivated By Parents and Teachers

By GRACE JOHNSTON,

Recording Secretary for the Toronto Home and School Council.

Have You a Home and School Club in Your Town or Community? If Not, Start One Now. It Will Work Wonders.

Do you know the man or woman who teaches your child at school? The greater part of a child's day is spent away from the home, so naturally as mother or as father you are interested in the surroundings, the people and the ideals that are moulding your child's character. Are these always ideal? If not, then the next question is, "What are you going to do about it?"

It is surprising how much practical help has been found in talking things over with men and women who have spent much time and thought on these very subjects. The child and his education has become the most important question of the present day, chiefly because of the growing responsibility that must be faced by those who are to take the place of Canada's sons and daughters who are willingly paying the price of freedom. Consequently men and women are making a greater effort to unite forces and to work together.

In connection with twenty-two of the schools in Toronto, "Home and School Clubs" have been formed and the parents and the teachers in these clubs have affiliated with what is known as The Toronto Home and School Council. This Council was organized two years ago for the purpose of studying educational problems and issues, and strengthening public interest in the development of the individual boy and the individual girl.

Good soil for developing educational thought-seeds can be found in no better place than in a club in your own school. There parents become acquainted with the teachers and the teachers learn to understand the parents and through them the children in the class rooms. It would be a pity, would it not, if the number of misunderstood children increased?

It is just possible that the school equipment is not up to date and that the stupid school-room cannot compete with the swimming hole or the baseball field. Result—truancy. The problem of truancy has been one of the big thoughts of the year and an effort was made to have some changes brought about in the Truancy Act. As the law now stands truant officers are controlled by the police department. A bill was introduced at the last session of Parliament to amend the Truancy Act so that School Attendance Officers would be appointed by the Board of Education. It is thought that suitable women as well as capable men should be appointed for the work which should be of a much more helpful nature than it has been in the past.

The bill to amend the Truancy Act was defeated. This fact proves the necessity of creating public opinion along any line of reform, but particularly where child welfare is concerned. It is strange, but true, that some of the members of Parliament are much better informed about the rearing and care of animals than they are about the needs of children. The truancy problem is still being studied by the Toronto Home and School Council, and an effort is being made to ensure better results when the bill to amend the Truancy Act is again brought before the House of Parliament.

Neither the child nor the parents may be to blame for the irregular school attendance, for there are many conditions that need careful consideration so that justice may be done to the home on the one hand, and to the school on the other. True, we want all Canadian children to go to school, but what they learn there should be practical if it is to meet the needs of the present day and also the needs of the next few years.

"One of our soldiers on the battlefield has to-day seven times a better chance of living than has a new born babe in this country." This was the enlightening statement made by a very prominent educationist at one of the open meetings of The Toronto Home and School Council. Just face that fact and all that it involves. Is it not time that "The Care and Feeding of Infants" be one of the subjects taught to our young girls? Why do we leave the most vital things of life to chance? Parents and teachers together might with advantage study questions of Hygiene so that they may tell wisely and truthfully Life's story about the sacredness of each body, mind and soul that has been entrusted to their care.

The most up-to-date schools are equipped for teaching Household Science and Manual Training, but one of our most progressive Home and School Clubs is taking no risk in the matter of a good building. The club is organized and the members are taking steps to ensure the erection of a school building in accordance with the most progressive and up-to-date ideals in education. It is likely to be a year or more before this school is built, but in the meantime thought-seeds are alive and active, and there is no reason why the new building should not be one of which all interested will be proud.

Time and again during the past year letters have come from different parts of Ontario asking about the work of the Home and School Council. The president of the Council, Mrs. A. C. Courtice, has accepted several invitations to speak in towns and cities where there was a desire to organize clubs. The Bureau of Education at Washington, D.C., asked for and has received copies of the constitution and an outline of the work of the Council.

Last Easter when the Ontario Teachers met in convention at the University of Toronto, The Home and School Council had an opportunity of speaking before three of the sections. Reports were given from clubs working in an endless variety of localities and under all sorts of conditions. Occasionally when a principal of a school was consulted about the advisability of starting a club in connection with his school he would not be enthusiastic about the matter. In such cases the teachers or the parents would take the initiative and the success of the club soon convinced all concerned that there was work in that very district that needed the combined effort of parents and teachers.

When you get to the core of life, human nature always responds to the highest and the best, and, no matter whether your school is in the country, the town or the city, a well organized club will help to sustain a healthy community. After all a child in the home is a child of the community, and as such should realize that he has certain responsibilities to those outside his own family circle. In the same way individual clubs in the towns and in the cities of Ontario have a duty to one another. It was with this thought in mind that one speaker advocated a Provincial Home and School Organization. It was thought that such an organization could exert a very helpful influence in the work of extending ideals and making these ideals a power in the life of Canadian boys and girls. Then when thought-seeds had grown, and time for action had arrived how much easier it would be to work through united organizations than it would be if there were not unity among the parents and the teachers of Ontario.

Not only the parents and the children receive inspiration from the Home and School Clubs, the teachers, too, derive many benefits from them. If, in the past, we imagined that a few hundred dollars paid for a teacher's services, we have now awakened to the fact that his or her service to the country can never be estimated in terms of money. A strong, inspiring personality combined with good common sense and an optimistic outlook on life has unlimited power, and when a teacher is endowed with these qualities the fact should be recognized. That teacher should be paid a sufficiently large salary so that, apart altogether from the fact of earning it (which she assuredly does), the people who pay it may have a wholesome respect for the teaching profession. Naturally, we are inclined to value what we have in terms of what we pay for it. May this fact not be responsible for the lack of interest sometimes evidenced on the part of parents where teachers are concerned?

(*Continued on page* 46.)

Getting Together

Though the tongues of men be different, the heart is essentially the same. In a world torn with war and economic strife, what need is greater than that of "getting together"?

Today women are working as never before. Eager for political, economic and social reform, they are mobilizing the forces of good. Cognizant of her own potentiality, woman desires to use her capacities intelligently and well, wishes to learn of the achievements of others, and of the gradual leveling of national barriers before a growing universal fellowship.

The Christian Science Monitor, with a world-wide newsgathering service and an international circulation, presents the important activities of women everywhere. Education, the arts, household, fashions, and advertising are also valuable assets to its women readers.

The Christian Science Monitor, 3c a copy, is on general sale throughout the world at news stands, hotels and Christian Science reading-rooms. A monthly trial subscription by mail anywhere in the world for 75c; a sample copy on request.

The Pandora's Top

Three-quarters of your rangework is done on the top of the range.

So the Pandora Range top has been designed to perform as many duties, simultaneously, as it is possible for a range to do.

The Pandora flue system gives you five holes in the top upon which you can boil. The six-hole top is made with two interchangeable sections.

On wash day this enables you to set the boiler on the far side and cook dinner on three front holes.

There is a reducing cover for smaller sized pots.

Also a check cover to hold the fire in at night.

And then when the work is cleared away, by one gentle rub with a cloth you instantly restore the burnished brilliance of the top—less work by half than even the "lick and a promise" you used to give the old style, rough and rattling cast iron covers that would not shine without black-lead and a backache.

"The Magic of the Pandora"—Booklet Free

This is one of the many features of the Pandora Range described in "The Magic of the Pandora," a little booklet full of information that every woman will want before she buys a range. Write for it to the nearest McClary Branch.

Stuffed Vegetables in Place of Meat

By MARION HARRIS NEIL,
Author of "Salads, Sandwiches and Chafing Dish Recipes."

Substitutes are the Housewife's Need To-day.

At this season of the year vegetables stuffed with a forcemeat of some sort can be used in lieu of meat. Among the vegetables that respond well in food value to the usual meat "piece de resistance" are cabbage, tomatoes, egg plant, onions and peppers. There are no hard and fast rules for making the forcemeats, which may depend on materials on hand and individual preferences in seasonings.

Egg Plant Stuffed and Baked.—The richly colored egg plant is now on the market, and is as fresh and perfect as is to be found at any time of the year. One vegetable is enough for a good-sized family. Do not attempt to cook egg plant in any way without first removing its acridity by boiling in plenty of boiling salted water for twenty minutes, which draws out the injurious principle, solania. To stuff, cut open the egg plant lengthwise, scoop out the centre, add one cupful of fine breadcrumbs or cornmeal, one-half cupful of chopped cooked meat or chicken, two tablespoonfuls of butter substitute, salt and pepper to taste, and one-half cupful of milk. Fill the egg plant shells with the mixture, cover with breadcrumbs, dot with butter substitute, and bake in a moderate oven for forty-five minutes. Serve hot.

Another Method.—Scoop out centre from egg plant after being boiled. Add to pulp one-half teaspoonful of salt, one-fourth teaspoonful of pepper, one tablespoonful of chopped onion, one cupful of chopped tomatoes and one-half cupful of breadcrumbs. Fill into the shells, sprinkle with breadcrumbs, dot with butter substitute, and bake in a moderate oven for fifty minutes, basting frequently.

Stuffed Summer Squash.—Cut the top of a large squash smoothly across, and scrape out the inside, add to this one cupful of fine breadcrumbs or one cupful of cooked rice or barley, one small onion chopped fine, two tablespoonfuls of butter substitute, one-half teaspoonful of salt, one-fourth teaspoonful of pepper and one-half cupful of milk. Fill the squash with this mixture, sprinkle a few breadcrumbs over the top, and bake slowly until tender.

Stuffed Peppers.—Cut off stem end and remove seeds from three green or red peppers. Mix one can of corn with one teaspoonful of salt, one-half teaspoonful of pepper, one tablespoonful of chopped parsley and one teaspoonful of onion juice. Fill into peppers, arrange in greased baking dish, add one-half cupful of boiling water, and bake for thirty minutes. Or, cook one cupful of rice or macaroni in boiling salted water until tender, drain and add one small onion chopped, two tablespoonfuls of melted butter substitute, two tablespoonfuls of chopped red peppers, one-half teaspoonful of salt and one-fourth teaspoonful of pepper and fill into prepared peppers. Bake until tender, about thirty minutes. Or, mix one cupful of tomato pulp with one-half cupful of breadcrumbs, add one cupful of stock or water, two tablespoonfuls of butter substitute, three tablespoonfuls of corn flour, one-half teaspoonful of salt, one-fourth teaspoonful of pepper and one teaspoonful of onion juice. Fill into peppers and bake until ready. Serve hot.

Stuffed Cabbage.—Choose a firm, round cabbage of medium size. Wash it well, removing any discolored leaves and the hard end of the stalk. Then put the cabbage into a bowl, cover it with boiling water, put a plate on the top and allow it to stand for one hour to soften. Meanwhile prepare the stuffing. Chop four tablespoonfuls of cooked chicken or left-over meat, add three tablespoonfuls of breadcrumbs, one teaspoonful of salt and one-half teaspoonful of pepper. Pour in one tablespoonful of melted butter substitute and bind all into a stiffish paste with milk. Pull the leaves of the cabbage apart, put a spoonful of the stuffing in the centre and the remainder between the leaves. Then wrap the cabbage in a piece of greased paper, tie it with string and place it in a baking dish with two cupfuls of stock or water poured round. Bake in a steady oven for one hour, basting occasionally with the stock. When ready, serve the cabbage on a hot dish, removing the paper and string, boil down the stock until there is just sufficient to serve as gravy, remove any grease from the top and pour it round. Chopped nut meats may be used in place of the chicken or meat. Sufficient for five persons.

Stuffed Carrots.—Wash and scrape ten carrots, put them into a saucepan of boiling salted water, and parboil them. Take out and drain well, then allow to cool, and hollow out the centre of each. Cook sufficient beans to make one cupful of puree. Melt one tablespoonful of butter substitute in a saucepan, put in the bean mixture, stir until mixed, season with salt and pepper, and stir in two tablespoonfuls of milk or the beaten yolk of one egg. Mix thoroughly, and allow to cool. Put this puree into a forcing bag with tube, and fill the centres of the carrots with it. Melt four tablespoonfuls of butter substitute in a saucepan, put in the stuffed carrots, cover with the lid of the pan, and cook gently for five minutes, then add one cupful of water or gravy, and simmer until the carrots are soft but not broken. Serve hot with the gravy poured round.

Stuffed Potatoes.—Choose five or six medium-sized and evenly shaped potatoes. Wash and scrub them well and dry them. Prick the skins, place the potatoes on a tin in a moderate oven and bake them until tender, which can be ascertained by pressing them gently between the finger and the thumb. When ready, cut a piece off each with a sharp knife and scoop out all the inside, being careful not to damage the skins. Put two tablespoonfuls of butter substitute into a saucepan, add three tablespoonfuls of milk and allow to heat over the fire, sieve the potato and add it to them. Then season to taste with salt and pepper, and beat well until perfectly smooth. Now remove the saucepan from the fire, stir in the yolk of one egg and lastly the white beaten to a stiff froth. Refill the potato skins with this mixture and sprinkle the tops with grated cheese. Place the potatoes on a baking tin and bake in a moderate oven for fifteen minutes. Serve at once.

Or scoop out the centres from baked potatoes and mash the pulp with four tablespoonfuls of chopped cold meat, tongue or chicken, add salt and pepper to taste and one tablespoonful of chopped parsley, then add two tablespoonfuls of left-over sauce or milk. Refill the skins with this mixture, piling it high in the centre. Sprinkle a few breadcrumbs over and put a small piece of butter substitute on the top of each. Return the potatoes to the oven and bake them until thoroughly hot. Serve hot. Grated cheese or finely flaked cooked fish may be used instead of meat.

Stuffed Beets.—Peel three large cooked beets, cut them into slices about one and one-half inches in thickness; cut these slices into rounds with a fluted cutter, two inches in diameter, take the centre out of each with a smaller cutter, in this way making little cases of the beets. Take the whitest part of one small head of celery, wash it thoroughly, and then cut it into shreds, place these in a bowl, and mix with one tablespoonful of mayonnaise dressing. Fill into the centre of the case, piling it up above the beet. Sprinkle a little chopped parsley on the top of each and serve.

Stuffed Onions.—Choose six medium-sized onions, peel them, trim the root, but do not cut if off or the onions will fall apart; parboil them for fifteen minutes, drain well, and scoop out some of the centre of each, fill with left-over cooked meat. Cut one turnip and one carrot into slices; put two tablespoonfuls of butter substitute at the bottom of a saucepan, on that place the carrot and turnip, add one cupful of stock or water, stand the stuffed onions in this, cover with the lid of the pan, and cook in a moderate oven for one hour. Serve hot. Nut meats may be used instead of the meat. This makes a very good supper or luncheon dish.

Another Method.—Boil and drain onions, scoop out the centres, and fill with breadcrumbs seasoned with salt, pepper and grated cheese, and moisten with a little milk. Wrap each onion in greased paper, twist the ends; put in a greased pan, and bake for one hour. Remove the paper and serve hot.

Sparks From the Food Board Anvil

By ISHBEL M. ROSS,
Educational Division, Canada Food Board.

Observe the Food Regulations—Go Further If You Will, But Never Fall Short.

Even if the women of Canada hotly deny the imputation, the fact remains that there are still plenty of Miss Fluffy Ruffles and her genus abroad. The masculine idlers are now being rounded up. It isn't likely that anything as drastic will be done where women are concerned, but the national registration which took place last month will go far to show how many feminine slackers we have in the country. To every able-bodied woman who is idle, or who is doing merely decorative work, or who thinks she is serving her country by a few hours of Red Cross work, the call comes for genuine sacrifice, for effort that is essential.

Knitting must go on, but there is a very great deal of camouflage knitting. It is work that can be done by older women and in odd times by their daughters. But in the main, young, strong women must do something that is going to count—something that spells an increased supply of foodstuffs.

* * * * * * *

Canada must produce 250,000,000 more bushels of wheat in 1918 than in 1917. Canada must produce at least 1,000,000 more hogs in 1918 than in 1917, and as many more as possible. Canada must eat less white bread, less sugar, less pastry, less fats.

In crystallized form this is a stirring challenge to the women of the country. It is July and the precious grain is growing on the stalk. The war gardens are rich with promise. Work lies ahead — no end of work. Sir Robert Borden has said that the men must be taken, for no production would avail if the sorely-tried lines in Flanders were to break.

What then? The boy power of the country has been marshalled, and already the Soldiers of the Soil are holding the trenches in the second line of defence—the food production line.

The women are getting into it—but not half fast enough. *There is no time to be lost.* Since August, 1914, 4,750,000 persons have died of starvation in Europe, as compared with 4,250,000 who have been killed in action. Right now there are 9,000,000 people in Belgium and Northern France without bread. And it is getting worse all the time!

The women of Canada *must* help to divert the demand for wheat foods, beef and bacon, to a demand for cereals, potatoes, vegetables and fish.

The women of Canada must do more. They must *produce!* Forty million men are on active service at the front. Ten million men are on war duty behind the lines. Forty million men are engaged in the war industries at home. These 90,000,000 men are not producing food. These 90,000,000 men are consuming food and must be fed.

* * * * * * *

Not a scrap of energy must be wasted in bothering about trivialities. There is no time for criticism, for snarling and carping. Work with a cheerful spirit and a courageous heart. That is how the men fight. It is how we, who cannot fight, must live. The conduct of every brave woman brings victory nearer just as surely as does the gallantry of our heroes overseas.

Observe the food regulations. Go further if you will, but never fall short of them. They may be issued for public institutions. They are meant equally for *you!*

Never let yourself forget the need of Europe. Think of it every day—think of it with a sense of responsibility. then, inevitably, you will save, you will sacrifice, you will do your plain duty.

The war is bringing about many big changes in the world of trade. Some of them, almost imperceptible as yet, are going to revolutionize the existing state of affairs and have a direct bearing on the woman in the home.

While she has undoubtedly heard a good deal of talk about the licensing of the various trades by the Canada Food Board, it is questionable if this has conveyed very much to her or excited more than passing interest because she did not see any particular relationship between her grocer's license and the goods he sells her every day.

As a matter of fact, the licensing of the trades of Canada is one of the most significant features of food control, and its effects will be more far-reaching than is yet realized. The great majority of Canadian citizens engaged in supplying food to the people are both honest and patriotic. They have been quick to come forward and pledge support. Wherever there is an unscrupulous dealer, however, licensing catches him.

The trades are rapidly being lined up. Over a hundred thousand application forms have already gone out from the Licensing Department of the Canada Food Board. Butchers, bakers, feed merchants, fruit and vegetable dealers, fish dealers, confectioners, produce dealers and public eating houses are all coming under license. Every licensee can be made, upon request, to disclose his account books for the year. In this way undue profits can be kept down.

The fact that licensing keeps down profiteering will appeal to every woman. The actual fee for the license is merely nominal. If a man is found to be making undue profits, his license will be cancelled. No license, no business! There is no means of escape, for the system is thorough and extends to every dealer. Licensing is really a source of protection to the honest tradesman, and at the same time should mean much to the woman in the home.

The grocer has to make monthly returns to the Canada Food Board. Naturally he will be more careful than he has ever been in the past.

* * * * * * *

Different methods are employed for the export trade. Every consignee wishing to send foodstuffs out of the country has to get a permit from the Canada Food Board. These permits are being issued at the rate of seventy-five or so per day. They preclude the possibility of a scrap of food reaching enemy sources, for the destination of everything has to be defined and the Board reserves the right to refuse permits if they deem this course advisable.

Thus it will be seen that the Canada Food Board has its finger on the pulse of the trade channels of Canada. Nothing can slip through without their knowledge. They will be wide awake all the time to what is going on. Any woman can see the immense advantage to her of this kind of supervision.

The hot weather is here. During the hottest days of the summer it is important that the workers—and it is taken for granted that in these days everyone, man, woman and child, is a worker—keep in condition to do their bit without a pause. Rain or shine, hot or cold, the boys in France are working. The war workers here at home must do the same.

For reasons of health, as well as reasons of patriotism, fresh fish is strongly to be recommended as a desirable summer food.

Fish is more easily digested than meat.

Fish is less heating than meat.

Fish left-overs form an excellent basis for salads and other cold dishes.

SUFFICIENT SUGAR FOR CANNING.

Housekeepers who are anxious about their preserves for next winter may take comfort. The Food Board announces that there will be sufficient sugar in the country for the preserving and canning season and that the maximum fruit and vegetable crops that can be produced in this country will be taken care of, so far as the sugar supply is concerned. To make sure of this however, strict conservation will be necessary in the meantime.

Junket
MADE with MILK
ICE CREAM

Use of a Junket Tablet in making ice cream means that you can use more milk and less cream and yet produce a more "creamy" ice cream than ever before; and it will be more wholesome and digestible.
Junket Ice Cream is quickly made and has a smoother, more velvety texture than ordinary ice cream.
A simple trial will please you immensely. You will be truly delighted to be able to make better cream at lower cost. Children can eat all they want of Junket Ice Cream—just as they can of Junket desserts.
Interesting Recipe Booklet sent free. For 3c we will send samples, enough for 2 quarts of ice cream or 12 dishes of Junket. Full package sent for 12c.

Sold by Grocers and Druggists.

Chr. Hansen's Canadian Laboratory,
Dept. C, Toronto, Canada.

"Nesnah" is Junket prepared with sugar and in 4 flavors. Made in a jiffy. Try a package—10c.

Nothing to do but put in the dirty clothes and take them out clean. Think how many other things *you* can be doing meanwhile! Here is a

"Home" Water-Motor Washer

Attach it to the faucet, turn on water, and the machine washes the clothes — without help — without any attention. Water and suds, that's all—and great piles of dirty clothes will melt away as though by magic, till wash-day becomes the lightest working day in your week.

that makes special appeal to thrifty housekeepers—no gasoline to buy or current to use—just plain, cheap water! And it will clean the clothes just as carefully as you would do them by hand. Saves work—saves time—saves backache—saves the clothes! Ask your dealer.

MAXWELLS LIMITED - Dept. 'I' St. Marys, Ontario 39

Keep Your Skin Lovely

It is not difficult. By using our preparations which counteract the causes of defective skin, the beautiful, clear, freshness of youth may be restored. Sufferers from Pimples, Blackheads, Eczema, Wrinkles, "Crow's Feet," Blotches, etc., should consult with us at once and secure our free advice as to the proper preparations to use.

Princess Complexion Purifier	$1.50
Princess Skin Food	1.50

The Y.M.C.A. Replies to Criticisms

Ridiculously Untrue Stories are Being Circulated in Some Localities, Which Unthinking People Believe, Thereby Impeding the Valuable Work of this Splendid Organization.

I was told to-day that a man whose son was at the front received a letter from his boy, in which he said he had just come safely out of an engagement and wished to have a letter posted immediately to his father. He wrote the letter, took it to a Y.M.C.A. and asked them to mail it.

"Have you a stamp?" asked the secretary.

"No," replied the soldier.

"Have you any money?"

"No," again from the unfortunate Tommy.

"Then," said the heartless Y.M.C.A. man, "I cannot post it for you."

This is story No. 1, going the rounds at the present time. Whoever invented it must have done so with a sincere desire to hurt the work of the Y.M.C.A. Or it may be a direct piece of German propaganda, to poison the minds of Canadians and retard the work of an organization which is fast becoming a gigantic obstacle on the enemy's road to victory.

A moment's consideration convinces one of the absolute falsehood of such a statement. All letters from our soldiers in France are posted by them unstamped. They need neither stamps nor money to send their letters home.

Story No. 2 is quite as foolish as the former. Doubtless it has been told to you. It is as follows:

A soldier bought a pair of socks from the Y.M.C.A., and in the toe found a little note from the lady who had knitted and donated them, asking the recipient to communicate with her. She was accordingly very much shocked to learn that the poor soldier had been forced to pay for his socks.

It is a well known fact that the Y.M.C.A. has nothing whatever to do with supplying socks to the soldiers. They neither sell nor donate socks—this being the work of the Red Cross and the Canadian War Contingent Association.

Accusations of G. W. V.'s.

More serious, however, were the accusations of the Great War Veterans recently when they undertook to criticize the work of the Y.M.C.A. So untrue were their statements that the National Council of the Y.M.C.A. has issued the following:

"In view of recent criticisms and questions from various sources, the National Executive Committee of the Y.M.C.A. wish to present to the public the following general statements of fact in regard to its services to the soldiers, and to give out at the same time a statement recently made by General Currie, which will enable the public to judge of the value of the Y.M.C.A. work in France.

Purpose of Y.M.C.A. Canteens.

"The Y.M.C.A. is in the canteen business solely as a medium of service to the soldier, and devotes every dollar of net profit made to that service. There is not, nor ever has been, a dollar made in its military canteen which has been used in any other way than in its service to the soldiers. The total cost of maintaining its service greatly exceeds the amount of net profits from its canteens, and the balance is met from the subscription funds raised in Canada.

"During the year 1917 the total cost of maintaining the Y.M.C.A. service to the Canadian soldiers in England and France, including very large items for free drinks, cinemas and concerts, athletic supplies, writing materials, libraries, etc., was two and a half times as much as the net profits from its canteens. In other words, for every dollar of net profit made in its canteens the Y.M.C.A. has had to secure by subscriptions another dollar and a half to meet the requirements of its entire service overseas.

"The prices charged in the canteens are governed by the military authorities, and the Y.M.C.A. is not allowed to undersell the Expeditionary Force canteens in France.

Financial Statements.

"In France the books of the Y.M.C.A. are checked monthly, in so far as all canteen operations are concerned, by the army field cashiers. These, as well as the accounts in England, are audited regularly by a chartered accountant, and these audited statements, now issued every six months, are sent to all the officers commanding, and are posted in the Y.M.C.A. huts for the information of the soldiers. In addition to this, a combined English and French audited statement is issued every six months.

"A complete audited statement, including overseas operations for 1917, which will be published in Canada, has been delayed by the recent military operations, which have prevented the auditor getting the necessary permission to cross to France.

"A military board of three officers appointed by Lieut.-Gen. Sir Arthur Currie, conducted an examination of the whole work of the Y.M.C.A. in the Canadian Corps in France during the month of March, and reported that its financial operations were satisfactory, and that its business was being efficiently conducted.

Specific Criticisms Answered.

"It is scarcely necessary for the Y.M.C.A. to affirm that it has never sold in its canteens articles sent as gifts to the soldiers. It is impossible for such a thing to happen as a Y.M.C.A. transaction.

"In connection with Y.M.C.A. libraries in France, a small deposit is asked when a book is taken out, and refunded when it is returned. This is done to ensure the return of the books for further circulation. No charge is made for the loan of a book.

General Currie's Testimony.

"No one is in a better position than Lieut.-Gen. Sir Arthur Currie to speak as to whether the Y.M.C.A. is a genuine benefaction and service to the Canadian army. The following is a statement made by him to a gathering of Canadian Y.M.C.A. officers in France, at which the general secretary for Canada was present, on March 11th, 1918.

" 'One of the most important factors in winning a fight is the morale of the troops, and it is in helping to raise and maintain the morale at a high level that you have done so much. Canadians have the well-merited reputation of being good soldiers, and that is because their morale is good. This is only possible because they are well looked after, and that is where the Y.M.C.A. steps in and renders invaluable assistance by providing them with happiness and comfort. The men forget the sights of war, and seem to get a fresh start through your programmes, your concerts, your sports and your canteens. Your literature, music and concerts afford them the greatest possible pleasure and relaxation, your sports keep them happy and fit, and your canteens provide them with things they cannot get elsewhere at such reasonable rates.

Great Help in Beating Huns.

" 'You are a wonderful help to us in beating the Boche. It is not necessary for me to say this. It is apparent to all in the corps. But this year we are going to need your help more than ever. Heretofore, the Canadians have always been pushing forward and winning, and that is a great stimulus to the men. This year we may be on the defensive, and that will require a maximum of moral courage and strength. If we let the morale sag, our efficiency will topple over.

" 'I believe the authorities should recognize the extremely valuable factor the Y.M.C.A. is in winning battles, and I think you ought to have the proper personnel and equipment necessary to carry on your work.

" 'In conclusion, I can only repeat what I said a few minutes ago—that the need of the work and the influence of the Y.M.C.A. are greater now than ever before, and, if such a thing be possible, you must all work even harder than in the past, though I do not see how, with the men and material you have, you can do more than you are doing. But if you can, do so. We need it, and we appreciate it.' "

It is to be regretted that the Great War Veterans, who have at one time been benefited by the Y.M.C.A., should now speak so bitterly against this organization. The Y.M.C.A. has proven beyond question that it is doing a magnificent work for our soldiers, and the public will have no sympathy with an individual or association which persists in unjust criticism of its work.

The War-Time Holiday

By KATHLEEN McKILLIGAN.

Two Real Vacations Which Cost Next to Nothing.

As this fourth war-time summer, with all its changed conditions, approaches we hear again and again the plaint: "I'm not taking a holiday this year. Living is so high it seems as if we really can't afford it"; or, "It seems wrong to spend money on a holiday when there is so much need in the world." Too often comes the addition: "I need a holiday, too, if only I could manage it."

This last for most of us is quite too true. Life has taken on an added strain, an extra burden of anxiety of which, since we have carried it now for so long, we are scarcely conscious. It is so much a part of our lives that we can scarcely imagine existence without it. Yet this very acquiescence is but a proof of our need of relaxation. Let us by no means drop these precious holidays. They give us a measure of preparedness for the future we must face; to a certain extent they counteract the wear and worry of the past. Some sort of holiday, a genuine, restful, joy-filled, health-giving holiday, is the right of every worker. Nor need it prove the expensive luxury which so often we have found it heretofore. In our long vista of holiday summers two of the happiest were enjoyed at an expense so slight that they might be at the command of the most straightened of purses. Some such holiday I am sure everyone could accomplish, and we at least found that they vie in happiness with our more pretentious summers.

The first came to us one summer when mother was in the Western States. We girls decided to forego our usual holiday, and instead planned a stay-at-home time that proved even better than our anticipations. We lived in a big house in a small town, a house that meant plenty of work for us all, for we had no maid that year, and a slow, sleepy country town that offered little of what is generally accepted as a good time. But we were determined to get just as much of a holiday as we could plan, and mother's train was scarcely an hour on its way westward when we three girls who were left began putting our scheme into operation.

We went through the whole house, pulling the furniture into the middle of the room and covering it just as we always did for a summer's absence. As we finished each room we turned the key in the lock. The halls, the summer kitchen with its coal-oil stove, and one large bedroom which we all shared, were the only rooms which we left open. From these we removed every rug, curtain, drape and ornament, and every piece of unnecessary furniture. The house had shutters, so we dispensed with both the window blinds and windows in our own room. In the daytime the shutters kept out flies and moths, but at night they were flung wide open to welcome the fresh outdoor air. The house had two wide verandahs, and in the grounds were several large trees and groups of shrubs which offered abundance of shade. Of these sheltered nooks the one which we used most, and which we had dubbed the "cubby hole," was a large space cut out in the heart of a group of Norway spruce. Even a few feet from it one might well be unaware of its existence, but once through the narrow opening between the thick branches one found oneself in a circular room, perhaps twelve feet in diameter, roofed with sky and raftered with spruce boughs and carpeted with green-brown needles from the trees above. Here there were hammocks, a small table and a chair or two. This was our drawing-room. Tables and chairs and rugs on the verandahs completed our house-furnishings.

Our programme varied little with the days. There was always some work to do, for we had gardens and lawn to care for, and our own washing and ironing to do. The cooking was never more than we could do easily with our coal-oil stove and oven. We did not prepare very "fussy" meals, even when we had company, but I think we were never more hungry nor enjoyed anything better. Besides our regular work we preserved about forty-five quarts of fruit, and picked most of it, too, so we hadn't any chance to be really idle. Our day's plan was as follows: We were up fairly early, and breakfast was served on a table under the trees on the lawn, or if it was wet on either verandah.

We were adepts at transporting huge tray-loads, everything at once, and learned every trick of cosy, hay-box, and hot-water bottle or pail to keep things warm. We found a boy's small express wagon very useful for transporting meals from kitchen to lawn. The bottom could be filled, and then a large tray placed over it resting on the sides. We usually managed with one such trip. Dishes were washed out of doors after the table was cleared, and were carefully stacked in the wagon and covered or packed in the picnic basket ready for the next move. For the most part our mornings were busy; if there was spare time it was usually spent in the hammock with a book or writing letters in the "cubby hole." Dinner was at mid-day, and the heaviest rain never drove us nearer to indoors than the sheltered corner of the verandah.

After dinner we slept or read or followed our own sweet will until the noon heat was over, then packed our picnic basket and sallied forth with rugs, books, sketching or writing material, and, usually, bathing suits. On most days we went to the lake, which was only distant a ten-minutes' walk; but sometimes it was up the river or to some near-by woods. Often we asked some of our friends to go with us, or joined in picnics which they gave; but quite as often were alone, for we three girls were always good comrades.

We were all fond of bathing, and could swim a little, so we had great fun in the water. Often we played about doing "gym" stunts in our bathing suits before we went in. After bathing we were always a bit tired, and usually sat around on the sand while our hair was drying, sometimes reading aloud, but more often just chatting.

Long before six o'clock we set about preparing supper. Our picnics could have given pointers to people who consider picnics "too much nuisance." Our plan was always as little home preparation as possible, so our bread came in the loaf with the bread-board, and was buttered and sliced under the trees by the lake. Our berries were hulled and cleaned there, and we grew to be expert cooks over a little fire, or rather over little fires, for we found it worked best to have as many fires as we had things to cook. We broiled ham or steak over the coals, fried chicken, baked or fried potatoes, warmed pork and beans, made fritters and omelettes; even made tomato soup on cold days. In fact, we tried all sorts of cooking stunts, and had the greatest fun doing it.

Usually we were back at home before dark if we went alone. Often someone dropped in to spend the evening, and we sat on the verandah and ate ice-cream, or we went motoring, or played tennis on the club courts. If we were alone with nothing doing we spent our evenings always in the "cubby hole." There was a hammock apiece, with cushions and rugs, and we hung a lantern from the boughs overhead. With a large white paper shade to throw the light downward this gave a light quite strong enough to read by, and we had many a cosy evening. But our out-of-door day always made us sleepy, and we were ready for bed at an early hour.

Sometimes we planned all day picnics, an excursion by water or a long drive; but these were few, only three or four in the month, and it was the every-days, which, after all, I believe we enjoyed the most.

Of course, there were cold and rainy days, but we had warm coats and sweaters at hand, and always we could find a dry corner on either of our verandahs. There were always heaps of things waiting to be done on those rainy days. By the time the month was over we were all brown as berries, had grown appreciably in weight, and were ready to vote our summer at home one of the very happiest holidays we had ever spent. And it had cost us little more than our ordinary living expenses.

A Holiday in a Tent.

Our other holiday came a few years later, when we were city-dwellers. Mother had been ill and needed a change. We girls had positions in the city and were all eager to get away for the summer—but where?—or how? It was the first year of the war. Things looked terribly uncertain financially,

A LETTER JUST RECEIVED

Brampton, May 20, 1918.

Canadian Home Journal,
Toronto, Ont.

Last year about Christmas time you had a set of dollies. I got them for my little girl, and of all her dolls, including an —— Beauty, she liked her big rag doll best, and would take it to bed every night in preference to any of the others. I have tried to get them in town, but cannot find any as large and good as Dolly Dimples. Will you kindly tell me where and how I can get another?

Expectantly yours,

Mrs. ———.

I am Dolly Dimples

I have Two Sisters

I have been taken to bed every night by hundreds of little girls and boys, and though dolls and toys are very scarce this season—

I am Absolutely FREE

THE CANADIAN HOME JOURNAL

sent hundreds like me to all parts of Canada last year, and I proved so welcome that they are asking me to visit more homes this year.

Cut Out This Coupon and Mail It At Once

Canadian Home Journal,
71-81 Richmond St. West,
Toronto, Ont.

Enclosed find $1.50 for my subscription to the Canadian Home Journal for the coming year. I am guaranteed prompt delivery of each copy and the set of Dolly Dimples Dolls as advertised in your July issue.

Mrs. .....

Address .....

☞ This coupon is only good if used before July 31, 1918.

The One Hundred Per Cent. Bad Boy

An Experiment of Unusual Interest is About to be Tried in the United States.

"Literary Digest" gives the following:

WANTED.—The worst boy in America.

Any kids on your block that you think might size up to that specification? Of course you know lots of boys that are just plain "bad"—according to your lights—but naturally there is only one "worst" boy in the country, and he is wanted in Chicago. If you think you know him send word to Jack Robins and the delegation that recently left Chicago. That boy is going to be found, and he is going to be transplanted and made into a good boy in six months.

Joe Willens, seventeen, Mayor of the Boys' Brotherhood Republic; Manford Haskell, the City Clerk, and Jack Robins, the original "Big Brother" who founded the Republic four years ago, have started on a tour of the country looking for the 100 per cent. bad boy from fourteen to sixteen years old. Describing the novel experiment, a writer in the Newark *Star-Eagle* says:

These two boys with Robins will hold public meetings in scores of cities and will confer with officials of juvenile courts, police departments, and settlement organizations. They will go into jails, workhouses, and reformatories in search for the worst boy.

"He must be the worst boy in the whole country," Robins explained to me at the boys' city hall, while Mayor Joe added: "Just a bad boy isn't enough."

If he is an inmate of a reformatory, eminent Chicago men who are trying to solve the world wide "boy problem" through the Boys' Brotherhood Republic, will give bond to insure the return of the boy to the institution after the six months are up.

Should the boy's parents or guardians desire it, a fictitious name will be given the "worst" boy when he is transplanted to the Boys' Republic, and no one outside the boys there will know that he is the worst boy.

"Any boy can be reformed if work on him is started at the right time," said Robins. "That time is before he is seventeen. We take boys between fourteen and seventeen, and haven't failed on a single lad. Some of the boys—in fact, most of them—were habitual bad boys before they came to us. But I have never seen a bad boy under seventeen who stayed bad if the right effort to reform him was made.

"Juvenile delinquency has increased 35 per cent. since the war started, according to the record of Chicago courts. I don't know what the reason is, but it is true in all countries at war. This must be stopped. We must conserve these boys to help win the war and for the good of our country after the war is over. These boys must take places left vacant by the Americans who fall in battle over there.

"That is why we are starting this hunt for America's worst boy. We are going to show that the worst boy can be reformed. That will prove the possibility of reforming all the so-called bad boys. Most of these bad boys are not bad. But they will be bad if their boyish energy and enthusiasm are not directed into proper channels.

"We make good boys out of bad boys by turning their energy and enthusiasm into the right channel. No, we don't preach to them. The other boys merely set the right example, and we provide plenty of safety valves for pent-up spirits.

"By reforming the worst boy in the country, we hope to draw strong attention to the boy problem during the war, and believe a more earnest effort will be made in every city and every home to start boys right."

When the worst boy in Uncle Sam's big family is found he will be invited to go to Chicago and live at the Boys' Republic. His transportation from any part of the United States will be paid, and there are 250 good citizens in the Republic who are anxious to prove the theory that the only difference between a good boy and a bad boy is the way they are permitted to expend their surplus energy. Says Robins:

"The bad boy, if not reformed, becomes the 'baby gunman,' the kid 'stick-up guy,' and if he goes to prison and not to the gallows he comes out a full-fledged bad man, highwayman, burglar, safe-cracker, gangster, and murderer for money. You can't reform him then, not without his own help, and 90 per cent. of them don't want to be reformed at that stage of their lives.

"The moral is to get 'em young. That's why we hope to attract the attention of every mother and father to this hunt for the worst boy."

A NEW SOCIETY WITH AN OLD NAME.

There is a new antisociety on the lists. Perhaps you are already a member. If not, you will be interested in its propaganda. It is called the Antibellyache Society. Vulgar? Well, only in parenthesis. It's good dictionary English. See the New Standard for verification:

Bellyache (vulgar.) To act the sycophant; also, to fret, as with discontent; complain.

Anyway, it's a good, forceful Americanism.

The membership card of the society states that it has "no dues, no offices, no annual banquet," and that its object is "to discourage war-time bellyaching."

Here are the sentiments t which the members subscribe:

I avow the belief:

That even *I* could not run this war and please everybody;

That war must necessarily interfere with some peaceful occupations and pursuits;

That all men should *help* as much as possible, and complain as little as possible—that they should "'can' the bellyache."

Wherefore:

I hereby join the Antibellyache Society, and thus becoming an A-B (Antibellyacher), I pledge myself to refrain (so far as possible) from and to discourage bellyaching for the term of the war; to get new members whenever possible; to impose on myself a fine, payable to the American Red Cross, for each bellyache of which I may be guilty.
—*Literary Digest.*

Developing A Dream

(*Continued from page 23.*)

Colored people love tragedy, mystery and romance, and they are all to be found in the story of how the "Grower" came into being: the tragic young life; the message from the Lord; the change from a meagre room with an atmosphere of soapsuds to a palatial mansion on the Hudson.

Through the genius of Mrs. Walker, the colored race has been advanced in a way that can hardly be calculated. She has made possible the way for thousands of women of her race to abandon the wash tub for more pleasant and profitable occupation. Colored women all over the country are being rapidly re-made in appearance. The fact that they are at last able to manage their hair seems to have stirred them into improving their appearance in other respects. The thousands of young women employed by "madam" realize that their personal appearance has much to do with selling their wares, and they govern themselves accordingly.

Through the influence of this "Beauty Culture" movement among the colored people, enormous sums of money are being kept in the race which formerly went into the coffers of the unscrupulous vendors of powders and brews which were claimed to bleach the skin and straighten the hair of those who persistently swallowed them. The pity of it was that in many cases the credulous purchasers were injured physically as well as financially.

Mrs. Walker has certainly earned the undying gratitude of her colored brothers and sisters all over the country for her remarkable discovery which she has put upon the market at a price within the reach of all. She has had the courage of her convictions, and without aid or encouragement from any living soul has amassed a fortune. More power to her!

Contributions to the Silver Thimble and Trinket Fund Begin

A case of Maundy money is donated and the interesting story about it told.

Although the June number scarcely reaches the homes of its readers before this issue goes to press, there has already been a response to the request contained in its pages for silver and gold trinkets to be used to provide hot drinks for the soldiers. The beginning has been made—the first package has come in, and we are prepared for the arrival of a huge number of parcels during the coming weeks, containing all manner of quaint and queer, large and small, old and new gifts. It is so little for each to do, yet the whole will accomplish so much.

As explained last month, a receipt is sent to each contributor, and the articles that will bring more by selling are thus disposed of, after being valued, and the rest melted down—every cent goes to provide hot drinks for the soldi rs. The W.C.T.U. has undertaken this excellent way of assisting the Y.M.C.A., and we are asking our readers to search their homes for all useless trinkets, and send them to us, that a substantial pile may be handed over to the W.C.T.U.

Any of the following articles will be thankfully received: Old gold or silver thimbles, brooches, chains or links of chains, scarf pins, gold or silver tops of canes or umbrellas, bracelets, rings and earrings, silver match boxes, old gold or silver watches, odd cuff links, studs, watch chains, false teeth, broken spoons, forks or toilet articles in sterling silver, coins in gold or silver, medals, silverware of all kinds, plated or sterling.

Send to

Trinket Fund Dept.,
Canadian Home Journal,
71 Richmond St. W., Toronto.

When a collection was made recently in the city of London, a lady donated a case of Maundy money. So rare and interesting was this gift that we had it photographed and reproduced above. The following story describes the ancient custom of the kings and queens in distributing Maundy money to their subjects:

The royal alms, known as His Majesty's Royal Maundy, are distributed annually by the Lord High Almoner on Maundy Thursday on behalf of the King.

They consist of various cash payments made to persons of both sexes over sixty years of age, who are in necessitous circumstances, and who have at one time given employment to others and paid rates and taxes.

One of the Maundy gifts is a payment, made in silver coins, of the value of as many pence as the years of the reigning Sovereign's age, to a like number of persons of both sexes. The money is paid entirely in silver coins of the nominal value of 1d., 2d., 3d. and 4d., respectively; and it is to these small silver pieces, which are struck specially at the mint for the purpose, that the title "Maundy money" is applied. These coins bear on the obverse the effigy of His Majesty, with the inscription (similar to that on other coins of the realm), *Edwardus VII, D.G. Britt. Omn. Rex. F. D. Ind. Imp.* (in full, *Edwardus VII, Dei Gratia Britanniarum Omnium Rex Fidei Defensor Indiae Imperator*), and on the reverse the figure "1d.," "2d.," "3d." or "4d.," surrounded by a wreath of oak and surmounted by the royal crown. The edges of the coins are not milled; the threepence, therefore, are identical with the coins of that denomination struck for general circulation. Collectors of coins frequently purchase the Maundy moneys from the original recipients at enhanced prices, but Maundy coins do not pass into general use.

The first coinage of small silver pieces intended solely for distribution on Maundy Thursday was struck in 1661. Prior to that date, silver pence had been struck for general circulation, and the coins which formed part of the Maundy alms were such as could be found in the ordinary currency of the country. The title "Maundy," applied to the Thursday before Easter, is derived from *dies mandati*, the day of the mandate—as on the day before Good Friday, Christ, after washing the disciples' feet, gave his new commandment, "That ye love one another" (John XIII, 34). Hence arose the custom of washing the feet of the poor by royal and other distinguished persons. This ceremony, which was accompanied by doles of food and clothing, can be traced back to the fourth century. James II. was the last King of England who washed the feet of the recipients of the Maundy doles. An old record book at Somerset House contained the following: "On Maundy Thursday, April 16, 1685, our Gracious King James, ye 2nd, washed, wiped and kissed the feet of 52 poor men with wonderful humility."

At the ceremony of washing the feet of the poor, it was an ancient custom of the Kings and Queens of England to present some of the most necessitous with a gown from the royal wardrobe. This gift was, however, subsequently redeemed by a money payment intended to represent the value of the garment.

In the year 1572, Queen Elizabeth went through a grand Maundy ceremonial in the hall at Greenwich. Poor women, corresponding in number to the age of Her Majesty, assembled, and these were duly arranged in the great hall. Tables and benches were placed along the room, with a carpeted footway and cushions in front of each poor person for the Queen to kneel on. When all were in their places, the Laundress, provided with a silver basin containing warm water and sweet flowers, washed all their feet, and after signing them a little above the toes with a cross, kissed them. When a hymn had been sung, the Sub-Almoner and the Lord High Almoner each in turn repeated the process. The Chaplain, having read an appropriate lesson, descriptive of the washing of the disciples' feet, and as it was considered that the feet of these poor women, after the continued washing, were by this time in a fit state for Her Majesty to deal with, the Queen entered the hall

TWO RETURNED SOLDIERS REPLY TO THE QUESTION, "DO THE BOYS ENJOY THE HOT DRINKS?"

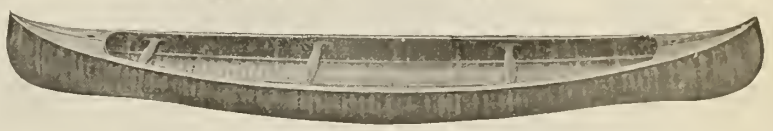
"Coffee never looked so good to me as it did once after a ten-mile march through muddy France. By the time it came to my turn the pot was empty. I thought I was out of luck until one of my pals gave me half of his. It wasn't quite as good as a whole cup, but it was a 'jake' just the same."

"I'll just say this much," said an Irishman, "if we didn't have some hot drinks, a cup of coffee or a bowl of soup to look forward to, our marches sometimes would be miserable failures. Sure, ma'am, it's what puts the life into us."

Your Silver and Gold Trinkets will help provide these drinks.

BANFF SPRINGS HOTEL

In the Heart of a Grander Switzerland—



THE CANADIAN PACIFIC ROCKIES

—summer resort of many discriminating Americans. The outdoor life—golf, tennis, motoring roads, pony riding on mountain trails, hiking, climbing—the open air sulphur pools, the roomy restfulness of the big hotel with its excellent ballroom and orchestra, its splendid cuisine and service—combine to give Banff its tone. Moderate rates.

Particulars as to fares, etc., from Canadian Pacific Ticket Agents.

Around the Hearth

By JENNIE ALLEN MOORE.

"The day is cold, and dark, and dreary,
It rains, and the wind is never weary;
The vine still clings to the mouldering wall,
But at every gust the dead leaves fall,
And the day is dark and dreary.
"My life is cold, and dark, and dreary,
It rains, and the wind is never weary;
My thoughts still cling to the mouldering Past,
But the hopes of youth fall thick in the blast,
And the days are dark and dreary.
"Be still, sad heart! and cease repining;
Behind the clouds is the sun still shining;
Thy fate is the common fate of all,
Into each life some rain must fall,
Some days must be dark and dreary."

—Longfellow.

ONE RAINY DAY.

It was a holiday, too, that rainy day The verses above may indicate a heavy subject, but such is not my intention. Remembering that this page will be read in the heat of July days, I forbear to take the serious side of this beautiful poem, believing that light reading is more befitting for warm weather. There is enough rain in our lives these awful war times, and anything that can divert our minds for even a brief spell is a redress to be appreciated.

There is a whole page in the poem alone, but it carries its own interpretation, so we will allow it to stand on its own merit. I would recommend to every one who reads it that it be memorized, and many times repeated until its philosophy and its optimism sink into and permeate the very existence, and until the heart can issue the command of the last verse with an authority that will not be gainsaid.

There was an excursion on that holiday—that day of promise—as the sun shone forth in warmth and splendor. The train trip was eighteen miles, and we were to have a long day at the beautiful park. It was to last from eleven in the morning when we were scheduled to arrive there, until eight in the evening, the time we were due to leave for home. My friend and I packed dainty lunches, and prepared for a splendid day's outing.

The train stopped at the little station, and we alighted on the platform. But at that moment an umbrella shot up, another and yet another. We turned our gaze skyward, and there was no mistaking that the protection sought was not from the sun which had accompanied us all the way, but the rain. The big drops splashed on the dusty white boards to the discomfiture of seven coach-loads of pleasure seekers.

Little groups had quickly formed and hurried away believing it to be but a passing shower. We lingered around the small depot, then decided to sit down inside. There a pleasant surprise awaited us in the form of a very intimate acquaintance, who had with her a sister from the far West, whom she brought to see our celebrated Falls.

Presently she whispered to me—"Say, let's double up for the day! We've a mighty fine lunch with us."

I assured her we also had a "dandy," and so we decided to spend the day together, but at that time we did not dream of sticking quite so closely to each other.

* * * * * *

The rain continued to fall, and soon those who had wandered away returned. The coaches had been left standing unlocked upon the track, else whither could such a crowd have found shelter from the elements? People were climbing back in, and we four concluded that the cushioned seats there were more desirable than the narrow bench upon which we sat, so we followed the rest, and procured two seats *vis-a-vis*, and awaited developments.

As baskets and boxes were being opened all around us, and appetizing contents distributed, we of course, also felt the pangs of hunger.

We *must* have tea, one of our number proclaimed, or *she* for one, would have a splitting headache. She was accordingly deputed to set forth on an expedition to obtain "the cup that cheers but not inebriates," and returned with such a strong decoction that a very tiny sip at a time sufficed for me—just sufficient to ward off the headache that had been predicted as inevitable, but—"Saints preserve us!"

We certainly did justice to the contents of the boxes, as each one must needs taste every variety of sandwich and cake, all of which proved a delightful diversion while it lasted.

But everything comes to an end, and soon we were all packed up trig and neat once more, crumbs shaken off our laps, the inner woman more that satisfied, and we consulted once more the weather. The result was not encouraging, and on this occasion our hearts did not beat in response to—

"How beautiful is the rain!
After the dust and heat,
In the broad and fiery street,
In the narrow lane
How beautiful is the rain!"

Fortunately I had taken my knitting along, so proceeded to fill in the time until the shower(?) should subside. And as we calmly waited, we talked—what else could we do? Our remarks were principally upon the weather probabilities, and the possibilities of walking through wet grass, even should the rain cease.

But there was no sign of it ceasing, and the steady drip, drip, seemed to disperse any hope of "A brighter day a-coming by-and-by!" So we kept on talking.

We discussed the war and food conservation, the fuel question, votes for women, (one of our number was an ardent suffragist), and told about our lads overseas. We exchanged ideas on many subjects, on house-cleaning, on raising children without spoiling them, (as *we* had been brought up) on managing husbands, and—

* * * * * *

Presto! *The scene was changed.* The sun shone forth in all his glory. Imagine how swiftly those coaches were emptied. Our guest *must* see the Falls. And she did. But old Sol retreated once more behind a cloud evidently more in sympathy with—

"In the country on every side
Where far and wide
Like a leopard's tawny and spotted hide
Stretched the plain,
To the dry grass, and drier grain
How welcome is the rain!"

In half an hour we had resumed our places, and our knitting—and incidentally our talking. Say, reader, did you ever have to keep on talking when you felt you would like absolute silence?

We were denied our customary afternoon rest—the quiet hour that "knits up the tangled threads," and affords refreshment—and would gladly have refrained from talking for a time. But there seemed no way of escape, the confusion was too general, so don't you see we just *had* to talk? There was nothing else to do, and there were still five hours of the nine to spend.

There is a common saying—"Oh, talk is cheap!" It *was* that day, and it was plentiful. And *time* was likewise plentiful—a very rare occurrence in the lives of four busy women, whose leisure hours are few.

Let's talk about *talk* for a time. It is a talent with some. Others acquire it. I was a very silent child, and had to cultivate the habit of talking when I began to teach school. My first year was not a success, simply because I hated the constant talk of explanation. When I realized that it meant my vocational equipment, I soon learned to improve my "stock-in-trade," so to speak. And the habit grew, to be sure.

A King in Babylon

(*Continued from page* 17.)

asked Jimmy quietly. "It was intended for me."

We could only stare at him with open mouths—even Davis!

"And I think it is a pretty good likeness all things considered," he added, looking down at it.

Creel got back enough of his self-control to laugh—a pretty hollow laugh it was, but nevertheless it could be recognized as being intended for a sign of amusement.

"They gave you a swell coffin!" he commented.

"Yes," said Jimmy simply, "that I couldn't prevent—any more than I could prevent that magniloquent description of my greatness which they inscribed along the sides. But the sarcophagus—all this," and he waved his hand around at the barren walls, "I myself prepared a year before I died. That was my expiation—a million years in hell! But it wasn't enough, it seems!"

"Expiation for what?" demanded Creel.

"For walling her up alive," said Jimmy, and for an instant inclined a listening ear toward the rear wall of the tomb, as I had seen him do once before. Then, with a faint smile, he turned back to the coffin, and gazed down at it meditatively.

Davis was looking at him with a sort of double-concentrated attention; Creel was staring, a twisted smile still on his lips; as for me—I knew what had happened—I had feared it the night before—Jimmy had gone mad!

"But that's all make-believe!" Creel burst out, at last. "That's just the story we're filming."

"Is it?" asked Jimmy, and brushed his hand before his eyes in a bewildered way. "Perhaps it is—I don't seem to be able to keep them apart any more—the real and the unreal." Then he shook his head sharply. "No—it's true!" he said. "She kept on asking for love—for love! Her arms were always around me like a prison! At last I couldn't stand it any longer—she tried to kill me, one day, because I took another woman; and I walled her up back there, so she couldn't bother me any more," and he nodded toward the rear wall, with its sinister sign of warning. "I was sorry afterwards," he added in a lower tone; "but it was too late. And she *did* bother me—for she never died—just waited on and on . . ."

His voice trailed away, and he looked down again at the coffin, his lips trembling.

We stared at the wall and we stared at Jimmy, and I, at least, was convinced that when that wall was opened, the body of his victim—or what was left of it—would be found there. As for her never dying, that, of course, was nonsense. She would be dead enough, and dried into some such hideous thing as Creel had fabricated . . .

I glanced at Davis, to find him combing his beard thoughtfully, as he looked at Jimmy without any sign of surprise or perturbation. And at last, Jimmy, with a final look at the coffin, turned and walked silently out of the tomb.

"What do you think of him, Professor?" Creel demanded, when the sound of his footsteps had died away down the passage.

"He has been worrying over that picture too much," said Davis. "He said himself that he couldn't separate the imaginary from the real. The heat, no doubt, is what started the trouble. And then he's rather mad about that French-woman, isn't he?"

"You mean his mind is gone?"

"Oh, not so bad as that—just a mild mania. He will be all right again, once he's through with the picture and away from here."

"Then you don't believe . . ."

Creel didn't finish the sentence, but the glance he cast at the rear wall was enough.

"That he really is reincarnation of the mummy in the coffin there?" asked Davis smiling. "No Did you?"

"I don't know," said Creel, slowly. "I seem to be ready to believe almost anything—it must be in the air! But where did he get that story?"

"There is sometimes a curious clairvoyance about mania," Davis answered, more gravely, "and it may be that Jimmy has guessed the secret of this place. I had made some such guess myself—you'll remember—that the king had caused himself to be buried in this bare, unornamented tomb as a penance or expiation. I should have said that it was probably to expiate some impiety towards the gods; but it may be that the crime for which he wished to atone was the murder of a woman who loved him; yes—and it may be that we shall find her body behind that wall back yonder."

"Alive?" asked Creel, almost in a whisper.

"Rubbish!" said Davis, impatiently. "As dead as that papier-mache fake you brought from New York!"

"I surely hope so!" said Creel, devoutly. "Go ahead."

"That's all, I think," said Davis, "except that there's just a possibility we may find the whole story on a papyrus roll inside the coffin. But if we do, and if the story should turn out to be as Jimmy has guessed it, that wouldn't prove anything—it certainly wouldn't prove that Jimmy Allen is the reincarnation of Sekenyen-Re, and that Mlle. Roland is the reincarnation of the murdered favorite, and that this fantastic story you have made up for a moving-picture is true!"

"You're right, of course," agreed Creel, and made a motion as though he were brushing cobwebs from before his eyes. "Stated like that, it certainly does sound absurd. But for a moment . . ."

"If we steadily refuse to accept a supernatural explanation of anything," said Davis, "we can always find a natural one. Just give your reason a chance!" And, torch in hand, he turned to an examination of the coffin.

It was, as I have said already, shaped roughly like the mummy inside it—though the feet which projected from the lower end were so enormous that, for Sekenyen's sake, I trust they were an exaggeration! At the top, the face of the dead king had been carved life-size in the solid wood, and then painted with a care and cunning which made its life-likeness, seen thus in the shadow, at least, simply startling. And this effect was enormously heightened by the wide-open, staring eyes—made, so Davis said, of mother-of-pearl, with pupils of jet. The way they shimmered in the light was positively uncanny.

The chest and shoulders were covered by a broad, jewelled necklace, quite wonderfully painted, and below it on the breast lay what looked like a snake and a vulture. A pair of closed wings, in full gilt, were folded about the body as though to protect it, and below the wings, down the sides of the coffin as far as I could see, ran an inscription which it was evident Davis was panting to translate.

"What do you make of it?" asked Creel, at last. "Is it really the fellow you thought is was?"

"It is Sekenyen-Re beyond doubt," answered Davis quickly. "See—here is his cartouche—he is wearing the double crown of upper and lower Egypt—the uraeus and the vulture are the sacred symbols of sovereignty over the two lands. These figures beneath his feet are his guardian gods—Amon-Re, Ka and Osiris. I have never seen a more beautiful case. We must lift it out, so that I can get to work on that inscription."

"For heaven's sake, man," Creel protested, "don't start anything like that to-night! You'll kill yourself! Besides, it's long past dinner-time."

I could tell by the way Davis looked at the coffin that he would willingly forego dinner and sleep and everything else for the opportunity to study it; but again reason triumphed over impulse.

"You're right," he said. "I'll get it over to the tent to-morrow. Then I can work at it in the evenings;" and, with the help of the natives, he slid the heavy covering-slab back into place, and nodded to them that they might go.

"I don't suppose it was really necessary to put that cover back," said Davis; "but I like to be on the safe side. It is just possible that one of the natives might be tempted to break into the coffin and steal whatever's inside it. He couldn't get away with it, of course, but he might do a lot of damage. Now it's safe," and with a last look around, he picked up his torch and led the way along the passage.

"You will have to tear this wall down before you can get that coffin out," said Creel, as we came to the narrow entrance.

"Yes; I'll set some men at it first thing in the morning," and Davis flashed his light over the wall and across the slabbed ceiling.

"Won't there be danger of the roof coming down?"

"I don't think so. The wall was put

(*Continued on page* 47.)

New Crocheted Trimmings for the Knitting-Bag

THE knitting bag is now an important feature of every woman's possessions and is one which allows of a display of individuality. For the woman who likes to make these dainty articles a number of attractive bags in widely differing styles are shown here. The artistic ornaments are crocheted in wool and form a pleasing contrast to the richer materials of which the bags are made. In the two sets of directions, No. 1015 and No. 1016, are attractive motifs which may be used on hats, cushions, and bags of varied styles.

Pictorial Review Crochet Directions No. 1015-D. The very realistic cherries on this knitting-bag are among the nine designs of crocheted motifs in No. 1015. Directions for making these woolen ornaments will be sent upon receipt of 15 cents and a stamped, self-addressed envelop. The cherries are made of red and pink worsted with the leaves of green and the large stem a reddish brown. The bag is made from Pictorial Review Pattern No. 7693 (20 cents), and is of black figured silk lined with old gold. This pattern also gives two other bags.

No. 1015-D on Bag No. 7693

No. 1016-B on Bag No. 7632

No. 1015-C on Bag No. 7632

No. 1016-D on Bag No. 7693

Initial "L" selected from No 11997

No. 1015-J on Bag 7632

Pictorial Review Crochet Directions No. 1016-B. An attractive spray of crocheted roses decorates this very handsome bag. The flowers are in two shades of old rose and are made like the rose in Irish crochet. A soft shade of green is used for the leaves and stems. Full working directions for the nine motifs in No. 1016 will be sent upon receipt of 15 cents and a stamped, self-addressed envelop. Pictorial Review Pattern No. 7632 (20 cents), which was used for this bag, is also shown on the opposite side of the page, and at the bottom of the page as well. There are four different styles of bags included in the pattern.

Pictorial Review Crochet Directions No. 1016-D. The quaint ball-tassel shown on this bag is made of black yarn and old gold silk. The ball is about 2½ inches high and is joined to the bag with a chain made from three strands of wool. This chain is twisted into loops and bound into place as illustrated with old gold silk. The silk is also bound round the ball, dividing it into six sections. The initial is a crocheted chain of old gold silk twisted into the form of an L. For the initial Pictorial Review Transfer Pattern No. 11997, blue, 15 cents, was used. The bag made from pattern No. 7693 (20 cents) is of a dark shade of reseda green silk lined with tan. A lighter shade of green is used for the blanket stitch which outlines the bag. Blanket stitch is the simplest form of buttonhole stitch. On this bag the stitches are the same length and at equal distances apart but in many cases they are of different lengths.

Pictorial Review Crochet Directions No. 1015-C. This gives another smart way of trimming bag No. 7632. The crocheted motif is composed of plums of two different shades and green leaves which are attached in a cluster to a black stem about two inches long. The three leaves are turned back over the point of the bag. Made of Shadow Lawn green crêpe de Chine, this bag is lined with a soft satin of a Gobelin blue shade. Pictorial Review Pattern No. 7632, 20 cents.

Pictorial Review Crochet Directions No. 1015-J. Quite unusual are these dainty dahlias made in two shades of rose and two shades of violet with leaves of hunters' green. The flowers are made in a long knotted stitch which is quickly worked and is very effective. A spray of these flowers and leaves trims one side of the bag while a solitary blossom is placed on the other side. Pictorial Review Pattern No. 7632, 20 cents, was used to make this handsome bag. It is made of soft silver-gray satin lined with Delft-blue China silk and has silver cords to hold it by. The cherries and the roses shown on two of the bags at the top of the page would also be very effective on this bag. A cluster of three cherries and two leaves might be placed at one side instead of the single flower. The bags illustrated are suitable for utility service as well as for knitting. For working directions No. 1015, send 15 cents and a stamped, self-addressed envelop to the Embroidery Department, Pictorial Review.

Important in Summer Fashions Are Gingham Frocks and Blouses

7676—Ladies' Dress (25 cents). Six sizes, 34 to 44 bust. Size 36 requires 2⅛ yards figured voile—3 yards 36-inch linen for cuffs and skirt—¾ yard organdy for collar and frilling. Embroidery No. 11339, blue or yellow transfer, 15 cents. Width at lower edge about 1¾ yard. Among the notable fashion features of this season is the combination of sheer and heavy materials such as voile or organdy with linen, and in this model plain linen and printed voile are combined attractively. The front-closing waist is mounted on a sleeveless underbody with high or V neck, and on this is arranged a surplice vestee. Flowing sleeves may replace the sleeves illustrated, and the two-piece gathered skirt has a line of perforations to indicate where the plain material is attached to the figured.

7825—Ladies' Blouse (20 cents). Six sizes, 34 to 44 bust. No. 7657—Ladies' Two-piece Skirt (20 cents). Five sizes, 24 to 32 waist. Width at lower edge about 1¾ yard. The costume in medium size requires 6⅜ yards 32-inch check gingham—1¼ yard 27-inch white piqué for collar and trimming. Check gingham is both practical and smart for the Summer frock, relieved with trimming of white piqué. The blouse, which closes at left side-front, has an inserted vest, and the jumper extends down below the belt and is turned up at the lower edge to form hem pockets. The skirt is a two-piece gathered model closing at left side seam.

7824—Ladies' Dress (25 cents). Nine sizes, 34 to 50 bust. Size 36 requires 4½ yards 36-inch plaid gingham—¾ yard white linen for vest and trimming—½ yard 36-inch black satin for sash. Width at lower edge about 1¾ yard. Scallop No. 11853, blue transfer, 10 cents. The simplicity that is such a striking note of the Summer fashions is attractively expressed in this frock of plaid gingham. The collar extends into long revers ending at the waist-line and frames an inset vest. Perforations permit of shortening the sleeves. Attached under the satin girdle is the three-piece gathered skirt that closes at center-front.

7755—Ladies' Blouse (20 cents). Five sizes, 34 to 42 bust. No. 7546—Ladies' Tunic Skirt (20 cents). Six sizes, 24 to 34 waist. The dress in medium size requires 6½ yards 36-inch plain voile—2⅝ yards plaid voile—¼ yard white Georgette crêpe for collar—1¼ yard filet lace. Width at lower edge about 1¾ yard. Over a front-closing waist the bodice-like jumper is adjusted, and the belt that extends across the back buttons onto the jumper at the side-front. Plain sleeves with turn-back cuffs may be substituted for the gathered sleeves illustrated. A side tunic that may be shortened is mounted on the two-piece gathered skirt.

DESCRIPTIONS CONTINUED ON PAG. 39

7820—Ladies' One-piece Dress (25 cents). Nine sizes, 34 to 50 bust. Size 36 requires 4⅛ yards 36-inch linen. Scallop No. 11854, blue or yellow transfer, 10 cents. Width at lower edge about 1⅝ yard. Here is another attractive and practical one-piece frock, the only note of trimming being the buttonholed scalloped edges. The dress may close to the neck, or it may be worn with a collar forming revers. The fronts are gathered below a small square yoke.

Distinctly Swagger Are the New Sports Blouses and Capes

7835—Ladies' and Misses' Two-piece Circular Cape (20 cents). Three sizes, small, medium, and large, corresponding with 16 years, 36 and 42 bust. Medium size requires 1⅞ yard 54-inch black plush—½ yard white satin for collar. The vogue of capes is increasing all the time, and they are worn by young girls as well as by their elder sisters and mothers. This is one of the new short models, slashed at side-front and side-back for the belt.

7842—Ladies' Blouse (20 cents). Seven sizes, 34 to 46 bust. Size 36 requires 2¼ yards 40-inch white Georgette crêpe. Braiding on collar No. 12419, blue or yellow transfer, 15 cents. No. 7792—Ladies' and Misses' Sleeveless Overblouse (20 cents). Sizes small, medium, and large, corresponding with 16 years, 36 and 42 bust. Medium size requires 3 yards 36-inch plaid sports satin. No. 7804—Ladies' One-piece Circular Skirt (20 cents). Eight sizes, 22 to 36 waist. Size 26 requires 2¾ yards 36-inch white linen. Width at lower edge about 1¾ yard. A very attractive sports costume is evolved by the combination of these three models. The blouse of white Georgette crêpe buttons at the back, and is gathered on the shoulders in front. The overblouse is one of the fashionable sleeveless models with belt starting each side of the front panel, and finished at the back with sash ends. The skirt has an oddly shaped belt buttoning onto the pockets.

7618—Ladies' Sailor Blouse (20 cents). Five sizes, 34 to 42 bust. Size 36 requires 2⅝ yards 44-inch organdy. No 7588—Ladies' Two-piece Jumper Skirt (20 cents). Six sizes, 24 to 34 waist. Size 26 requires 3¼ yards 36-inch linen Width at lower edge about 2⅛ yards. This blouse slips on over the head, and the shield is removable. The curving trimming bands on the side-front of the skirt give the effect of an inserted yoke. The closing is at left side-back under a plait formed by the panel section at the back. The suspender sections may be omitted.

7729—Ladies' Sports Blouse (20 cents). Six sizes, 34 to 44 bust. Size 36 requires 3½ yards 36-inch white drilling—½ yard blue drilling for collar and trimming—6⅜ yards braid. A panel front gives a smart air to this sports blouse with square or round collar.

7513—Ladies' Sports Blouse (20 cents). Six sizes, 34 to 44 bust. Size 36 requires 4½ yards 27-inch check gingham—4 yards 27-inch white piqué and ⅜ yard blue linen for collar and trimming.

Playtime and Dress-Up Models for the Little People

6943—Child's Empire Dress (20 cents). Four sizes, 2 to 8 years. Size 4 requires 2½ yards 36-inch flowered dimity—5¼ yards insertion—2¼ yards edging.

Child's Dress 6943

Child's Coat 7850
Scallop 11659

Boys' Suit 6682

Juniors' Dress 7849

7849—Juniors' Dress (25cents). Three sizes, 13 to 17 years. Size 15 requires 3¾ yards 32-inch plaid gingham—⅝ yard white voile for collar, cuffs, and trimming. Very simple and youthful is this frock of plaid gingham. The waist closes at the back, and may have V or square neck and long or short sleeves. Under an oddly shaped belt the one-piece gathered skirt is attached. The pockets may be omitted.

Girls' Dress 7686
Emb. 11339

Girls' and Juniors' Dress 7844
Scallop 11693

7686—Girls' Dress (20 cents). Five sizes, 6 to 14 years. Size 12 requires 3¼ yards 36-inch white voile—1¼ yard filet lace—3½ yards Val insertion. Embroidery No. 11339, blue or yellow transfer, 15 cents. Instead of the straight shirred tunic at the sides, this dress may be made with bretelles that extend down to form large outstanding pockets. The closing is at the back.

7850—Child's Coat (20 cents). Three sizes, 2 to 6 years. Size 6 requires 3⅜ yards 36-inch taffeta—⅜ yard 40-inch Georgette crêpe for collar and cuffs. Scallop No. 11659, blue or yellow transfer, 15 cents. Scalloped collar and cuffs of white Georgette crêpe give added daintiness to this coat of beige taffeta. The skirt section is in five gores.

Child's Dress 7848

Girls' and Juniors' Nightgown 7681

Child's Skirt 7587

Girls' Pajamas 6838

Girls' and Juniors' Skirt 7244

Child's and Girls' Petticoat 7826
Emb. 11730

Boys' Overalls 7851

Girls' Overalls 7853

Boys' Overalls 3701

6682—Boys' Suit (15 cents). Four sizes, 2 to 5 years. Size 4 requires 1¼ yard 27-inch plain galatea for blouse—1½ yard 27-inch striped galatea for trousers and trimming. There is nothing cuter for the small boy than suits of this type, to be made of linen, galatea, or chambray in plain and striped, or in two contrasting colors.

7848—Child's Dress (20 cents). Four sizes, 2 to 8 years. Size 4 requires 2 yards 36-inch dotted swiss—5 yards Val insertion—6½ yards lace. This cute little dress buttons in front and has an attached two-piece gathered skirt with one tuck above the hem.

7844—One-piece Dress for Girls and Juniors (20 cents). Five sizes, 6 to 14 years. Size 8 requires 2⅝ yards 36-inch white linen. Dotted scallop No. 11693, blue transfer, 15 cents. The closing is at the left shoulder and side-front.

ADAMS CALIFORNIA FRUIT CHEWING GUM

WITH THE FRUITY FLAVOR

RUTH ROLAND says: Ripe, red cherries and Adams California Fruit Gum I think are equally delicious. I love them both.

Ruth Roland

the first comfortable baby

Gerhard Mennen produced the first borated talcum to shower on babies to protect their delicate skin from chafing and from the friction of tight garments.

His first perfect formula has never been bettered.

Mothers insist on
MENNEN'S
for babies because it is safe – isn't a safe talcum equally as good for adults?

After the War—What?

(*Continued from page* 18.)

country will be an outstanding example of pure and prosperous Democracy; when production will be developed to the utmost; when the development of our unlimited natural resources will be scientifically managed, so that our financial position will be safe and strong; when co-operation will be encouraged, so that "team-work"—the happy name given by Hon. Mr. Balfour for Democracy—will be fully developed and utilized; and when, above all, the proceeds from the united labor of all our people will be so distributed that there shall be no abject poor, no starving children, no slums, no dangerous tenements, no tramps, no loafers, no non-producers; so that there will be plenty to provide for the care and comfort of the helpless and aged; so that hours of labor shall be reduced so as to provide for improvement and pleasure outside of working hours; so that the best facilities for education, music, art, and all uplifting and enlightening agencies shall be afforded to all.

I propose to take up various problems of reconstruction one by one, and deal with them in popular language. In this introductory article I only want to get the setting for the pictures I may draw; I desire to find the proper "atmosphere" into which to project my thoughts; I want my readers to assume the proper attitude. It is important to keep level heads while dealing with these tangled topics; so please be patient, considerate, attentive, but as outspoken as you please in criticism, which should be constructive—suggesting something in the place of the thing to which objection is taken.

Newest Fancies in Fashions

(*Continued from page* 34.)

7262—Ladies' Blouse (20 cents). Six sizes, 34 to 44 bust. No. 7330—Ladies' Two-piece Gathered Skirt (20 cents). Seven sizes, 22 to 34 waist. Width at lower edge about 2¼ yards. The costume in medium size requires 5⅛ yards 36-inch plaid taffeta—⅝ yard plain taffeta—½ yard 40-inch Georgette crepe for overcollar and cuffs.

7832—Ladies' Blouse (20 cents.) Eight sizes, 34 to 48 bust. Size 36 requires 2 yards 40-inch gray Georgette crepe—⅜ yard white Georgette crepe—2 yards satin ribbon.

7829—Ladies' Blouse (20 cents). Nine sizes, 34 to 50 bust. Size 36 requires 1⅝ yard 36-inch plain voile—⅝ yard 36-inch figured voile.

7842—Ladies' Blouse (20 cents). Seven sizes, 34 to 46 bust. Size 36 requires 2 yards 40-inch figured Georgette—⅜ yard white Georgette—1¾ yard Valenciennes insertion—2½ yards edging.

(*Continued from page* 35.)

7806—Ladies' Blouse (20 cents). Seven sizes, 34 to 46 bust. No. 7847—Ladies' Overblouse (20 cents). Cut in one size only. No. 7735—Ladies' One-piece Gathered Skirt (20 cents). Five sizes, 24 to 32 waist. Width at lower edge about 1⅞ yard. The costume in medium size requires 3⅛ yard 36-inch plain voile—3⅜ yards figured voile—2⅛ yards black Baronette satin for overblouse.

7647—Ladies' Frill Blouse (20 cents). Six sizes, 34 to 44 bust. Size 36 requires 2 yards plain Georgette crepe—1 yard dotted Georgette crepe for collar and trimming. No. 7831—Ladies' Two-piece Gathered Skirt (20 cents). Sev n sizes, 24 to 36 waist. Size 26 requires 2⅞ yards 44-inch woolen plaid. Width at lower edge about 1⅝ yard.

7270—Ladies' Blouse (20 cents). Seven sizes, 34 to 46 bust. Size 36 requires 1⅞ yard 36-inch white voile—½ yard 36-inch white ramie linen for collar and cuffs. Scallop No. 11661, blue or yellow transfer, 15 cents. No. 7704—Ladies' Tunic Skirt (20 cents). Five sizes, 24 to 32 waist. Size 26 requires 3¾ yards 40-inch check cloth—⅜ yard plain cloth for trimming—1¼ yard 36-inch lining for upper part of skirt. Width at lower edge about 1½ yard.

7705—Ladies' Blouse (20 cents). Six sizes, 34 to 44 bust. Size 36 requires 2⅞ yards 32-inch cross-bar voile—⅜ yard white voile for cuffs and trimming. No. 7797—Ladies' Two-piece Gathered Skirt (20 cents). Seven sizes, 22 to 34 waist. Size 26 requires for skirt with hanging pockets, 2½ yards 44-inch gabardine. Width at lower edge about 1¾ yard. The skirt closes at left side seam.

7790—Ladies' Tunic Skirt (20 cents). Six sizes, 22 to 32 waist. Size 26 requires 2½ yards 36-inch linen for skirt without tunic. Width at lower edge about 1½ yards.

7745—Ladies' Two-piece Skirt (20 cents). Six sizes, 24 to 34 waist. Size 26 requires 2⅞ yards 44-inch serge. Width at lower edge about 1⅞ yard.

7830—Ladies' Two-piece Gathered Skirt (20 cents). Seven sizes, 24 to 36 waist. Size 26 requires 3 yards 44-inch check cloth. Width at lower edge about 1½ yard. The closing is at the left side seam.

(*Continued from page* 36).

7851—Boys' Overalls Closing at the Back (20 cents). Six sizes, 2 to 12 years. Size 8 requires 3¼ yards 27-inch blue denim. The front of these overalls is in one, while the back of the trousers buttons to the back of the waist.

7853—Girds' Overalls (15 cents). Three sizes, 2 to 6 years. Size 6 requires 1⅝ yard 32-inch check gingham.

3701—Boys' Overalls (15 cents). Seven sizes, 4 to 16 years. Size 4 requires 2 yards 27-inch denim.

6838—Girls' One-piece Pajamas (15 cents). Six sizes, 4 to 14 years. Size 8 requires 4⅛ yards 27-inch cotton crepe.

7681—Girls' and Juniors' Nightgown (15 cents). Four sizes, 8 to 14 years. Size 12 requires 3⅛ yards 36-inch nainsook.

7587—Child's One-piece Plaited or Gathered Skirt (15 cents). Five sizes, 2 to 6 years. Size 4 requires 1⅜ yard 36-inch linen—½ yard cambric for underbody.

7244—Girls' and Juniors' Straight Sideplaited Skirt with Underwaist (15 cents). Five sizes, 6 to 14 years. Size 8 requires 1½ yard 36-inch rep for skirt—1 yard 27-inch cambric for underbody.

7826—Child's and Girls' One-piece Gathered Petticoat (15 cents). Eight sizes, 1 to 8 years. Size 4 requires for skirt without ruffle 1½ yard 27-inch cambric. Embroidery and Scallop No. 11730, blue transfer, 15 cents.

The Canadian Tommy on Leave in England

(*Continued from page* 13.)

with by the League are from the land of the Maple Leaf.

Throughout the city of London, and, indeed, all over the country, in Edinburgh, Glasgow, and all the larger cities, there are Y.M.C.A. kiosks established, so that in the event of any boy finding himself stranded, he knows where to go for ready help and information.

In Edinburgh.

Captain Fingland is the Canadian "Y" officer in charge of the work in Edinburgh, and it is interesting to note that sixty per cent. of the Canadians who take the Association tours go to Scotland. Under Captain Fingland is a good staff of voluntary guides, and the number of men served by his organization during April of this year was 1,580.

The service to the Canadian troops in England is only partially dealt with in this article. Other branches of the work could be referred to, and the Association is constantly extending its scope. A similar work is being done in Paris, where, in addition to its centrally located and commodious hostel, the Canadian Y.M.C.A. has taken over a large hotel at a rental of 50,000 francs, for the use of the men in khaki. As has been remarked, this side of Red Triangle activities may not appear quite so spectacular as some of its doings at the front, but it is undoubtedly a great piece of constructive and preventive service, for which the Canadian relatives of the men cared for cannot be too thankful.

Officers who have noted this Leave Work of the Y.M.C.A., and compared the better morale and health of their men who have spent their ten days under such auspices, with those who have "gone on their own," most heartily endorse the plan and strongly commend it to the regiments in their command. The avidity with which the boys themselves seize such opportunities, and their grateful testimonies to the good and wholesome time they have had, provide eloquent evidence that the "Y" is making good in this, as in other, directions.

Make Your Dainty Things Like New Again and Again

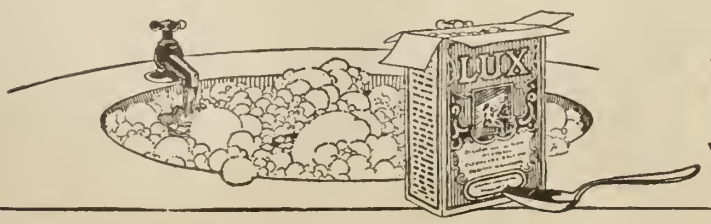
Every woman wants to be economical in war-time, of course. But it isn't extravagance to wear the daintiest, prettiest, flimsiest things your heart may fancy for everyday wear—provided you let Lux cleanse them. You can keep them like new with never a bit of rubbing—for it was the old-style relentness rubbing that robbed your things of their beauty.

These delicate Lux flakes have far more real cleansing power than any form of soap. The girl who wants to "do a few things" in a spare hour, will find a wash basin, some hot water and a package of Lux all she needs to transform anything which is limp and dingy into a refreshing, dainty garment.

How to wash silks—beautifully

Use a table spoonful of Lux to a gallon of water Dissolve in boiling or very hot water and stir into a copious lather. Cool with cold water and dip your garment through this rich suds many times. Work it about in the suds—squeezing the water through the soiled parts but do not rub. Rinse in three waters, clear and lukewarm, press out—but do not wring. Dry in the shade. When nearly dry, press on the wrong side with a warm iron—never a hot one. Press crepes from side to side and stretch a little as you press.

How to wash white woollens



Drop two table spoonsfull of Lux in a gallon of boiling or very hot water and whip into a creamy foam Put the woollens in and let them soak until the water is comfortable for the hands. Squeeze the suds through and through them but do not rub. Rinse in three waters, lukewarm and put through a loose wringer or squeeze the water out—do not wring.

COLORED WOOLLENS: wash as above but in luke warm suds and do not soak. Dry in the shade.

The pure Lux flakes will not harm anything that pure water itself will not hurt.

The Canning of Foods is Given Great Prominence Among Ontario Institutes

INSTRUCTION IN CANNING.

The keen interest in, and appreciation of, the instruction given to Institutes last year in the canning and preserving of fruits and vegetables by the demonstrators sent out by the Department has resulted in a similar offer being made this year. The conditions are as follows:

1. That the Women's Institute or other local organizations will furnish suitable building in which to give instruction, including demonstrations and explanations as the work is being done, with possibly a brief lecture as an introduction to the demonstration.

2. That the Institute furnish a suitable stove and an ordinary wash boiler in which to do the sterilizing; also a suitable vessel or vessels in which to cook the fruit. The Department will provide all other necessary equipment except the jars or cans for holding the fruit. It will be preferable to use glass jars in most instances, as tin cans are very expensive and hard to secure, and it also requires some experience to use them to advantage. A steam pressure cooker will be used at the larger centres. The Institute will be required to furnish, free of cost, the fruit, vegetables and sugar to be used in the demonstration.

3. If assurance can be given that a large number will take advantage of the instruction, the demonstrator will remain for two days in the one centre, if thought well.

4. Application for a demonstrator should be made to the Institute Branch, Department of Agriculture, at as early a date as possible, at least three weeks before the instructor is wanted, and dates preferred should be stated.

The first demonstrations will be given as soon as vegetables suitable for canning are ready.

There will be no charge for either services or expenses of instructor.

If applications are received from Institutes conveniently located it may be that those who wish to take advantage of the lecture and demonstration will be asked to go to a central point for instruction, thus having the one demonstration serve several Institutes.

The Department still has a limited number of the Bulletin No. 252 on "The Preservation of Food," and copies will be mailed to applicants so long as the supply lasts. Thousands of copies of the Bulletin have already been sent out, and the greatest of satisfaction has resulted from the following of the directions given therein.

ONTARIO CANNING CENTRES.

Following the success of the Canning Centres established at Parkhill, last year, interesting notes regarding which have appeared in this Journal, the Ontario Department of Agriculture will this year assist in opening canning centres at a number of points. Already plans have been made for this work at Barrie and Mapleton, and no doubt by the time this issue reaches the readers other centres will be decided upon.

At Barrie, the Women's Institute have the co-operation of the town council, and the splendid market building has been secured for the season. The council has donated $300 to assist in covering expenses.

At Mapleton, a fine building erected for use as a creamery has been secured.

While arrangements will be made for the use of these canning centres on certain days for community purposes—that is, those who contribute to the centre will have an opportunity of putting up goods for their own use—the centres are being established principally for patriotic purposes. The labor in each case will be furnished largely by local people, and most of it voluntarily, but it is expected that generous supplies will be sent in from all of the surrounding districts, and, as most people have planned to produce a little more than they require for their own use, there will, no doubt, be a splendid response. The Canadian Red Cross Society will contribute containers (sealers, tins, or kegs), sugar, spices, and vinegar for all goods contributed to patriotic purposes.

The supplies which can be utilized to best advantage at such a centre are as follows: Chicken, fruit, tomatoes, string beans, peas, beets and corn. These will be of value in about the order named. The centre will also be able to utilize to good advantage a limited supply of cucumbers, cauliflower and cabbage with which to make pickles.

WAR-TIME FOOD AND COOKING.

The little bulletin called "Circular II.," has proved most popular and every day the Department of Agriculture is receiving requests for copies. The Canada Food Board has made most favorable comment regarding the value of this bulletin.

Suggestions for well planned meals, in regard to food values, substitutes for white sugar, wheat substitutes, vegetable recipes, fruit desserts, egg dishes, milk dishes, ways of using cheese are all contained in the little book.

Copies will be sent on application to the Institute Branch, Department of Agriculture, Toronto.

NOTES FROM ONTARIO BRANCHES.

St. Williams Branch in South Norfolk, reports splendid patriotic work accomplished. With a membership of fifty-eight, they have raised $1,722.73, and done much work for the soldiers.

Aurora Institute succeeded in raising $48 from the sale of old newspapers. This Branch met every week to do war work, and each month sent 25 parcels overseas, and 48 at Christmas.

Sundridge, Alkona, and Moyle - Tranquillity report excellent Red Cross and Patriotic endeavor. The last named used the following methods to raise money: Cash contributions from members, collections taken by the farmers' clubs, a little play, a collection at a barn raising, Red Cross mite boxes, a bazaar given by the girls, a garden party, tag day at the Provincial Plowing Match, the Wentworth banquet at the Plowing Match, and the sale of junk.

Fenelon Falls Branch presented their president, Mrs. Gould, with a club bag at their annual meeting. It is pleasing to note that Mrs. Gould's untiring efforts are so much appreciated by her associates. Any president's task is difficult, and too often the members of a Branch accept her efforts as their just right, little dreaming of the hours of toil spent to plan, organize, and make the work of the Institute effective and of real benefit to the community.

Perth Institute has sustained a very serious loss in the death of Mrs. David Hogg, their first president, and always a helpful and enthusiastic member. The Institute, churches and entire town of Perth feel deeply the loss of this prominent citizen.

EXCELLENT WORK AMONG THE B. C. INSTITUTES.

Agassiz met on May 16th. Recommendations re Divorce, Inheritance and Homestead from Cranbrook were endorsed. Mrs. MacCallum gave an excellent paper which showed careful preparation on "Stories for Children," while Mrs Roach read an equally interesting paper on "Canadian Civics."

Boundary held a Y.M.C.A. tag day and dance on the 10th, both of which were in every way successful, clearing $190.

Roll Call—"What Our Town Needs."

At Chilliwack two papers were given on "Zionist Movement" and "Economy in Time and Strength," by Mrs. Welch and Mrs. Dusterhoef. Roll Call was responded to by "War-Time Recipes and What Our Town Needs." It is always encouraging to see the Institutes taking up what is essentially Institute work, namely, "Local Neighborhood Needs."

Colwood is not lacking in the same spirit, the Roll Call being "Local Improvements," which we are pleased to report brought out some excellent suggestions. Mrs. Neal gave a splendid paper on "Turkey Raising," which is to be printed in the Journal.

Hatzic Institute held a "Wild Flower Competition." The Patriotic Committee reported that they had sent two pairs of socks to each of the district boys at the front and the balance to the Red Cross headquarters, at Vancouver.

A Woman Trustee.

Matsqui Institute met on May 10th, when the members decided to accept the standing invitation of the newly formed Farmers' Institute to visit them at their next meeting. It is the intention of the Institute to nominate a woman candidate for school trustee at the coming election.

Nelson Institute members listened to a talk on "Care and Feeding of Chickens," and demonstration, "How to Dress a Rabbit and Prepare for Table." A good meeting was reported.

Miss Abriel gave an excellent paper on "The Necessity of Keeping Household Accounts," at the Nakusp Institute. North Saanich Flower Show, formerly dated for June, was postponed to July owing to late season with regard to flowers. The members listened to Messrs. Carmichael and Davis on "Modern Methods of Canning." The question of a community canning club was left for further discussion and consideration.

Peachland Institute met on the evening of May 10th, when the members and all present listened to a talk by Rev. W. J. Scott on Jerusalem and enjoyed the views presented. This was followed by a paper on "Modern Jerusalem," by Miss White. Altogether the evening was one of keen enjoyment.

Short papers read on "The Effect of the War on Belgium, Serbia, United States and Poland," brought up much discussion, which was interesting and instructive, at the Robson Institute.

Rock Creek turned back to the "good old days of long ago," when the members listened to a paper on "Pioneer Days."

Salmon Arm City Institute met on May 21st, and with three important and interesting subjects, "Care of Tomato Plants," "Re-footing Stockings," and "Making of Rag Rugs," the afternoon was one of profit and pleasure to the twenty-seven members and five visitors present.

Tillicum Women's Institute had the pleasure of a lively discussion following a very able paper by Mrs. J. D. Gordon, on "How Parents Can Help or Hinder the School Work of Their Children." It is a fact worthy of note that the meeting had a member of the school board present who helped considerably in the discussion. On May 15th the topic for discussion, being "Woman's Duty to Herself," was very ably handled by Mrs. Clark and thoroughly appreciated by the audience. Arrangements are well under way for the annual flower show to be held on June 29th, the principal feature of which will be the children's exhibit.

Willow Point met on May 9th. The time was occupied in a discussion on "Legalized Versus Voluntary Food Rationing." All members were unanimously in favor of compulsory rationing.

West Saanich met in May, taking as the topic, "Whether Women Shall Take Part in Public Life," discussion arising therefrom being both lively and interesting.

The Great Good Sense of a Child.

Tappen on May 1st took for discussion "Current Events" and "The Great Good Sense of a Child." The latter topic could be recommended to all our organizations in the hope that there would be understanding sufficient to appreciate and profit by this "Great Good Sense." Speakers were Mrs. Woolett and Mrs. Fleming.

Kalamalka, on May 8th, listened to papers on "Beekeeping" and "Ripening and Preserving of Seeds." These as industries are needed in British Columbia and are such as women could take up with profit and comparative ease.

Salmon River Valley has changed its name to Silver Creek. The topics for May meeting were instructive and very much to the fore, "Maternity" and "Conservation."

Arrow Park had a very practical and helpful demonstration on "Cleaning and Pressing."

Garden City had a most interesting lecture from Miss Juniper, Supervisor of Domestic Science, Victoria, on "Food Values and Conservation."

Gordon Head met on May 15th. Circulars relating to medical inspection of schools were distributed.

Metchosin met on May 7th and listened to a paper on the "Care of House Plants." Copies of the Busy Woman's Handbook were ordered by those present.

Upper Sumas had a mother's meeting and children's programme. This is a splendid idea and should be an item in the yearly programme of every Institute. It seems strange that in the interest in improvement of the general livestock, the most important of all "Our Human Livestock," has been the last to receive attention.

TRADE MARK REG.

The Thrift Car

Canada at Work in Model 90

What the railroads are to a nation, motor cars are to individuals.

Now is the time when you *need* a Model 90, to save time and increase your efficiency.

When farmers, merchants, salesmen, business men and women engaged in every kind of activity—agree upon a car, the proof of that car's value is so conclusive that—

You can safely buy a Model 90 without having seen it, or without knowing a single thing about its perfected construction.

Such testimony of merit is the utmost guarantee that you can have.

But we ask you to take no one's judgment but your own.

Your inspection of Model 90 will explain its popularity.

The powerful, spirited motor seems to exult in the demands you put upon it.

Model 90 is economical with fuel and saving of tires.

It has big-car stylish design, is easy to operate, has narrow turning radius, and performs equally well on hill, straight-away, or in congested traffic.

It has rear cantilever springs, 106-inch wheelbase, 31x4 inch tires, non-skid rear, and vacuum fuel system.

A car to be completely satisfactory must be satisfactory in *every* one of these respects.

You cannot get *complete* satisfaction for less than Model 90 price.

Why delay?

Five points of Overland superiority:

The New Slip-Over Sweater and Spiral Sock

Are the Newest Features of Knitting

Child's Slip Over Sweater

Striped Slip Over Sweater

Sleeveless Slip Over Sweater

CHILD'S SLIP OVER SWEATER.

Age: 4 to 6 years.

1 pr knitting needles, No. 5; 1 pound 4-fold knitting yarn.

Body: Cast on 64 st, k pl 46 ribs, increase 1 st on each end of each rib for 4 ribs. Cast on 45 st for sleeves on end side of work. K 13 ribs pl. Take 69 st on extra needle, bind off 25 st for neck and k on remaining length. *4 ribs pl, increase at neck line 3 st each rib for 6 ribs, k 6 ribs pl, bind off 45 st for sleeve. Decrease at under arm 1 st each rib for 4 ribs, then 5 ribs pl*, hold on needle and work other side in like manner from * to *. K the 2 sides together and k 48 ribs pl and bind off. Cuff: Pick up st at bottom of sleeve. K 9 st pl, then to decrease k 2 st in one 5 times. K pl until there are 16 ribs, bind off. Collar: Cast on 26 st, k pl for 65 ribs, bind off and sew to neck line. Belt: Cast on 10 st, pl knitting, 130 ribs, then decrease 2 st each rib (1 at each end) until 2 st remain, bind off. Cord: Four strands wool, crochet length desired. Finish with tassels.

SLEEVELESS SLIP OVER SWEATER.

Materials: 8 balls knitting wool. Use 1 pair needles No. 5. Cast on 126 st. K 6 st and purl 6 st across entire sweater. Continue knitting where purled in previous row, in so doing forming ribs. Do this for 89 rows, then k pl for 27 ribs. Bind off 27 st on each side of sweater. Decrease 1 st on each side for 5 ribs. K 19 ribs on this length. Take off 23 st on extra needle. Bind off 26 st for neck and k on remaining length. *10 rows on this length. Increase 1 st each rib on neck side for 24 ribs.* K other side from * up to this point. Then k the 2 sides together. K 27 ribs. Then purl and k as on back for 89 rows and bind off. Sew up seams with wool.

STRIPED SLIP OVER SWEATER.

Begin at the lower edge of the back with the white and cast on 108 st (about 19 in.). K 4 ribs of white, start on the right side of the work with the color and k 4 ribs, then 4 more white. With color k until the work measures 10 in. from the lower edge. In the next row narrow every 3rd st across, leaving 80 st (to narrow the 3rd st, k 2 and then k next 2 tog). With the 80 st, rib 3 in. by k 4, p. 4. K pl for 8 in. In measuring always lay work flat and measure with a ruler without stretching. Cast on 80 st for the sleeve, just loose enough so the edge will not draw. K to end of row, cast on 80 st for the other sleeve, making in all 241 st. K back and forth for 32 ribs or 6 in. The back should measure about 16 in. across and the sleeve 19 in. K 108 st and leave on a separate needle. Bind off 25 for the neck. * on the remaining 108 st, k 6 ribs, adding a st at neck edge in 2d st of beginning of each rib, making 114 st in all. Cast on 23 at neck edge, making 137 on the needle. K 32 ribs or about 6 in. more. Bind off 80 st for the sleeve. The bound off edge should be about as loose as the cast on edge. Leave the 57 st on a separate needle. With the 108 st on the other side repeat from *, ending with 57 st. Place all the st on one needle and k back and forth until the number of ribs is the same as the back between the ribbing and sleeve. Rib 3 in. to correspond with the back, then finish with the same number of ribs of the white and color as in the back. Bind off loosely. For the collar, begin at the left side and with the color and steel needles take up 60 st (5 of each 23 cast on in front and rest of the 60 on bound off st of neck edge). K 3 or 4 ribs with steel needles then with aluminum needles until you have 16 ribs of color, 4 of white, 4 of color and end with 4 white and bind off. For a deeper collar make more ribs. This one measures 13 in. at back edge. By widening a st at the beginning of each rib after the 3rd, a wider collar with points at the side will be formed. For the cuff, take up 60 st with steel needles and color, k 2 in., then on right side of the work p a row which makes the cuff turn easily. Make 1 in. more, then with white 2 ribs, then with color and aluminum needles make 4 ribs of color and 4 of white and bind off. Sew up the under side of sleeve and cuff and under the arms, joining back to front. Around lower edge, cuff, and around collar and revers crochet sc with black. In each st of black make sl st with white. Work loosely and widen at corners so edge will not draw. The ribbing at the waist may be omitted and after making the 10 in. below the waist narrow as given above. If the girdle is used cast on 3 st with steel needle, w a st at beginning of each rib until there are 20 st. K required length, point other end by narrowing a st at beginning of each rib until 3 are left and bind these off. The white may be used for stripes on the ends. With 10 st on steel needles k 2 strips or straps and sew under the arms on the ribbing through which to run the girdle (see illustration). This is a good working model for a sweater and is well proportioned.

Front View of Spiral Sock Drawn Up On Leg and Foot

THE SPIRAL SOCK With Kitchener Toe

This is the new spiral sock with Kitchener toe. It is much easier for the amateur knitter, as there is no heel to turn, and socks made in this way can be finished in much less time. The sock is knitted in spiral shaping, and this gives it a close fit and makes the sock fit close to the foot, ankle, and leg, without causing any bumps or bulges anywhere. Fitting so closely, the socks are perfectly comfortable to wear, and are undoubtedly very much to be preferred for the amateur knitter, who finds difficulty in turning the heel of the ordinary sock.

Materials required for one pair of socks are: 1½ hank yarn; 4 needles, No. 1 Red Cross celluloid needes.

To knit: Cast on 56 stitches (16 on one needle—20 on other two). Knit 2 and purl 2 for 30 rows, then knit 4 and purl 4 until sock measures 22 inches in length. Advance one stitch every fourth row of rib, to form spiral. Change stitches to 28 on one needle and 14 on each of other two. Then make Kitchener toe as follows: 1st needle (E). Knit to within 3 stitches of end, Knit 2 together, Knit 1. 2nd needle (F). Knit 1, Slip 1, Knit 1, pass slipped stitch over. Knit to within 3 stitches of end, Knit 2 together, Knit 1. 3rd needle (G). Knit 1, Slip 1, Knit 1, pass slipped stitch over, Knit to end. Knit two rows plain (H). Repeat E, F, G, H, 3 times (making 4 times in all). Then narrow every other row 5 times. Knit the 5 stitches of your 1st needle onto your 3rd needle. You now have 10 stitches on each of the two needles. Break wool (leaving 12-inch length) and thread it into worsted needle. Hold sock so that the worsted needle is at your right and, always keeping wool under knitting needles, weave front and back together as follows: (*) Pass worsted needle through 1st stitch of front knitting needle as if knitting, and slip stitch off the knitting needle. Pass through 2nd stitch as if purling and leave stitch on the knitting needle. Pass through 1st stitch of back needle as if purling and slip stitch off the knitting needle. Pass through 2nd stitch of back needle as if knitting and leave stitch on knitting needle. Repeat from (*) until all stitches are off needles. In order to avoid a ridge across the end of the toe, fasten the wool down the side.

Spiral Sock As It Appears Off the Foot

Back View of Spiral Sock

MONARCH-FLOSS

FOR PATRIOTIC AND ECONOMICAL HAND KNITTING

IN 30 COLORS

FOR knitting women's pullovers, scarves, children's garments, and the finer kinds of woolen things, where strength and durability, no less than good appearance, are desired, Monarch Floss is ideal. A 2-ply yarn, it is made by expert spinners in our own plant from a very fine grade of Australian wool. It is uniform in size and of a beautiful, soft texture. Ask your drygoodsman to show you the Monarch Floss shade card of 30 popular colors. Where a heavier yarn than Monarch Floss is required, you will find Monarch Down—a 4-ply high grade yarn—particularly suitable.

[It is well to note that the various articles described on the opposite page can be made from Monarch Floss and Monarch Down.]

Canadian Women's Institutes

(*Continued from page* 40.)

GRANDMOTHERS' DAY.

An interesting meeting of the Rutland Women's Institute was held on May 9th, in the Rutland school house. The programme was in charge of the grandmothers and the attendance proved that 'grandmas" are very popular. There were eight items on the programme, including a chorus by eight grandmas. Mrs. Sara Craig, aged seventy-nine, contributed two items. The most popular number was a song rendered by Mr. Martin, aged seventy-eight. Oldtime refreshments were sold by the grandmothers, realizing the sum of $11.90 for the Red Cross Material Fund. A collection was also taken for the adopted prisoner of war, which amounted to $11.05.

Naramata listened to Mrs. Lipsett on the subject "Laws of B. C., Pertaining to Women and Children." This Institute has decided that with the rush of ranch work necessary in the greater production campaign, the needle work section of the prize list will be occupied with such entries as best soldier's flannel shirt, knitted socks, suit of pyjamas and stretcher cap.

Sooke Institute discussed a subject which seems to be growing in favor, the subject of "Beekeeping." Mrs. Murray read a couple of articles on "Buying of Bees," "Best Make of Hives for Beginners," and the opinion of experienced keepers on the winter feeding.

West Summerland listened to Mr. Kelly, lawyer, on "Points of Law Affecting Women," suggesting some changes which the Women's Institutes could ask for.

Parksville had the pleasure of listening to the member of the Advisory Board for Vancouver Island on May 1.

Tynehead reports for May meeting, a discussion of Y. M. C. A. work and cleanliness of public schools. This is an important step in the right direction, and one that all Institutes would do well to follow.

Chilliwack's report is encouraging. This Institute has taken up the study of Canadian Civics, and is progressing splendidly in all matters relating to the subject. A labor bureau and exchange are being opened and the junior branch is a great benefit in this Institute.

West Saanich has decided to form a committee, which, working in co-operation with the Victorian Order of District Nurses, will be known as "The Prevention of Disease Committee." This committee is one of six of such in the district of Saanich, and was in response to a request from the Board of Management of the Victorian Order to the six Institutes in Saanich.

Tillicum Women's Institute illustrates the tendencies of the times, that a mother's duty to her children is not all embodied in keeping them clothed and fed. The address given by the able and experienced president upon the responsibilities of mothers to their daughters showed plainly that the future mothers and fathers of our nation must be educated upon broader lines.

Salmon Arm held its monthly meeting. The programme consisted of a paper on economic cooking of meats, while the unique feature, a debate, "Resolved that Each Family Should Have a Pig in the Back Yard," was won by the negative.

WAYS OF PRESERVING FISH.

In writing to the Department of Agriculture, Mrs. J. T. McDougall, of North Bay, states, "I have followed with excellent results the directions for canning given in the bulletin on 'The Prescrvation of Food,' issued by your Department. I am most anxious to put away some fish for winter use and would be pleased if you could give me some information regarding the canning of fish; also the preserving of small fish in oil. I think this information would be a decided advantage to the women in this section where fish are so plentiful in open season."

The readers of this Journal will be glad to read the reply given by Miss Sutherland of the Department of Agriculture:

"Make a brine of salt and water that will support a potato, and, after cleaning the fish properly, place it in brine for half an hour. Remove from brine, cut into convenient pieces and pack in glass jars with the skin toward the outside. Add one level teaspoon of salt per quart. Put rubber and top in position, not tight, and sterilize in a hot water bath for three hours. Remove jars, tighten covers, invert to cool and test the joints. Wrap the jars with paper to prevent bleaching.

"Another method. After removing the fish from the brine, it might be steamed for fifteen or twenty minutes, the skin removed, packed in the jars and sterilized for two and a half hours.

"I have never canned fish in oil, but have found a recipe which I have no doubt would be very good. To 50 lbs. of fish, mix 2½ lbs. salt, 1 lb. brown sugar and 2½ ozs. saltpetre. Rub the fish with this mixture and let stand for 48 hours. Then wash and dry thoroughly in the sun. Dip in oil heated to about 300 degrees. Pack tightly in jars, fill with hot oil, place rubber and cap in position and sterilize in hot water bath for 2½ hours. Remove jars, tighten covers, invert to cool and test joints. The fish might be put in brine as in the first recipe, rather than dry salting, and then dipped in oil. Or, it might be salted, dried and smoked, which seems to me to be a very practical way."

After trying these recipes, Mrs. J. T. McDougall writes as follows: "I have tried both recipes and found them very successful; in fact, I do not think either could be improved upon, except that, in the first recipe, I found that, adding 1 teaspoonful salt when packing the fish made them a little too salty. I tried some without adding the salt and found them as near perfection as could be imagined. Of course, the amount of salt would be a matter of taste, and I think it would be a good thing to leave it out when putting the fish in the jars, as it is much easier to add extra salt, if desired, than to take out what has been put in.

"I experimented with speckled trout and think I never tasted anything quite so delicious as 'canned speckled trout.'

"I also tried the small brook trout in olive oil and found them very good, but do not think they are worth the extra trouble and expense, as, of course, olive oil is rather a luxury just now, and this method seems like defeating its own object.

"I might add that I found the method of canning very practical and very little trouble, and the result certainly surpassed anything I had expected."

A BIG ORDER.

Planning and constructing a healthful, satisfying, tasty dinner and setting it before the family in a dainty, artistic way is as fascinating and quite as useful as designing and making a hat, or painting china. And—don't forget this—if we make it so by painstaking, competent service, quite as dignified and honorable.

The *Business* of the world is in the hands of the women of the world.

People cannot be alert, clear-thinking, clean-acting, and efficient unless they are fed properly.

The *Happiness* of the world is in the hands of the women of the world, because it is the poorly fed person who quits work, quits home, quits morality and manhood and character, quits trying,—just quits. And when a man, or woman, quits, unless we can get him back mighty quick, the game is end d. There is nothing more to be said or done.

The War-Time Holiday

(*Continued from page* 29.)

and nobody felt like spending a great deal of money on a holiday. While we puzzled, undecided, discussing summer hotels half-heartedly, a letter from a cousin solved our difficulties. If we must go camping, she wrote jestingly, why not camp on their lawn? To go camping was exactly the thing we girls wanted to do, but mother could not have come with us on the ordinary camping expedition. Here was a thing we could all do. Our cousins lived in a little country village within a couple of dollars of our home. We were sure of a generous welcome. That very night our plans were decided on.

We rented a nine by sixteen three-compartment tent, with six-foot walls. On mother's account we had this floored roughly after it was set up. It had large awning openings, both back and front, and this added much to its apparent size, as they were always open, even during the night. It was placed not twenty feet from my cousin's house, but facing out across a lovely stretch of green lawn shaded by tall maples. Ten feet from our back door was the big vegetable and fruit garden, and we had all the green peas, new potatoes and fresh vegetables that we could use, not to mention strawberries and raspberries straight from the vines. Just down the road was a farm where we might buy the most delicious cream and milk, and the village boasted an up-to-date grocery and a butcher-shop. My cousin knocked up a little shack behind the tent, where we placed our oil-stove. Here it and the unfortunate cook who operated it were sheltered from wind and rain.

We did all our own cooking (save for the hot biscuits, desserts, etc., that were surreptitiously placed on our table by generous friends), but we gladly made use of the big, cool cellar, which fortunately had an outside entrance.

We took with us two large trunks, both of which sat outside the tent. They were covered with waterproof canvas and raised slightly on boards to prevent their getting damp from the ground. We were able to keep suits, hats, etc., in one of the roomy clothes-closets which the house afforded, so the tent was never crowded with clothes. Even so, two stretchers and a bed seemed too much for a tent that one wanted to live in, so every morning one of the stretchers was carried out and placed along the shady side of the tent. At night we moved out our table and moved in the stretcher. Weighted curtains of mosquito netting saved us from the flies, which otherwise would have been a nuisance at meal times, though they bothered us at no other time.

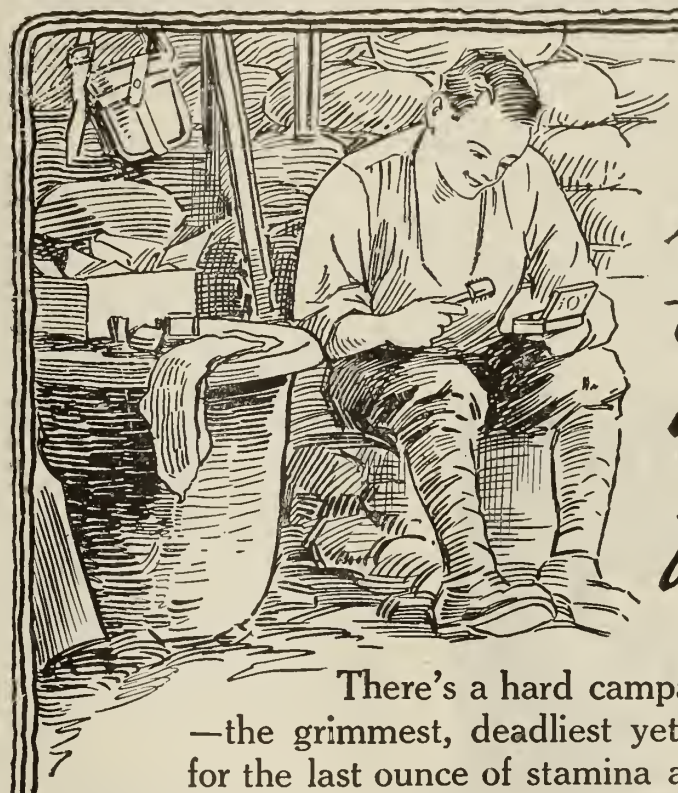
For two very happy months the tent was our home. After a busy year it was great to have all the time one wished to read or sleep, to go for great long tramps up the little river, or hike off to the lake for a day—for old Ontario was only two miles away. We found, too, an obliging man with a motor, who was willing for surprisingly little money to make surprisingly long trips out into the country, and these were among our greatest treats. There was a tennis club in the village, which boasted a fair turf court, and this we promptly joined.

There were "swimming pools" in the little river, and when we walked to the lake we always took our bathing suits. Also there was fishing of a kind, both in lake and stream, and long, lazy afternoons in the boat drifting about with the dragon flies which frequented the river. There were delicious picnics under the big elms on the "flats," and jolly late "feeds" in the tent after an evening's driving. There were a hundred little happinesses beside, the orioles and catbirds in the trees about the camp, the saucy squirrels which chattered at us from the branches, and stole from us mendaciously as soon as our backs were turned; the wonderful still starlight nights—for the tent curtains were never closed, and always we looked up to the night blue of the country sky—and the marvel of the dawn stealing up silver-gray out of the night.

Even the rain beating on the tent roof had a music of its own, and the night wind in the trees was a friendly song. One of the loveliest things about living in a tent is this growth of intimate friendship with all out-of-doors.

In spite of the fact that we accomplished something in the way of sewing and canned and preserved some forty quarts of fruit and vegetables to ship home at the end of the summer, it was one of the most care-free holidays I have ever known. We came back to the city when it was over, vowing to repeat it at our earliest opportunity.

Such holidays, it seems to me, are open to almost every worker, and I can guarantee their value, both for pleasure and for recreation.



Are We Reincarnated After Death?

(*Continued from page* 10.)

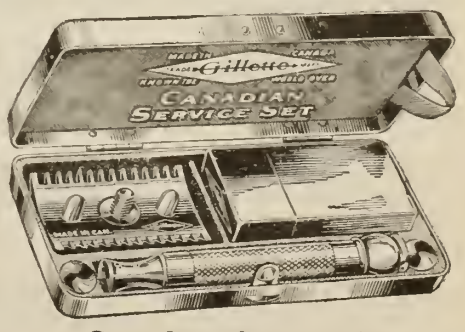
law in nature which provides for the loss of these higher powers by those who exercise them for selfish motives. It might be compared to the fuse in an electric system which blows out when a current which it is not intended to bear, reaches it.

Men who have attained these powers and the perfection which is the condition of their possession are known as Masters, Adepts, Initiates, Elder Brothers, Rishis, Mahatmas and by other names. Such were the great prophets, like Moses, Elijah (who was reincarnated as John the Baptist, of whom Jesus said [Matthew xi. 14], "If ye are willing to receive it, this is Elijah who was for to come," though many people nowadays appear to be unwilling) Ezekiel, Isaiah, Daniel, Paul.

These highly developed men know a great deal more about the universe than our most eminent scientific men, and such statements as they have made in The Secret Doctrine, which was published by Madame Blavatsky and was, she said, largely dictated by them, have anticipated the important scientific discoveries of the past thirty years. The universe has its seasons, just as the earth has, and these vast periods recur in regular order as our seasons do, their occurrence being measured by cycles, such as the solar years of 25,868 years, a month of which, or 2,155 years, is the Messianic cycle, and corresponds with a sign of the Zodiac. The Kelpa is the term applied to the life-time of a world, a period of 4,320,000,000 years. This earth is said to be about 320,000,000 years old and man as he now appears has been upon it for 18,000,000 years or so; or since the later secondary period in geology. The Continents on which he flourished and on which great civilizations rose and fell, like Lemuria which now lies below the Pacific Ocean, and the later Atlantis, now covered by the Atlantic Ocean, the last fragment of which was submerged nearly 12,000 years ago, were the temporary dwelling-places of the race, which is immortal. It would take too long to tell of the astral, the pranic and the manasic worlds, beyond this material one, upon which man has a future to evolve, and for which he has bodies corresponding to the conditions there, as he has a physical body here. There is no death in the ordinary sense. As he dies in this world he is born in a higher one, and as the cycle returns, he dies there to be born again here, until he has reached perfection. For man is immortal and "his future is the future of a thing whose growth and splendor have no limit."

Keep in touch with the men who are fighting for you!

There's a hard campaign under way "over there" —the grimmest, deadliest yet—a campaign that will call for the last ounce of stamina and morale. Let them know you are thinking of them, and appreciate what they are doing!



Nothing will help more than letters, cheery, hopeful and ***frequent.*** Reinforce them with sensible practical gifts, like the

GILLETTE SAFETY RAZOR

and once in a while, a few packages of Gillette Blades to replace those lost or given away.

Clean shaving has from the first been a matter of pride and discipline, as well as a comfort with our boys. You can imagine how it refreshes and braces them up after a long dusty march or a day of hot and desperate fighting. Now it's a matter of life or death as well, for on none but a clean-shaven face can a gas-mask fit close enough for safety in these days of intensive gas-attacks.

And the Gillette has proved itself by all odds the best razor for the job. It's always keen and ready for action, even under the most unlikely conditions. To that man whose life means so much to you a Gillette would be a welcome daily reminder of a home worth fighting for. Don't keep him waiting for it! Ask your dealer to show you the new Military Sets in metal and khaki, to-day.

Thought Seeds that are Being Cultivated by Parents and Teachers

(*Continued from page* 25.)

Get together and work together in the interests of childhood! Of the children Longfellow has said:

"Come to me, O ye children!
For I hear you at your play,
And the questions that perplex me
Have vanished quite away.

"Ah! what would the world be to us
If the children were no more?
We should dread the desert behind us
Worse than the dark before.

"Ye are better than all the ballads
That ever were sung or said;
For ye are living poems
And all the rest are dead."

Too much emphasis cannot be placed on the importance of early impressions both in the home and in the school; but there is another equally important period. Between the ages of twelve and sixteen, nature is working her tremendous revolution. Words cannot express what it means to the girl or boy who, during this development, is absolutely sure to be guided wisely, and who in years to come will look back with keen appreciation of the treatment he received both at home and at school.

As well as appreciating a teacher's true worth, parents who take an active interest in their Home and School Club understand the necessity of helping a teacher by seeing that the children are at school on time, having first made sure that these children were properly washed, clothed and fed.

Side by side with the important movement for greater food production is the fact that we do not live by bread alone. Over and over again our nurses and our soldiers have surmounted physical hunger and weariness because of the fact that high ideals fed and nourished the immortal part of their being. When these large souls return to Canada what do you think they will prize? Material things do not seem as important to them as they do to us, and they have learned the power of high ideals.

The Toronto Home and School Council hopes to renew its activities in the autumn with increased vigor, to cultivate towards greater maturity the thought-seeds planted this year. They are confident that ideas and ideals are life giving and that the leaves of the tree of life are for the healing of the nations.

TURNBULL'S "M" BANDS
FOR BABIES

are a necessity for every infant from the date of its birth.

They are made only of the softest and purest Australian Merino Wool, finely knitted, thus keeping the baby warm and comfortable.

The tapes which are attached to the tabs, front and back of the "M" bands, and go over the shoulder, carry all the strain of the diaper, absolutely preventing any stretching of the garment.

The garment is pinned to the tabs, which not only provide a firm hold for the pin, but, due to the support given by the tapes, keep the diaper snugly in proper place, no matter how active the infant may be.

Put up in sanitary boxes in sets of three. Price, $1.50 per box.

Sold by the best dry goods shops or direct by mail. Send for a box to-day, give age of baby.

with great ceremony. Elizabeth, then in the thirty-ninth year of her age, was attended by thirty-nine ladies and gentlemen, to correspond with the number of poor folks. These attendants proceeded to array themselves in aprons, and, bearing towels and basins of water and sweet flowers, waited on the Queen whilst Her Majesty, kneeling on the cushions provided, washed, crossed and kissed, as had been done before. After this, the Queen distributed broadcloth to make gowns, a pair of sleeves, a wooden platter, whereon was half a side of salmon, as much ling, six red herrings and six loaves of "cheat" bread, together with a white wooden dish of claret wine. Finally the towels used and the aprons worn by the attendants were bestowed on the recipients of the charity. At the close of this somewhat lengthy ceremonial, Her Majesty departed. The old chronicler who recorded these proceedings pithily remarks that "by this time the sun was setting."

As no provision was made to ensure the suitability of the Maundy gifts to the various requirements of the poor persons, somewhat rough bartering among the recipients frequently took place, and with a view to check these practices, money payments were from time to time substituted for the various doles, the last of the gifts in kind being that of the clothing for the men, which was distributed so recently as the year 1881. It having been found, however, that in most instances the men parted with the goods for less than their original cost, the sum of £2/5 per head is now given instead of clothing. Thus the Maundy alms are at the present time composed entirely of cash payments, amounting in all to about £5.

The total sum is made up as follows: (1) The gift of pence at the rate of one penny for each year of the Sovereign's age, which is handed to the selected persons in a white leather purse; (2) sums of £1/10 in lieu of provisions and £1 in lieu of the gown formerly given by the Sovereign, enclosed in a red leather purse; (3) a further gift of 35s. to the women and 45s. to the men in lieu of clothing, this last gift being enclosed in a paper packet.

The ceremony of the distribution of the Maundy alms, which is of much interest, took place in the Chapel Royal, Whitehall, from 1714 to 1890. But since the latter date, the chapel having been closed, the gifts have been distributed in Westminster Abbey.

In February, 1901, after the death of her late Majesty, Queen Victoria, the Lord High Almoner petitioned His Majesty, King Edward VII. to follow the precedent adopted on the demise of William IV. to which proposal His Majesty was graciously pleased to give his consent. This procedure was to the effect that the numbers on the list of Maundy recipients should be reduced to numbers corresponding with the years of the reigning monarch, and that the surviving recipients of the last Maundy of the previous reign should be placed on a supplementary list, this said list to be absorbed as vacancies occurred. It was further ordered that, meanwhile, no fresh appointments were to be made.

The Girls' "Carry-On" Column

(*Continued from page* 21.)

of something I could do to help, besides sewing or knitting, for I just hate it?

X. Y. Z.

I must tell you of the plan a lady near Saskatoon is working out, and it has been a tremendous success. She arranged with a military hospital to supply chickens at the cost of production. She is a very busy woman, but insists that she must give some time to the soldiers, and now she has started a chicken farm for her heroes, as she calls them.

DEAR BETTY:

We are a club of girls who have been meeting at each other's houses to knit, but we want to do something a little more strenuous. Could you suggest anything for girls who live in a small town?

QUINTET.

When in New York about a month ago I saw, on the corner of Fifth avenue and Forty-second street a number of women who had formed an organization to collect books to supply the soldiers overseas. Novels, bright, cheery ones, that had been read and were of no more use, historical books and books of poetry were taken, if they were in good condition. If you had no books you could give money which went for a subscription to a magazine for some Y. M. C. A. hut or military hospital, and the success of the venture was shown by the pile of books that mounted up every day.

BETTY O'HARA:

Do you think it possible to do any work for a military hospital at home?

A CLUB OF TEN.

If you only knew how some of the nurses are rushed to death, I am sure you would be glad to make up some surgical supplies, pads, wipes, etc. Apply to the matron of the hospital. I am sure she will be pleased to have you do it.

DEAR BETTY:

I would so much like to do something for returned soldiers. We have a large house and a motor car and I am sure I could give them a nice time, but I don't know how to go about it. A. R.

Well, my dear, you certainly have the right idea, and if a few more girls in Canada would get busy, there would not be quite so many lonesome soldier boys. The best way for you to overcome your difficulty is to telephone to

A King in Babylon

(*Continued from page 33.*)

in the last thing, after the coffin had been sealed up in the sarcophagus, so the roof must have been built to stand without it. Of course the weight of the sand that is heaped up over it now may make a difference, but I'll take down just enough to let the coffin past."

"You'll not try to bring out the sarcophagus?"

"Oh, no; that's too big for me to handle—besides, it isn't of much value, since it isn't decorated. I'll turn it over to the government."

We found it quite dark when we emerged from the tomb; and we hurried up the steps and across to the tents, where we found Ma Creel anxiously awaiting us.

"I thought you were never coming!" she said. "I was just going to send after you."

"Nothing wrong, is there?" asked Creel. "How is the Princess? Did she wake up?"

"No," said Ma Creel; "she didn't wake up—she just turned over and went to sleep."

"But she was asleep."

"No, she wasn't—it wasn't sleep—and it wasn't a faint. I know—I've seen too many women in faints. It was something different—more serious. But she's sleeping now, like a log."

"What was it happened?" asked Davis, who had been listening closely. "You didn't tell me anything . . ."

"I didn't think of it," said Creel. "Mlle. Roland had some hard scenes, this afternoon, and played them magnificently, for all she was worth. We ended with the burying-alive scene—I told you yesterday, you know; and she played it so well that the natives got all worked up and broke loose and tore the wall down the minute the last stone was in place. You must have heard the racket."

"I did," nodded Davis; "I supposed that was what you were doing. I was too busy to look out. Well, what then?"

"When I got through the opening, I found Mlle. Roland in a heap on the floor. The strain had been too much for her."

"Ah!" commented Davis. "And Jimmy—did he faint, too?"

"Faint?" I burst in. "I should say not! He walked away the moment it was over, without waiting to see whether the girl was dead or alive."

"He had no reason to think her dead," Davis commented. "But he has evidently got past the fainting stage."

"Yes, he boasts of it!" I said. "He told me he would never be afraid again. But I didn't think him so cold-blooded . . ."

I broke off for want of the proper words to finish the sentence.

"Where is he now?" asked Davis.

"He's in his tent," said Ma Creel. "He came in about an hour ago, and went into the tent without saying a word, and I haven't seen him since. I suppose he's asleep . . ."

"Go and see, Billy," said Creel, and in a minute I was at Jimmy's bedside.

He had thrown himself on his cot without removing even his shoes, and lay on his back with his hands behind his head and his ankles crossed. His eyes were closed and he was breathing with a slow, deep regularity which told of profound slumber.

"He's sleeping like a log," I reported.

"And you say Mlle. Roland is sleeping, too?" asked Davis, who was scrabbling thoughtfully at his beard.

"She's sleeping as though she would never wake up," Ma Creel answered. "Great, deep breaths, as regular as clock-work."

"And she didn't come out of her faint? She didn't say anything?"

"Not a word; she didn't even open her eyes. I was sitting right there bathing her forehead, when all at once she seemed to relax; then she stretched out and crossed her ankles and put her hands behind her head, and went off to sleep—what in heaven's name is the matter now, Billy?"

"Why," I stuttered, "why that's just the way Jimmy is sleeping—ankles crossed, hands behind his head . . ."

"Well, what of it?" Creel broke in, with what seemed to me quite unnecessary violence. "Didn't you ever hear of anybody sleeping like that before! I'm tired of these hysterics! Let's have dinner; I'm nearly starved!" And he stalked away to the tent.

I remember thinking, as I looked after him, that he wasn't so very far from hysterics himself. Then I noticed that Davis was still scrabbling thoughtfully at his beard.

CHAPTER XXIV.

NEITHER Jimmy nor Mlle. Roland was present at dinner that evening. They were sleeping peacefully on, and Davis, who had taken a look at both of them, advised against awakening them.

"I am something of a doctor, you know," he said, as we sat down to table; "got to be, out here in the desert—and my advice is to let them have their sleep out. They have been exhausted by the day's work—they need sleep more than food. They can eat when they wake up. Besides, to wake a person who is sleeping as soundly as they are is always a shock. And they've had shocks enough."

"Jimmy didn't have any shocks," objected Creel. "He just stood around sneering."

"We burn up more nerve force sometimes holding ourselves in than letting ourselves go," Davis pointed out. "From what you told me, I judge Mlle. Roland let herself go pretty completely."

"She just cut loose," said Creel. "It was gorgeous! She almost overpowered Digby and Mustafa, when they tried to chuck her into the tomb. Digby nearly had apoplexy—and I had to plaster Mustafa's arm with a ten-dollar bill, after it was all over."

"Yes, he was over here," said Ma Creel, "and I dabbed some iodine on it and dressed it for him. I was just going to ask you what happened to him. He wouldn't tell me, but it looked like a bite—a deep bite right through his forearm."

"It *was* a bite!" I blurted out; and then I could have bitten my tongue, for Creel looked at me like a thunder-cloud.

"A bite!" echoed Ma Creel, and they all stared at me—except old Digby. He just hung his head and went on with his meal. "But I didn't know there were wild animals out here," and she cast a frightened glance into the darkness about us. "And nothing but a tent . . ."

"There aren't any wild animals!" said Creel impatiently. "For goodness sake, don't start anything else, Mary!"

"Then what was it?" Ma Creel demanded. "It was deep, I tell you—savage—clear in! Billy . . ."

But I wouldn't have answered if I had been on the rack.

"Perhaps it was a camel," said Davis, quietly, at last. "Camels get vicious sometimes."

"No, it wasn't a camel," broke in Mollie, sharply. "It was too small for a camel."

"Then it must have been a goat," said Ma Creel scornfully.

"It was the Princess bit him," explained Creel, unable to endure the ordeal any longer. "Just as he and Digby were thrusting her into the tomb, she lost control, somehow—flew off—forgot it was only make-believe, and defended herself in the only way that remained to her. And then Mustafa lost control, too, and picked her up and jammed her through the hole as though she were a bundle of rags. It's lucky she wasn't hurt! And then the natives lost control, and went whooping over us and tore down the wall! By George, it was a strenuous afternoon—eh, Digby?"

We all started to laugh at old Digby—it seemed to ease our nerves—and then, when he looked up, I saw two ugly red streaks across his left cheek-bone.

"What's the matter with *you?*" asked Creel. "Did she get you, too?"

"She tried to claw my eyes out," answered Digby, intensely.

"Nonsense!" said Creel, impatiently.

"Of course, I may be mistaken," said Digby; "but I would much sooner handle a wild-cat!"

We all laughed again, but there was a sort of painful undercurrent in the laughter. A girl who bit men savagely in the arm and tried to claw their eyes out wasn't exactly pleasant to think about.

"I'm glad you didn't lose an eye," said Creel finally; "but it will make a great scene. I am sorry you didn't see it, Professor."

"So am I," agreed Davis. "Will you have some more to-morrow?"

"Yes—but nothing so exciting. I am going to rush this thing through as fast as I can, before something serious happens to my principals."

"Don't push them too hard," advised Davis. "They both seem to be very

H·A· BRAND OLEOMARGARINE

A Table Delicacy—
A Kitchen Economy

"H.A." Brand Oleomargarine is a wholesome, nutritious and economical spread for bread. It is excellent, too, for cooking, for vegetables, soups and sauces. It makes light cakes and flaky pastry.

"H.A." Brand Oleomargarine is shipped to the grocer, in small quantities, soon after it is churned. That is why it is always fresh and uniform in flavor when it reaches you.

Spread your bread with "H.A." Brand—do your cooking with it. Think what you can save. "H.A." Brand Oleomargarine costs at least one-third less than Creamery Butter.

At Your Grocer's and Butcher's.

A King in Babylon

(Continued from preceding page.)

highly-strung and extraordinarily susceptible to suggestion. They lose control, as you call it; and every time they do that makes it easier to do it again—it becomes a sort of habit."

"Doctor Jekyll and Mr. Hyde," I ventured.

"Exactly," Davis assented. "You'll remember that, after a time, Jekyll kept slipping into Hyde in spite of himself. These two haven't got that far yet—they will probably wake up all right in the morning; but they are evidently set on hair-triggers, as it were. A touch sets them off. So you will have to nurse them along."

"I'm going to," said Creel; "but I've got to complete the picture—don't forget that."

"Will you need the natives to-morrow?" Davis asked.

"Yes. We'll do the slave-market," he added, turning to me; "and then we'll show the girl being captured by the slavers and brought across the desert. I want to get as much of that caravan stuff as possible—that's what we came to Egypt for. Then we'll take a few love scenes in the tent and beneath the palms. We'll get as many feet as we can!"

"I hope you can spare me five or six of the natives," said Davis. "I would like to get the case over to the tent, where I can keep my eye on it."

"Of course," agreed Creel, instantly. "Take as many as you need. Only I'll have to have Mustafa to keep those fellows in order and tell them what to do."

"Oh, I don't need Mustafa," said Davis, and so it was settled.

Davis hurried away after dinner to write up his notes, and Creel sat down to moil over his scenario with a disturb-me-if-you-dare look which there was no mistaking. Drawn by an irresistible fascination, I went in and took another look at Jimmy. He was lying exactly as before, breathing long and deep. There was something abnormal about it; I had seen him asleep many times, and he had never breathed like that—nor lain on his back with his hands behind his head and his ankles crossed. It was a strained, unnatural attitude . . .

As I tore myself away and came out of the tent, I found Mollie waiting for me—at least, I should have supposed she was waiting, if she hadn't seemed so surprised when she saw me.

"I thought you were off by yourself somewhere smoking your pipe," she said.

"I've been taking a look at Jimmy," I explained. "He is still asleep."

"So is that—that vampire!" she whispered. And then, after a moment, "Would you like to see her?"

"Do you think it would be all right?"

"Of course it would be all right. Uncle Warrie and Mr. Davis have both seen her. I *want* you to see her. Come along," and she caught my hand and ran, rather than walked, to the women's tent.

A night-lamp was burning just inside the entrance, and she caught this up, and swept aside a canvas flap, and motioned me through.

But I held back.

"You go first," I said. "See if everything's all right."

"Of course everything's all right. Can't you hear her?"

Yes, I could hear her—that deep, regular breathing might have been an echo of Jimmy's. I slipped through, and Mollie let the flap fall behind us. Then she drew me to the bed, and held the light so that the sleeper's face was clearly revealed.

She was lying on her back, her hands clasped behind her head her ankles crossed—and I noted with a curious little thrill that her left ankle was over her right just as Jimmy's was. Her eyes were closed, and her long, curved lashes swept the lower lids. Her breast rose and fell convulsively with those long, deep, regular breaths. But for them, she might have been dead, so motionless she was and pale, save for that livid mark across her cheek. Mollie indicated it with an enquiring finger.

"Did she really fall?" she whispered.

"Yes," I said; "but that wasn't what made the bruise. Mustafa struck her."

I saw the lamp quiver in Mollie's hand.

"How horrible!" she whispered. "How horrible! But she bit him—you should have seen that bite—deep, like a wild beast's . . ."

"Come along," I urged. "We mustn't wake her," and I pulled her toward the door, took the lamp from her hand, and set it down on the little table outside. "Now come and sit beside me while I smoke that pipe," I added. "I want to talk to you."

She made no objection, and together we walked out to the edge of the palms, where we could look off across the desert, and sat down side by side.

"There wasn't any danger of waking her," said Mollie, suddenly, as I was filling my pipe. "I made a lot of noise awhile ago, just to see, and she never stirred. I don't believe she is asleep at all."

"Not asleep?"

"No; she doesn't breathe like that when she's asleep—nobody does. She's in a trance."

"Then Jimmy is too—he is breathing just the same way."

"I know—I went in to see him."

"You did?"

"Yes—I want this thing settled—I can't stand it any longer."

"I thought for a while," I said slowly, "that perhaps Mlle. Roland was a dope fiend, and that that was the cause of her spells of listlessness and languor. Perhaps she is drugged now—perhaps those wild actions of hers this afternoon were the result of a drug; and now she is sleeping off the effects."

"But how about Jimmy?" Mollie objected. "He isn't a dope fiend—we know that—and his condition is exactly the same."

"Well, what is it, then?" I demanded.

For a moment Mollie was silent, staring out across the sand, then she turned to me impulsively.

"Do you know what I think, Billy," she said. "I think their spirits are off somewhere together—over at the tomb, perhaps . . ."

Her voice trailed off as though she were afraid to finish, and we sat in silence looking out toward the ruins, behind which the moon was rising. How beautiful the desert was—and yet how dismal—how threatening! Perhaps Mollie was right—why shouldn't she be right? I could imagine them walking side by side through some dream-world . . .

"Mollie," I said, in a low tone, "the most astonishing thing happened over there this afternoon. Davis, you know, took the lid off that stone coffin, and inside of it was a wooden mummy-case, with a face painted at one end of it; and when that lid was raised, and we looked in, I would have sworn for a minute that it was Jimmy Allen staring up at us. It was just for a flash—and then the face changed, and the likeness was gone. And then Jimmy came in and looked at it, and told us in the most matter-of-fact way, that it really was he, and that the woman he had murdered was walled up at the far end of the tomb; and that she had never died, but had just waited and waited, for four thousand years. . . . It sounds ridiculous, I know; but when Jimmy was telling it, the cold chills kept running up my spine and over my scalp, and I would have sworn it was all true, and that when Davis opens that wall . . ."

"He mustn't open it!" breathed Mollie. "You mustn't let him open it!"

"Creel tried to talk him out of it, but he just laughed at him—called it superstition, ignorant fear. He half-believes in it himself, I think, but he won't let himself be frightened. He has nerve—I'll say that for him—and he has a theory that every time we yield to unreasoning fear, we are setting the race back toward savagery."

"He's welcome to his theories," said Mollie; "but he mustn't be allowed to open that wall!"

"How can we prevent it? After all, when one thinks of it, it *does* seem foolish . . ."

"If he opens that wall," gasped Mollie, her hand clutching my arm, "something awful will happen—something *awful*—I feel it!"

I caught the hand and held it—and she didn't draw it away. After all, I reflected, I could stand a ghost or two—I could even welcome them!—if they drove Mollie into my arms!

(Continued on page 52.)

Around the Hearth

(*Continued from page* 32.)

Years ago, we used to hear considerable about "besetting sins," (we seldom hear them mentioned now), and I used to feel at times that talkativeness was mine. Many a time I tried to imitate some demure person, hoping to overcome this besetment of mine. It always made me feel very virtuous to thus restrain myself, but my resolutions were very fragile and often broken.

But one day my viewpoint changed. I had been talking to an old woman who kept a little bake-shop. She had unburdened her mind to me, and as I rose to leave she said, "Oh, don't go yet, your talk is doing me so much good."

As I walked homeward, I reasoned the matter out with myself, and concluded that if my speaking member could dispense comfort, why should I not use it rather than refrain? So the "besetting sin" was "laid away in a napkin," and the talent brought forth in its stead.

* * * * * *

"I'm not much of a talker, I do a lot of thinking but I just can't express myself," is a very common phrase.

That speech makes me somewhat impatient. Why don't those people incorporate their thoughts and send them forth? Practice speaking aloud the thoughts that course through the brain, and thus qualify for a companionable person, if not a brilliant conversationalist.

Some of our best preachers, our greatest orators, our most eloquent statesmen were very quiet men before they were called into public notice. They had to overcome diffidence, nervousness and hesitation of utterance before they attained to a state of perfection. Would you know wherein lay the secret of their progress and success?

It is this—they became obsessed with an idea and they proceeded to give it expression. As the idea grew in their mind, they expatiated upon it with their words. By degrees it became easy to express what was uppermost and absorbing in the mind and heart, and "practice makes perfect."

A really good speaker, man or woman, is one who has a message to give. The same applies to a good talker. They have something to say, and they say it in the best language they can command.

Many people consider they are bestowing a compliment by congratulating a person on being a *great* talker. Never confuse the words, because it is an offence to a *good* talker.

We all meet with "great talkers," people who keep up a continual strain of uninteresting chatter—

"But leave you none the wiser
For all they have to say."

* * * * * *

Some time ago I read an article in a magazine, wherein the writer contended that we all talk too much, that it is a disease with many, that it is most trying on the nervous system, and in many cases requires serious treatment to overcome.

Many of us know by experience that there is some truth in these assertions. We have tossed for hours instead of sleeping because of an overdose of talk. The excitement of a prolonged conversation, probably late at night, with some one whom we have not met for years, will overtax the nerves, and cause unrest.

Now, I suppose we all *do* talk too much. Better for us if we said less, and did more thinking. But if we know enough to have our quiet spells, and avoid excess, what a splendid mission to impart information.

But to return. The day wore on, the rain falling with quiet persistence. The sock grew in length, and the talking went on apace.

We gave war-time recipes, talked of women in business, in politics, making of wills, telepathy, phrenology, hypnotism, fortune-telling, even ghost stories, and gradually, or mayhap suddenly, back to the weather.

Then came a delightful change of programme as boxes and baskets once more received our attention. I once heard a man make this remark, which I never forgot—"Is it not gratifying, when eating is such a necessity, that it affords us so much pleasure?"

Never more so than on that rainy day, when the seats that had been so soft and acceptable at first grew hard and tiring as we sat hour after hour watching the patter against the window panes.

* * * * * *

Lo! the wheels began to move. We were actually pulling out! What a relief to feel we were going! As we neared the city, there was no evidence of rain having fallen. It had not rained a drop all day.

My friends dropped off at their respective streets, and I was left alone. As I gazed out of the window in the gathering dusk, I mentally soliloquized—"Well, the rain, the talk, and the day are ended. It was uneventful, but it had its lessons. It required patience to spend the long hours in such close, cramped quarters, lacking the air and exercise we so much desired, but we had food and shelter, and congeniality."

I always travel to Dreamland by way of England and France, so my mind reverted to the boys in the trenches, the long waits in the dark and mud, often cold and hungry, listening for the signal to go over the top.

"I could write a book, mother, on the various emotions as we stood there in the inky blackness of the dug-out, waiting for the boom of the guns and barrage of fire that Easter Monday at Vimy Ridge," my son wrote. Six of that unit went over. Three returned at night through the mire and sleet, saddened and lonely.

"Some days must be dark and dreary."

Peace--The Stranger

(*Continued from page* 8.)

"Refreshments for Madame Palmist," she smiled.

The boy was an opportunist. "If I might stay with you while you drink your tea, those who are waiting would think you engaged and not disturb you," he offered.

"Ah! how nice of you; to talk to a man is a rare treat in the present dearth of masculinity; and *you* should have much of interest to tell owing to your experiences at the front."

"Why, how did you know? You failed to catch the hint I gave you about the gas."

"I did, but received a 'message' later. The mind currents are working overtime to-day, and your promise of thrills was prophetic. Oh! I'm glad to be nonsensical for a minute or two, but now it's really—goodbye."

"Goodbye?" he said, in an injured tone. "Au revoir, rather."

"Run along, infant," she scoffed. "I eat little boys like you for supper every night."

"Very well," he persevered, "there are still two days of the Fair, and any time I pay my quarter I'm entitled to fifteen perfectly good minutes of your time."

"Oh! mercy, mercy!" she begged. "Do you want everyone to think us quite mad? Well, if you will have it, I'll be relieved at eight o'clock, and it might happen that I should stay awhile to view the crowd. If you were around I might be able to give you some grandmotherly advice."

"At eight then, and as for advice, I never allow it to inconvenience me in the least."

When at eight o'clock, she slipped through the curtains, he was waiting, and stepped eagerly forward—to the rather palpable indignation of the pretty girl, so young and sweet and eighteen, who had been endeavoring to hold his attention. But young and pretty girls, in this Canadian town, were so plentiful as to make the life of the returned soldier almost a burden. "And *she's* thirty, nearly, or I miss my guess," thought sweet-and-eighteen, indignantly.

And she was right; as the palmist stepped into the unshaded light, he saw her as she was, slim and dark as he was slim and dark, but in her tired white face showed every minute of her thirty years, for she had lived them all, and felt them all, and now—asked but for Peace.

Peace—The Stranger

(Continued from preceding page.)

Clad in her fantastic garb, and standing under the flags of the Allies (which decorated the gallery tea room), she might, the boy thought, have stood for a picture of enemy-ridden Belgium, herself—so wan and sad and haunted. And the sight of her had upon him the same effect as had had that tragic, war-swept, battle-scarred land—the desire to help, to comfort, to fight her battles; for the gift of imagination, the capacity for suffering with which his literary temperament had endowed him, rendered him sympathetic beyond his years—and his late experiences on the battle-field had not ceased from troubling.

"You are tired," he said. "Let's find a quiet corner and have some supper."

"If I dare brave the fiery glances of your young and pretty friend—she's wondering how you can turn from her charms to the sorry glances of your maiden aunt. Oh! no, don't—I'm not fishing—and I'd have felt the same at her age, so I can sympathize."

"Maiden aunt," he scoffed, "when the lovely sibyl condescends to bestow upon this poor mortal a few moments of her time. Rest ye, tired spirit, while I seek such fare as may tempt your fairy palate—nightingale's tongue, and butterfly's wings, mayhap."

"Nay, rather, good ham sandwiches and plenty of them for your old witch godmother," she retorted.

He was gone—she had had the last word, and that word rang in her ears.

Godmother—somehow it suggested a benefactress. To him? To whom? Could she benefit him?—how? Give him something, perhaps—some emotion (a transitory one, of course) to fill his mind for the moment, and wipe away the searing memories of war.

Someone brushed past her and drew her attention to the busy scene around her; where women, who would scorn to do a hand's turn in their own homes, and girls, weary of office routine, vied with each other in eagerness to spend themselves for the Great Cause—earning comforts and necessities for our boys in hospital or holding the long line.

Godmothers, benefactors all—these women, and might it not be that they should reap some benefit themselves, some broadening or deepening of nature or character from the efforts put forth in these troublous times—these times of stress so infinitely harder on the women than on even the men grimly engaged in their conflict against oppression's hordes?

Ah! if from the dreadful, sordid, soul-sickening maelstrom of modern war could come to the women of the world one gift—the gift of helpfulness—how changed the world would be. Vanity, jealousy, levity, subordinate to charity!

"Come out of it," murmured the boy—and she dropped to earth.

* * * * * * *

It was a dull, misty winter day—as the Pacific Coast knows winter—but in the big ball-room at Government House the many-colored gowns of the women and the dancing gleams of light from the fire-place defied the surrounding gloom.

A benefit for war widows was in progress, and the musical programme now under way was being conducted by a number of the city's leading artists.

In a curtained alcove window facing the sea, the boy (freed for the afternoon from his journalistic work in the Government offices) stood talking to the young woman who in the last three months had come to mean so much in his life. She was clad again in her gypsy garb, and would presently take possession of a fortune-telling tent erected in the hall.

"Why will you not let me speak?" he pleaded. "Always you change the subject when I ask for an answer to the (to me) most vital question in the world. You say there is no one else, and that you are fond of me—is not that enough?"

"Enough? Yes, perhaps—for me; but I'm thinking, also, of you. Why shorten your boyhood by settling down with a woman who has quaffed deeply of life's draughts both bitter and sweet, and now craves only a quiet corner—and peace—if peace be anywhere waiting for me. My life is behind me—yours all ahead; they cannot meet—why, why, try the impossible task of linking them together? Such a situation could only result in disaster—and I'm so unlucky; I fear I bring ill luck to all who love me."

"Nonsense, I'm not afraid—you're too imaginative; and don't you think you're maybe making a mistake? I'm getting along well at my work, and that little legacy I came into this year will keep the wolf from the door in any case. Also," he added in a more playful tone, "that extra birthday ought to help some, since you say you're not going to have any more—that will let me catch up in no time. And remember what everyone's saying, that Canadian girls will have to be a little less particular in their choice from now on, as men will be scarce."

"Oh! I've thought of all that—but you see I have loved and lost, which is something—why not leave for some other girl the chance she might not otherwise get?"

"Does that mean—No?"

"I think so—but wait, I must go now. Later I will give you a decisive answer."

She slipped away, and the music went on, and the people wandered past him, unheeded—and still he stood, gazing tensely across the terraces to the sea—so cold to-day it seemed, that sea; no sunshine coaxed the sparkle from its depths; so cold it seemed, and grey, with white-capped billows breaking on the beach; cold as she was not cold, yet in the restless, peaceless tossing of the tide, seemed something vaguely reminding of her.

The afternoon was drawing to a close, twilight had come, when through the tangled currents in the room a message came, borne on invisible wires. He knew she'd made her choice, and felt that he must know his fate at once, so, threading his way through the crowd, he passed into the hall—someone was just coming out of the tent, and heedless of those waiting he stepped inside the curtain.

"I've come," he said.

"And I have chosen," she answered, smiling dimly, "Ah, I've thought and thought and thought, and always the answer is 'No.' Whenever I stretch forth my hand toward happiness I receive only pain. Peace and I seem fated never to meet. You also, so young and bright and hopeful, I should only drag into the shadow. To me, to-day, have come women young and women old, with oh, such tales of misery and grief—and I have tried to give to each a message of hope; for though I may not help myself sometimes I'm vouchsafed the power to help others.

"And oh! those thousands upon thousands of my sisters who need help—now, and later; for where are the men nature intended should provide homes and havens for them all? Lying dead on the fields of Flanders or hopelessly crippled and helpless. Ah! the problems that will arise from this world war; and all those women seeking the gaiety and pleasure of life that is their birthright—much thought and care and kindness will be needed to keep their feet from straying; therefore, to them I dedicate my life.

"You know I have Belgian blood in my veins—and somehow my nature seems allied to that fatal land, always longing for peace, striving for happiness and quiet domesticity; then, when the goal seems just in sight, war again, and pain and grief and death."

Someone opened the great hall door and the voice of a newsboy without came clearly through the air:

"Berlin wants peace — all about the German peace proposals—evening paper."

"Peace," she went on, "It must come, and soon—but many of the wounds this war has made, no peace can ever cure."

The curtains parted and through them stepped Sweet-and-Eighteen; so young and winsome did she seem she might have stood for fair young Peace, bringing her healing sweetness into a war-warped world.

"Oh," she stammered, "I didn't know you were engaged."

"I'm through, I can take you now," smiled the palmist.

And the boy? His health had improved, and the scars the ruthless battle-front had carved in his soul were mending. Perhaps a woman's sympathetic touch had helped in the healing process. Youth and joyousness were asserting themselves once more; and now, even through the pain her refusal had created, there leaped into his expressive eyes such an appreciation of the youth and beauty in the curtained entrance that the older woman knew positively and for all time that with *him* all was well.

He went—and mechanically the palmist took the girl's hand in hers for a preliminary survey—but in her heart a storm raged—loneliness, pain, and jealousy battled with common sense and her sense of fair play. Almost the former allies won and she thought to draw him back to her again—then, looking into the young girl's eyes and reading there all this earth holds of good—her moment of renunciation came—and passed, leaving her cold, an alien lonely soul. Youth to youth, gaiety to gaiety, and for herself—a mission, perhaps, and to once more sally forth in weary quest of Peace, the Stranger.

Annette Kellerman

(Continued from page 9.)

referred to what I already knew—that she was born in Australia. She is British through and through, and very proud of it, and was glad to be interviewed by a Canadian publisher, she told me.

It seems almost incredible that as a child Miss Kellerman was a cripple, and that it was purely by her own effort and determination she was able to walk. Perseverance and exercise have, however, developed her so marvellously that to-day she is the finest swimmer and diver in the world, and most perfectly formed.

It was quite a shock to Miss Kellerman's parents, who were very much interested in music, to find that their daughter was going to adopt swimming as a profession. However, she persistently had her own way, after many an uphill fight, and when she had become fairly experienced, she landed in America.

Her first engagement of any consequence brought her a salary of $1,250 a week. Success and fame were already within her grasp, when she was visited by a representative of certain syndicate newspapers, and told that unless she paid them $1,000 a week they would support some swimming act, other than hers. For a long time Miss Kellerman had to give way to this blackmail, which left her a very small amount to live on, considering her enormous expenses. However, troubles of this nature are now all past and her only concern is in doing all she wishes inside of twenty-four hours, so great is the demand upon her time by film concerns and theatres in all parts of the country.

Miss Kellerman was very anxious to have me see her in action; in other words, going through one of her acts either before the public or before the film. This, however, I was unable to do until she was making some of her pictures in her new production, "Queen of the Sea," which is about to be released. It was, indeed, a pleasure to be with Miss Kellerman during the taking of part of the scenes of her new picture, and from what I know of the story and have seen of the making of the film, I think the public will agree with me in saying that it is infinitely superior to "A Daughter of the Gods," or any other Kellerman production.

The story runs as follows:

Merilla, who is Annette Kellerman, Queen of the Sea, learns from the good fairy, Ariel, that she must save four human lives to become a mortal herself. That very day, under orders from Thonor, King of Evil, a ship is wrecked and the crew leap into the waves. Word that Merilla has rescued three of the men is brought to Thonor by the sirens. He determines that she shall no longer interfere with his work. His henchmen, therefore, seize her, after a chase through the deep, and she is carried before the King.

Thonor promises to spare her if she will promise never to save another mortal life. The torture chamber is the alternative, but Merilla courageously chooses it. Meantime, the Prince of a nearby country, has set sail to meet a Princess to whom he is betrothed, but whom he has never seen. It is before him, in the course of his voyage, that Ariel appears. She tells of Merilla's plight and urges him to help the Queen of the Sea. This he readily consents to do. While Thonor is upon the waters in his phantom ship, the Prince rescues Merilla with Ariel's aid.

The Queen and the Prince become sweethearts at first sight, but the fairy reminds him that his word is pledged to another, and whisks Merilla from his sight.

Thonor learns that the Prince has freed his captive and has taken chests of treasure (which belonged rightfully to the Prince's father). He starts out in pursuit of the Prince in his phantom ship, and causes a heavy storm to sweep the ocean. The Prince and his men are plunged into the sea, but Merilla's skill in the deep circumvents the King of Evil and she succeeds in bringing the Prince safely to shore.

In fulfilment of her promise, Ariel changes Merilla to a mortal then, and takes her to her kingdom in the clouds.

The little Princess who is to marry the Prince falls into Thonor's hands as her carriage hurries along the road. In her dwelling place above the earth, Merilla (to whom Ariel shows the Princess's fate in a crystal) is very unhappy without the Prince. When she sees what is happening to the Princess, she decides to save her for the Prince's sake.

Thonor, with his evil power, can see her descending through the clouds. He makes her fall to the ground, but she escapes unharmed and stumbles into the party of courtiers who were escorting the little Princess. They rejoice at their luck. The Prince has never seen the girl he is to marry and they persuade Merilla to impersonate the Princess for a few days before the wedding, until they can rescue their mistress. This Merilla consents to do.

When she stands before the Prince once more, he begs that she become his wife, to seize this final chance for happiness. This she refuses.

"There can be no real happiness bought at such a price," she says. "You are pledged to the little Princess."

"But I shall love you all my life," he replies.

Merilla goes by sea, the Prince by land, to free the Princess from Thonor's grasp. Thonor's men capture Merilla, and their chief places her in a room adjoining that in which the Princess is. Between them are a series of blades and swords, seemingly impassable without death. Merilla manages to best this barrier.

Then the good fairy appears again.

"I can only show you a way to carry word to your friends," she tells Merilla, and points to a cable stretching from the high tower in which Merilla and the little Princess are kept. Merilla walks this wire for a distance and then dives boldly 125 feet into the sea beneath. She makes her way to the Prince and he flies at once with his men to the rescue of the Princess.

There is a spirited fight in the castle between the opposing forces, in which Thonor's men are vanquished and Thonor himself is killed by the Prince. In gratitude for what Merilla has done, the Princess releases the Prince from his bond, and the road to happiness for the Prince and for Merilla is cleared at last.

The Drip of The Honey

(Continued from page 7.)

"Elmer!"

"Frankie!"

The noise of Via del Babuino drifted up to them, thin and muffled and far away.

"What is it, deary?"

"Isn't that the Pantheon, the round dome with the flat top, just beside the Madama Palace?"

"Confound that old Pantheon! Kiss me, angel!"

She raised her head slowly, pouting up the curved ruddiness of her lips. Then she hesitated. "But just one!" she said sternly.

Again there was silence, and more stars came out over the Campagna.

Then she gazed out over the twilight city of bells and domes and spires, as the dusk grew deeper about them. "Ah, Rome!" she said, with a happy little sigh. "Isn't it beautiful?"

"Glorious, isn't it?" he said contentedly, as they leaned on the stone balustrade side by side.

And they sighed companionably, and were silent once more.

THE END.

Now Grocers Everywhere
can supply pure rich sweet milk

They may keep it, and you may keep it, for months, for it is sealed safe from contamination — always pure, always sweet, always fresh.

You have it on hand on the pantry shelf ready to use — as you may need it.

And you can use it for *everything* — drinking — cooking — creaming vegetables — soups — with coffee, tea or cocoa — for baby's bottle — everything.

Yes, and it *whips* beautifully when thoroughly chilled.

This milk your grocer supplies is Carnation Milk.

Carnation Milk comes from inspected herds of "Contented Cows." It is evaporated to the consistency of cream. Then sealed and sterilized. Nothing is added. No sweetening, no preservatives. Nothing but water is taken away.

Add pure water to Carnation Milk and you "bring it back" to the original milk — with this difference, you have a better, safer milk, because it has been sterilized. You have all the food value — all the milk solids of the best *whole* milk fresh from the cows.

Carnation MILK
MADE IN CANADA

Have You Read This Story?

You surely want to know about the milk you serve in your home. It is important. If there is an absolutely safe milk; if there is a pure milk; if there is a uniformly rich, clean and sweet milk at your command, you want to know all about it, don't you? Let us tell you the "Story of Carnation Milk," how it is handled in our sanitary condenseries at Aylmer and Springfield, Ont. We have printed a book for thoughtful wives and mothers who are particular about foods—and especially about milk. It tells a story of cleanliness and care that will satisfy the most exacting housewife. There are many fine recipes in the book. Dishes of many kinds may be prepared—and improved—with Carnation Milk.

This book will be mailed FREE to anyone who mentions this paper. Write for it. Make a little effort to settle so important a question.

Condenseries at Aylmer and Springfield, Ont.

Order From Your Grocer

He is the Carnation Milkman. Try three or four cans. Learn the convenience and economy of using just the quantity of milk you need each day — never too much — never too little. Find out for yourself how good, how rich, how wholesome is this Carnation Milk from "Contented Cows."

"From Contented Cows"

Hon. Dr. Cody, Ontario's New Minister of Education, Outlines His Plans

(*Continued from page* 12.)

appliances. We should aim to inform and arouse the people on educational matters so that when the time seems ripe for any advanced measures they can be properly projected and successfully carried through."

"No doubt you will find the people ready to hear you," I remarked, "for there is a great desire in many directions for information on various phases of education."

"Yes, no doubt. Already, though I have not been in office three weeks I have received literally hundreds of different suggestions for the improvement of our educational system and outlines of educational reconstruction. I venture to say that practically the whole community is prepared to tell the officials of the Department of Education how they ought to run the educational machine of the Province," he added, with a smile. "But there is a reason for that, and it is not a discreditable one. It is because education touches every one of us. Into almost every home the boy or the girl comes with a tale of weal or woe from school, so that education reaches and affects every nook and corner of our country. It is therefore natural and right that everybody should have an opinion on what is of such vital importance, and should be moved to express that opinion."

"What will be your attitude toward criticisms and suggestions?" I asked.

"I am not a czar," replied the Minister; "I am not omniscient; and," (with a smile) "honestly, I don't think that the officials of the Department really believe that they are omniscient, or do not wish to receive helpful and suggestive and constructive criticism. Indeed, I might paraphrase the words of Holy Scripture and say, 'If any one has a psalm, or a word of exhortation, or a helpful suggestion, let him rise up in meeting and give it to us, and we shall welcome it.' The Department of Education is not a Government Department alone; it is the Department of the whole people; it touches us all; and on the policy and management of the Department, of course, will tremendously depend the progress of our Province and of our Dominion. What is done in Ontario powerfully affects all the other provinces in Canada. So far as Canada at large is concerned, the public school system may be said to have come from this Province. All over our growing and wonderfully buoyant provinces in the west you find people who came from Ontario—most of them, it would seem to me, either from Bruce or Huron county! The educational and legal foundations of those Provinces were, in many cases, laid by men from old Ontario, so that what we do here is vital as affecting the whole Dominion in the way of example."

I remarked on the effects of the war in reducing the number of young men who were training in science, thus causing difficulty and delay in developing Canada's natural resources to meet our war debts; also the fact that we would not be able to get from the old lands the industrial designers on whom we had largely depended in the past.

"We all feel," replied Dr. Cody, "and we know, that we are living in a wonderful country, that our Canadian people are worthy of the most splendid opportunities that can be presented to them, and that they can profit by every educational facility that is presented. It is my hope and wish that our people should be trained to take the fullest advantage of those boundless opportunities. We use the phrase, 'Boys will be boys'; but it is well sometimes to repeat part of it in a different sense and conclude: 'Boys will be *men*.' But the kind of men they will be depends entirely on the turn given them while they are boys."

"You spoke about the special value of boys of to-day; have you any special plans for them, Doctor?"

"One point has greatly impressed me in regard to our Ontario system," Dr. Cody said. "You will remember that Dr. Egerton Ryerson had two factors in mind in projecting the system; the first was, to bring the opportunities for education within the reach of every child in the Province; the second was what I might call continuity of advance. That is, the public school was linked to the high school, which in turn was linked to and led up to the university. The system was what might be called a chain with its various links. Those two leading ideas still remain in the system, and it is not claiming too much to say that our system has been kept very fairly up to the needs of the times. But now we are in new times, and almost every system needs readjustment and needs lubrication. Now, it strikes me that our readjustment might be made on this line—I am not speaking dogmatically, and hope I shall never so speak; but this is what occurs to me:—Ninety per cent. of our children get no further education than that given in our public schools; only ten per cent. of them go as far as the high school. May it not be advisable, then, for us sometimes to view the public school not as a mere link in a chain which is never completed, but as rather a distinct and complete entity—a thing by itself—at least as affecting the masses of children? Might not that ninety per cent. who, from family necessity, must soon earn their living, be trained in public schools as though they would never get a more complete education? The question then would be, how much education can we give in the public schools that will provide not only a general mental training, but some measure of vocational training and handwork, some kind of vocational guidance into useful and suitable occupations, as well as the great inspirations of morality and patriotism? Perhaps we might do well to make more of our public school system, in the light of the actual fact that the public school, and it alone, reaches ninety per cent. of our total school population. The ideal, of course, would be to secure for as many as possible of this ninety per cent. a further period of training, with a special view to their life work. We must strive to make this ideal a reality."

I took the liberty of assuring the Minister of Education, on behalf of the public bodies of progressive citizens with whom I kept in constant touch, such as the Manufacturers' Association, the Trades and Labor Council, Boards of Trade, Rotary and Advertising Clubs, Neighborhood Workers' Association, Home and School Council, etc., that such an intensifying and extension of the work in public schools would be looked upon as a most important step in the right direction. It would prepare the great bulk of boys and girls for their life-work; would interest them in further study in part-time classes or technical schools after they went to work; would turn the thoughts of some in the direction of scientific investigations, and would guide them into occupations in which they could earn satisfactory wages and do good work; in fact, it would vitalize the whole system at a critical point. I ventured to add that the present curriculum might be improved by condensing, say, the teaching of English into one subject, thus intensifying and improving that study, and at the same time leaving room for more handwork. I then asked Dr. Cody what plans he had projected for the improvement of teachers, and for stirring up trustees and the public.

"No democracy is safe for the world," he replied, "until it is led by honest intelligence. Up and down the length and breadth of our country I believe we cannot have too much of the public explication and vindication of the great policies of the country, and of the great problems that lie before it. It is my hope to be able to go through the Province, as Minister of Education, and meet the teachers face to face, meet the trustees, and meet the school constituency, and get into as close touch as I can with the people of the Province, and see the educational problems from their point of view. Perhaps I may be able to serve the Province far better in some such way as that than merely by dealing with things in the abstract."

"In the matter of teaching," he added, "it is the personality, the vitalizing power of the teacher, that counts. A comparatively poor system will work well if it is administered by a great soul, while the best system will not do much good if a tiny-souled individual manages it. The teacher bears the great burden of the physical, the intellectual, and in no small part the moral development of those who will be the future citizens of our city and Province and Dominion. But how can we expect a teacher to teach in any inspiring fashion if he or she is in low spirits? There is nothing that will produce greater depression of spirits than financial worry and financial strain. We ought to raise public opinion steadily in our whole Province so that our people will be ready to give larger sums, not so much for buildings, which are secondary, but for the living agents who teach their children."

We discussed the position, throughout the whole of Canada to-day, of the question of Education, especially technical education, and I gave Dr. Cody various views as expressed to me, which made comparisons between different systems and Provinces as to their progress. On this point Dr. Cody said:

"In these critical times our people must be made fit for the immense opportunities and responsibilities which are now before us, and new ones which will face us after the war—those problems of reconstruction, adjustment, development that will call for all the skill and expert training we can command."

He quoted Dr. John R. Mott, who recently told an English audience, "I would rather be living to-day, or in the next ten years, than at any previous period in the world's history."

"The great thing for Canadians," added Dr. Cody, "is to fit themselves for their great task." He hoped it might not be said of us, as was written of Henrietta Maria, the consort of Charles the First, "She lived at a great time, but had no greatness of soul with which to meet it."

"In the days after the war," he continued, "the problems of education will still remain, and human nature—the raw material on which we work—will be much the same, though the conditions may differ, and the demands may be somewhat changed in consequence. One thing, however, is sure: we all realize to-day, as we never did before, the tremendous power and value of education. We have seen a false ideal taught to generations of Germans in their public schools, their gymnasia their *real-schule*, and in their universities; and we have seen the very soul of that nation poisoned We have seen the results of this pernicious teaching in the bestiality, the savagery, the ruthlessness, of many a battlefield, and of many a devastated realm. We know that it does matter what people are taught, and what they believe. What people really believe determines their conduct. More than that, we have learned by the war that it is possible to use education with tremendous effect in developing and organizing commerce and industry. We have seen Germany, by her system of research fellowships, by her application of pure science to industry, to agriculture, and to manufacturing, capture one market after the other. We see what is possible to trained and organized industry and commerce. It is lawful to be taught by our enemies; let us learn that lesson from them. Let us never forget, however, that efficiency is in itself no more a moral thing than is electricity; it depends altogether upon the end to which it is directed. Hence the perpetual need of directing moral ideas, and of moral training. The schools of Ontario can and should be made the training-ground for the inculcation of true and intelligent democracy that will help to keep the world safe, and that will make Ontario the banner province of a great, free, intelligent and skilful nation."

The Girls' "Carry On" Column

(*Continued from page* 46.)

one of the military hospitals, and tell them you want to take three or four soldiers for a motor drive. Take your mother or father with you and do your very best to give the boys a happy time. You will find you will be repaid tenfold for any effort you make for the returned soldiers.

DEAR BETTY:

I want to go into a canning factory during my holidays. What wages would I get and when would I be required? A. D. F., HAMILTON.

Some factories are giving $1.50 a day. You would be needed from May 15, to June 15, or from July 1, to October 1.

DEAR BETTY:

I have been told that Farmerettes must help with the housework. Is it compulsory? ELSIE.

All workers are asked to do two hours of housework if required, and if you really have the interest of your country at heart you wouldn't refuse, would you?

DEAR MISS O'HARA:

I will not be able to go on the farm until the fall. Is there anything I could do then, and what would the wages be?

E. T.

You could pick peaches, pears, plums, grapes or apples, and you are paid at the rate of $9 a week for a ten hour day. Especially good workers are to be paid 20 cents an hour.

DEAR BETTY:

I would like to run an elevator during the summer to release men for the farm. To whom should I apply?

M. J.

Positions of that kind may be obtained from the Government Employment Bureau, 15 King street east.

ENCLOSE A STAMPED ADDRESSED ENVELOPE FOR A PERSONAL REPLY TO QUESTIONS.

A King in Babylon

(*Continued from page* 48.)

"Davis just laughs at it," I said comfortingly; "and he's probably right. He says Jimmy has moiled around over this picture so long, that it has become a sort of mania—he had a kind of heat-stroke, you know, a few days ago, and that may have helped. In fact Jimmy sat right here beside me last night and told me he was getting things all mixed up—that he couldn't tell what was real from what was only imaginary; his outside and inside worlds had run together, as it were . . ."

"You don't mean that he's gone mad?" asked Mollie, horror-stricken. "If he has, it's that woman . . ."

"He hasn't gone mad," I broke in, impatiently. "He'll come around all right as soon as he gets this infernal picture out of his head. I feel sometimes that I'm going mad myself. Let's stop talking about it—let's talk about ourselves. Mollie . . ."

"It isn't the picture," Mollie broke in. "It is something in the air—a kind of threat! I feel it all the time. I have been in wilder pictures than this, lots of times, but nobody ever went crazy before—and bit people—and tore their eyes out—not even the director!"

"Well," I said, "I think Creel has about got to the limit of *his* nerve. He'll give the order to pack up as soon as he can. He is over there now, slashing his scenario to pieces and simplifying it every way he can. But that hasn't anything to do with us. Now, look here, Mollie . . ."

"Billy," she broke in fiercely, "I can't stand it! If you grow sentimental now—if you *dare* to grow sentimental now!—I shall hate you!"

"I wasn't growing sentimental," I said resentfully.

"You sounded like it!"

"I was just going to say . . ."

"I don't want to hear it! I'm ready to fly to pieces as it is!"

"I don't see what there is for *us* to worry about," I said. "If Jimmy and Mlle. Roland want to go wandering off through dream-land together, why need we care? And if Jimmy thinks he was once a king of Egypt, I don't see that it's anything to us! And if Davis does dig out a woman who has been buried four thousand years, and who has been waiting all that time for vengeance—why, it isn't us she's after! We've got ourselves to think about, Mollie, and I have been doing some mighty serious thinking on that subject recently, as I told you the other night. And you promised . . ."

"I promised nothing!" she broke in. "Let go my hand!"

"You led me to infer . . ."

"No, I didn't! How can I help what you infer! Billy, I won't be kissed! I hate it! I . . ."

(*To be continued.*)

One of Two Things Must Happen

YOU CAN DECIDE WHICH

As publishers of the CANADIAN HOME JOURNAL, we are confronted with a perplexing situation--we must either push forward in our efforts to publish a magazine worthy of Canadian womanhood, or step back into a rut of uselessness, and allow the magazine to become unworthy of being a leader of thought among Canadian women.

We desire the former course because we believe many thousands of our women appreciate the assistance the CANADIAN HOME JOURNAL has been to them, and are anxious for us to continue our policy of speaking fearlessly on vital Canadian questions.

Many causes have forced up our publishing expense enormously. Year after year we have continued to improve until now we have first call upon the work of many of the best authors, writers and illustrators in America. Canadian women will, we believe, continue to encourage the publishing of a clean, wholesome woman's magazine containing their own literature and presenting Canadian ideals.

The situation confronting us is that to keep up the high standard we have established, we must make a slight increase in our subscription price. It is not much--only fifty cents, but you need not pay the increase now if you will accept our offer of renewing your subscription at the old rate before July 31st.

Our offer is a simple one -- send us $1.50 now, and we will extend your subscription for one year, no matter when it expires. Pay now and save 50c. If you desire to extend your subscription for two years or more, send us $1.50 for each year.

After July 31st, the subscription price of CANADIAN HOME JOURNAL will be $2.00

THIS OFFER WILL NOT APPEAR AGAIN

Hot Weather Drinks

By
MARION HARRIS NEIL
Author of
"Canning, Preserving and Pickling."

During the hot weather there is a cry for the ideal summer drink. This, however, is difficult to find, but in the following selection will surely be found one or other to suit the palates of all

Orangeade.

Raspberry Lemonade.

A cup of tea always cheers.

Frozen Coffee.

PINEAPPLE DRINK.—Pare and remove the eyes from a large, ripe pineapple, then grate it and add the strained juice of four lemons. Make a syrup by boiling two cupfuls of sugar, two cupfuls of honey or corn syrup, and two cupfuls of water for fifteen minutes; then add the grated pineapple and juice. When cold add four cupfuls of water. Chill thoroughly before serving.

Another Method.—Mix pulp and juice of one fresh pineapple with two cupfuls of grape juice, three-fourths cupful of corn syrup or honey, strained juice of one lemon, and one orange, and allow to stand in refrigerator for two hours. Pour over shaved ice, add two cupfuls of soda water and serve.

ORANGE CUP.—Peel four oranges, remove all the white pith and divide into sections, removing seeds and membrane. Put four tablespoonfuls of honey or corn syrup in a saucepan, add the strained juice of two oranges and simmer for a few minutes, but do not allow to boil. Remove from the fire and cool. Arrange oranges in a pretty dish, mix two cupfuls of cold water with cooked syrup and pour over oranges. Add ice in lumps to cool, and serve in glasses.

ICED CHOCOLATE.—Put seven tablespoonfuls of grated chocolate and two and one-half cupfuls of boiling water into a saucepan over the fire, simmer and stir until dissolved; then add four cupfuls of sugar, stir until thoroughly dissolved, and cook for ten minutes without stirring; strain and add two tablespoonfuls of vanilla extract and pour into bottles and cork well. To use, allow two tablespoonfuls of the syrup and one-half cupful of cold milk, and two tablespoonfuls of whipped cream or whipped evaporated milk for every glass. Put into a large cold fruit jar, shake well for four minutes, pour into chilled glasses, and put one teaspoonful of whipped cream on the top of each glass. If liked a little chipped ice may be added to each glass.

RASPBERRY BEVERAGE.—Mash one quart of ripe raspberries, add the strained juice of one lemon, two tablespoonfuls of orange or fruit juice, and six cupfuls of water, and allow to stand for four hours. Strain and add one and one-half cupfuls of sugar, and stir until dissolved. Serve in glasses partly filled with shaved ice. Strawberries may be used instead of raspberries.

TO MAKE RASPBERRY LEMONADE.—Put two tablespoonfuls of raspberry syrup, two tablespoonfuls of lemon juice and two tablespoonfuls of honey or corn syrup into a pitcher, add two tablespoonfuls of shaved ice, and fill up with soda water. Serve in glasses with a thin slice of lemon on the top. Or make raspberry puree by rubbing raspberries through a sieve. Put two tablespoonfuls of this puree into a tumbler with one tablespoonful of lemon or orange juice, and sugar to taste. Add a little crushed ice, and fill up with soda water. Serve with straws.

ICED TEA.—Four cupfuls of boiling water, three lemons, one-half cupful of honey or syrup, five teaspoonfuls of tea and ice. Chip the rinds from two of the lemons, add this to one cupful of the water, add the honey or syrup, and boil for eight minutes. Cool, add the strained juice of two of the lemons. Put the tea into a pitcher or earthenware pot, pour over it the remainder of the water—which must be freshly boiling—let stand for three minutes, and add the lemon mixture. Strain this at once into a bowl containing a small block of ice. When cold, pour into glasses one-third full of cracked ice. Cut the remaining lemon into very thin slices, and add a slice to each glass. One or two ripe berries will add to the flavor and appearance.

ICED COCOA.—Two cupfuls of water, two cupfuls of milk, five tablespoonfuls of cocoa, two tablespoonfuls of honey or syrup, one-half cupful of cream or evaporated milk whipped, one-half teaspoonful of vanilla extract and ice. Mix the cocoa and the honey or syrup, add a little of the water, mix to a paste, and add the remainder of the water. Bring this to the boiling point, boil for three minutes, add the milk, and bring to the boiling point again. Remove from the fire, cool, and add the vanilla. Pour into glasses or cups one-half full of crushed ice, and top each glass with a tablespoonful of the whipped cream or evaporated milk. This makes a delightful dessert for luncheon, and is a good substitute for ice cream.

TO MAKE COCOA EGG NOG.—Beat to a stiff froth the white of one egg, and add gradually, while beating constantly, one tablespoonful of sugar, one teaspoonful of cocoa and one-half teaspoonful of vanilla extract. Add to one-half the mixture, while beating, one cupful of cold milk. Serve in tall glasses, and pile remaining egg mixture on the top.

TEMPERANCE PUNCH.—Mix together the strained juice of six oranges and five lemons, add three cupfuls of strawberry syrup, one can of grated pineapple and two cupfuls of grape juice. Make a syrup of two cupfuls of water, one and one-half cupfuls of tea, and two cupfuls of honey or sugar. When cold add to the fruit mixture, with two diced bananas and enough water to make one gallon of liquid. Serve in glasses with wafers or crackers.

FROZEN COFFEE.—A very cooling beverage for warm weather is frozen coffee. To make this, coarsely ground coffee is steeped in milk in a percolator or double boiler, using three tablespoonfuls to each quart of water. After thirty minutes' infusion in the hot milk the mixture is carefully strained, and one cupful of sugar, or one-half cupful of honey dissolved in it. When chilled, add one teaspoonful of vanilla and one-half teaspoonful of lemon extract and freeze. This is served in tall glasses with a spoonful of whipped cream on the top.

ORANGEADE.—Squeeze the juice from one orange, add one cupful of water and two tablespoonfuls of sugar or honey, and stir until dissolved. The sugar or honey and water may be boiled for ten minutes, allowed to cool, and then added to the juice.

Lemonade is made in the same way, using one lemon instead of the orange.

EGG MILK PUNCH.—Two eggs, six teaspoonfuls of sugar, one cupful of shaved ice, one-half cupful of fruit juice, and one-eighth teaspoonful of powdered nutmeg. Mix in the order given, cover tightly, shake well and strain into glasses, with the nutmeg sprinkled over the top of each glass.

TO MAKE EGG NOG.—Beat the yolk of one egg add one tablespoonful of sugar or honey, and beat until light, then add one-half cupful of milk, fold in the stiffly beaten white of egg and add one-half teaspoonful of vanilla extract, a little powdered nutmeg, or one tablespoonful of lemon juice.

BOSTON CREAM.—Pour four cupfuls of boiling water over one pound of lump sugar and one ounce of tartaric acid, and allow to stand until dissolved and cold. Then add two teaspoonfuls of lemon extract and the stiffly beaten white of one egg, and bottle for use. One-half fill a tumbler with this mixture, nearly fill with ice water, stir in a pinch of baking soda, and drink while effervescing.

BARLEY WATER.—Barley water is both cooling and nutritious. It should be made fresh every day. Wash one ounce of pearl barley in several waters. Boil it for five minutes in two cupfuls of cold water, which must be thrown away; then add four cupfuls of water, and let it boil down to two cupfuls. Strain it and sweeten with honey or corn syrup, then flavor with a little lemon juice or a little powdered cinnamon. One cupful of seeded raisins may be boiled with it.

IRISH MOSS DRINK.—Wash one ounce of Irish moss well, and soak it for several hours in cold water. Drain it out of this water, and put it into a saucepan with two quarts of cold water, and simmer slowly five hours. Strain and sweeten to taste with honey or corn syrup. A little lemon juice may be added if liked.

Irish moss, or Carrageen moss, is a seaweed. Its nutritive value is considerable, and it also contains iodine and sulphur.

Iceland moss can be made in the same way. Iceland moss is a lichen, which grows on barren rocks, principally in northern latitudes. It contains an acid which gives it an unpleasant flavor. A pinch of baking soda added to the water in which it is soaked will help to counteract this.

APRICOT EFFERVESCING DRINK.—Bruise sufficient apricots to make two cupfuls, boil with one cupful of honey or corn syrup for ten minutes, then add one ounce of tartaric acid, bottle, and cork well. For a tumbler three parts full of ice water, add two tablespoonfuls of the above syrup and a pinch of baking soda, stir, and drink while effervescing.

MINT JULEP.—Chop two bunches of mint leaves, add three cupfuls of ice or cold water and allow to stand over night. Boil two cupfuls of honey or corn syrup with five cupfuls of water for ten minutes, and then chill, add strained juice of one lemon and mint water. Serve with crushed ice, and garnish with fresh mint leaves.

CURRANT DELIGHT.—Boil four cupfuls of honey or corn syrup with fourteen cupfuls of water for ten minutes, add two cupfuls of fresh tea, five cupfuls of currant juice and six oranges, and six lemons cut in very thin slices; then add a large piece of ice and serve in glasses.

RHUBARB DRINK.—As well as being a very refreshing beverage, this is a most wholesome drink for children. Boil seven or eight stalks of rhubarb in four cupfuls of water for ten minutes. Strain the liquor into a pitcher, in which you have the thin rind of one lemon; add two tablespoonfuls of sugar or honey, and allow it to stand for a few hours, and it will be ready for use.

RASPBERRY VINEGAR.—Bruise the raspberries and add two cupfuls of vinegar to every pound of fruit. Allow to stand for one week, stirring every day, then strain through a jelly bag, and add two cupfuls of sugar to every pint of juice. Boil this for three minutes, and let it stand until quite cold.

Bottle and seal.

CANNED GRAPE JUICE.—Pick over and wash sound Concord grapes, rejecting all that are soft and bruised, but leaving a few of the stems. Put them into a preserving pan with a little cold water, but not enough to cover, and cook slowly until the skins break, stirring and mashing occasionally with a wooden spoon.

Boil for about two hours and then drain through a jelly bag. Do not press or squeeze or the juice will be cloudy.

Measure the juice, and to each quart allow one-half cupful of sugar. Reheat the juice to boiling point and cook for thirty minutes, removing the scum as it rises. Add the sugar, which has been heated in the oven, cook for five minutes, turn into hot sterilized bottles and seal airtight while hot.

If preferred, the grape juice may be canned without the addition of sugar, and glass jars may be used in place of the bottles.

LEMON SYRUP.—Twelve lemons, one-half pint (one cup) water, one pound lump sugar. Rub the lump sugar on the rinds of six of the lemons, and put it into a preserving pan with the water. Boil until clear, then add the strained juice of the twelve lemons, and simmer very gently, not allowing it to boil, for five minutes. Pour into bottles, which must be dry, and, when cold, cork securely.

UNCOOKED GRAPE JUICE.—Wash and weigh the grapes, then crush, and to every six pounds of the fruit add one quart of water in which two ounces of tartaric acid has been dissolved. Allow to stand over night. In the morning, press through a fruit press or strainer, then add three-fourths the same amount of sugar.

Bottle cold.

CHERRY SYRUP.—Choose sound, ripe cherries, stone, and place them in wide-mouthed glass jars, with layers of crushed lump sugar between the fruit.

Cork securely and place in a can with sufficient cold water to reach up the necks of the bottles, bring to boiling point, and boil until the fruit looks dry and shriveled, then remove the pan from the fire and leave until cold.

This syrup keeps excellently if left in the bottles as it is; but, if preferred, it may be strained into sterilized bottles and corked and sealed.

"Bank Account" Tires

The motor car has become woman's servant. With it she is saving valuable time. She is helping her busy husband and the nation. It adds to the range of her activities and multiplies her usefulness.

Many women speak of Goodyear Tires as their "bank account" tires.

They appreciate so clearly the distinct savings effected by these tires that they regard them as an *investment.*

To-day the buying of tires is a business proposition -- a matter of cold-blooded calculations as to cost, mileage, comfort.

And to-day Goodyear Tires are the largest selling tires in the world.

Women are also attracted by the definite air of smartness given to any car by Goodyear Tires.

But when they purchase these tires, their keen feminine instinct for thrift has *not* gone astray.

This is proved by the continuous use of Goodyear Tires by women who believe whole-heartedly in the present need for national and personal economy.

On this one basis--economy through longer mileage--we ask you to consider Goodyear Tires to-day.

Behind Baby's Peaceful Slumbers

FOR babies, and older people as well, the soothing comfort of Colgate's Talc is a necessity. Particularly so for many women whose work for various patriotic activities is of such value but so hard on the hands.

All talcums are not alike—be sure you and your family have Colgate's—the real boric powder. Over ten years ago A. A. Breneman, M. Sc., made a comparative test of talcum powders, and recently he repeated the examination. Let us send you an interesting, easily understood copy of these two reports which give several scientific reasons for the superiority of Colgate's Talc.

. . .

Any personal preference as to perfume can be suited—you have a choice of 8 perfumes in addition to the Baby Talc and Unscented.

GILLETT'S GOODS

ESTABLISHED 1852

"Best by Every Test"

THE constant effort of manufacturers to improve their products and reach the highest point of perfection entitles them to your consideration, and while, for selfish motives there may be forces working to belittle such commendable efforts, the ultimate results are sooner or later bound to be recognized and appreciated by the thoughtful and intelligent individual. The success of any of the well-known articles that have come to be looked upon as the standard articles of their kind, is invariably followed by the attempt of envious imitators to benefit by another's success, basing their claims for recognition on the unsubstantial statement of "just as good." Such claim is of itself a recognition of superiority of the article imitated.

Gillett's Goods have reached the point of perfection that places them in a class by themselves, and while often imitated, are never equalled.

All dealers are authorized to guarantee Gillett's Goods as being the best and purest that it is possible to produce, and to be just as represented.

The Canadian Women's Magazine Publishing Co., Limited

Volume Fifteen — WILLIAM G. ROOK, President, Toronto — Number Four

Copyright, August, 1918, in Canada by The Canadian Women's Magazine Publishing Company, Limited, Toronto.

The Next Issue is the Enlarged Advance Fall Fashion Number

The September Number will contain nine pages of Fashions, all carefully selected to meet the needs of women who wish to dress smartly and at the same time modestly—their chief interest being in war work rather than finery. The newest features which mark the early Autumn garments will be shown, and our readers may with confidence use these styles from which to plan their heavier clothing and remodel last year's garments. There will be nothing extreme, nothing requiring the extravagant use of either cloths or trimmings—in short, the new Autumn fashions shown in the September Canadian Home Journal will be dignified, up-to-the-minute in style and beautiful.

* * *

"THE QUEEN'S TEAR BOTTLE."

Another fairy story by Virna Sheard will appear in the September Number, complete in one large instalment. This will be illustrated by Norman Price, who has in the past so beautifully interpreted for our readers the work of Virna Sheard.

* * *

"AFTER THE WAR—SHOULD WE HAVE A FOOD CONTROLLER?"

A. Frank Reade will write on this subject in his series of articles, entitled "After the War—What?"

The view taken by some that as long as the war lasts we should not consider plans for reconstruction after its completion is, we believe, exceedingly short-sighted and unwise. Now is the time to plan, consider and adjust to suit the changing conditions. Watch for Mr. Reade's article on this important subject.

"September in the Northern Canadian Forests"

Painted by J. W. Beatty, R.C.A.

* * *

"THE X-RAY IN DENTISTRY."

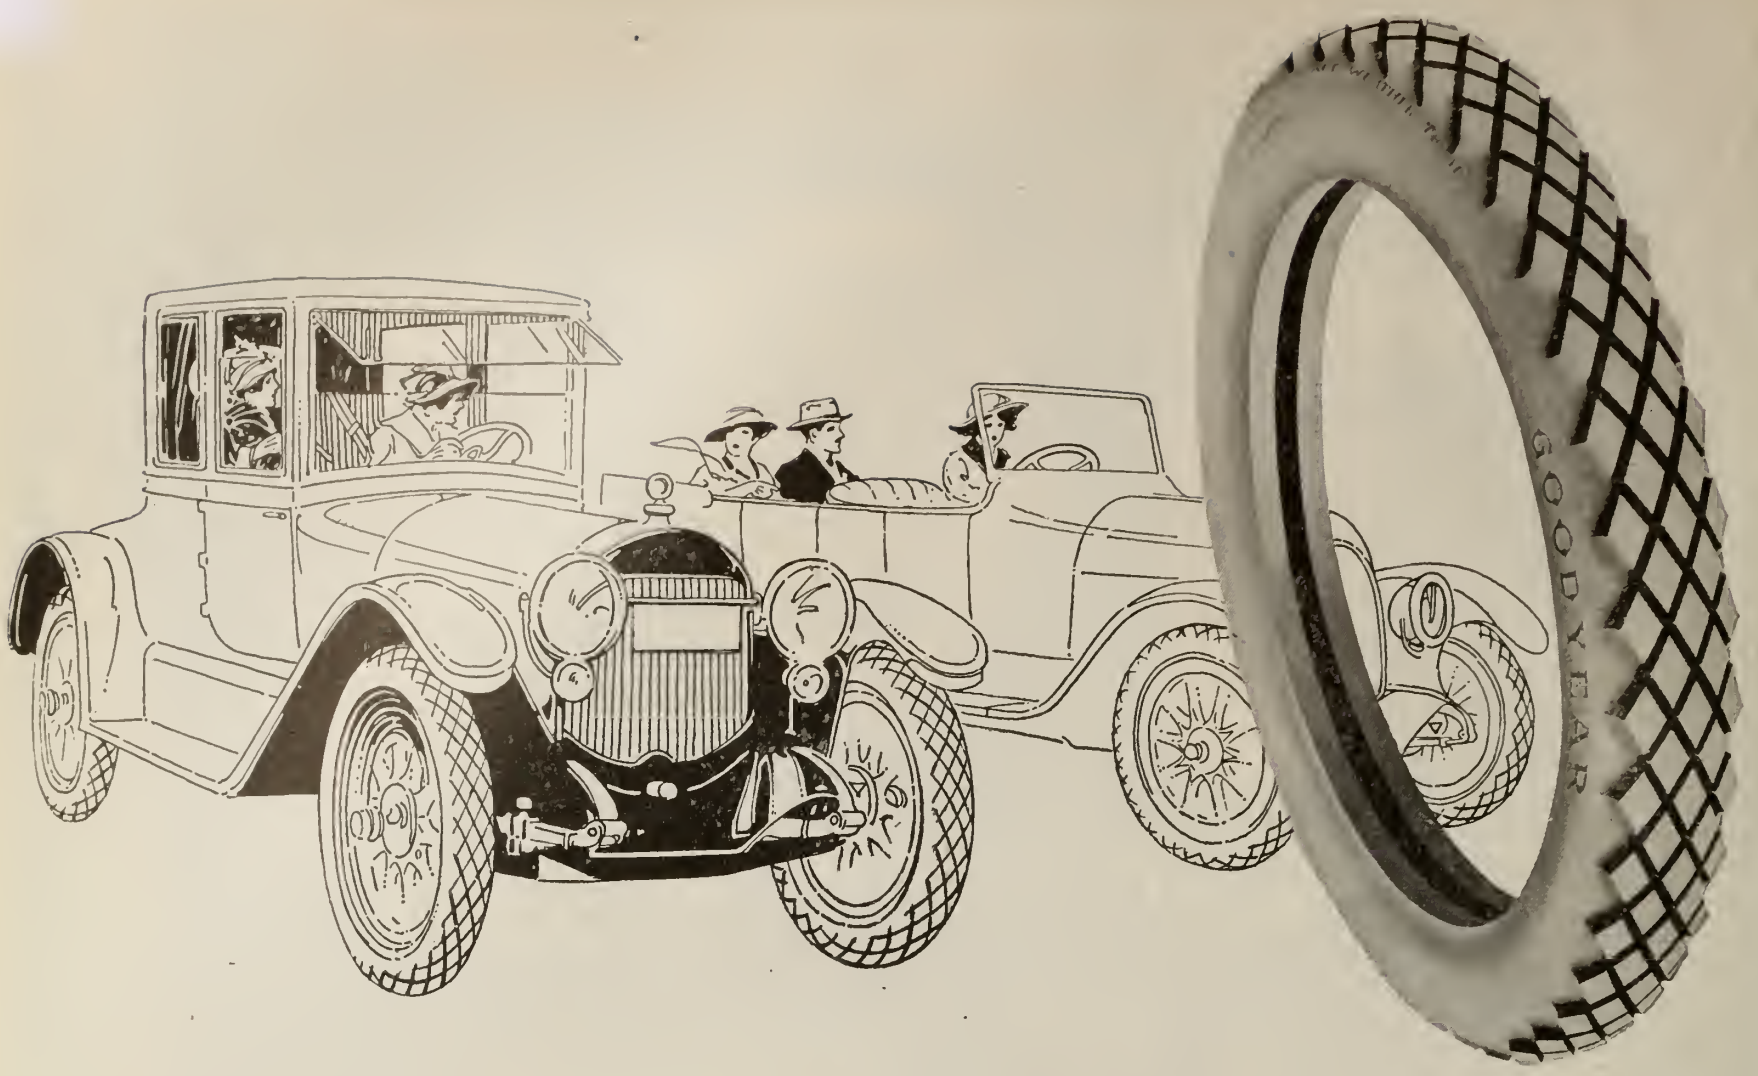
Not guesswork, supposition, or hearsay, not what we say or what the person next door says, but the actual facts as set forth by dentists and doctors constitute an article on the above subject in our September issue.

Many are suffering from various diseases which could be easily cured if they would have their teeth examined and treated. Doctors and dentists have proved this, and trace remarkable recoveries directly to the removal or treatment of diseased teeth, which in some cases looked perfectly healthy and sound. The X-ray is to-day playing a most important part in dentistry, revealing trouble at the roots of the teeth, which when discovered can quickly be cured.

* * *

"WITHOUT AN EGG IN THE HOUSE."

What would you do, if suddenly forced to bake or cook? Marion Harris Neil will tell you in the September Number a host of good things she has discovered which can be made without eggs. This is a most valuable article, and will be gladly received by all housewives who are sometimes faced with this problem.



* * *

Marion Harris Neil's second article is entitled

Goodyears are Fashionable Tires, Too---

Perhaps style plays a minor part in the selection of tires--

But where fine appearance is a factor --there Goodyear Tires are first choice.

You'll notice this Fashion on all cars of extra luxury--the bigger, costlier cars; sedans and limousines. Goodyear Tires seem the natural accompaniment of a special finish; extra equipment; wire wheels.

But it is a more commercial factor that has made Goodyears the largest selling tires in the world.

It is their long mileage and freedom from trouble--which mean lower tire-costs.

Women to whom the Goodyear All-Weather Tread has appealed for its distinctive beauty, are even more pleased to find in this tire a quality that coincides unmistakably with their sense of thrift.

Because of the manifold advantages of Goodyear Tires in comfort, appearance, security and freedom from trouble, many users are led to overlook their most important virtue, which is economy. Goodyear Tires actually do cost less to use. The greater mileages they deliver in the end make their selection a matter of economy as well as preference.

Canadian Home Journal EDITORIAL

August *Nineteen-Eighteen*

LET THE MEN HELP. The President smiled at the visitor's apparent surprise as the figures of the exceedingly large amount of Red Cross and Patriotic work for the year were read at one of the many Women's Institute meetings held this Summer.

"Our secret," she explained, "is just that we let the men help. They were very glad to have a share in our work. I believe all men would enjoy helping their womenfolk in their war work, but they are seldom given an opportunity. We women want all the glory ourselves," she added knowingly—for the President was over seventy and she had acquired much wisdom.

"It was this way: The men raised or give the money and we women did the work, thereby accomplishing more than either could achieve alone."

Such splendid advice seemed too good to be kept within the bounds of one small meeting, so the visitor passed it on that all societies might benefit therefrom.

* * *

MORE FISH USED. The campaign to increase fish consumption is having results. In the Canadian army stationed or in training in Canada, 200,000 pounds of beef were saved in the month of May, and approximately the same amount in the month of June, by the substitution of fish. In the West a train load of flat fish every few days from Prince Rupert is sold at popular prices under the auspices of the Canada Food Board. In Toronto recently 100,000 pounds of mackerel were sold within one week as the result of a special campaign.

* * *

MORE MARKET BASKETS IN WAR TIME. What is the matter with the markets in Canada? This question is being seriously considered by the Canada Food Board, and Mr. Thomson, the Chairman, is striving to again bring into general favor the once honored market basket.

European cities have led the world in municipal advance and their markets have figured largely in this connection. In London and Paris wholesale as well as retail public markets are conducted on a vast scale. On the North American continent the municipal market has been a much neglected quantity.

War has shed a new light on the situation, however, and instead of suffering from prevailing conditions, the market has bigger opportunities than it ever had before. What practically every family is worrying about these days is the rising price of everything from potatoes to pennibs. Anything that means dragging the H. C. of L. down from its lofty pedestal is hailed with acclaim. The municipal market is one way to do it and an effective way at that.

It will very likely be contended here that market prices are very rarely lower than the prices prevailing at local stores. Maybe not, but the fact remains that the market sets the scale for local prices and that in towns where there is no market the general tendency is for prices to be abnormally high. It is only reasonable to assume that no dealer would find it paid him to sell at higher rates than the farmers on the market.

But it takes the united efforts of producer and consumer to create a flourishing market. Its success or failure depends very largely on the consumer. Where a market is dead and alive it is a sure indication that the women of the community need to have their eyes opened to the benefits of one of the best institutions that any town can have.

There is a feeling among general dealers that markets are injurious to their interests. They are—in so far as they keep their prices from sky-rocketing! This is an end to be desired by all consumers, who, after all, constitute the major part of the community.

Markets are usually operated only two or three days in the week, and they increase general trade rather than detract from it, for they bring in their wake a big influx of country people who are going to spend money while in town. Indeed, many a city in Europe has grown up round a market and it has never yet been known to retard development, while in nine cases out of ten it has had a good share in hurrying it along.

Markets do not spring to life involuntarily, however. In the early days they did, by the very nature of things. Nowadays they need the stimulus of community enterprise. Location is of the first importance. Clean, sanitary surroundings are necessary. The farmers need encouragement in the shape of co-operative townspeople who will turn out to see what they have. It is a case of give and take in marketing. The first principle is the community spirit.

How is Canada off for markets? There are five at Montreal, five at Winnipeg, three at Edmonton, two at Calgary and Toronto, and one at Ottawa, Owen Sound, Peterborough, Sault Ste. Marie, St. Catharines, Berlin, Brantford, Chatham, Fort William, Galt, Guelph, Hamilton, Kingston, London, Brandon, Regina, Saskatoon, New Westminster, Vancouver, Victoria, Moncton and St. John.

The trouble is that most of the markets in Canada need a thorough cleaning-up. They need the backing of all the people, and they need a clientele of women who put marketing in the "old-fashioned" way among the foremost of their war-time duties.

When Canada reaches the stage where she has a perfect network of well-equipped, up-to-date, live markets patronized by all and sundry, then she will have taken a big step forward in food conservation. Expansion is rapid once community interest is stimulated and the press and moving picture companies can do much to forward the campaign. It is up to the women of Canada primarily.

The fashion has been set at the capital. Long rows of automobiles disport themselves democratically beside hucksters' carts on marketing days, and Cabinet Ministers' wives rub elbows with the humblest citizens in their hunt for fresh country produce at reasonable prices.

There are many things to be considered about it, but where markets already exist the woman who neglects them is working against her own interests and is failing to make the best of her opportunities.

OUR AIM

To publish a magazine which will be worthy of Canadian womanhood.

To at all times keep both editorial and advertising columns clean, wholesome, and truthful.

To be a leader in thought, and a fearless speaker in all vital questions.

To, as far as possible, publish and reproduce the work of Canadians that our readers may become familiar with their own people, their own literature, and their own country, with its wonderful possibilities and glorious history.

If summer sun and dust have begun to coarsen your skin, the special Woodbury treatment for this trouble will make it fine and soft again. For full directions for this treatment see the booklet wrapped around every cake of Woodbury's Facial Soap

If neglect has made your skin sallow, sluggish, lifeless, it needs stimulating. Try the famous Woodbury treatment for rousing sallow, sluggish skins, given in the booklet wrapped around every cake of Woodbury's Facial Soap

Your skin needs special care in summer

to keep it soft, attractive, free from blackheads, blemishes and the coarsening caused by exposure

THINK how constantly your skin is exposed to sun and dust in summer. Strong sunlight coarsens its texture — irritating dust every day carries bacteria and parasites into the skin, causing blackheads and other blemishes.

Are you using the right cleansing method for your skin? Or the proper treatment to keep it fine in texture? You can live out-of-doors as much as you like, and yet keep your skin active, healthy, clear, radiant.

Take your hand mirror to the clear daylight, and examine your skin closely. See whether it is not already showing the effects of summer exposure.

If you find blackheads or blemishes, if your skin is beginning to grow coarse, begin at once to see what the right method of cleansing will do for it, and the proper treatment with a soap specially prepared to meet the needs of the skin.

Try this famous treatment for blackheads

Apply hot cloths to the face until the skin is reddened. Then with a rough washcloth work up a heavy lather of Woodbury's Facial Soap and rub it into the pores thoroughly, always with an upward and outward motion. Rinse with clear, hot water, then with cold — the colder the better. If possible, rub your face for thirty seconds with a *piece of ice.* Dry the skin carefully.

Use this treatment persistently. Make it a daily habit, and it will give you the clear, attractive skin that the steady use of Woodbury's always brings.

To remove blackheads already formed, substitute a flesh brush for the wash-cloth in the treatment above. Then protect the fingers with a handkerchief and press out the blackheads.

Treatments for all the common troubles of the skin are given in the booklet wrapped around every cake of Woodbury's Facial Soap. Get a cake today and begin tonight the treatment your skin needs. A 25c cake is sufficient for a month or six weeks of any Woodbury Facial treatment and for general cleansing use for that time. Woodbury's is on sale at drug stores and toilet goods counters throughout the United States and Canada.

Send for sample cake of soap with booklet of famous treatments and samples of Woodbury's Facial Cream and Facial Powder

Send 5c for a trial size cake (enough for a week or ten days of any Woodbury Facial treatment) together with the booklet of treatments, "A Skin You Love to Touch." Or for 12c we will send you the treatment booklet and samples of Woodbury's Facial Soap, Facial Cream and Facial Powder. Address The Andrew Jergens Co., Limited, 5208 Sherbrooke Street, Perth, Ontario.

"Granny wakened from her nap and shrieked objurgations at T. B. for an hour."

Our Neighbors at the Tansy Patch

"Every one of them is crazier than the others, ma'am" vehemently asserts Salome, maid-of-all-work

By L. M. MONTGOMERY.

Author of "Anne of Green Gables," "Anne of Avonlea," and "The Cats of the Tansy Patch."

Illustrated by E. J. DINSMORE.

PART I.

WHEN, during our second summer at the Tansy Patch, the whiskers of one of our cats were cut off mysteriously we always blamed a small boy pertaining to a family living near us, behind a thick spruce grove. Whether e were right or wrong in this conclusion I cannot say. None of us, not even our redoubtable Salome, cared to accuse any member of this family openly. We had too well-founded dread of "Granny's" tongue. So nothing was ever said about "Doc's" whiskers, and our amiable relations with our neighbors remained undisturbed.

They were certainly a curious assortment. Salome always referred to them as "Them lunatics behind the bush," and asserted vehemently that "everyone of them is crazier than the others, ma'am." She thought it quite dreadful that Dick and I should allow the children to consort with them so freely; but the children liked them, and we ourselves found an endless source of amusement in their peculiarities. They were even better fun than our cats, we thought.

The head of the house was a handsome, middle-aged man whom we seldom saw and with whom, save on one memorable occasion, we never had any conversation. His legal name appeared to be William Conway. His offspring called him "Paw," Aunt Lily always referred to him pathetically as "My poor brother," and Granny called him "My worthless skinamulinx of a son-in-law." What his wife had called him I wot not. She had died, it appears, eight years previously, when Millicent Mary Selina Munn Cook Conway had been born. If she resembled her mother it is not probable that her bereaved spouse sorrowed as one without hope.

When Timothy Benjamin, the oldest son—better known, it may be said as T. B.—paid us a long, friendly, first call, Salome had asked him bluntly, "What does your father do for a living?"

"Nawthing, mostly," was T. B.'s frank and laconic response.

"Then how do you get along?" demanded Salome.

"My old beast of a granny has a little money. We live on that," said T. B. easily. "Folks round here call paw lazy, but he says no, he's just contented."

"Does he never work?"

"Nope. He fiddles and fishes. And he hunts for buried treasure."

"Buried treasure?"

"Yip—down on them sand-hills 'cross from the hotel. He says Captain Kidd buried millions there. He keeps a-digging for it, paw does. Says when he finds it we'll all be rich."

"Your father'd better be digging in his garden," said Salome, severely. "I *never* saw such a scandal of weeds."

"That's what Granny says," retorted T. B.

Salome was squelched for the time being. The thought that she and Granny could be of the same opinion about anything enraged her into silence.

Of Mr. Conway's prowess as fisherman and treasure-seeker I know nothing, but I can testify to his ability as a violinist. When he fiddled, on his tumble-down "back stoop," on the summer evenings, the music that drifted over to the Tansy Patch, through the arches of the spruce wood, was enchanting. Even Salome, who prided herself on her ear for music, admitted that.

"It's angelic, ma'am, that's what it is," she said with solemn reluctance. And to think that lazy good-for-nothing could make it! What could Providence have been thinking of, ma'am? My good, hard-working brother John tried all his life to learn to play well on the fiddle and he never could. And this Bill Conway can do it without trying. Why, he can almost make me dance, ma'am."

That would have been a miracle, indeed! But Dick and I often did dance, on our own stoop, in time to the witching lilts of the invisible musician beyond the spruces.

In appearance Mr. Conway looked like a poet run to seed. He had a shock of wavy, dark auburn hair, a drooping moustache and a goatee, and brilliant brown eyes. He was shy or unsociable, we did not know which. At all events, he never came near us. "Jest too lazy to talk, that's all," T. B. assured us. "Paw hasn't nothin' again' yous."

The first member of the family to call on us—and the only one who ever paid us a formal call—was Aunt Lily—Miss Lilian Alethea Conway, according to the limp, broken-cornered card she left behind. The formality of her call consisted in her leaving this card. For the rest, she stayed the afternoon, took supper with us, and then remained for the evening.

"I am not, my dear Mrs. Bruce, a soulless society woman," was her somewhat unnecessary introductory remark. She swam up the steps—she really had a very graceful walk—and subsided limply into a rocker. She wore a rumpled dress of pale blue muslin with a complicated adornment of black velvet ribbon, and her long, thin arms were encased in cream lace gloves—remarkably nice gloves, of their kind, at that. Some of Granny's money must have gone into those gloves. She had a pale, freckled face and reddish hair. Yet she was not absolutely lacking in beauty. Later on I saw her once in the moonlight and was surprised by her good looks. Her features were quite classical and if she had known how to do anything with her hair she would have been a pretty woman.

I asked her to come into the house, but she assured me she preferred to remain outside.

"I love to sit and watch the golden bees plundering the sweets of the clover," she said dreamily, clasping her lace-covered hands. Neither bees nor clover were noticeable about the Tansy Patch, but that did not worry Aunt Lily. She rolled her large, blue eyes upon me and added,

"I adore the country, Mrs. Bruce. The city is so artificial. Don't you truly think the city is so artificial? There can be no real interchange of soul in the city. Here, in the beautiful country, under God's blue sky, human beings can be their real and highest selves. I am sure you agree with me, Mrs. Bruce."

I did, or pretended to; Salome and I knitted the afternoon away while Aunt Lily swayed idly and unceasingly in her rocker, and talked quite as idly and unceasingly. She told us all there was to be told about her family and herself. She kept a diary, it appeared.

"I must have some place to pour out my soul in, Mrs. Bruce," she said pathetically. "Some day, if you wish, I will show you my journal. It is a self-revelation. And yet I cannot write out what burns in my bosom. I envy my niece Dorinda her powers of expression. Dorinda is a poetess, Mrs. Bruce. She experiences the divine afflatus. My poor brother can express the deepest emotions of his soul in music, but I can only wield my halting pen. Yet my journal is not devoid of interest, Mrs. Bruce, and I should not object to sharing it with a sympathetic friend."

"I should like to see it," I assured her—sincerely enough, for I suspected that journal would be rather good fun.

"I will bring it to you some day then," said Aunt

(Continued on page 18.)

The Second of a Series of Articles on Reconstruction in Canada

After the War---What?

By A. FRANK READE.

The Human Problem of Reconstruction---Some Important Reforms---A New Starting-Point---Women Coming Into the New World---Judges and Officials Should Be Put Into Productive Work

WHERE shall we begin on the problem of reconstruction of Canada? That is really the chief problem at the start. The process should be very similar to that of construction, which always begins with a rough plan or sketch, a study of details, then the finished working plan, followed by the clearing of the ground, the digging of the foundation, and the superstructure. Such a programme cannot be worked out in its entirety when the project is not construction, but reconstruction; for we must bear in mind that there are some things we cannot change, no matter how desirable they are, or how eager we are for changes. The site, for example, cannot be changed. But, fortunately, no Canadian wants to change that. The geographical site on which the Canadian people live and work and love and struggle is ideal; so we may safely leave it to the poet's panegyrics and pass on to the edifice that is to be reconstructed and the grounds that are to be improved and differently laid out.

We must keep in mind always that in the process of reconstruction we are not dealing with bricks and mortar and material things, but with people; with human beings who have ideas, habits, traditions, attachments, sentiments, languages, degrees of training and skill, methods of thinking and working, modes of living and worshipping, limits of understanding and of education, as well as institutions of religion and philosophy, that must be thought of, and in some instances must be regarded with the most tender care.

The question of language is a serious one; not merely that we have in Western Canada nearly fifty foreign languages and dialects—for the people there are intermixed with English-speaking people, and are practically all, especially the young, ambitious individually to make English their common tongue—but the real language problem is massed in the Province of Quebec, where nearly a third of Canada's total population speaks only French, and does not understand what the other two-thirds are saying or writing. But the situation is even worse in the English-speaking parts of Canada, such as in Ontario, where practically none of the English-speaking people can either speak or read French. This vexed question is merely touched here because of its bearing on the broad question as to ideals for Canada, which we must now discuss.

Canadian Ideals Lead the World.

Just as the architect and builder start with a plan before proceeding with construction, so we should have some plan, some ideals, as to what we desire or intend to do.

Canada, speaking nationally, has just passed the half-century of life as a Confederation of the Provinces, and therefore should be old enough to have some settled ideas and ideals as to national life. When the Confederation was formed in 1867, the basis was: Executive authority vested in the British sovereign through his representative, the Governor-General; a general legislature or parliament for the federated provinces, charged with matters of common interest to the whole country, and composed of Senate and House of Commons, provincial governments charged with control of local matters in their respective sections. Here we have, briefly stated, British connection; a strong central government, with the sovereign's representative at its head, controlling all national matters; provincial autonomy in all matters not of general (Dominion) concern.

These were the ideals of our statesmen fifty years ago, as to the form and method by or under which the Dominion of Canada should live and develop; and it is assuring to all Canadians, as it has been inspiring to nation-builders in other lands, to know that the Fathers of Confederation proved to be "wise master-builders." Their edifice of statesmanship, which was the first experiment in federal government, was imitated by Australia in forming its Commonwealth, and later in the Union of South Africa. It is being followed also in the organization of India. In this connection, it is worth while relating that the name of the Canadian Confederation was suggested by Sir Leonard Tilley, who, on reading the 72nd Psalm, was struck with the remarkable description of Canada's geography in the eighth verse:

"He shall have Dominion from sea to sea, and from the river unto the ends of the earth."

In other words, from Atlantic to Pacific, and from the River St. Lawrence to the Arctic regions, where Stefansson is even now exploring on behalf of the Dominion Government.

Reforms Afford a Starting Point.

While Canadians may congratulate themselves on having a stable form of government with which to start their national life, there should be—and there is—a widespread desire to improve on the methods of the founders of the firm. Those old Fathers of Confederation were red-hot party politicians, and though they united for the great crisis in national life, they soon ranged themselves again on old party lines, and it has taken fifty years' time and another national crisis to bring back a union government.

But we have gone farther this time, and have abolished the chief feature of party government—the system of patronage and party pull, which vitiated the entire public service, filling necessary offices with inefficients, creating soft jobs and sinecures for party favorites, and wasting the public money most recklessly. Indeed, the example of union government has been imitated in other fields, particularly the newspaper sphere, and in many cases the two partizan papers of larger towns and cities have united. As the result of a recent case in Ontario, a small town weekly paper is able to boast that it is "the only Liberal paper in Blank County," but it is hot enough in its utterances to meet the entire county's needs.

Our ideals to-day are in advance of those of fifty years ago in respect of union government, for not only is this union to be permanent, but three important reforms—abolition of patronage, prohibition of the liquor traffic, and woman suffrage—have already sprung from the union. All these changes are strong, radical, and in the right direction; and we may fairly take them as a starting-point for further developments along progressive lines.

Having wiped out partyism, old party methods, shallow party cries and irritating party questions, let us start on broader lines, introduce new ideas, use new terms, and get a new outlook. Let us think of Social Progress now, instead of Party Success. Let us get the true idea of democracy—the building up of the people; securing for the people a good living wage; proper housing; minimum working hours; fair distribution of the proceeds of production; the best possible training towards efficiency; a sound education that will enable them to understand social problems, so that they can intelligently take part in their solution.

Social progress must be secured, at any cost; and the social progress must be made orderly, systematic, purposeful, sure. There must be created in every member of the community—that is, in every man and woman, in every boy and girl—a deep feeling of social responsibility. Selfishness must give place to sociality; all members of the community must learn to work together for the common good; prejudices of class, of rank, of wealth, of race, of religion, must give place to broad charity, to helpfulness. The new standard of patriotism must be willingness not only to die for Canada, but to live for it—to live unselfishly, desire to help in every good work, willingness to teach what we know, to pass on to others what has helped us, anxiety to assist in removing evils, temptations, dangers, and to make our community and nation safe for democracy.

The New "Orientation."

The key-words of reconstruction are—production and service. Production means doing productive work in the best and most thrifty way, by the most efficient methods. It means the elimination of useless occupations; the turning of every man and woman to useful, productive work. It means, in the final analysis, the examination of every man's work, as to what sort it is, and the turning of unproductive work into productive channels, or else destroying it. National service is coming, that will put a stop to all confusion as to what is real service for the community and the nation, and what is wasteful, unnecessary or positively dangerous and evil.

We must get a new "orientation"—to use the new word, which is so suggestive in this connection. That is, we must turn and look in another direction. We have been taking things for granted too much. We have been doing what we have been "used to," never thinking what it was all about. We have gone to meetings of the village, town, city or county council, and have seen men sitting around the table, and have heard them discuss community matters—the wise men of the community—never a woman. It seemed all right; it had always been so; this was a man's job; why women at such a place? (We never thought "why women?"—fact is, we took it all as a matter of course, and thought nothing at all about it.) Now comes the new orientation: we look for women around these boards now, and wonder—oh, how we wonder—that we never thought of them before. Why, these men are talking about things they don't understand at all. What do they know—the most of them, at any rate—about women's problems, such as the protection of young girls, the care of old women, mothers' pensions, the struggles of

(Continued on page 40.)

HONORING MANITOBA'S HEROES.

An interesting ceremony took place at Government House, Winnipeg, when Sir James Aikins, Lieutenant-Governor of Manitoba, conferred a number of medals on the wives and relatives of several of Canada's heroes. Two returned officers, Captain L. M. Moffatt, of the 44th Battalion, and Lieutenant T. G. Vant, 15th Canadian Machine Gun Company, were accorded the Military Cross for valor at the front. Both were wounded. In all the other cases the presentations were made to relatives owing to the death of the proper recipient. The photograph shows Sir James Aikins, officers of the Staff of Military District 10, and the recipients of the decorations, and was taken outside Government House immediately after the ceremony.

Smoked Glasses

How One Recruit Was Added To The Army

THE effect was that of a royal October landscape, hung in the light of a blue and green tinted, north exposure, stained glass window. Children played by the hearth. The open fire beamed impartially on tangled curls and cropped boyish heads. Its crackling lent a minor accompaniment to the shrill treble of young voices. As an ideal home picture, both coloring and composition were faultless. But this masterpiece of the Artist of the Fireside was chilled by the mother's fretted, unsympathetic eyes.

"Can't you leave that tiresome paper, Evan, and put the children to bed?" she demanded petulantly. "It's seven now, and I have the dishes to do yet. Miss Grey said that she would call for me at eight o'clock, sharp."

"What for?" her husband demanded a bit dazedly, jerking his attention from an engrossing column.

"For the concert, of course. I told you about it last night," Jeanette explained testily. "Other women go out with their husbands occasionally. I never can, because I married a physician, and he may be summoned at any minute to soothe some other woman's nerves. Miss Grey offered to call for me, and sister Julia will stay with the children. So I am to have a little diversion if I can get ready in time," she finished meaningly.

Dr. Scotney started to explain that it was a man who needed him to-night, a man who was about to face the crisis of typhoid fever. Before he could frame a word, Jeanette had whisked angrily from the room. He heard the spiteful hiss of the hot water faucet and the sharp clink of silver. His strong, kindly face darkened and his hands clenched ineffectually. They relaxed as his glance fell upon his children.

"Come on, kiddies," he invited, swinging the smallest mite to his broad shoulder. "First one upstairs leads in a pillow fight."

A disapproving protest from the kitchen jangled into the laughter. It failed to soar to the heights of the nursery.

"Look out, daddy, I've got the hard pillow!" shrieked eight-year-old Roland.

Evan entered into the romp with the abandonment which is possible only to the hard-working man who has learned the value of play. After ten minutes he terminated the frolic with a quiet but authoritative word.

"We like to have you put us to bed," chirped Witch Marian as the father buttoned and unbuttoned small white garments with his skillful surgeon fingers. "Mother never has time for fun or stories. She just jerks our clothes off, tells us to say our prayers quick and to jump into bed."

"Mother is tired, dear," Evan reproved gently. "Now we'll have prayers, and then you shall each choose a story."

"O, goody," cried Harold. "Let's ask God to send daddy to put us to bed every night," he whispered to his younger brother.

Mrs. Scotney was drawing on her gloves when her husband descended the stairs, again seated himself by the library table and resumed his interrupted reading. She dropped into the opposite chair and turned the pages of a magazine idly. The lines of her face softened with the moment of rest and of relaxation.

"What have you there that is so wonderfully fascinating?" she quizzed. "Is it a serial, and is the hero about to be shot by a band of masked desperadoes? Or is it merely an account of the gymnastics of a new germ?" "It's a current magazine with an article which describes the work of the doctors in the base hospitals, just back of the front line trenches," explained Evan. "There is a constant demand for competent medical men who have the necessary experience and the physical endurance."

"A good opportunity for some young fellow just out of college," commented Jeanette, listlessly. The subject had not stirred her to a ripple of interest.

"Why not for an older man with established practice and family?" Evan asked quietly.

"How perfectly absurd!" Jeanette flashed. "In the first place there are quite enough unmarried slackers to fill the posts. Then a married man's duty is to his wife and children. He has no right to go where, in all probability, his life will be forfeit and they will be left unprotected. Even if he should come back alive and unwounded his practice would be gone and he would have to start all over again. I should never consent to your going, and that's flat, if that is what you are hinting about, Evan Scotney." Then, briskly arising, "There's Miss Grey's ring. Call up Julia and tell her I'm off. The children might sleep safely, but it is well to guard against all possible danger. Goodbye." She touched his forehead in a perfunctory kiss. "Sorry you can't come along."

The unaccustomed silence of the house which followed her departure was broken a few minutes later by a sweet, merry voice:

"Good evening, doctor brother," it saluted. "I have been waiting patiently for five minutes for you to look up and say, 'How do you do?' I opened the door quite noisily, too. Speaking of the value of the ability to concentrate, I could have collected all of the family silver—if that fascinating article had been long enough. May I have that paper after you go?" she requested, as she tossed hat and coat on the sofa and fluffed her auburn hair.

"It wouldn't interest you, little sister," Evan discouraged.

"But it interests you," she persisted, "and my intellect from yours is not further removed than is Vimy Ridge from our own peaceful Main Street."

She selected a willow rocker and added a sofa pillow that made a bewitching background for her white wool dress and clear complexion.

"If Rob or Ned were only here now," Evan commented, quizzically. "Too bad to waste such tactics on an old married man," he added with an amused twinkle.

"Thirty-five is not old at all," Julia declared, serenely, displaying a daintily shod and silk stockinged foot. "You were married when you were a mere infant; that is all. There are plenty of young bachelors on my eligible list whose birthdays antedate yours. Be a good sport and let me practice some more, will you? They say that the way to fascinate a man is ——"

"Don't say 'through his stomach,' I beseech you," deplored Dr. Scotney. "I have too many cases of chafing dish dyspepsia on my hands now."

"Don't jump at conclusions, goosey," Julia admonished. "I intended to complete my sentence by saying: 'To lead him to talk about himself.' How long have you?"

"Fifteen minutes," Evan calculated, looking at his watch.

"Plenty of time," she dimpled. "You are a young man, understand. You have been waiting in my parlor while I powdered my nose and crimped my hair and tried on three gowns in order to decide which is the more becoming. It was quite necessary to decide correctly, because I fully intend that you shall propose to-night, though you aren't in the secret. During the interim you discovered that magazine and found something that interested you. Curtain's up."

Dr. Scotney grinned indulgently. He was accustomed to Julia's caprices. They had amused him when she was a chubby faced child and later as a hobbledehoy school girl. Now that she had turned overnight into a young lady they were even more diverting.

"I believe you were reading visions between the lines of your paper, Evan. Won't you tell me about them?" Julia cooed sweetly.

"Just some accounts of the medical work which is being done within sound of the roar of the big guns," Evan returned, dropping easily into the character of one of Julia's young swains. "Nothing to interest a sunnyside-o'-life girl like you."

"But it does interest me," Julia differed. "I believe there's a strain of warrior blood in my veins. The very thought of those grey, huddled heaps in No-Man's land; of the procession of stretcher bearers and of comrade's-shoulder-supported men crawling up from the trenches along paths that grow redder as they pass—well, it makes my heart beat to drum time and my eyes to see the old flag waving in the battle breeze. If I don't read and talk about things that set me to shuddering it's because I want to save my energy and my sympathy for cases of real need which I can actually help. I can do nothing for the soldiers themselves. I may be able to do something for

(Continued on following page.)

"I believe you were reading visions between the lines of your paper. Evan, won't you tell me about them?"

SMOKED GLASSES

(*Continued from preceding page.*)

those whom they leave behind. Suppose, my young medical student, that you really had your degree and that your mother were enough of a Spartan to bid you Godspeed. What would you do?"

"I'd enlist for active service at once," Evan vowed earnestly, entering into the play with zest. "I'd extract shrapnel and soothe from shell shock and amputate splintered limbs instead of puttering with a lot of silly women whose only trouble is that they have no real work to do; that they fritter away their days at silly teas and over senseless cards; that they never treat their muscles to actual exertion nor their lungs to pantingly breathed outdoor air."

"But you wouldn't get as much money as you get here," Julia commented, in a voice that was innocently sweet. Evan could not see the wicked sparkle in the blue eyes gazing so low-lidded at the flickering flames.

"How much can I get here?" he demanded, fiercely, forgetting the character that he had assumed. "Enough to keep up a house exactly like that of the other houses in the village. Enough to clothe and to feed my family and to pay for a few books, a life insurance and an occasional trip. Perhaps I can make enough to send my sons to college if they are worth the effort. I sometimes doubt it. Life here seems to give the present generation mental rickets. Other men's sons turn out to be namby pamby. Mine may. But they won't if they have to fight their way up, and if they have the example of a hero father. Anyway, what is gold compared to honor? Besides," he added, whimsically, "My practice will soon be ruined here. Half of the ills of life are imaginary, and they do not tarry with those who are straining muscles in the doing of things that are worth while. And it won't be long until everyone here will be too busy solving real problems on life's blackboard to play tit tat toe behind the teacher's back."

"But my sister won't let you go," blazed Julia, facing him suddenly. "She prefers to have you putter around here where she has always lived. I know all about the splendid chance which she forced you to turn down last winter, too! Medical students indeed! Mending soldiers' rent bodies and agony-seared souls is a work for healers who know life as well as medicine. You think I am only a child. At my age our grandmothers were rocking their second babies. I've read and observed and thought and I can see. Jeanette is all right at heart, but she has allowed her eyes to be covered with the smoked glasses donated by the Demon of Domestic Dullness. She wasn't always like this. I remember her wedding morning. I was only a child then. I woke to find her kneeling by the eastern window of our little room, watching the sun rise. I crept out of bed to throw my arms about her. She put her head down on my shoulder and said:

"'O, Julia, I am so happy. Evan is so good, so true, so kind, my lover and my king. I want to be worthy of him. Little sister, help me always to be his inspiration, his comrade, his better self. God grant that I may never make it hard for him to do that which his honor demands.'

"Now I intend to help her," Julia rushed on with the impetuosity of youth. "She would have let you join a special expedition to China to fight the Bubonic plague then. There is no reason why she shouldn't send you overseas now as bravely as the other women have sent husbands and lovers, brothers and sons. The home is in her name. There is a good bit of solidly invested money and she had a profession before she married. She is a strong, healthy young woman and the children are all safely past the teething period. She needs something to open her eyes. I am going to do just that. I shall ——"

"Stop!" Evan had risen to his feet and stood as if dazed before the furious onslaught of the girl's words. Now he spoke with the voice which neither nurse nor patient, nor officious relative had ever dared to disobey.

"You will in no way interfere. You forget that you are speaking of my wife, the mother of my children. We will settle our own domestic difficulties—if difficulties there be which I do not concede. Thank you for coming over this evening." His voice had grown coldly formal. "I have an engagement now. Good-night."

Dr. Scotney stepped out into the starshine and closed the door. Could he have seen through the solid oak, instead of the silent, crushed little figure that he had left he would have beheld a thrillingly alive and vivacious young woman. She bowed triumphantly to her reflection in the glass and murmured to the daring eyed vision that dimpled back at her:

"Oh, no, you'll not Interfere! You are flattened into a door mat and you will creep away and hide. You are a sly little puss and you found out just what you wanted to discover. And you will now sit down and plan some amateur theatricals with yourself as the villainess, your sister as the Awakened Wife and Brother Evan in the limelight before the final curtain as the Happy Husband."

Evan shrank from the next meeting with his sister-in-law. He could not quite remember what he had said. He was sure that he had not mentioned Jeanette's name. Yet he had the uncomfortable feeling that he had bared his soul for this slip of a girl. He knew that she was quite capable of executing any plan, however venturesome. He had helped her through too many girlish escapades to have the slightest doubt on that score.

However, his fears were quickly soothed. Julia came over quite as often as before. She made no reference to the conversation. At first she wore such a hurt, childish expression that Evan melted. Probably the infant had not realized what she was saying. Moreover, the babies adored her, and she was so devoted to Jeanette. The doctor became quite kind in his desire to make amends for his harshness. Julia revived by degrees and soon they were back on the old familiar footing. Evan had completely forgotten the episode when a telegram was handed him some weeks later. He tore it open and found that it was from a physician in another part of the state, a man who had been a college friend of his father and who had helped Evan himself with many a bit of sage counsel when he was a young practitioner. He read:

"Come for consultation. Arrange leave practice. Stay week. Important."

Evan glanced at his watch. The express was due in exactly eighty minutes. He hurried into the living room. Julia was there, tranquilly mending. The baby played at her feet.

"Where's Jeanette?" he demanded.

"She has gone to a meeting of the club," Julia responded. "Harold and Roland are at school. Sister took Marian with her. Mrs. Lawton suggested that she could play with her Molly under the care of the nurse. Anything wrong?"

"A telegram from Dr. Ryall," Evan explained, hurriedly. "Important consultation. I really ought to leave on the five-forty. Can you get Jeanette by phone?"

"Yes," was the judicial response, "but it would spoil her afternoon and disturb the meeting. Why is it necessary? I can pack your bag. I always pack daddy's. Jeanette hasn't been out for an afternoon in a month, and she was anticipating such a pleasant time. There is a celebrated author present and you know that Mrs. Lawton is an ideal hostess. If Jeanette knew that you were going she would feel obliged to rush home and pack your bag and see that you had on fresh linen and a newly pressed suit. Too bad to deprive her of the afternoon's pleasure."

"That's so," Evan commented after a moment's thought. "Very well. I'll write a message for her. Pack the bag while I see Oswald and arrange for him to take over my practice. He'll be only too glad. He's having a hard time to get a foothold. Three doctors for every patient now. I'll be back in half an hour."

When Evan returned, his bag was ready and his clean linen and fresh suit were on the bed. In exactly thirty minutes he appeared in travelling trim, kissed the baby and gave Julia a note.

"Give this to Jeanette, please," he said. "Good-bye, little sister. You are a trump. Take care of my family."

He was off in a whirlwind rush for the train.

"Am afraid I have called you here on a fool's errand, my boy," the genial old doctor remarked as his guest emerged from the sleeper the next morning. "My patient rallied miraculously. It turned out to be quite an ordinary case after all."

Evan's face showed distinct disappointment.

"Tut, lad," the doctor rallied. "You look positively sorry that the man is recovering."

Evan pulled himself together.

"It wasn't that," he declared. "But I had been looking forward to the week with you. You are always as good as a tonic and I'm feeling rather done. However, it doesn't matter. I can get the morning express."

"Now, why?" the old man demanded. "I've a chance to go on a fine camping trip and to bring a friend. Your practice is arranged for. Your wife doesn't expect you. Why not come along?"

Evan found a fresh objection for every hour of the day. Each was overruled. Next morning the two men took an early train which would end at a trail—a trail which would plunge them into the heart of the woods. Evan had written a letter to Jeanette the night before and entrusted it to Dr. Ryall. It had been posted—enclosed in a fresh envelope to Julia.

It was a long, healing week spent close to nature. They fished and hunted and trapped. There were fragrant evenings by the dancing camp fire when Evan drank in the shrewd old man's philosophy or laughed at his kindly humor. Too, there were dreamless nights on beds of balsam, and awakings to a plunge in the sparkling stream and to trout for breakfast. Mother Nature yielded the balm which she always gives to those who ask her to soothe their workaday hurts. It was with steadied nerves and with a saner outlook upon life that Dr. Scotney turned his face homewards.

At the end of the journey he swung from the train and hurried toward his office. There might be important mail. He was anxious to get Oswald by wire and to inquire about the progress of the more important cases. At the door he stopped in utter bewilderment. Jeanette, red-eyed and white cheeked, was sorting over his private papers.

"In the name of ——," he began, but Jeanette rushed into his arms and burst into a torrent of weeping.

"There, there, pet," he comforted awkwardly. "What is the trouble? Has anything happened to the children?"

"O, you've come back, you've come back," she managed to gasp between her sobs.

"Come back?" he repeated, wonderingly. "Of course I've come back. What else would I do?"

He held her close until her sobs were quieted.

"Now tell me all about it," he insisted.

"You were gone when I came from the club," she began, in a trembling voice. "The children had stopped to play on their way home from school and knew nothing about you. Baby said: 'Papa say bye, bye,' but I thought you had just gone for a call. Julia was in a hurry to get home and I suspected nothing wrong. When you didn't come for

DR. BELAND

Canada's Greeting Upon His Return From Europe.

By J. W. BENGOUGH.

Little Bateese, go on de garden now,
And pick de flower pure w'ite and bring to me,
Dat's for put on de botton-'ole for show
Docteur Beland is 'ome from 'cross de sea.

Pick de w'ite flower, dat's match de soul of 'im
In all de year 'e suffer grief and pain,
Weeping de bitter tear till eye is dim
For bride dat's die, 'e will not see again.

W'ite flower—dat's like de love de docteur show
De poor Belgique w'en she is trample down;
Not try for ron away from dere, Oh, no!
But, lak de hero, stay for face de Hun.

W'ite flower—dat's tell de story how he look
W'en he is prisoner of de brute de Bosche,
Lak' rose dat's 'mong de ogly blisters took—
I go and fight dose devil too, ba gosh!

I lak' for strangle such beast on de t'roat
Dat's murder pauvre mere and little child,
And drown de babies w'en dey'll sink de boat;
Give me de gun, Bateese, my blood is wild!

Ah! I'm old man—pas' age for armee now,
But young Canayan habitant he'll go;
De beeg young feller strong as ox or cow,
He's got de stuff, by gar, let German know!

De w'ite flower on my botton-'ole, dat's prayer
De bon Dieu bless you always, chere Beland,
And w'en Quebec boy 'e get over dere
'E'll settle wit' dose Bosche, you understand!

TO MY MOTHER

If I should die, grieve not that one so weak and poor as I should die—
Nay, though thy heart should break, think only this:—
That when at dusk they speak of sons and brothers of another one—
Then thou canst say "I too had a son. He died for freedom's sake."

(Unknown.)

MARY BRITTEN WRITES

A Second Letter to Her Sister in Canada

By SARA JEANETTE DUNCAN.

36 *The Buildings,*
Angel Road, N.W.

MY DEAR SISTER:

IN your last—enclosed in half a pound of marg., for which we are truly thankful, as it does seem worth its weight in gold these times—you remark I had not mentioned Flossie's young man before speaking of her getting rid of him, and I notice though smudged in places you would be pleased to hear the particulars. I will do my best as it is no secret and never was, and now F. herself agrees with me that a man with no chin has that much against him whatever size his eyes may be or good his hand-writing. From this you will see that F. has dropped the veil and no longer keeps herself to herself, which is a lot more agreeable all round.

The very first day of Flossie's going on the buses her father pointed out the likelihood. Says Alf, "That girl will be bringing a young man here off one of them Generals, mark my words," he says, and F. never denied but that was how he made her acquaintance. I believe it began with him putting her right with her change and you know how one thing leads to another when the heart is young and him a regular on her route. Soon it came to conversation and one evening, much to her surprise, he begged her to accept of a rabbit, the next day being Sunday and very tasty it was done my way with a dumpling or two and an onion. That led to the pictures, and the first thing we knew he was sitting down to tea with us and I noticed he was particularly fond of sardines. You will ask when all seemed so satisfactory why break it off and I can only tell you it has as much to do with her father as anything else. From the very first Alf thought there was something, but him being so sensitive since he was buried in France I didn't take much notice. Hard to please, Alf is now, with any stranger, which you can't blame him, seeing all he's been through and so many walking around protected.

It was Mabel began it.

"Why don't you give him a hint to cut his hair?" she says to F., and F. replies, "I guess he's got enough to do cutting other people's," which was the first we knew of him being a hairdresser, F. not being one to tell all she knows, not by any means. She went on to pass a remark about the grapes being sour, which I needn't dwell on, sisters being sisters as the sayin' is all the world over. But Alf pricks up his ears. Alf isn't fond of hairdressers, not as a class. He says out there they're the exception and not the rule. "Well," I said, "if he was rejected on account of flat feet that wasn't his fault," I said, but Alf seemed to smell something.

Up to now, when this Mr. Pepple was there we had kept the conversation on air raids, submarines and the food controller, and I must say he expressed himself very well, though generally managing to slide the subject off on to Irene Vanbrugh or Gladys Cooper, when the details was at all horrible. He didn't seem as if he could stand them, so one evening when young George had been giving us all a regular turn with something he'd heard, this Mr. Pepple he passed his cup to change over the subject and his hand shook so it clattered in the saucer. Alf he noticed it, and presently he says to P., "What do you think about this here war?" Alf says sort of artful.

"I don't like war," says P.

"Neither do I," says Alf. "And I been there, so I know," he said. "I don't arf like war—there's a whole lot of things I like better," says Alf, "but leavin' war in general out of it, what do you think of *this* war?" Alf says.

This Mr. Pepple he straightened his collar behind where there wasn't nothing the matter with it and he replies:

"I don't see as this war is different from any other."

"Don't you?" says Alf. "Then you got poor eyes."

"Oh, father," says Flossie, "Mr. Pepple's eyes are his best feature."

"There's a kind of eye that's very good at reading the wrong sort of print," says Alf, "and there's quite a few of them about just now," he says. "Now, what I ask this gentleman is: Do you consider the Huns is in the right?"

"I ain't considered it," said Mr. P.

"Oh," says Alf, "ain't you? Then may I ask what you *'ave* been exercising of your mind on the last three years?"

"Suppose they ain't in the right what's that to you or me?" says P.

"If they ain't in the right they're in the wrong," Alf tells him. "And where there's a right and a wrong there's got to be a fight and always has been. We got to see it through."

"Not me," says Pepple.

"If we *are* going to 'Her Dream of Diamonds,'" puts in Flossie very nervous, "I don't want to hurry you, Mr. Pepple, but—"

"No," says her father, "don't hurry the young man. I understand," he said to P., "that you were rejected for flat feet."

"Flat feet, one man business, only son of a widow," says P., "and if they wanted more I could give it to them."

"Maybe you're a Pacific," says Alf.

"Maybe I am," says P.

"Maybe you're a Conchy," says Alf, and gave him a look.

"It wasn't necessary," says Pepple, "I had me flat feet."

"Had you?" says Alf. "Got 'em still?"

"Why yes," says P.

"Then use 'em," says Alf, and opened the door to him.

None of us have ever seen him since. F. thinks he takes the Tube. Alf says maybe he goes on his flat feet.

Your affectionate sister,

MARY BRITTEN.

P.S.—The present one is cross-eyed and in khaki. He gets on splendid with Alf. F. thinks his chin is his best feature. "Yes," says Mabel, "you could take a ride on it." "To Berlin," says F. You can't down our Flossie since she's been on the buses.

THE SHERWOOD FOREST

By JEAN GRAHAM.

There is no spot in England associated with more romance of fairy lore and outlaw adventure than ancient Sherwood Forest, where the trees are many centuries old and the velvet sward is softened and enriched by the dews of many summers. To the courtesy of a returned Canadian soldier, one of our boys who went "over the top" at Vimy, I am indebted for these two photographs of "the heart of Merrie England." Of course, it is of Robin Hood that we think, when we hear of this forest of the old land, and the words of Alfred Noyes come to us with their magic summoning of long ago scenes.

THE MAJOR OAK.

This wonderful old tree is about fifteen yards in circumference and twenty-two persons can stand inside it. All the limbs are supported by iron braces to the main trunk. The top of the tree was lost twenty-three years ago.

"Softly over Sherwood the south wind blows .
All the heart of England hid in every rose
Hears across the greenwood the sunny whisper leap,
Sherwood in the red dawn, is Robin Hood asleep?

Hark, the voice of England wakes him as of old
And, shattering the silence with a cry of brighter gold,
Bugles in the greenwood echo from the steep,
Sherwood in the red dawn, is Robin Hood asleep?

Where the deer are gliding down the shadowy glen,
All across the glades of fern he calls his merry men—
Doublets of the Lincoln green glancing through the May
In Sherwood, in Sherwood, about the break of day—

Calls them and they answer from aisles of oak and ash
Rings the *Follow! Follow!* and the boughs begin to crash,
The ferns begin to flutter and the flowers begin to fly,
And through the crimson dawning the robber band goes by;

Robin! Robin! Robin! All his merry thieves
Answer as the bugle-note shivers through the leaves,
Calling as he used to call, faint and far away,
In Sherwood, in Sherwood, about the break of day."

WOODLAND DEPTHS OF OLD ENGLAND.

Here are seen some of the Monarchs of Sherwood Forest. These trees were considered too old for ships in the reign of Queen Elizabeth.

ROBIN HOOD

Robin Hood, Robin Hood, wind your horn again,
Break the Sherwood silence, call your merrie men!

Robin, England staggers, horrible in pain;
Leave your sleepy forest, thunder down the plain.

Dim your olden glory, shame your olden skill—
Trench can never stop you, bog nor barren hill!

That is Vimy Ridge there, rising from the mud;
Vimy Ridge was captured by the British blood!

Robin, Robin, Robin, summon all your men!
God and Merrie England! take the field again!

—*New York Sun.*

Teaching Truths Concerning The Beginnings of Life

By DR. LAURA S. M. HAMILTON.

A Talk To Mothers

NEARLY a year ago, in the Department of Baby Welfare, we discussed the subject of the best age at which to send a child to school, and in the June number of the Journal, we considered the subject of Venereal Disease.

At first glance one would not suppose that these two subjects had any connection with each other, yet I hope to show in the following paper that underneath all other remedies proposed for the relief and cure of the plague, that burdens the whole civilized world to-day, the teaching of the child is the remedy paramount that will by the mercy of God eventually deliver the world from this curse.

Those of you who read the article a year ago will possibly recall that my final conclusion as regards the right age to send the ordinary child out from home protection was to be judged by what the parents had been able to teach him or her at home. That is, a child should not be sent into the mimic world of school till certain truths concerning life, and its origin, had been truly and lovingly explained at home.

It is logical rather than Utopian to conclude that the man or woman who has been trained from infancy to understand some of the beauty of life and its beginnings, to glimpse the mystery of that Eternity from which we come and to which we go, to realize the truth of life that we carry from Eternity to Eternity, and bequeath beautified or sullied to countless generations—that such a man or woman will not wantonly wreck the life that has been given into his or her keeping.

That this is not a mere dream has been proven even now by the reverent living of those, comparatively few though they be, who have had the good fortune to have been so taught or to have imbibed from some source a pure conception of the Creator's plan of propagation of life.

A few generations of such reverent lives would cause the curse of venereal disease, and all the network of misery consequent on a wrong conception of God's Greatest Thought, to pass from the world as some of the so-called "medical" practices of the dark ages have done.

The practical question that faces the parent first, and the teacher of children second, is the best form in which to help the child to understand the truth that is his.

Much has been written and taught along this line, and a perusal of some of this, most of it painstaking, and careful work, lies within the power of every person who is able to read. It is no more difficult to understand than some of the instructions given as to the making of a child's dress, or the intricacies of the published recipes and menus for "war-time saving." It is vastly more interesting and instructive reading.

In my own experience the child itself almost invariably points out the way to help, and the path of instruction to follow; if the parent is wise and patient enough to watch for the turning of the little mind in that direction. Yes, and the parents need to be industrious enough to be ready for question or remark when it comes, and not find themselves in a suddenly embarrassed position on unfamiliar ground, or ground that has only been considered by them in the coarse or ignorant vocabulary of lazy and unbeautiful minds.

In a foot note at the end of this article I hope to append a list of some of the latest and best books on these subjects, trusting that my readers will select those that fit their particular need.

To a little child that has not been in some way injured or hurt mentally, its own beautiful little body is one of the very first things that awaken a curious interest. And right here on the part of many thoughtless people comes one of the very first sins against the child, and against God's Beautiful Thought. No baby should ever be given the ghost of a thought that any part of that exquisite little body is unclean, or unholy, or needful of concealment. Drop that poison in, and you have already turned the child's face toward the regions of death.

The contrary should be persistently taught, yes, and insisted on, in the face of much opposition and many stumbling-blocks deliberately placed by the giant Ignorance in your own and the Baby's path. You will have to watch the nurse and the washer woman, your grandmother and your best friend. But after a while your "very peculiar ideas" will be respected, and before that time your child's ideas will have taken some form. See to it that that form is clear and correct in regard to function, and nomenclature, in so far as the child can understand. Otherwise, teach him physiology and hygiene.

Little lessons from Nature probably come next, and in that the parent teacher of to-day is vastly better off than the parent of even a decade ago. Books of all grades, of great beauty of form, and so inexpensive as to be within the reach of any purse may be had at any good store or from any publisher.

Here let me say a word along the line of the purchase of literature for little children, or any children for that matter. The buying of good books, not haphazard, nor even according to the Sunday school selection, is absolutely necessary in every home. Books should be purchased corresponding to the need of each particular child, and containing the information required by each special occasion. I have in mind now one very happy ordinary home, where the young mother is ambitious that her boy should have the best in moral, and mental, as well as physical development. But every book that she requires to purchase to prepare her mind to meet the opening needs of that new mind, has to be obtained through friends, on the quiet as it were, because her husband considers the buying of books on such subjects as an extravagance for people in their position. Yet you will never go into that home but what you may see a novel or new magazine lying around that he has bought for his own recreation. He has no intention of being selfish, or, mercy, *stupid!*—but let me whisper it softly, he being a man with the best intentions in the world, is both, where it comes to understanding the needs of a very little child. Could we as men and women only meet and face, and then endeavor to provide for our limitations, even as we put on an extra wrap to provide against a drop in temperature, how much more wisdom we would show.

Little lessons in hygiene, little lessons in physiology and anatomy, little lessons in Nature study, little lessons in love and reverence to God (the favorite portion of the Bible of "the man of the house"—aged six—which he found after hearing it read, laboriously read himself and then learned to recite, is the first ten verses of the first chapter of the Gospel of John). Other little lessons about the house and kitchen, when fish or fowl are being prepared for cooking. Then one day all the different parts of the puzzle will slip one by one into place, and not suddenly, or fearsomely, but gladly, beautifully, reverently, tenderly, the child mind will get its conception of the whole of God's Beautiful Thought. And best of all that he himself is part of that Beautiful Thought.

Great, wide, beautiful, wonderful World
With the wonderful water round you curled,
And the wonderful grass upon your breast—
World, you are beautifully drest.

The wonderful air is over me,
And the wonderful wind is shaking the tree,
It walks on the water, and whirls the mills,
And talks to itself on the tops of the hills.

You friendly Earth! how far do you go,
With the wheat-fields that nod and the rivers that flow,
With cities and gardens, and cliffs, and isles,
And people upon you for thousands of miles?

The marvel to me always has been that parents deliberately, or carelessly, depute other persons, teachers, Sunday school teachers, school mates, or even chance acquaintances on the street to give to that mind which is their own creation its first conceptions of the Life Truths.

Nature works slowly and "by degrees." So does Nature's Master. The human mind does not receive readily or with good results those impressions given with sudden violence. Such are apt to be lasting or to produce results entirely different from what was intended.

Therefore, all such teaching is best done as I have described, gradually, and slowly. Let me illustrate two examples of the result of the opposite course.

The mothers in both these cases were thoughtful, cultured women, both able and willing to teach what was right to their respective children, but somehow each had missed just the psychic moment. The fathers I was not acquainted with.

In the first instance the boy was about seven years old, when his mother discovered, to her horror, that he was practicing the habit of self-injury. The child was perfectly innocent of wrong doing, but already his nerves were showing the results of the habit. He told his mother quite frankly that he had been shown how by another little boy a few years older living on the same street. This older child was the son of a somewhat prominent church officer, a man with a high, narrow forehead, and anxious large eyes, who exercised himself greatly as to the experience and regularity of attendance of his fellow church members. I subsequently discovered that his son had instructed in a similar manner several more of his playfellows on the street, the thing being for a time like an epidemic, all traceable to the one source.

This mother, in her horror and disgust, gave her boy such a deep impression of the wrongness and awful results of the habit, that as she regretfully told me in relating the incident, she almost reduced him to nervous prostration, he being a sensitive, high-strung child, and it was months before he would trust himself for any time away from her protecting presence.

Now such an experience is painful for both child and mother, and it seems to me that the little lad might have been taught the twenty-fourth Psalm, and the need for "clean hands," obedient hands that do not meddle with sacred things, and a pure heart that "the King of Glory might come in." This, together with the knowledge that God had given him as a trust certain organs, to do a certain work in this body, that work being to manufacture fluids that would make him strong and fit and a man, that these little organs would do their work surely and well as he grew older, if he took good care of them, did not hurt or meddle with them, kept his hands clean and himself unashamed. Had the child been taught something thus tenderly and truly, no other lad could have taught him an evil habit.

The other case was one of a large family, and the little boy in question had somehow just been missed in this particular teaching. So he reached eleven years without any definite knowledge of himself. Then in the public school he came under the care of one of those truly good and great teachers who are endeavoring to make up for what parents neglect, and if it be possible to warn the little ships that set out from their harbor of dangers ahead.

It was so well known that Mr. X. instructed every boy ere he left his class along these lines that parents had come to accept it as a matter of course. In the special case I refer to the boy got "such a big dose all at once" that the shock of the knowledge almost made him ill, and the usefulness of the much needed instruction was greatly nullified by the child's unpreparedness, for which I do not think the teacher was in the least to blame.

This instance only is one of many that go to prove that such first impressions should be given slowly and by degrees in the shelter and language of home.

A peculiarity so marked that it might almost be called a characteristic of much of the literature for instruction of little children along the lines we have been considering is the elaboration of the mother function, and either complete omission of or very cryptical allusion to that of the father. Stories, allegories, and illustrations of the egg, and the work of the mother abound; the father is dismissed with a few if any words at all.

This is not fair. It may give the girls all the instruction they need. It does not do the same for the little father to be. I was brought up against this some time ago in reading a nature study story to a couple of little boys, both under seven. After listening patiently and expectantly for some time one of them looked at me and asked eagerly in regard to the making of that new baby. "Well, but what does the daddy do?" He was such a little lad I felt for an instant as if I were standing on a height, but those frank, eager eyes were fixed unwaveringly on mine. Then I made the plunge, and in a perfectly casual tone I told him. "The daddy has the little new life from God first in his keeping, and he gives it to the mother to take care of for him." It was perfectly satisfactory. We have talked about the matter several times subsequently. The logical result the following shows: We were walking, the small boy and I, along one of the main thoroughfares of the city the other day, when we met a group consisting of a huge, heavily built, muscular man, strolling with his pipe in his mouth, his hat on the back of his head, on the inside of the pavement. Beside him wearily trailed a little slight, pale, worn woman, evidently his wife. One child dragged at her skirt. She pushed a heavy baby carriage containing another in front of her. It was up grade, too. Her steps were very burdened, for unknown to my small escort she carried yet another "close beneath her heart." But he had seen enough. With indignation growing in his eyes he gazed at the man till at last he burst out with, "What's the matter with him? Why doesn't he help her? *They were his children first.*" A little later we met them again. Now places were exchanged, the man wheeled the carriage with one hand and carried the tired toddler on the other arm, oh, so easily. "Look, look," said the boy eagerly, as if to vindicate his sex "He *is* a gentleman after all."

But isn't my point proved? "*They were his children first.*" With such a knowledge as this, where were the deserted baby? Where the prostitute girl? Where the man who would "murder his own children" by wanton living, or by contracting or giving venereal disease? Is not this the solution underlying all other of the social problems of to-day? Does not the fact that public opinion permits me to write as I am now doing show that "the light that lighteneth every man that cometh into the world" is gradually penetrating our darkness, which hitherto has indeed "comprehended it not."

Nothing of the various forms of evil connected with "sins of the body" need ever be taught to little children, unless, as in the case of the child taught the evil habit, it has been thrust upon them by outside influences, and then it should be dismissed as

Set the Pace in Your Own Home Town

By

EDITH HALSTED LORWAY.

Be a Leader in Your Community in the Food Conservation Movement by Holding an Educational Food Sale. This Article Will Tell You How This is Accomplished.

ONE—Two—Three—ready—go! The food campaign is on! The next three months will be the crisis time of the war, as far as the food situation goes. We must produce, and we must conserve; but now here is the problem. The summer drive is also on, and the Red Cross in Europe is sending out an S.O.S. call for more ambulances and more medical supplies of all kinds. Ambulances, surgical instruments, etc., mean cold cash. Therefore all the various local branches of the Canadian Red Cross must combine the saving of food with the raising of money. How best to go about it?

Everyone buys when it's for the Red Cross.

There is no use arguing that in war-time people should not expect to be fed when they attend public socials. People in the cities are now pretty well educated up to that idea; but in the rural districts where there are no movies to start an idea and bright colored posters do not everywhere catch the eye, public opinion travels more slowly. So let us in these few paragraphs lay aside theories and confront practical points, two of which we must combine. At our sales of baking, etc., we think we hear someone say, "Why have a sale of baking at all?" We know of no other way to reply than to say, "Attend a few Red Cross meetings in a small town and learn how difficult it is to think of ways and means of raising money in which food does not figure as the chief drawing card." Farmers driving in from the country to a social can hardly conceive of the idea of starting upon the return drive without having had something to eat; and when the local talent is limited concerts cannot be given continuously, for the public tires easily of the same thing, even when given in aid of the Great Cause. Let us, however, return to the discussion of our two points concerning this feeding matter. Our first point is that we must waste nothing. Cakes and pies must not be cut up and placed on plates at various tables. This method of serving people is bound to entail waste, for it would not be sanitary to utilize pieces of cake or pie left on the plates. Even untouched pieces and such are more or less wasted through becoming stale. We must put into vogue the method used in many private parties, *i.e.,* pass the cake around, cutting off each separate piece as wanted, the same with pie. This naturally makes a little more work, but must be done. Then any parts of cake left can be sold and be quite sanitary.

We now arrive at our second point, namely, that of education. Unless the military law of rationing is put into effect we cannot coerce the public. We must lead them gently, we must make war-time eating attractive, and we must make public opinion so strong against the unnecessary consumption of frosted cakes and "double faced pies"; that is to say, pies with an upper and lower crust and the unnecessary making and eating of fudges and creams that it will be considered positively bad taste for these gay luxuries of cakes, pies and sweets to flaunt themselves upon our tables in their peace time gowns. We must subdue them into wearing the sober gowns of war-time. They must lay aside their fine white coating of frosting and shiver upon our tables in their naked state of unfrosted tops. Pies must take off their top crust and benevolently smile upon us in the form of custard, lemon and pies of such cast. If the more sturdy raisin and date pies will come without their upper crust we may favor them by letting them wear the beaten white of eggs or, perhaps, a little whipped cream; that is, if such pies happen to live in a farming district where eggs and cream are at present plentiful.

Lastly, what about all our gay little candies? Shall we let them frisk around full of sugar, or will we put the fudges and creams to bed till the war is over and bring out the chocolate-coated nuts and dates and dress up our molasses candies in their Sunday-go-to-meeting garb?

This educational system can best be carried out in rural districts through the free use of attractively gotten up posters and articles in the local papers; by the use of movies (if we can persuade the Government to make use of our town hall for that purpose), and last, but perhaps not least, competition sales of war-time baking; at which sale posters and bulletins should be freely used and especially should prizes be given to girls and children for war-time candies and sweets, for through the children the homes are often influenced. Attractively gotten up booklets of war-time recipes can be sold, the proceeds to go toward some patriotic cause. Also a little booklet called "War-time Ditties for Children" containing suitable food verses for them could be sold.

An old Italian Hurdy-gurdy "plays" its part and brings in many dollars.

It Pays to Advertise.

First and foremost we must believe in the slogan that "It Pays to Advertise." At least a couple of weeks beforehand get out your posters. Paraphrased Mother Goose Rhymes may not be the most original thing one could use, nevertheless they seem to take as well as anything. For instance, the following Simple Simon verse can be used on a poster:

Simple Simon met a Pieman out to take the air,
Said Simple Simon to the Pieman "Where is this fine fair?"
Said the Pieman to Simple Simon, "Right in Smithfield Town,
There sell we the war-time bread, old Germany to down,"
Said Simple Simon to the Pieman, "Pray say the date"
For even war-time cake like I, and that is no mistake."
Said the Pieman to Simple Simon, "Saturday afternoon,
Everything will be fresh and fine so you can't come too soon."

Posters should be made on a very large sheet of cardboard usually procurable at the printer's and someone in your town who has a talent for drawing should be able to suitably illustrate the verses. If there is no such person, the colored pictures can be cut from nursery books or magazine covers. Once you get them started ideas will present themselves.

Making the Sale Novel and Attractive.

Now let us talk about the sale itself. We must still hold fast to our idea that a prosaic subject such as the food campaign will go ahead with much more speed if the vehicle in which it travels is fed by the gasoline of novelty and attractiveness. So get the young people interested and have them wear costumes suitable for the booth to which each may be assigned.

The Bread Booths.

Let us pretend the first booth to which we come is a bread booth. The girls or women on this could be dressed in caps and aprons or even a baker's costume, with the band across the cap saying, "Soldiers of the Kitchen."

Loaves of bread can be hung all around this booth and posters can be used at the sale as well as before hand. The following are suggested:

"Brown bread hot, brown bread cold,
Brown bread from the sale one day old."

"Take your brown bread hot in your puddings, muffins pancakes, etc."

"Take your brown bread cold from our war-time sale of baking."

"Homemade Bread Sold Here."

Let us now move on to the cake table. There, instead of loaves of bread, we find strings of raisins, attractively festooned—(for we are urged to use raisins in our war-time cake to save on sugar *in* the cakes and icing *on* the cakes). The head of this table could be dressed to represent the Queen

(*Continued on page* 37.)

A KING IN BABYLON

By BURTON E. STEVENSON.

In which the mystery grows more complex, the same gray shape re-appears, this time accompanied by another

CHAPTER XXIV.—(*Continued.*)

AND then suddenly her voice stopped in her throat with a sort of gurgle, the hands which had been holding me away fell limp, a slow shudder ran through her, and I saw her eyes fix themselves in a stare of horror over my shoulder, out across the sand . . .

It was a moment before I dared turn my head . . .

For an instant, I saw nothing; then, far out, a dim shape moved . . came nearer . . .

It might have been the shadow of a cloud—but there was no cloud in the sky. It might have been a whorl of sand caught up by the wind—but there was no wind or at most a gentle breeze. It came nearer, with a strange, gliding motion, as though swept along on wings; and then my heart gave a sickening thud, for it was the same gray shape I had seen once before—in the tomb! And as I stared, it resolved itself into two shapes, moving side by side—as though hand in hand! In another moment, they reached the first group of palms and disappeared.

I knew what was in my own mind—I knew the same thought was in Mollie's. I dared not look at her; I dared not let her see my eyes; I just sat there, still holding her han , staring at the spot where I had seen them last!

It was Mollie who stirred first.

"We must be going back," she said, and rose wearily to her feet and brushed the sand from her dress.

I didn't want to go back; I was afraid to go back; suppose that trance was ended . . .

Nevertheless I rose and followed her. There was nothing else to do.

From a little distance, we caught the sound of voices, and saw a dim group sitting around the table. Evidently they had seen nothing—but the shadows would be invisible beneath the trees. . .

I felt Mollie shiver—I shivered myself, as I strained my eyes to see who was in that group; and then I breathed a sigh of relief. There were only Ma Creel and Digby and Creel himself. Perhaps, after all there *had* been a cloud . . .

Creel saw us first.

"Hurry up!" he called. "We've got some lemonade!"

"Who said lemonade?" asked a voice behind him, and I saw the tent-flap raised, and Jimmy stepped out into the dim light. "Gracious, but I had a sleep!" he added, stretching luxuriously. "What time is it, anyway?"

"It is nearly eleven," said Creel.

"What!"

"Yes—you seemed so tired, we just let you sleep. How do you feel?"

"Like a new man!" said Jimmy.

My eyes had been on the other tent-flap, from the first moment. I knew it would be raised—I knew it!

"And I also!" cried Mlle. Roland, as she came toward us. "Or, at least, like a new woman! I feel as though I had slept a year!"

Jimmy was regarding her with a strange smile, but she walked straight past him, apparently without seeing him, and sat down beside Creel at the table.

"But I am thirsty!" she said, and held out her glass.

CHAPTER XXV

CREEL had us at work at dawn next morning, and we kept hard at it all day, save for the noon siesta; but there were no such sensational incidents as there had been the day before. Jimmy and the Princess were both effective, but there was no merging of the imaginary in the real—no loss of control. It was just good acting.

And both of them seemed to be their natural selves. The girl had apparently forgotten all that had happened the day before—though she had still that bruise on her cheek—I could see how carefully she had painted it out—and must have wondered how it came there!—and chatted with all of us impartially and more brightly than had been her habit since the journey into the desert started; while if Jimmy still believed himself to be the re-incarnation of Sekenyen-Re, he certainly gave no sign of it. And we all breathed more freely, and did our best to wipe certain disquieting incidents from our memories, and were even a little hilarious in our reaction from the nervous tension of the previous night. In a word, we were just the average motion-picture company, doing our work as well as we could, and having the best possible time on the side!

During an interval when Creel was getting a scene ready, I walked over to Mollie.

"Things look different by daylight," I remarked; "excursions through dream-land, and such like!"

She looked up at me scornfully.

"You've got a mighty short memory, Billy Williams!" she said.

"I can't make up my mind how much of it is memory and how much imagination!" I retorted. "The more I think of it, the more I am convinced that it was all imagination. We didn't really see anything . . ."

"*Didn't* we!" she sniffed.

"Or if we did, it was only a drifting shadow. We were all worked up, you know."

"You may have been—I wasn't."

"Mollie," I said, "you don't really believe . . .

I didn't finish the sentence—it seemed too absurd to express in words. But she understood.

"Yes, I do!" she retorted. "I believe just that!"

"Well," I said, "whatever it was, it came at a most unpropitious moment. May I see you again to-night, Mollie?"

"No," she said; "I've had enough of ghost-hunting."

"I wasn't thinking about ghost-hunting," I began; but just then Creel shouted that he was ready, and I had to leave it at that.

We did the slave-market, and the way Mlle. Roland blazed back contempt and defiance when the king strolled past and looked at her appraisingly was beautiful to see. (Creel had found it impossible to work out Jimmy's idea with the means at his disposal, and had reverted to his own.) She was also superb when the eunuchs dragged her into the king's presence, and he looked her over brutally, and waved her away to the harem. The scenes that followed, where her hate changed gradually to a consuming passion, were also consummately done.

"Of course," said Creel, as these progressed, "we ought to have a palace to do these in, but I'm afraid to wait till we get home. So we will do the best we can out here—and then, if we *do* get home, we'll make re-takes of some of them."

"Why shouldn't we get home?" I asked, but he only shook his head.

He did wonderfully well, I thought. He had the tent, of course; and one beautiful spot near the pool served as a corner of the palace gardens; and another spot with a lovely clump of palms in the background served as another corner. Always the white-clad eunuchs were on guard; and Ma Creel and Mollie were in attendance—Mollie, the former favorite whom the new one had supplanted, and who was plotting revenge with the prime minister—Digby. We did the slavers' attack—using the native camp, this time; and then we did some caravan stuff—the slavers making off across the desert with their booty—and by that time there wasn't light for anything more, even had we been able to attempt it. We were all dead tired, but Creel was triumphant.

"Another day like this," he said to me, as we were washing up, "and I don't care what happens!"

"It doesn't look as if anything were going to happen," I pointed out. "Everything is normal again."

"Too blamed normal!" Creel growled. "To-day's scenes didn't have the snap that yesterday's had."

"No," I agreed; "nobody spit in anybody's face; nobody bit anybody, nor tried to scratch anybody's eyes out!"

"Maybe we'll have better luck to-morrow," said Creel hopefully.

"Better luck?" I stared.

"It is that sort of stuff which makes a picture, Billy," said Creel; "you know that as well as I do. I'd have no objection to getting bitten or scratched, if it helped make a good picture. I'd welcome it! Any good actor would! I wish I had more actresses who bit and scratched and raised Cain generally when the action called for it! Hello! What's this?"

There was the tramp of feet outside, and then the curtain-flap was thrust back, and Davis appeared—very dirty and evidently very tired, but with shining eyes; and close behind him toiled six natives, carrying the gilded coffin of Sekenyen-Re, while two others brought up the rear lugging the wooden chest.

"Good Lord!" protested Creel. "You're not going to bring those things in here!"

"I am, though," said Davis, cheerfully. "I want them where I can keep my eyes on them—the coffin especially. It's too precious to take any chances with!"

"But there's scarcely room to turn around, as it is."

"I'm going to put it on my cot," said Davis. "It won't be in the way there—at least, not in anybody's way but mine—and I can sleep on the ground beside it. There's room in that corner for the chest."

Devotion to duty always silenced Creel, and he stood aside now without another word while the natives squeezed past and deposited the mummy case on the professor's cot, and the canopic chest in the corner he had indicated.

"That's all," he said, and waved them away, and then he got out his electric torch and began to examine the hieroglyphics with which the sides of the coffin were covered, quite forgetful of the fact that he was streaked with dirt and that dinner was waiting. He was fairly smacking his lips with joy. Creel's face softened as he looked at him—he understood the artist's enthusiasm.

"Come and get washed up," he said. "Those pothooks can wait. Dinner is ready—and you look fagged out."

"I am," Davis admitted, and snapped off his torch. "Getting that wall down was a harder job than I expected. It was like adamant—talk about Roman work—it isn't in the same class with the early Egyptian! And the tomb was like an oven!"

"Let me have your torch," said Creel; and while Davis washed his hands and face and brushed the dust out of his hair we took another look at the coffin. For the first time we appreciated its full beauty. "The face isn't in the least like Jimmy's," said Creel, as the light came to rest on the staring eyes. "I wonder how it ever affected us like that?"

I was squinting down at it, and I wasn't so sure.

"Perhaps it was the way we were looking at it," I suggested. "Even now, it looks somehow as though it *might* change to Jimmy's at any instant."

Creel was squinting too, with his eyes curiously puckered; and after a moment, he nodded without speaking. Then he ran the light around the edge of the lid.

"Have you opened it?" he asked Davis.

"I lifted the lid and looked in, to be sure everything was all right."

"And was it?"

"Oh, yes—the mummy is there, beautifully wrapped. I'll not try to unwrap it till I get it home to the museum—it's too delicate a job."

"Then you're done out here?"

"There is still the rear wall of the tomb to open. I'll do that to-morrow."

"Oh," said Creel, slowly, "so you have quite made up your mind to open that wall, too!"

"Certainly—I thought that was understood. I was wondering if I might have Mustafa."

(*Continued on following page.*)

What Has Happened in the Previous Chapters

A NEW YORK company of moving picture actors goes to Egypt to film a picture which it is believed will make a tremendous "hit." Davis, an Egyptologist, joins the party at Luxor, and with an outfit of camels, donkeys, etc., they journey into the desert. While Davis accompanies and directs them, his real object is to complete excavations in certain ruins in which he believes he will find the tomb of an ancient king.

He is correct in his supposition and the tomb of Sekenyen-Re is unearthed. The plot of the picture and the real become strangely interwoven in this land of mystery and superstition, and it often remains for the old Egyptologist to give a reasonable solution of the many uncanny happenings.

A King in Babylon

(Continued from preceding page.)

"What do you want with Mustafa?"

"Fact is," said Davis, "if I can't get Mustafa to help, I will have to do the job myself. I tried to set the natives at it this afternoon, and they refused. Refused point-blank. I couldn't budge them."

"What was the matter?"

"Some ignorant superstition. Perhaps they know the meaning of that sign—it is wonderful how those old superstitions persist sometimes! Anyway, I couldn't get them near that wall."

"But Mustafa is a native," Creel objected.

"He's a Copt—it isn't exactly the same thing. He doesn't believe in signs—at least not in old heathen ones. I think he reasons that a heathen sign couldn't have any potency against a Christian. Anyway, he is willing to take the risk."

"For a consideration, I suppose?"

"Exactly. May I have him?"

"I'll see," said Creel, somewhat grudgingly, and handed back the torch. "You can have him part of the day, I guess."

"Thanks. It won't be any great job to make a hole in that wall big enough to squeeze through. That's all I want."

"I don't suppose there is any use trying to dissuade you?"

"Not a bit," said Davis, briskly. "It's all in the day's work, you know. I wouldn't be playing the game if I didn't open it."

"I understand," Creel nodded. "But there is one thing—I wish you wouldn't say anything about it. My people have quieted down; I have a feeling that if they knew about this, it would upset them."

"All right," Davis agreed; and with that we went out and joined the others at the table.

"What were you men gassing about so long in there?" Ma Creel demanded.

"Davis has brought over his great find," Creel explained; "the coffin of Sekenyen-Re, erstwhile King of Upper and Lower Egypt—with the gentleman inside—at least, part of him! There is also a small box which, I understand, contains his innards."

"But look here," objected Ma Creel, "I don't fancy sleeping so near the thing. I abhor corpses."

"My dear madam," said Davis, "this corpse has been dead four thousand years, and I don't see how it could possibly harm anyone!"

"I don't see what that has to do with it," retorted Ma Creel. "It isn't any deader after four thousand years than it was the first day!"

"But this is quite a consecrated mummy, Mary," said Creel. "It is going to prove that the Bible is true!"

Ma Creel sniffed.

"As if I needed a mummy to prove that! I don't think you ought to joke about such things, Warrie."

"I wasn't joking," Creel protested. "I was merely repeating what the professor told me,"

"It is true, madam," said Davis. "I hope to find, in the hieroglyphs on that coffin—perhaps also in papyrus documents inside the wrappings—proof of the sojourn of the Children of Israel in the land of Egypt."

We were all silent for a while, after that. I suppose we were all a little awed. I know I was—the thought was rather overpowering. I glanced at Jimmy and Mlle. Roland, where they sat opposite each other at the far end of the table, to see how they took it; but they seemed quite unaffected. They had taken no part in the conversation; they had gone on with the meal as though they had not heard it. Now, as I looked at them, they gave me the vivid impression of talking together. They did not so much as glance at each other, but somehow I was sure they were in communication—close, confidential communication—as though their spirits were talking, without need of words . . .

And I saw again those two shadowy shapes crossing the desert, hand in hand . . .

"Wake up, Billy!" said Creel's voice, and he gave me a startling slap on the shoulder. "Come along!"

"Along where?" I asked, and looked around to find that the others were already on their feet.

"Davis is going to show the ladies his great find. Are you coming Jimmy?"

Jimmy looked across at Mlle. Roland, a little smile twitching the corners of his lips.

"Shall we go?" he asked; and there was an undercurrent of challenge in the words.

"I certainly intend to go," she answered, rising.

Somehow I found Mollie's hand snuggled close in mine.

"I'm frightened!" she breathed as she pressed against me.

"Then don't go," I said.

"Yes, yes; I want to see it—I want to see . . ."

She stopped and drew away. But I knew what she meant; she wanted to see if that painted face really looked like Jimmy Allen.

Creel had taken the lamp from the table; Davis had produced his flashlight; the rest of us crowded into the tent after them.

I should explain, perhaps, that our tent was not divided by canvas curtains as the women's was. It was quite open, with our five cots set side by side, with just room for a small folding-chair and a bag for our personal belongings in between. Davis's was nearest the entrance, and then came Jimmy's, and then mine, and then Creel's, and then Digby's. It was on Davis's cot the coffin had been placed, and we were right on it as soon as we were inside the tent.

"Oh, oh!" cried Ma Creel. "It *is* gorgeous!"

And then we stood looking down at it while Davis pointed out the royal cartouche, and explained the meaning of some of the symbols with which it was covered. Mollie had pressed up closer, still holding my hand, and stood staring down at the painted face.

"Well?" I whispered.

She shook her head slightly, and I saw her screwing up her eyes; and then she gave a sudden gasp of horror—and I knew that the face had changed . . .

"Come away!" I whispered; but again she shook her head, and stood as though fascinated . . .

I looked around at the others—Davis, intent and eager; Creel deeply interested, evolving another feature perhaps; Digby and Ma Creel with furrowed brows, trying to understand; Jimmy listening with that little ironic smile, as though he knew far more about it than Davis, but found it not worth while to say so or to correct his mistakes; Mlle. Roland, close beside him, clutching his arm with a revealing intimacy; her face very white, her lips working . . .

Jimmy turned and looked down at her.

"Don't you think it a good likeness?" he whispered.

I saw her close her eyes and sway forward . . .

"Look out!" I cried.

And the next instant, before I could so much as move, she crashed heavily forward across the coffin.

CHAPTER XXVI.

I KNEW that Jimmy Allen had whispered those words to test her; I knew that he felt her going, and that he could have caught her if he wished; but he never so much as moved a finger, and for a long breath, he stood quite still, looking down at her. Then he bent and caught her up with sudden fierceness, and turned and faced us, and I saw that his face was a-glow with triumph.

It was as though he had won a great victory after desperate struggle; and he stood a moment so, holding her close against him with a sort of ownership, and looking around at us defiantly.

It was Ma Creel who got her wits back first.

"Take her over to our tent, Jimmy," she said authoritatively. "We'll undress her and get her to bed. The poor thing has been worked to death." And she shot her husband an accusing glance. "Come along, Mollie—I'll need your help."

I half expected Jimmy to disregard the order, and walk away into the desert with the girl in his arms. But he didn't. Ma Creel was too matter-of-fact, perhaps, to permit of any heroics. At any rate, after the merest instant's hesitation, he walked quietly out of the tent, the two women after him.

Creel drew a long breath.

"Well!" he began, and ran tremulous fingers through his hair. "We've got to go through all that again, it seems! Do you really think it is overwork?" he asked, turning to Davis.

"No," said the latter, "I don't. It's an overwrought emotional state. These fainting spells are clearly cataleptic.

Babies Recommend Mennen's---

IF they don't put it into words, they do better — they prove their argument in practice. Their sensitive skin knows and shows the difference between powder specially designed for their use and other kinds. The baby whose skin is regularly dusted with Mennen's is comfortable, happy, lovable —all the time.

But grown-up skin needs and enjoys soothing Talcum just as much as does baby skin.

The trouble is, most grown-up skins are neglected.

Think of being always comfortable as a freshly bathed baby—no skin irritation, no chafing from corsets or collars or belt or tight shoes—our bodies kept smooth and cool with a silky film of Mennen's Talcum Powder.

Just to start the next hot day —try Mennen's—a shower of it—after your bath. Use plenty of Mennen's Talcum to protect against sun and wind.

If you've never tried it, you will be amazed at the comfort of a Mennen Talcum bath. Your clothes will feel loose and won't irritate your skin in hot weather. You won't know you have a skin.

If your feet trouble you in hot weather, shake Mennen's Talcum into your shoes and stockings.

Dust Mennen's between the sheets on a hot night. They will feel like sheerest silk.

Let Mennen's mean to you what it has meant to millions of happy babies.

Mennen's Talcums—all with the original borated formula which has never been bettered—include a variety to satisfy every need: Borated, Violet, Flesh Tint and Cream Tint, each charmingly perfumed, and the new Talcum for Men, which is neutral in tint and delightful after shaving.

A King in Babylon

(Continued from preceding page.)

Perhaps she has had them all her life. Now she'll probably go off into a trance-like sleep again."

"It's something between her and Jimmy," I put in. "Didn't you see how she clung to him? Didn't you see him whisper to her? Didn't you see his eyes just now?"

Creel nodded.

"He's in love with her, of course," he said; "has been since the moment he laid eyes on her; and she . . ."

"Do you remember how she looked the first time she saw him?" I burst out. "You didn't get the effect of it as I did—I never saw such loathing in a human countenance!"

"She said she couldn't go on," Creel explained to Davis; "sprang to her feet and tried to get off the boat. But it was too late—the engines started just then—and she quieted down. In fact, she sort of apologized afterwards—said it was nerves, or something like that. But I have felt ever since that, away down in her heart, she hated the sight of him."

"Yet she clung to him to-night," I said, feebly.

Davis was scrabbling thoughtfully at his beard.

"Then that is what the fight has been," he said.

"And you think he has won?" asked Creel.

"*He* thinks so, anyway," said Davis. "But I'm not so sure."

"By George, you're right!" Creel agreed. "That girl has got the devil in her if any woman ever had! She'll strangle him in his sleep some night!"

"Yes," assented Davis, slowly, "I feel the same way . . ."

And then he stopped suddenly, for the tent-flap was raised and Jimmy came in. If he had heard that last sentence, he gave no sign.

"She's all right," he said, in answer to our look. "Sleeping like a baby. I feel dog-tired myself. I'll turn in, if you don't mind."

"I thought I would study these hieroglyphics awhile," said Davis, hesitatingly; "but if it will disturb you . . ."

"Dynamite wouldn't disturb me," Jimmy assured him; and he sat down on his cot and began to unlace his shoes.

Creel said something about having some work to do on the script, and gathered up his manuscript and took it over to the property-tent, where there was a table and a lamp. I sat down outside the tent, and got out my pipe and lighted it, in the hope that Mollie would smell it and come out; but she didn't; and at last, realizing how tired I was, I resolved to go to bed.

I found Davis, with his torch propped on a chair, bending over the coffin, intent on his study of the hieroglyphics; he greeted me with a nod so curt that it was the plainest sort of invitation to pass on. In the next cot Jimmy slumbered peacefully—on his side, I was glad to note—his back turned to the old Egyptologist. I passed on to the third cot, got out of my clothes, into my pajamas, and stretched myself out luxuriously.

It had seemed quite dark inside the tent as I came in from the bright moonlight, save for the reflected glow of Davis's torch; but as I lay staring up into the night, I gradually perceived that it was not really dark—that the wonderful night outside penetrated the canvas with a luminous glow . . .

How long I slept, I don't know; but I awoke suddenly with a start, and lay listening, with a strange sense of apprehension. I could hear some one breathing regularly at my left, so knew that Creel had come to bed without disturbing me. But from the other side I could detect no sound—and yet I remembered distinctly that when I first lay down I could hear Jimmy's breathing quite clearly. I peered cautiously in his direction; but the light was so dim, I could not be certain whether he was there or not. I might have stretched out my hand and made sure, but I dared not. Something held me back. I was afraid of what my fingers might encounter!

Beyond Jimmy's bed, I could see the coffin rearing its great shape against the open tent-flap—there was something sinister in the way its shadow fell across Jimmy's cot. Where was Davis sleeping, I wondered. Had he really rolled himself in his blanket on the ground, in order to guard his treasure? But what was it he feared? What could happen to it?

As I lay there staring at it, trying to muster courage to stretch out my hand into its shadow, it seemed to me that its painted sides began to give out little flashes of light, and a sort of phosphorescent glow gathered above its gilded top, and hung there, gently waxing and waning. Perhaps there was a phosphorescent quality in the gilt—I had heard of such things; or perhaps . . . I shivered slightly. Where was it I had read that all decaying things possessed a certain phosphorescence?

I turned over impatiently and closed my eyes and resolved to go to sleep. Such imaginings were morbid—it was folly to give way to them. It made no difference to me whether Jimmy was there or not. Suppose he was not there—it was natural enough that he should have gone outside to smoke a cigarette, or get a breath of fresh air—yes, or keep an engagement for a meeting! Whatever the source of the phosphorescence, it was essentially the same thing, and absolutely harmless.

But there, in the silence of the night, all my senses seemed preternaturally quickened; an odor of musk and spices drifted across my nostrils; in the stillness behind me, I fancied I could detect a stealthy movement—a soft rustle, as of a woman's gown . . .

My eyes had snapped wide open again; and I lay there listening, listening; and a little stream of perspiration ran down across my temple and dropped off upon the pillow; my heart was hammering in my throat—I could stand it no longer—I turned and looked . . .

For a moment I saw only what I had seen before—the square coffin against the light of the entrance; the faint glow above it; the prickle of light along its side—and then my heart gave a sudden leap—for there *was* something else . . .

Above the coffin a gray cloud hovered—a translucent cloud, for it only dimmed the light behind it; a cloud whose edges I could not distinguish, but which nevertheless reminded me of a human form; a cloud which wavered uncertainly this way and that . . .

And then, against the light, I distinctly saw the occupant of the coffin *sit up*—I saw his head and shoulders coming, apparently, right through the lid; a strange white shape, but indubitably a man; and I saw him hold out his hand to the floating cloud, as though in welcome, and rise; and together they glided from the tent . . .

And then Creel and Davis were standing over me, the latter playing his torch into my blinded eyes.

"Take it away!" I gasped, and pushed the torch aside and sat up; and then from the farther cot I got a glimpse of Digby's frightened face.

"What in heaven's name is the matter?" Creel demanded. "I thought you were being murdered!"

"The mummy!" I gasped. "It—it got away—it walked right out of the tent . . ."

I saw the panic in Davis's face as he stepped quickly to the coffin and ran his ray of light over it.

"Nonsense!" he said. "It hasn't been touched."

"You were dreaming!" snapped Creel. "Go to sleep again!" and he turned away to his cot.

"I *wasn't* dreaming!" I protested hotly. "I was as wide awake as I am this minute. I saw the mummy sit up through the lid, and hold out its hand to the cloud, and they glided away together . . ."

"Look here, Billy," broke in Creel savagely, coming back and standing over me, "don't you go crazy, too! Two maniacs are all I can stand . . ."

"I'm not crazy! I saw it, I tell you . . . and there was an odor of musk and spices . . . and the rustle of a woman's dress . . ."

"There is a faint odor of spices about the coffin," broke in Davis; "there always is; and as for the rustle of a dress—well, the breeze in the palms outside would explain that."

"But it won't explain what I *saw!*" I said. "Besides, where's Jimmy?"

For the light from Davis's torch had swept across Jimmy's bed, and we had all seen that it was empty.

"I don't care where he is!" said Creel, still more savagely. "What you saw, if you saw anything, was that madman getting out of bed. Your heated imagination did the rest."

I couldn't deny that it *might* have been that; I *might* have got my perspective wrong in the darkness—but I didn't believe it. And then there was the cloud. I saw Creel's gesture of exasperation when I mentioned the cloud.

"Anyhow, I think we ought to find

Vacation Days Made Miserable by Sunburn

SO busy packing—so busy rushing to get away "by Saturday Noon"—that we forget something.

Then, by Sunday night, or Monday morning — oh, tortures! Neck — arms — shoulders — smarting fire!

Get a packet to-day—of Mennen's Kora-Konia. Use it now—and then pack it so you'll be sure you have it with you. Don't take chances on a holiday made miserable by Sunburn, when such a simple remedy can be had at your corner Drug Store.

It was an eminent physician who first suggested to Mr. Mennen the big need for a healing powder which could be dusted on wounds, chapped and irritated skin, sunburn, diaper rash and scalds, to ease the pain, absorb moisture and prevent friction.

The result was Kora-Konia.

We want you to learn for yourself the almost magic power of Kora-Konia to relieve and stop skin discomfort. We want you to try it on sunburns or chafed limbs which drive you nearly crazy on a hot day, and see how the discomfort ceases and the skin becomes white again. Note how the powder clings to the skin all day, refusing to be washed or rubbed off. See how quickly Kora-Konia cures diaper rash or teething rash and how it eases the skin irritations of bed patients. The full size box costs 50 cents.

Kora-Konia should not be confused with Talcum Powder. It has somewhat the same soothing and healing action, but in addition contains several other ingredients of recognized medicinal value which are indicated in the treatment of the more serious skin abrasions. It is antiseptic, absorbent, lubricating, adhesive, slightly water-proof, soothing and healing.

A King in Babylon

(Continued from preceding page.)

Jimmy," I said at last, realizing the uselessness of argument. "You said yourself, Professor . . ."

Davis clicked his tongue impatiently.

"I know I did—even I get infected with this foolishness sometimes—it's in the air! Well, I'm willing to take a look for him—I see there is no chance for sleep until we do!"

I fumbled around and found my shoes and slipped them on.

"I'm going too," I said; and then, when we got outside, I was surprised to find Creel at my elbow.

"Three fools are no worse than two!" he muttered, but he didn't meet my eyes. "We'll find that idiot sitting under a palm smoking a cigarette. And he'll laugh at us! What the devil is that?" he added, for from the direction of the native camp the night wind bore to our ears a sound as of a low crooning.

It was little more than a murmur; but it rose and fell on a gamut of only three or four notes in a manner inexpressibly weird. For an instant Davis was as startled as Creel and I; then I saw him smile.

"The natives have got a chanter at work to keep off the evil spirits," he said. "They have been uneasy since they learned I was going to open that inner tomb."

Creel muttered something to the effect that they couldn't be any more uneasy than he was, but Davis only shrugged, and we walked on across the oasis. We saw no sign of Jimmy, and at last we came to the little slope, right at the edge of the desert, on the other side of which the natives had pitched their camp. From the midst of it, clear and piercing in spite of its subdued tone, came the chant.

And then, as we topped the rise and looked down upon the camp, we saw the chanter, squatted on his haunches, and around him the sleeping fellahin.

"Let's have a word with the fellow," said Davis. "He may have seen our man."

We threaded our way between the natives, huddled in their cloaks and sleeping soundly, evidently with complete faith in the efficacy of the chant to ward off all things evil; and then we came to the chanter where he sat, with head thrown back and eyes fixed on the heavens . . .

He turned his head with a jerk when he heard us coming, and the chant ceased abruptly; then, when he recognized us, he sprang to his feet, and replied in a bated voice to Davis's brief questions. The latter motioned us away at last, and we followed him out from the circle of sleepers. Before we had taken the second step, the chant began again.

Davis led us right to the edge of the oasis. Then he stopped and looked out across the sands.

"He says there are ghosts abroad tonight," he said. "He says they are dancing about the tombs. He says he saw them quite clearly when the moon rose; and that two from the oasis joined them . . ."

He stopped, and we all stood staring out at the group of mounds which marked the ruins. In my own mind, I had not the slightest doubt that Jimmy was over there—and that he was not alone.

"Shall we go and see?" asked Davis abruptly, and peered into our faces.

I shrank back. I didn't want to go. I regretted that I had insisted upon this wild adventure. I didn't want to see—I was afraid to see . . .

But Creel was made of sterner stuff.

"Come on," he said, between clenched teeth. "If we are ever going to get to the bottom of this mystery, now is the time!"

And he started resolutely out across the sand.

CHAPTER XXVII.

IF the natives had seen us, they would have been more certain than ever that there were ghosts abroad, for, from a distance, we must have had a sufficiently weird look as we set out across the sand. Close up, we were ridiculous rather than weird, with nothing on but shoes and pajamas; and, as we looked at each other, the tension with which we had started out from the shadow of the trees suddenly relaxed.

"The ghosts will run at the first glimpse of us," laughed Creel. "They will be scared to death. They'll be outghosted! That wouldn't be so bad for a comedy reel, Billy—the ghosts scared out of their wits by the people they are trying to frighten!"

Davis laughed grimly; and we plodded on in silence. I suppose Creel was turning the idea over in his mind, for he chuckled softly once or twice. And then we were at the edge of the ruins, and clambered up the first of the mounds which topped the excavation.

I don't know what I expected to see there—a *danse macabre*, or some such horror, perhaps—and I strained my eyes from end to end of it at a single glance; but it lay white and empty in the moonlight.

"No ghosts there," said Creel. "Suppose we take a look in the tomb." And he started down the stair.

The black entrance to the tomb seemed to me unspeakably sinister and threatening, but Davis switched on his torch, and he and Creel stepped through without hesitation. I followed, wondering if they were really as fearless as they seemed, or if their knees were secretly knocking together as mine were.

Davis cast the beam of light about the outer chamber, and I saw that it was piled with the debris of the wall which had masked the entrance to the corridor.

"I had to take down nearly all of it before I could get the coffin out," he said; "it was a hard job."

"How about the roof?" Creel asked.

"I think it will hold," said Davis, and threw the light up over it. "Hello! There's an ugly crack!"

It *was* an ugly one, running from side to side across the chamber.

"I'd hate to be in here when that came down," said Creel; "or in the inner tomb. It would mean burial alive for certain!"

Davis was examining the crack attentively.

"The wall was built to brace the roof more than I thought it would be," he said. "The Egyptians must have foreseen the possibility of great masses of sand being heaped above it and provided in this way for the extra weight. But I don't think it will come down—not for a while, anyway. Of course I could build the wall up again—but that would be an awful bother. Still, it might be worth while, if only to preserve the place."

"If you are going to work in here at all," said Creel, "you ought certainly to do it—unless you're tired of living! I'm not sure I want to go in, even for a minute."

"Nonsense!" said Davis. "It won't fall unless something shakes it," and he stepped forward into the corridor. Then he stopped suddenly and held up his hand. "Wait!" he said. "Listen!"

We listened with bated breath, but not a sound broke the stillness of the tomb.

"What was it you heard?" asked Creel, at last.

"I don't know," Davis answered hesitatingly. "Perhaps it wasn't anything—but it seemed to me there was a sort of rustling . . ."

"Like a woman's dress," I said. "I know. It's in there!"

"Nonsense!" said Davis again, and went resolutely forward.

I don't believe I should have followed, if Creel hadn't been behind me, pressing me on. I *knew* what was there—I *knew* what we should see—and every step required an effort of will, for my feet were like lead. And then my heart leaped suffocatingly, for Davis gave a sudden, sharp cry, as the torch was dashed from his hand and fell clattering to the floor. And the next instant, something brushed past me, with a rush of air, and a flicker as of wings . . .

Davis was fumbling around on the floor, swearing softly to himself; and then something clutched my arm.

"It's only me," said Creel's voice. And then, in a lower tone, "Did you feel it?"

"Yes," I said.

"Something that rushed past . . ."

"Yes."

And then the light shot out again.

"Come along, you fellows!" Davis called. "What are you standing there whispering about?"

"Billy and I were comparing notes on the ghost," said Creel. "What did it look like—you must have seen it."

"I saw nothing," said Davis sharply. "There wasn't anything to see."

"I suppose you just dropped the torch," said Creel. "Let me see the back of your hand."

Conserve Food

Economy in baking is one of the biggest ways in which Canadian housewives can help to conserve food. Thousands of thoughtful women have found Egg-O Baking Powder a big help in economizing.

EGG-O BAKING POWDER

is so sure and so perfect—it ensures real baking economy. It means better baking at a smaller cost. **Use only a level teaspoon of Egg-O to each level, measuring-cupful of well-sifted flour.** These proportions will give you the best baking results.

Try Egg-O yourself, next bake day. Surprise the family with delicious Egg-O War Cake, eggless, butterless and milkless. It is easy to make.

1 lb. raisins, 1 teaspoon allspice, 1 teaspoon cinnamon, 2 tablespoons lard, 3 cups brown sugar, 3 cups water. Boil together 5 minutes. When cold, mix with 4 level cups of flour, 4 level teaspoons of Egg-O Baking Powder, 1 level teaspoon of salt; sift and beat together. Bake slowly for 1 hour in a shallow pan. Better kept a day or two before eating.

Buy Egg-O in the pound tin or larger sizes—it is much cheaper. Your grocer's name and 10 cents will bring a 4-oz. (net) tin of Egg-O and the book of Reliable Recipes.

(*Continued from page 7.*)

Lily, "and when you read it, remember, oh pray, remember, that it was written by a being with a tired heart. I suffer greatly, Mrs. Bruce, from a tired heart."

I did not know whether this was a physical or an emotional ailment. Salome understood it to be the former and asked quite sympathetically,

"Did you every try a mustard plaster at the pit of your stomach, Miss?"

"I fear that would not benefit a weary heart, Miss Silversides," sighed Aunt Lily. "Possibly you have never suffered, as I have, from a weary, wounded heart."

"No, thank the Lord, my heart's all right," said Salome, briskly. "My only trouble is rheumatism in the knee j'int. Ever have rheumatism in your knee j'int, Miss?"

No, Aunt Lily's knee joints were all right. In fact, Aunt Lily proved to be a remarkably healthy woman. Her wearied heart evidently found no difficulty in pumping sufficient blood through her body and her appetite, as supper-time showed, as anything but feeble.

"When I can forget what might have been, I am happy," she sighed. "I have had my romance, Mrs. Bruce. Alas, that it should be in the past tense! I once thought I had found my true soul mate, Mrs. Bruce, and I dreamed of happy, real marriage."

"What happened that you didn't get married?" queried Salome, pricking up her ears. Salome is always rather interested in blighted romances, despite her grim exterior.

"A misunderstanding, Miss Silversides—a misunderstanding that sever d two fond hearts. He wedded another. Never since that sad day have I met a man who could stir the dead ashes of my heart to tingling life again. But let us not talk of my sorrows, dear friends. Will you tell me how to can peas?"

When Aunt Lily went away I asked her to come again and she assured me that she would.

"I think you will understand me—I have always been misunderstood," she said. Then she trailed her blue draperies down the hill to the wood, looking, when kindly distance had lent enchantment, quite a graceful, romantic and attractive figure.

"Did you ever hear such a lunatic, ma'am?" demanded Salome. "Her and her soul mates and her tired hearts! Her hair looks as if she'd swept it up with a broom and her nails weren't cleaned and her stockings were scandalous dirty. And yet, for all, there's something about the creature I like, ma'am."

That was the eventual verdict of our household upon Aunt Lily. In spite of everything there was a queer charm about her to which we succumbed. The same thing could be said of that absurd diary of hers, which she brought over to us during our second summer. It was as ridiculous, and sentimental, and lackadalsical as Aunt Lily herself. And yet there was an odd fragrance about it that lingered in our memories. We could not, somehow, laugh quite as much over it as we wanted to.

T. B. was also an early and frequent caller. He was thirteen years old, in our first summer at the Patch. He had thick, fair, thatch-like hair and keen blue eyes—the only intelligent eyes in the family. He was, it developed, much addicted to creeping and crawling things; he always had bugs, toads, frogs or snakes secreted about his anatomy. The only time he ever had a meal with us a small green snake slipped from the pocket of his ragged shirt and glided over the table.

"Do you think he is *human,* ma'am?" Salome asked, with bated breath, after he was gone.

"He is a born naturalist," said Dick. "He is making a special study of ants this summer, it appears. Snakes are only a side issue at present. If he could be educated he would amount to something."

There did not seem to be much likelihood of this. T. B. himself had no illusions on the subject.

"There ain't any chance for me—never was and never will be," he once told me gloomily.

"Perhaps your grandmother would help you," I suggested.

T. B. grinned.

"Perhaps—when stones bleed," he said scornfully. "I don't s'pose the old beast has enough money. None of us knows how much she *has* got—she just doles it out. But she wouldn't give *me* any if she had pecks. She hates me. If there's any money left when she dies—s'posen she *ever* does die—Joe's to get it. He's her baby."

If Joseph—T. B. was the only one who ever called him Joe—was Granny's favorite he was not the favorite of anybody else. However we of the Tansy Patch might differ concerning the other members of the Conway family we all united in cordially detesting Joseph. He was such a sly, smug little wretch—"a born hypocrite, that child is, ma'am," declared Salome solemnly. We had no proof that it was really he who had cut off Doc's whiskers, but there was no doubt that it was Joseph who painted poor Una's legs with stripes of red and green paint one day. Una came home in tears, quickly followed by T. B. and Aunt Lily, the latter in tears also.

"I would rather have lost my right hand than have this happen, dear Mrs. Bruce," she wailed. "Oh, do not cherish it against us. Your friendship has been such a sweet boon to me. And turpentine will take it off—it can't be very dry yet."

"Jest wait till Granny goes to sleep and I'll lambaste Joe within an inch of his life," said T. B.

He did, too; when Granny wakened from her nap she heard the sobbing Joe's tale and shrieked objurgations t T. B. for an hour. T. B. sat on the fence and laughed at her; we could hear him and hear Granny also. Granny's vocal powers had not failed with advancing years, and every word came over distinctly to the Tansy Patch through the clear evening air.

"May you be eaten by pigs," vociferated Granny—and we knew she was brandishing her stick at the graceless T. B. "I'll bite your face off—I'll tear your eyes out—I'll rip your heart out! You blatant beast! You putrid pup!"

"Oh, listen to that awesome woman, ma'am," said Salome, shuddering. "Ain't it a wonder she isn't struck dead?

But Granny was every inch alive—except that she could not walk, having what Aunt Lily called "paralattics in the hips." She was confined to a chair, generally placed on the back verandah, whence she could command a view of the main road. From this point of vantage she could scream maledictions and shake her long, black stick at any person or objects which incurred her dislike or displeasure.

Granny was of striking appearance. She had snow-white hair and dead-white face, and flashing black eyes. She still possessed all her teeth, but they were discolored and fang-like; and when she drew her lips back and snarled she was certainly a rather wolf-like old dame. She always wore a frilled widow's cap tied tightly under her chin, and was addicted to bare feet.

School Shoes Need Neōlin Soles

School-days are coming — and new school shoes will be needed.

School shoes, even more than others, need Neolin Soles.

School shoes get the roughest use — school shoes are tramped through wet — and yet school shoe costs keep rising.

Tough, long-wearing Neolin Soles *cut* shoe-costs. Even the children can't go through Neolin Soles so quickly.

And to children Neolin flexibility brings not only comfort, but the opportunity for *proper foot development.*

Neolin waterproofness prevents many a wet-foot cold. Holds shoes in shape, too.

All the qualities which make Neolin Soles desirable on shoes for men and women — flexibility, waterproofness, durability — are of *magnified importance* in the case of children's school shoes.

You can have full-soles or half-soles of Neolin put on worn shoes by repair men.

Buy Neolin Soles for the whole family. Get them for waterproofness, comfort, economy.

But when you buy — either new shoes or re-soles — be sure to see the trade-mark "Neolin" underneath.

The Goodyear Tire & Rubber Co., of Canada, Limited

Most merchants have shoes with Neolin Soles. But you are sure of getting them wherever you see this price-ticket in the window.

But when you buy Neolin Soles be sure you see the Neolin trademark underneath. If it is not there the sole is not Neolin.

Neōlin Soles

Oftenest thought of for its deliciousness. Highest thought of for its wholesomeness.

Each glass of Coca-Cola means the beginning of refreshment and the end of thirst.

Demand the genuine by full name—nicknames encourage substitution.

Your daughter will learn self-reliance

SUMMER is fleeting, and perhaps the question of your daughter's education is still undecided. Probably she, herself, doesn't know what she wants. If this is your problem, it is easily solved. Without delay have her name enrolled at Alma College for entrance when the school opens in September. Do not worry about her studies, let her choose something which she fancies, and after she has been in attendance a few weeks, watch developments.

Remember she is surrounded on every side by busy, ambitious girls, each pursuing her own course of study and ever keeping her thought upon graduation day. Your daughter will probably become enthusiastic over music one week and write home that this is what she must study. Perhaps the next week another friend will take her to the Art rooms and relate wonderful tales of sketching expeditions and studio work, and then to learn to paint seems the supreme joy. The next week there is a recital and the pupils studying elocution and expression so arouse her admiration that she decides to study that. And so it goes. Unconsciously your daughter is finding herself, and just as naturally as the flower unfolds in the light, she slips into the course of study which she loves most after she has seen all.

This is one of the greatest advantages of boarding school. It is a little world in itself, and each girl learns to discriminate, to assert her own personality and to solve her own problems.

The King of the Milkweed

By ETHEL BAIN.

A Story for the Girls and Boys.

"Well, of all the things to do," chattered Bushy, the Squirrel, as he watched the atom of life on the milkweed plant. "Here, stop. What are you doing that for?" he asked of the caterpillar as it busily devoured the shell of the egg from which it had just emerged. The caterpillar mumbled something, but the squirrel interrupted it. "Don't you know that it's rude to talk whilst you're eating?" It did not answer, but kept on eating until the last piece had disappeared, then turning its quaint baby face upwards, in a tiny voice it squeaked, "Now what were you saying, Mr. Giant?"

"I'm not a giant, I'm a squirrel," retorted Bushy. "You don't know what a giant is. Wait until you see Mr. Grizzly Bear, for he is a giant. But say, why did you eat your shell? My, but you must have been hungry to do that."

"Yes. I'm hungry," replied the green caterpillar. It was so plump and looked so funny with its yellow face marked with two black arches and its bright green body with its bands of black and yellow. "You ask me why I've eaten my shell," it went on. "Well, I'll tell you. I have eaten my shell so as to destroy all signs that an egg was ever laid there. That bad Ichneumon fly is always attending to everybody's business but his own, and so that he shall not know there was an egg—well, I have eaten it. I suppose instinct makes me do it. I don't know, I'm only a baby."

"Won't you catch cold with no clothes on?" Bushy Squirrel anxiously asked of the naked worm.

"Cold!" the caterpillar squeaked. "Oh, no, for in about three days I shall make my first moult and I have to make three more before I am fully grown. Perhaps if this nice weather keeps on I shall be ready to go into the chrysalis stage in twelve days, but there, I'm so hungry, do please let me eat"—and not waiting for an answer, the future butterfly began to devour the leaf it was on.

"Well, I'd rather have my cosy fur coat, than yours, for all its bright colors," chattered the Red Squirrel as he scampered away.

For the next week he forgot all about the gaily colored worm he had met, until, as he was passing by the milkweed plant one morning, he saw it again, but dear me, how it had grown. It was nearly two inches long now and the surprised squirrel watched it marching along, the long, slender black filaments which grow from the second segment, twitching nervously as it sensed a stranger near.

"Well, well," gasped the squirrel. "Well! But how you've grown. I hardly knew you."

"I know you, Red Squirrel"—the fat caterpillar squeaked, "but I haven't much time to talk now, for I'm looking for a safe place where I can change into a chrysalis."

"A chrysalis!" chattered Bushy. "What is a chrysalis?"

"A chrysalis is the case I wrap myself up in, and I sleep a great deal when I am in this stage, but all the time there's a big change going on, because I'm not a worm any longer, for I change into a butterfly."

"You a butterfly! Never!" laughed the Red Squirrel.

"Of course I'm going to be a butterfly," retorted the now angry caterpillar. "You just wait and see what happens. Come along and see where I make my chrysalis case and then you'll know where to look for me." Off he marched, and Bushy Squirrel, who is always so inquisitive, followed him.

The caterpillar was hard to please, but at last he decided to hang from a piece of jutting rock. There he began to spin his silken case. "See you again in about two weeks," he cried to the astonished squirrel, who was watching him. Soon he disappeared from view, but still the squirrel could see him wriggling about inside the silky threads.

A few days later Bushy returned to see if the caterpillar was there. No worm, but such a pretty chrysalis was hanging in the same place he had last seen his little friend. The whole body of the chrysalis was an emerald green with a gold and black belt and many dots of black and gold on the shini g green body.

"My, but he's going to be lovely." Bushy Squirrel cried as he watched the plump case swinging gently to and fro in the summer breeze. "Why, it's only holding on by that tiny black ball. Well I never!" He sat watching it for a long time, then remembered what the caterpillar had said before he closed his case. "Twelve days," he chattered. "I'm coming every day until I do see him, only I'm sure I can't see how he'll come out of that alive." As he returned to his tree house he still wondered, but he never got any farther than wondering, for his little brain could not grasp one of the most wonderful mysteries of Nature. Every day he visited the rock and as he watched on the eleventh day he saw signs of life. "He's alive. He's alive," he cried and rushed home to tell his wife. Soon they returned and this time Mrs. Squirrel had packed the lunch basket, for she said if there was anything to see, they had better stay right there. And well for them that they did, for the next day the something that was alive in the chrysalis case was wriggling, wriggling, wriggling. They watched it closely, but it was well on to high noon before the case burst open, then to their astonished eyes there appeared something, but surely that was never the fat green caterpillar. Painfully the wonderful fly climbed out, often stopping for breath. It seemed hours before it was out of its prison, but at last it was free and slowly moving along the sunny rock spreading its gorgeous wings.

"Oh! oh!" gasped Bushy, and Mrs. Squirrel very softly and sat very, very quiet for fear the beauty might vanish. The butterfly opened its deep orange colored wings to their full width, which is four inches. Then the squirrels could see that on each of the four wings was a black border dotted with white. The black was so velvety looking that it seemed as if the edge was decked with glistening pearls. Then every vein that formed the framework of the wings was traced in black, whilst across the tip of each front wing was a black band and on this band were more lovely pearls. They noticed, too, that along the outside black border of the wings the pearly dots were all in twos. Two by two all the way round, and on the black body were more pearls near to the throat.

Slowly to and fro the butterfly moved its wings, gaining strength every minute until it seemed to poise and get ready to fly away; then Bushy, the Red Squirrel, cried, "Oh, don't go, please. Won't you speak to us?"

The butterfly was startled, for it had been so busy exercising its wings that it had not noticed the little wild folk. It turned, then cried, "Why, it's the Red Squirrel. Well, here I am again. I said I'd be ready in twelve days or so, didn't I?"

"Indeed you did," Bushy replied. "What's more, I've been watching you, and yesterday when I came you wriggled so much that I felt something great was going to happen, so I made Mrs. Squirrel come too, and we watched by you all the night."

"That was kind of you," said the butterfly, "and now you do believe a caterpillar can turn into a butterfly, don't you?"

"Sure I do, and I'll fight anyone who says it can't."

"Well, I'm going to try my wings now," cried the one-time worm. "If nothing happens, I'll come and see you, so good-bye for the present."

"Won't you tell us what your name is?" Bushy anxiously called, as the brilliant fly rose lightly into the air. He circled once then flew down and gently swept his wings over the squirrel's face. "I'm the Monarch butterfly," he cried, then, light as gossamer, he flew off and the squirrels were left alone.

That same evening as Night cast her cloak over the tired earth, the squirrels waited to see the Barn Owl as he passed their way. Noiselessly he came, and they were unaware of his presence until he spoke. "What did I tell you about stopping out late, Bushy?" The Red Squirrel laughed as he answered. "We were waiting for you, Mr. Owl, for we wanted to ask you what a monarch means"—and then Bushy told the wise bird about their little friend.

"Monarch," said the Barn Owl, "means a king."

"A king," chattered the squirrel, "he surely was a king indeed."

The Girls' "Carry On" Column

By BETTY O'HARA.

Girls: Twelve Thousand Scientifically Trained Women Are Needed For Every Million Soldiers—We All Must Work If We Would Win.

The Interesting Story of Physio-Therapy

Hart House has been the centre for research along the line of functional re-education of soldiers for some time past, and so successful have been the treatments and so marvelous the cures that the Canadian authorities have now decided to place it in the various military hospitals throughout the country.

To do this it is necessary to have, as in the case of massage, a number of girls to give these treatments, and it is for this reason that many girls from all over Canada are now flocking to Hart House.

The plan for girls who are to help in this work is rather different than for many courses heretofore given. It lasts about four or five months, and is entirely voluntary except for a small allowance which is to cover your laundry and car fare. The girls must provide their own uniforms and be responsible for their own subsistence. For this reason the applicants are brought from all the hospital cities to Hart House, where they will take the course, and when finished they will return to their home towns and give the treatments in the military hospitals; which by that time will be provided with the apparatus.

Uniform worn by the girls on whom the success of the new treatment of Physio-Therapy largely depends.

These girls, as a rule, are procured through the St. John's Ambulance Brigade of the different military districts, a V. A. D. course being necessary for the completion of the course. The studies are varied and just about as difficult as one would wish. Physiology and Anatomy, with special study of nerves and muscles, is taken: kinesiology, the study of muscles; psychology and the best way to treat patients physically; at the same time not losing sight of the fact that, if the best results are to be obtained a mental interest and stimulus is absolutely necessary. A special study is made of all wounds, their nature, treatments, and the results of such. A class is also given in which the typical and difficult cases are impressed on the minds of the pupils by seeing the actual patients. Orthopedic movements are also taught to some extent, this being necessary when a soldier's wound has rendered the part affected so useless that he is unable to move it himself. To complete the study a thorough knowledge of the apparatus used is essential, and the study of this, needless to say, plays a large part in the course.

This apparatus is of a mechanical nature, the movement of which is obtained solely by the patient's own effort. There are over one hundred and fifty of these devices, each one of which is calculated to bring about the exercise and use of some particular joint or muscle of the body. Apparatus for co-ordination of movement is also a very important factor in this work. In many cases of head injuries, the brain sometimes loses the power to send the messages to the nerves and muscles; and although the part affected may be in itself perfectly normal, yet on account of the brain not functioning properly the movement is jerky and sometimes entirely gone. Sense of distance and direction of movement are often destroyed by these brain injuries. There are three different kinds of treatment given in this re-educational work: passive, active and resistive. In passive work the operator gives orthopedic movements or helps the patient to move or exercise the part affected by moving the machine. Active—when the patient becomes stronger he moves the machine and does the exercises himself under the careful eye of the operator. Resistive—when the brake is put on the apparatus which makes the machine harder to operate, and this tends to strengthen still more the weakened part.

One splendid part of the apparatus is a foot piece, which is designed to bring back the circular movement of the ankle joint. The patient's foot is strapped in the machine which is adjusted to a larger or smaller circle, according to the power of movement of the patient. An apparatus which brings back the movement of the hip joint is another splendid invention. The man's ankle is strapped into the apparatus; he stands perfectly straight and swings his leg backward and forward without bending the knee; this indirectly has a tremendous effect on the movement of the hip joint. Another use for this apparatus is for the knee joint, in which treatment the patient assumes a sitting posture. In this case the knee joint is bent, as he brings his leg backward and forward. This loosens the joint as well as strengthens the muscles which control all movements of the leg. The same principle applies to the apparatus of the arm and shoulder. For the co-ordinative movements a man is instructed to touch a button with his fingers and then touch different holes. You will be much surprised to know that this is very difficult for some of these men, and much hard work and patience are required to bring this simple everyday movement back to normal. The same thing with the foot. Some men cannot put their foot on a certain step or mark you have laid out for them, and the result is a jerky hit or miss movement which is painful to witness.

One case particularly interested me. It was that of a soldier who had received a wound in the head, affecting the brain. As a result, he was partially paralyzed; his speech had entirely left him and his movements when he took a step resembled those of a child just after it had learned to walk. However, he is improving wonderfully, and in time will get back the use of his limbs to a considerable extent. Efforts are now being made at Hart House to bring back his power of speech.

Often as a result of having splints on the arm or leg for an indefinite time the part becomes stiffened and useless. Treatment is given to cure this. Adhesions from scar tissue often cause trouble, and the use of the member is brought back by means of exercise with the apparatus. The difference in the result of the treatment between this and massage is: the massage feeds the nerve or muscle by increasing the circulation, but functional re-education strengthens and brings back the use of the limb by the exercise of the part affected. For this reason, both treatments are sometimes given the same patient. The idea of a dial on each piece of apparatus does much to stimu-

Pickle These Vegetables and Use Them During the Winter

By MARION HARRIS NEIL,
Author of "Canning, Preserving and Pickling."

Pickles Serve as a Very Acceptable Substitute for Salads During the Winter Months When Fresh Green Vegetables are Scarce and High Priced.

In the making of pickles the quallty, strength and flavor of the vinegar are all essential. It is the vinegar that gives the flavor to the condiment. Vegetables and spices may be all that are desirable and be ruined in the cooking by using a cheap acid vinegar.

BEET PICKLE.—One quart of boiled beets, one quart of raw cabbage, one cupful of corn syrup or honey, one cupful of brown sugar, one-half cupful of grated horseradish, one teaspoonful of salt, one teaspoonful of black pepper, one-fourth teaspoonful of paprika, and vinegar to cover. Chop the beets and the cabbage, add the syrup or honey, sugar and seasonings, then cover with cold vinegar, pour into sterilized jars and seal.

Another Method.—Slice cooked beets. Put into a saucepan enough vinegar for the number of beets prepared, add one cupful of corn syrup or honey, one cupful of brown sugar to one quart of vinegar, with pepper and salt to taste, and when the vinegar is hot, put in the beets, let them remain on the fire until heated through, then seal in jars.

INDIA RELISH PICKLE.—Grind twelve apples, six green tomatoes, six mangoes, one package of seeded raisins, two cupfuls of brown sugar, four cupfuls of vinegar, one tablespoonful of celery seed, and one and one-half tablespoonfuls of salt, and cook for one hour, stirring occasionally. Pour into jars and seal.

CORN PICKLE OR RELISH.—Two dozen ears of corn, three-fourths cupful of salt, three quarts of vinegar, six onions, one red pepper, two green peppers, one bunch of celery one cupful of brown sugar, one and one-half cupfuls of corn or maple syrup, one tablespoonful of celery seed, two tablespoonfuls of salt, one teaspoonful of mustard, one-half teaspoonful of powdered ginger and two heads of cabbage. Cut the corn from the cob. Put the cabbage through a food chopper with the onions, peppers and celery stalks. Put the vegetables in the preserving kettle and pour over one-half of the vinegar. Mix the sugar, syrup and spices together and add the remaining vinegar. Combine mixtures, bring to boiling point, and then simmer gently for fifty minutes. Pour into jars or crocks and seal.

MUSTARD PICKLE.—One large white cauliflower, four cupfuls of small onions, one quart of string beans, one quart of green tomatoes, two quarts of cucumbers, and soak in strong brine for twenty-four hours. Then boil these ingredients separately until tender, drain and pull the cauliflower to pieces, chop tomatoes, beans and cucumbers slightly and mix all together. Into a kettle put six cupfuls of vinegar, and when hot stir in one-half pound of made mustard, one-half ounce of turmeric powder, one-half cupful of corn or barley flour rubbed smooth in two cupfuls of vinegar. Stir until it begins to thicken, then add one-half cupful each of honey or corn syrup and brown sugar, two tablespoonfuls each of celery and mustard seeds, and one-half cupful of oil. When hot pour over the other ingredients and seal in jars or bottles.

APPLE RELISH.—Twelve apples, two onions, three green peppers, one red pepper, one cupful of seeded raisins, one cupful of brown sugar, one-half cupful of grated maple sugar, one lemon, one-half tablespoonful of powdered ginger, one-half tablespoonful of salt and two cupfuls of vinegar. Core, peel and chop the apples, peppers and onions, add the sugars, salt, ginger, raisins and lemon sliced very thin and the seeds removed. Mix thoroughly, and cook for two hours, then bottle and seal.

MUSHROOM CATSUP.—Pick over, wash and drain one peck of mushrooms, slice and put over the fire in a saucepan with one cupful of water. Cook until the mushrooms are soft, stirring often, and then press through a sieve. To the pulp add two cupfuls of vinegar, two tablespoonfuls of salt, one teaspoonful of paprika, two tablespoonfuls of mustard, one teaspoonful each of powdered cinnamon, ginger, mace and cloves. Cook for thirty minutes longer. Then bottle and seal.

Or, wash and break firm, fresh mushrooms into pieces. Put a layer in the bottom of an earthenware vessel, sprinkle with fine salt, then add more mushrooms and salt until the materials are used. Cover and put away for three or four days, stirring with a wooden spoon four times each day. Then mash to a pulp and strain, squeezing out all the juice. Cook for fifteen minutes, and then measure. To each two cupfuls of the liquor allow two teaspoonfuls each of allspice, cloves, ginger and whole white peppers, then add one sliced onion, one blade of mace, three bay leaves and one-fourth teaspoonful of paprika. Cook until thick, stirring occasionally, strain, cool and bottle. Seal securely.

LEMON PICKLE.—Twelve large lemons, one-half cupful of salt, eight cloves of garlic or two chopped onions, one tablespoonful each of powdered mace, nutmeg and allspice, one teaspoonful of red pepper, five tablespoonfuls of mustard and one-half gallon of vinegar. Peel the lemons very thinly, place them in layers with salt in a jar, and leave for one week until they are quite soft. Put them into a jar with the garlic or onions, the spices tied in a muslin or cheesecloth bag, and pour the boiling vinegar over. When cold cover securely. Keep from two to three weeks before using them. They should have a brownish, almost semi-transparent look, and the vinegar should be quite thick.

PICKLED ONIONS.—Choose very small onions for pickling. Peel them under water, and use a silver knife to prevent their discoloring. Put one quart of onions, one quart of white boiling vinegar, one ounce of white peppers, three cloves, one bay leaf, one blade of mace, one-half ounce of allspice and one tablespoonful of salt into a saucepan and bring them to boiling point, then simmer until the onions turn clear. Pour into jars and seal.

Or, peel two quarts of small white onions, add one-half cupful of salt, and allow to stand over night. Place in a colander, pour over cold water and then drain well. Tie four tablespoonfuls of mixed spices in a bag. Boil one quart of vinegar with one cupful of brown sugar for eight minutes, throw in the onions, add spice bag and allow to boil up, and pour at once into jars and seal.

CUCUMBER PICKLES. — Twenty - four cucumbers, four cupfuls of small white onions, four cupfuls of vinegar, one cupful of honey or corn syrup, one teaspoonful each of celery seeds, ginger, mustard seeds, allspice, mace, cinnamon, salt and turmeric powder. Slice vegetables, sprinkle with salt and allow to stand for one hour and then drain well. Put vinegar and spices into preserving kettle, add vegetables, and allow to come slowly to boiling point. Pack into jars and seal.

Or, select medium-sized cucumbers, wipe and pack in a stone jar. To one gallon of vinegar use one cupful of salt one-half cupful of made mustard and one cupful of brown sugar, heat thoroughly, but do not allow to boil. Pour over cucumbers while hot. Keep cucumbers under the vinegar by means of a weighted plate.

PICKLED BEANS.—Remove strings and cut one peck of beans into one-inch pieces and cook in boiling salted water, until tender. Drain the beans and save the water in which they were cooked. Add to bean liquor, one cupful of vinegar, one blade of mace, one bay leaf, and one-half cupful of grated maple sugar, allow to boil for ten minutes, then add beans and cook for five minutes longer. Pour boiling hot into jars and seal at once.

PICKLED PEARS.—Wash eight pounds of pears, but do not pare. Stick four tablespoonfuls of whole cloves into the pears. Make a syrup with two cupfuls of brown sugar, one cupful of grated maple sugar, one-half cupful of golden or corn syrup and two cupfuls of vinegar, add spices, and a few pears at a time and cook the pears until tender. Fill jars and seal.

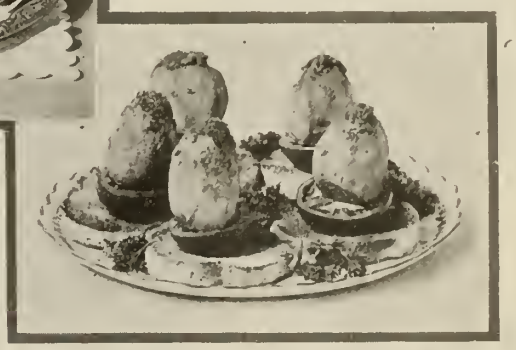
Gooseberries may be done in the same manner.

Savory and Sweet Money Savers

By MARION HARRIS NEIL.
Author of "Salads, Sandwiches and Chafing Dish Recipes."

Summer Food Should Be Carefully Prepared

During the month of August the market stalls have a supply of carrots, beans, squash, corn, egg-plant, cauliflower, beets, tomatoes, etc. The berries are nearly gone now, though a few blackberries and raspberries are still to be found; in their place we have a choice of peaches, apricots, plums, pears, apples and grapes. Salads can be had this month in abundance, and if their cleanliness can be assured they make the most wholesome food for the vacation season. If they are eaten freely with a good supply of oil they do away with the need of aperient medicine, which seems to be associated with a change of food, air and water. Tomatoes and cucumbers are quite free from the dangers which frequently lurk among the green leaves of fresh salad, and if the salad materials are limited in this way, the balance must be set right by a more plentiful supply of fresh fruit.



Potato Straws, Cauliflower and Peas.

Cabbage salad.

Prune and cocoanut pudding.

Potatoes on tomatoes.

Potato Border with String Beans and Cabbage.

Cabbage Salad.—Remove the centre from a firm cabbage. Chop the cabbage very fine, add enough tartare sauce to hold the cabbage together and fill into the shell. Decorate with olives. Place the cabbage on a plate and surround with baked or fried beets.

For the tartare sauce, make one cupful of mayonnaise dressing and stir into it one-half cupful each of mixed chopped pickles, olives and parsley. Slice cold cooked beets, dredge the slices with cornstarch, seasoned with salt and pepper, brush over with milk or beaten egg, toss in cornmeal or breadcrumbs and bake in the oven or fry in smoking hot fat; drain and use.

Potatoes on Tomatoes.—Wash and peel five potatoes, then boil in boiling salted water until tender, drain and scoop out the centre of each with a sharp knife. Melt two tablespoonfuls of butter substitute in a small saucepan, add one tablespoonful of chopped onion and fry it without browning, then add the potato pulp, four tablespoonfuls of chopped cooked chicken, one-fourth teaspoonful each of salt and pepper and two tablespoonfuls of hot milk or left-over sauce. Divide this mixture into the potatoes. Cut two tomatoes in slices, press out a little of the pulp, and stand a stuffed potato on each slice; melt a little butter substitute and brush over the potatoes with it. Place them on a greased baking tin, and bake in a hot oven for ten minutes. Serve on rounds of toasted bread and garnish with parsley.

Prune and Cocoanut Pudding.—Grease a fireproof dish. Wash one pound of prunes, and let them soak for forty minutes in boiling water. Roll out scraps of war-time pastry rather thinly and line the bottom of the dish with it. Put a layer of prunes, stoned, on the top, squeeze over a little lemon juice and add two tablespoonfuls of honey or corn syrup. Then place another layer of pastry over the top, sprinkle with cocoanut and bake in a moderate oven for one hour.

Potato Border With String Beans and Red Cabbage.—Melt two tablespoonfuls of butter substitute in a saucepan, add one cupful of mashed potatoes, a little salt and pepper, and four tablespoonfuls of hot milk. Cook over the fire until it ceases to stick to the spoon. Then flour a board, turn the potato onto it, and roll into a straight even roll. Arrange it in a circle on a dish and fill the centre with hot cooked string beans and garnish with stewed red cabbage. Serve hot.

To Stew Red Cabbage.—Trim one red cabbage, removing any damaged leaves and the hard part of the stalk. Cut it in halves and shred it finely. Then wash the cabbage carefully, drain it, and scald it in boiling water for five minutes. Drain again and put the prepared cabbage into a saucepan with two cupfuls of stock or water, add two tablespoonfuls of butter substitute rubbed into four tablespoonfuls of barley flour, two tablespoonfuls of vinegar, one-half teaspoonful of salt and one-fourth teaspoonful of pepper. Put the lid on the pan and cook gently for one hour on the top of the range or in the oven. Serve hot. Red cabbage is a good accompaniment to game.

Potato Straws With Cauliflower and Peas.—Cut peeled and sliced potatoes into thin match-like pieces. Soak for one hour in cold water, drain well, dry thoroughly, and fry in smoking hot fat, then drain and keep hot.

To Cook the Peas and Cauliflower.—Cook one tablespoonful of cornstarch in four tablespoonfuls of butter substitute for a few minutes, then add two cupfuls of boiling water, and cook until smooth, stirring constantly, then add four cupfuls of green peas and one cauliflower broken into flowerets. Cook uncovered until the vegetables are tender, drain and add salt and pepper to taste. Serve with the potatoes on a hot dish.

Banana and Date Salad.—A delicious salad is made by combining diced bananas and dates stuffed with chopped nutmeats. Serve with mayonnaise dressing made without mustard.

Another nice salad is made from equal parts of shredded fresh pineapple and chopped celery. Mix with mayonnaise and serve on crisp lettuce nests.

Coffee Blanc Mange.—At breakfast time make extra coffee. Strain two cupfuls of coffee into a saucepan and allow to heat. Mix two tablespoonfuls of cornstarch, three tablespoonfuls of brown sugar and a pinch of salt with two-thirds of a cupful of milk. When the coffee boils, stir in the mixture, and keep on stirring until smooth and thick, then cover it closely, and cook for a few minutes longer, remove from the fire and pour into a wet mold. When cold turn out and serve with milk or stewed fruit.

Fish Mayonnaise.—The remains of any kind of cooked fish can be used for this dish. Divide the fish into pieces, carefully remove all the bones and dark skin. Wash and prepare one lettuce; after it is well drained season it to taste with salt and pepper and place it in a salad bowl. Arrange the fish on the top of the salad; this must be done neatly. Pour over some mayonnaise dressing. If liked, a layer of mayonnaise may be put between the salad and the fish at the time of preparing the dish. Garnish with slices of cooked beets and gherkins.

Pineapple Custard.—Cut one medium-sized ripe pineapple into small pieces and cook it in a saucepan with one cupful of water and two cupfuls of corn syrup or honey. Let it just simmer until the syrup is thick. Strain two cupfuls of scalded milk over the well-beaten yolks of three eggs and then stir over the fire until it thickens, but do not allow to boil again. Pour it into a bowl and when cooled add the pineapple and syrup. Allow to get quite cold, then fold in the stiffly beaten whites of the eggs and serve.

Beans en Casserole.—Soak over night two cupfuls of beans. Cook next day until tender, then drain and mash. Grease a casserole or fireproof dish, in it put a layer of the beans, then a layer of stuffing made of two cupfuls of breadcrumbs or cornmeal, one-fourth cupful of melted butter substitute, one-half teaspoonful of salt, one-fourth teaspoonful each of pepper and powdered sage, and moisten with one cupful of hot water. Over the stuffing put a second layer of beans, dot with butter substitute and bake in a moderate oven until well browned. Serve with brown or tomato sauce.

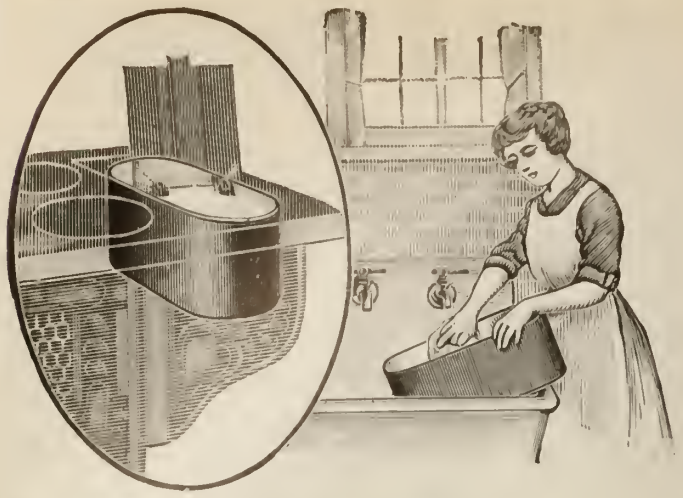
Smoked Haddock With Barley.—Wash, drain and boil in boiling salted water one cupful of barley; when soft drain the barley, and put it in a saucepan with one tablespoonful of butter substitute, cover and keep hot.

Remove the skin and bones from a good-sized smoked haddock, cut the fish into neat pieces and put them into a baking tin with just enough milk to cover, bring slowly to the boil and then cook gently for forty minutes. Then add two tablespoonfuls of butter substitute mixed with two tablespoonfuls of cornstarch, a little pepper and two tablespoonfuls of tomato sauce, and cook for ten minutes longer. Make a bed with the barley on a hot dish, arrange the haddock on the top and pour over the sauce. Serve hot.

Tomato and Cereal Soup.—Heat two sliced tomatoes, four cupfuls of water, one sliced onion and two cloves to boiling point, then add one-half cupful of rolled oats or any cooked cereal, and cook for one hour. Rub through a colander, add one teaspoonful each of salt and sugar, one-fourth teaspoonful of pepper, one-eighth teaspoonful of baking soda and one tablespoonful of butter substitute. Reheat and serve with crackers. One-half can of tomatoes may be used in place of the fresh ones.

Nut Roast.—Take cooked peas and put them through a sieve or colander. Then mix them with an equal amount of chopped nut meats and season to taste. Place one-half of this mixture in a greased baking dish, and over it spread a dressing made as follows:—Pour boiling water over four slices of toast, cover and allow to stand for eight minutes, then break it up and mix with it one-half cupful of milk, pepper and salt to taste. Cover the dressing with the remainder of the nut mixture, pour one-half cupful of milk over all, and bake for one and one-half hours. Cut in slices and serve with any preferred sweet sauce or with cranberry sauce.

Questioner.—Most any kind of fish suitable for eating may be canned successfully at home, if care is taken to use only very fresh fish and if the different canning steps are taken carefully.



Canning Fish.

Clean the fish as you would for the frying pan, removing the bones when possible. Make a salt and water brine that will support a potato, and place the cleaned fish in this brine for thirty minutes. Remove from the brine, cut into convenient sized pieces for the jars, and pack with the skin toward the outside. Put sterilized rubber and tops in position lightly and sterilize in a hot water canner for three hours. A wash boiler containing a rack and boiling water to come three-fourths up the jars may be used as a hot water canner.

When using coarse scaled, thick skinned fishes, cut off the fins or make an incision on each side of the fin and pull it out. Make an incision through the skin along the back, another along the belly, and connect these two by a third encircling the body just behind the head, impale the head on a hook or sharpened nail driven through a plank, take hold of the skin at the angle of the two incisions at the back of the head and remove it by pulling toward the tail. Thin-skinned fishes, like herring, should be scaled, not skinned.

Cut off the head, remove the intestines and other organs, and take out the backbone by making a cut with a sharp knife on each side, inside of the body cavity. Wash thoroughly, taking particular care to remove the blood along the back.

Cut the fish into strips to fit the length of the jars to be used and rub with dry salt, using a level tablespoonful to each pint jar of fish. Fill the jars with the pieces packed as tightly as possible, put on the rubber rings, and place the caps on the jars loosely, so that the steam can escape. Put water in the jars. Cook in a pressure cooker for one and one-half hours after steam pressure registers fifteen pounds or the temperature is at 350 degrees F. Tighten the caps of the jars and permit cooling. Use the cooker as directed by the makers. There are several kinds on the market and Marion Harris Neil will furnish addresses of manufacturers on application.

Pandora Range Reservoir is and does—

One thing a hot water reservoir should do—heat water.

And one thing it should be—easy to clean.

The Pandora flue system does the one—heats the water by carrying a continuous steady volume of heat to and along the length and depth of the reservoir.

The Pandora reservoir is easy to clean because it is seamless porcelain—enamelled white, with round ends. It can be lifted out with ease and washed as readily as a vegetable dish.

Different from the old-time, dark, built-in metal "tank" that had to be emptied with a dipper and cleaned by guess.

But the reservoir of the Pandora Range is modern, convenient, sanitary and good to look at, just like the Pandora is in every other way.

"The Magic of the Pandora"—Booklet Free

This is one of the many features of the Pandora Range described in "The Magic of the Pandora," a little booklet full of information that every woman will want before she buys a range. Write for it to the nearest McClary branch.

Fish—A War Time Food

Recipes from the Fish Exchange, Boston, Mass.

Use the Sea Food and Conserve the Land Products.

Fish is an ideal summer food, giving strength without unnecessary warmth. In warm weather the food problem is vastly different from the same problem in cold weather. During the latter period, foods should supply the body with heat, while in the summer months a food which gives the least possible heat with the requisite amount of nourishment should be selected.

During the cold weather, the average digestion will look after itself, but when warm weather sets in even the man with a steel armored digestive apparatus must beware. This is the reason that many persons practically become vegetarians during the summer.

There are few persons, however, who do not feel the need of one hearty meal a day, and to such fish is to be recommended. Sea foods aid instead of impeding the digestion.

Because of the many different ways in which it may be served, fish may appear on one's table either as a "heavy" or "light" food. Plainly fried, baked, or broiled, or served as a salad, no more easily digested food of great strength-giving qualities can be found. Served in other manners, it is heavy enough to satisfy a gourmand, without, however, putting his stomach and temper out of gear. Again, fish is an economical food. Summer, as a rule, is a greater drain on the household purse than winter. Even though fewer meals be eaten, and meat, that expensive commodity, be eaten more sparingly and seldom, the bills seem to mount. Vegetables are somewhat costly, and fruits even more so. To meet the hundred and one expenses which summer—even a summer in the city—entails, the housewife must keep a sharp eye on her food bill.

Out of a pound of fish she can make a delicious luncheon dish, and if she be clever, have enough left for a salad for supper, or, if the evening be cool, for a warming chowder, which will take the chill off the evening air.

It is generally acknowledged that meats, if used at all, should be consumed most sparingly during the warm season. Inhabitants of torrid countries live on fish, fruit and vegetables, relying on the fish for the muscle-making elements.

To cook fish properly does not require the understanding of any mystic art, nor any particular trouble. But it does require knowledge. Like all simple matters, it is enough when you know how. Incidentally, there is hardly any variety of food susceptible to so many variations of cooking as fish. A cod, for example, may be fried, baked, boiled, planked, made into patties, salads, and served in a hundred ways. In food value, and in taste, it is equally satisfactory whether served fried, plain, or made into an elaborate dish.

In purchasing fish, the housewife should remember that a pound of many varieties of fish will feed as many persons as twice that quantity of most varieties of meat, many varieties of fish having a particularly high nutritive value.

By a little careful study of her local markets, the housewife should be able to keep track of the fluctuations in the prices of the different varieties of fresh fish, and take advantage of them.

Baked Salmon.—Salmon may be baked, broiled or boiled. The New England Fish Exchange cook book offers the following suggestions for cooking the fish:—

Take salmon steaks weighing about one pound each. Place these in a buttered saucepan with four cupfuls of stock, four tablespoonfuls of butter and salt, pepper, grated nutmeg, parsley, and any other herbs desired. Let come to a boil, then cover and simmer for thirty minutes. Drain the fish. Thicken the liquid with flour and cook for ten minutes. Then add two yolks of eggs. Spread a layer of mashed potatoes in a greased oval baking dish. Remove skin and bones from salmon and place the steaks on the potatoes. Cover with potatoes, pour some of the sauce over all, sprinkle with breadcrumbs, and bake in a moderate oven until a light brown.

Boiled Salmon.—Rub the fish with a little salt, tie it in a cloth and boil slowly for three-fourths of an hour. Serve with egg or caper sauce.

Broiled Salmon.—Sprinkle slices of salmon with chopped parsley, mixed herbs, salt, pepper and olive oil. Arrange on a well greased gridiron and broil over a clear fire, basting occasionally with oil seasoning. Serve with a white sauce.

Grilled Halibut, New Style.—Take one slice of halibut, about one pound, pour over it a little oil, season with salt and pepper, place on a greased broiler and cook for eight minutes on each side. When nice and brown, arrange on a hot platter and pour over the following sauce. Melt two tablespoonfuls of butter, add one teaspoonful of chopped parsley, one-fourth teaspoonful of dry mustard, and salt and pepper to taste.

Baked Finnan Haddie, Club Style.—Boil a finnan haddie for eight minutes and then cut it into small pieces. Place the fish in a greased baking dish and cover with a Welsh rabbit sauce. Sprinkle over with grated cheese and bake until brown. Serve hot.

Baked Oysters.—Open some fresh oysters and leave them in the deep shell. Put a small piece of butter on each oyster and then a slice of bacon about one inch square on the top of each one. Sprinkle a few cracker crumbs over them and place in a hot oven for six minutes. Serve at once.

Boiled Codfish.—Cover a three pound fresh codfish with well salted fish stock and let cook for thirty minutes, without boiling; then take out the fish and drain it well. Lay it on a hot dish and garnish with sprigs of parsley. Serve with a cream parsley sauce separately.

How to Make a Gallon of Fish Stock.—Pour three quarts of water into a saucepan, add a handful of salt, one-half glassful of vinegar, one carrot sliced, one onion sliced, half a handful of whole peppercorns, one bunch of parsley, three sprigs of thyme and three bay leaves. Bring to boiling point and simmer for fifteen minutes. Cool and use when needed for various methods of cooking fish.

Steamed Mussels.—Wash and clean the required amount of mussels thoroughly; place them in a closely covered saucepan or kettle after adding a cupful of water for every half peck of mussels. Boil from ten to twelve minutes or until they are all well opened. Strain the broth and serve the mussels on a large, hot platter. Serve them with melted butter, and a cup of the broth to each person. Remove the beards, and eat the same as steamed clams. One-half peck of mussels will serve five people.

Stewed Eels.—Skin and clean the eels; cut them into short lengths and lay them in cold water for thirty minutes. Put them into a saucepan, add enough water to cover them, and cook them slowly for thirty minutes, or more, according to their size. A large eel may require one hour to make it tender. Drain the fish well, cover with white sauce, seasoned with paprika, lemon juice, onion juice, salt and chopped parsley. Simmer for five minutes and serve hot.

Fresh Crab Flakes a la Tokio.—Cut a green pepper, a red pepper and six mushrooms into thin shreds. Stew in a little butter until tender, add two cupfuls of cream and boil for five minutes, then add one pound of fresh crab flakes. Season to taste with salt, paprika and melted butter. Arrange a border of mashed potatoes on a hot dish, pour the fish mixture into the centre and bake in hot oven until brown. Serve hot.

Lobster, Bungalow Style.—Melt six tablespoonfuls of butter, add two teaspoonfuls of finely chopped onion and cook until brown, stirring constantly. To this add two teaspoonfuls of flour and stir until well blended, then pour in gradually one cupful of stewed and strained tomatoes, well seasoned with salt and paprika, and bring to boiling point. Now add one and one-half cupful of cooked lobster meat cut into small pieces. Serve very hot in the lobster shell.

Baked Blue Fish, Home Style.—Wash one medium sized blue fish, split it and remove the bones, then cut the fish in six pieces. Into a baking pan put four tablespoonfuls of butter, one onion chopped, and one-half cupful of chopped celery. Place in the fish, pour over a little melted butter, season with salt and pepper and bake for ten minutes. Now add the strained juice of one lemon and one cupful of canned tomatoes. Bake for fifteen minutes and serve hot.

TRADE MARK REG.

The Thrift Car

Model 90—Just What a Car Should Be

CANADIANS select their favorite automobiles for one or more of *five* reasons:

Appearance, performance, comfort, service or *price.*

One car may be famous because of its number of cylinders, another for its body design, another for its low price—

And so it goes until you come to Model 90 and then you discover this important fact back of the great number now in use;

Model 90 has been purchased because it *combines all five* of these essentials for complete satisfaction.

True, in many cases its quality *appearance,* big-car stylish design, and distinctive color scheme primarily influenced purchasers.

Again, in many, many cases it is the *performance* of Model 90 that makes it first choice. As a matter of fact, performance is its major virtue.

It is not only the things Model 90 *does,* but the *way* it does them, that makes Model 90 owners so enthusiastic—

The way it consistently meets every driving need day-in-and-day-out, through congested traffic, over steep hills, in fair or bad weather, and for short or long rides, proves its adequacy for every motoring need.

A large number of Model 90 owners when asked the reason for their choice have mentioned *comfort* first.

When you have inspected this car and driven and ridden in it, you, too, will understand why comfort accommodations have contributed so much to Model 90's fame.

Service is not listed among a car's specifications, and by service we do not mean the service the car gives alone, but the service that the dealers and factory behind the car are ever ready and able to give.

In making a survey of the reasons for the popularity of the Model 90 car, seldom has its moderate *price* been mentioned first—

Yet, even if it were lacking in some of the five advantages it *does* combine, its price still would warrant its great popularity.

And to-day, above all else, a car must be *economically* efficient.

Five points of Overland superiority:

Appearance, Performance, Comfort, Service and Price

A Puzzle For August

By TOM WOOD.

Hidden in the words of the speakers, in the first four pictures, may be found the names of four RIVERS, which have become famous in connection with the great war.

Numbers 5 and 6 represent "Square Words," i.e., four words of four letters each. Guess what each little picture represents, place in proper order and they will read the same from the top down, and from left to right. Can you guess the words?

Also give the words you can make, using the letters in "Something."

Two prizes will be given, first one dollar and fifty cents, and second one dollar, for the best solutions, judged according to neatness and accuracy.

All are eligible to compete in this contest.

Answers must be received before August 31st to be included.

CORRECT SOLUTION OF THE JUNE PUZZLE.

1—Saskatchewan.	5— R I N G	6— L E A F
2—Quebec.	I D O L	E C R U
3—Regina.	N O T E	A R U M
4—Chatham.	G L E N	F U M E

First prize is won by David Scott, 43 Rosebery Avenue, Ottawa, Ont., and the second by Jean Love, 15 Charles Street West, Toronto.

Address all answers to The Puzzle Department, "Canadian Home Journal," 71 Richmond Street West, Toronto, Canada.

The Girls' "Carry-On" Column

(*Continued from page* 21.)

late the effort of both patient and operator, as by this method the progress of each day's work is plainly visible.

While in Hart House the girls give treatments under the supervision of the instructresses, one for the arm and one for the leg treatments. The girls, however, when they are sent out to the various hospitals, are put on their own resources and are obliged to detect at once where the trouble is, whether it exists in the lower arm or upper arm, or if the trouble is a paralysis of some nerve received through a brain injury. It seems a very simple matter to be able to put a man in a machine and ask him to swing an arm back and forth. It is. But it is another proposition to keep a patient keyed up to the top notch of interest day in and day out, and to be able to put your finger on the cause of the trouble, if the best of results are not forthcoming. This is the work of the girls who are taking the course of physio-therapy, and if you could only see the interest the patients take in the work and the marvellous cures that have been effected, you would have little doubt as to the benefit of this treatment, for, although it has exploded many old ideas, it has even in this short time proved its worth.

The girls at present wear navy blue uniforms and the same colored veils with white collars and bands. This, however, is subject to change, as it is now the intention to have the girls who take this course connected with the St. John's Ambulance Brigade.

QUESTIONS AND ANSWERS.

Would you please tell me if V.A.D.'s are sent from Canada to England? What are the expenses of the course? What are the requirements of an ambulance driver for overseas service? I especially wish to go overseas.

GORE BAY.—Yes, V.A.D.'s are sent from Canada overseas. The average cost of a V.A.D. course is $2.50. This varies, as it depends on the number in the class to a great extent. If you wish to drive an ambulance overseas it will be necessary to qualify as a V. A. D. nurse and go overseas in that capacity and do nurse's work. If, however, when you get there you can prove your capability as an ambulance driver and have some knowledge of automobile mechanics and there is a vacancy in this department, you stand a splendid chance of getting a position as ambulance driver. This is the only way this can be accomplished, as up to the present time there has been no call for Canadian Ambulance drivers to go overseas.

I can drive a car, and I would love to work with the Women's Ambulance Corps. I would like to know what would be required of me.

DEAR LEILA.—There is no Women's Ambulance Corps in Canada. That is, the Government is not yet taking girls on for that work. If, however, you would like to drive an army car, you might like to become a driver of an R.A.F. car. They are now taking girls on for that work. You must know how to drive a car and have some knowledge of road repairs, and be able to pass the test in driving set by the Royal Air Force. It will be necessary to come to Toronto to take this position. The wages, however, will enable you to live comfortably. I am sending you by mail the address of the department of the R.A.F. to which you may apply.

Is the V.A.D. course a correspondence course or a series of lectures given locally? Does this course guarantee work in a military hospital or overseas work? Please send information as to where the course is obtainable.

SUMMERLAND, B.C.—The V.A.D. course is a series of lectures given locally. The fact that you take this course does not absolutely guarantee work in a military hospital in Canada, but if you produce first-class letters of reference, you have the same chance as any other girl. As to the overseas work, you must serve a certain length of time in Canada and prove yourself capable before you are sent overseas. I am sending you the address of the provincial secretary for B.C. He will give you any information as to the classes given in B.C.

The people in our town are interested enough in the war, but we want to start something to get everyone to work to help the Red Cross. What could you suggest?

DEAR WAR WORKER.—A splendid plan was worked out in one of the cities of the United States a while ago. Everyone brought some rubber article and placed it on a block in the main street. Automobile tires, hot water bottles and rubber in all shapes and forms found refuge there. This was sold and the proceeds given to the Red Cross. An enormous amount of money was procured, and it was a most exciting and interesting procedure. Try it and see.

What do you think a club of twelve girls could do for the soldiers who are returned? We live in a small town, and we are forty miles from the nearest military hospital.

DEAR GIRLS.—Why not start a canning kitchen in your town? In this way you could preserve hundreds of jars of fruit, and send it to the military hospital nearest you. You have no idea how tired the returned soldiers get of the hospital diet. It seems to lack the pleasing varieties they are used to.

NOTE.—Space does not permit the printing of more of the many questions which have come in to Betty O'Hara. She is answering all, and will gladly reply to still more of our girls' letters sent to her. Enclose a stamped, self-addressed envelope if you wish a personal letter.

THE KING OF THE MILKWEED

(*Continued from page* 20.)

And so it is, the Monarch butterfly or "King Billy," as it is often called, is very regal looking and stands out amongst its kind, by being one of the few butterflies that migrate, for in the fall of the year the King Billies get together in clouds, then wing their way to the southland returning north the next season. Do you know King Billy? Shall I tell you where to find the eggs and caterpillars? You will have to look carefully for the eggs are so tiny, but you will find them on the broad, thick leaves of the milkweed plant. In color they are a pale green and cone shaped and always you will find them on the middle rib of the leaf. Often you will see the King Billy sipping nectar from the flowers of the golden rod, for this flower is one of his favorites. Can you find him? Won't you try? Then you will see and learn for yourself the wondertul life story of one of Mother Nature's children, for she is always waving her magic wand over the earth and changing the ugliest of worms and grubs to things of living beauty.

A KING IN BABYLON

(*Continued from page* 17.)

He turned Davis's hand over and directed the light of the torch upon it. Across the knuckles was a livid welt.

"Just like mine," he said. "No doubt that same stone fell out again!"

Davis snorted.

"I struck my hand against the corner of that pillar," he said.

"What was it brushed past us?"

"There wasn't anything brushed past us."

"Yes, there was; I felt it—so did Billy. It darted past with a rush of air . . ."

And then suddenly Davis threw back his head and laughed.

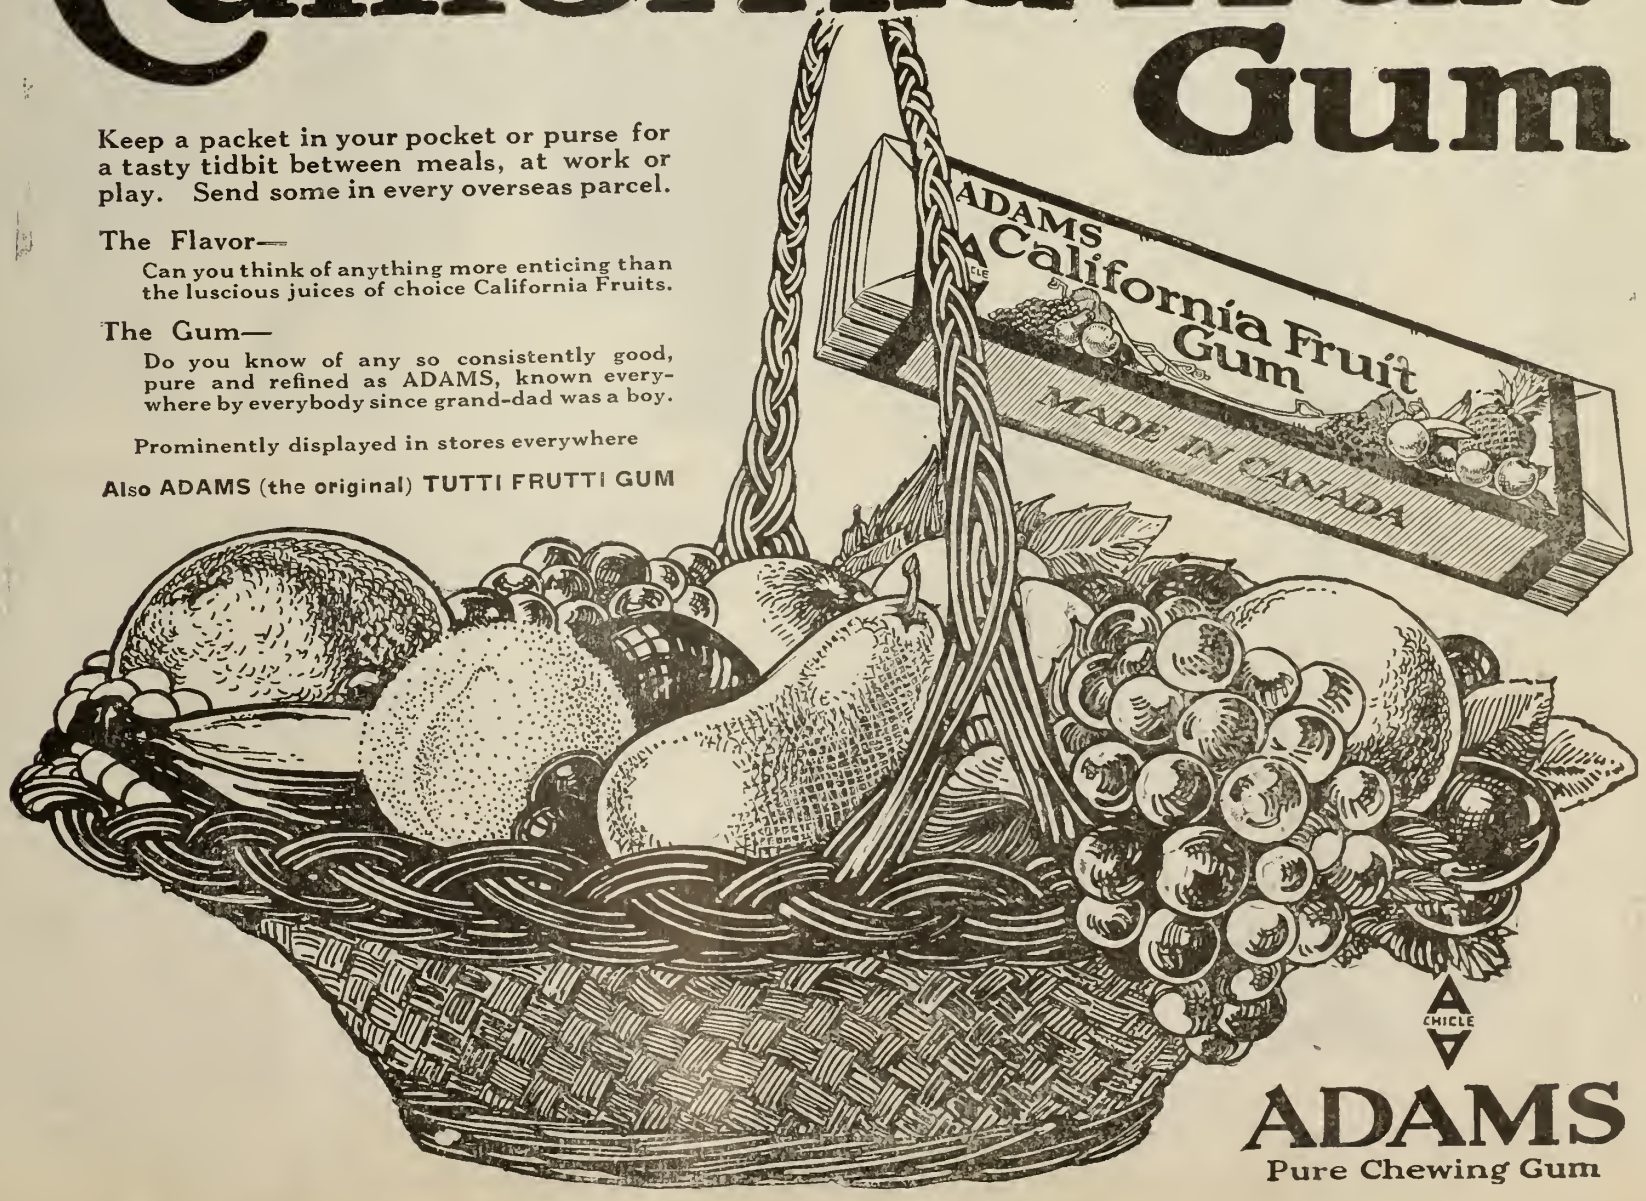
"I remember now," he said; "I *did* see the ghost—caught just a glimpse of it before the light went out."

"Well?" Creel demanded.

"Well," said Davis, "it was flying around the pillars, and it looked to me uncommonly like a bat. It may, of course, have been a ghost in disguise!"

(To be continued.)

ADAMS
California Fruit Gum



Keep a packet in your pocket or purse for a tasty tidbit between meals, at work or play. Send some in every overseas parcel.

The Flavor—
Can you think of anything more enticing than the luscious juices of choice California Fruits.

ADAMS
Pure Chewing Gum

For Morning and Afternoon Wear in Town or Country

7815—Ladies' Blouse (20 cents). Five sizes, 34 to 42 bust. Size 36 requires 1⅝ yard 40- or 45-inch organdy. No. 7854—Ladies' Sleeveless Overblouse or Sports Coat (20 cents). Sizes small, medium, and large, corresponding with 36, 40, and 44 bust. Medium size requires 1⅞ yard 54-inch rose-color wool Jersey—1⅛ yard white wool Jersey for collar and revers. No. 7688—Ladies' Two-piece Skirt (20 cents). Seven sizes, 24 to 36 waist. Size 26 requires for skirt with inserted pockets 2½ yards 44-inch plaid worsted. Width at lower edge about 1⅞ yard. The ideal Summer sports frock consists of a white voile or organdy blouse, a sleeveless sports coat or overblouse of Jersey or satin, and a simple skirt of plaid worsted or of sports satin. The overblouse may match the skirt in color, or when the skirt is of plaid material the overblouse may match the dominant tone of the plaid. This blouse slips on over the head, and is tucked on the shoulders front and back. The overblouse is in drop-shoulder style, falling slightly over the shoulders, and the fronts may be turned back only to the waist-line, or they may be turned back as illustrated to the bottom of the overblouse and faced with contrasting material. The skirt is a two-piece model closing at left side, and with inserted or hanging pockets. At foot of page the overblouse is shown again with embroidery squares No. 12444, blue or yellow, 15 cents.

7799—Ladies' Dress (25 cents). Six sizes, 34 to 44 bust. Size 36 requires 3½ yards 40-inch voile or Georgette crêpe—2½ yards wide, 8 yards narrow filet lace banding—2 yards velvet ribbon—⅞ yard 36-inch lining for underbody. No. 7688—Ladies' Two-piece Skirt (20 cents). Seven sizes, 24 to 36 waist. Size 26 requires for skirt without pockets 2½ yards 40-inch voile or Georgette crêpe. Width at lower edge 1⅞ yard. Tho simplicity of line is featured on the S mmer frocks, they are nevertheless very dainty and charming, and fashioned of the new voile and other cotton fabrics they are quite inexpensive. The trimming for these frocks may consist of tucks or insets of lace, and filet is particularly attractive when combined with voile. While this frock is a one-piece model, it may be shortened as illustrated to form a redingote effect worn over a separate skirt. Below the girdle the redingote may be seamed together, or it may be open at the sides as worn here, the edges finished with a facing, and trimmed with lace insertion. The dress closes at the back, and is gathered slightly on the shoulders in front which is always a pretty style for sheer fabrics. Plain sleeves may replace the flowing sleeves illustrated. The dress may be worn with oval collarless neck, or it may be open low in front showing a vest. The skirt is a plain two-piece model closing at left side seam.

7690—Ladies' Tucked Blouse with Peplum (20 cents). Six sizes, 34 to 44 bust. Size 36 requires 3¼ yards 36-inch voile. ½ yard organdy for collar and cuffs. Very smart to wear with separate sports skirts are these peplum blouses, many of them like this model in panel style with fine tucks front and back. The closing is arranged on the shoulder and at left side-front under a tuck. A two-piece circular collar finishes the round neck, and gathered sleeves may replace the flowing sleeves.

7838—Ladies' Dress (25 cents). Six sizes, 34 to 44 bust. Size 36 requires 1¾ yard 36-inch check gingham for waist —2½ yards plain gingham for skirt, cuffs, and collar—¾ yard 36-inch white voile for overcollar and vest. Width at lower edge about 1⅞ yard. For informal Summer wear nothing is more serviceable than the gingham frock. The entire dress may be made of check gingham, or, as in this illustration, the long-waisted body section may be of the check gingham, while the skirt is of plain gingham matching the check. The fronts of the waist roll back in revers attached on the shoulders to a square collar, and the front opening of the waist is filled in with a vest of white voile which is joined to a collar of white voile which overlays the gingham collar. Provision is made in the pattern for long sleeves should these be preferred to the short ones illustrated.

7820—Ladies' One-piece Dress (25 cents). Nine sizes 34 to 50 bust. Size 36 requires 3½ yards 44-inch tricotine —¼ yard 27-inch black satin for collar—3½ yards braid Width at lower edge about 1⅝ yard. For cool days in Summer in the city as well as the country a simple dress like this of blue serge or gabardine is very useful. The dress buttons in front, the closing to be continued to the top of the standing collar, or if preferred, the fronts may be rolled back and the collar worn flat. The front of the dress is gathered below a square yoke, and the sleeves may be shortened. Two rows of wide silk or Hercules braid on the skirt relieves the plainness, but this is not absolutely essential to the good style of the dress. The fronts are slashed for inserted pockets.

7709—Ladies' Dress (25 cents). Six sizes, 34 to 44 bust Size 36 requires 6¼ yards 45-inch organdy—5 yards filet lace—⅞ yard 36-inch lining for underbody. Width at lower edge about 1⅜ yard. The fashionable irregular lower edge is displayed on this frock, both in the long waisted body section and in the tunic. The closing is on the left shoulder and left side-front, and instead of the neck-line illustrated, a V neck with rolling collar may be selected. Full-length plain sleeves may be substituted for the flowing sleeves that are illustrated. Over a two-piece skirt closing at left side seam, is dropped a three-piece tunic which is attached to the waist. Narrow frills of organdy alternating with filet banding form a dainty trimming

Afternoon Frocks of Graceful Lines for Stout Women

7878—Ladies' Blouse (25 cents). Five sizes, 34 to 2 bust. No. 7677—Ladies' Two-piece Tunic Skirt 20 cents). Six sizes, 24 to 34 waist. Width at lower dge about 1⅝ yard. The costume in medium size equires 6 yards 36-inch white voile—2½ yards 36- nch check voile—⅞ yard 36-inch lining for underbody. Plain and check voile in combination make adorable ummer frocks, and for these pastel shades of blue, ink, yellow, or lavender with white may be selected. The blouse closes on the left shoulder and under the eft arm, and is somewhat in jumper style draped oward the underarm. A pointed collar finishes the neck, and the sleeves which are sewed into the arm- ic'es of the underbody, may be in three-quarter lowing style, or long one-piece models gathered to wo-piece cuffs may be chosen. Completing this lainty frock is a two-piece skirt closing at left side eam and with a two-piece gathered tunic. The tunic nay be open front and back, it may be closed all around, or have draped sections at sides.

7858—Ladies' Dress (25 cents). Nine sizes, 34 to 50 bust. Size 36 requires 4⅜ yards 44-inch navy blue serge—9½ yards braid. Width at lower edge about 2⅝ yards. This frock of blue serge shows the new long-waisted effect. The center-front and back of the waist are in panel style, extending up to form a deep yoke. Under the girdle is joined a three-piece side-plaited skirt with straight lower edge. The waist closes on the left shoulder and at left side-front, and three-quarter length sleeves with turn-back cuffs may replace the long ones.

7872—Ladies' Blouse (25 cents). Seven sizes, 34 to 46 bust. No. 7886—Ladies' Two-piece Tunic Skirt (25 cents). Six sizes, 24 to 34 waist. Width at lower edge about 1¾ yard. The costume in medium size requires 6¾ yards 36-inch printed voile—1 yard 40-inch white Georgette crêpe—3 yards filet lace—⅜ yard 27-inch taffeta for girdle—⅞ yard 36-inch lining. Figured and printed voile and Georgette crêpes are among the most attractive of the Summer materials, and are very fashionable for afternoon frocks. Daintiness is given to this model, which is very becoming to stout women, by the trimming of filet lace banding and white Georgette. The blouse is open in front to show an inset vest with V or square neck. Two styles of collars are provided, and the sleeves are perforated for shorter length. The blouse closes at the side-front, and is mounted on a sleeveless underbody with high, square, or V neck. Very attractive in style is the skirt which displays the modish tunic to be made with a plaited apron panel front and back, or if preferred, the tunic may be introduced at the sides only omitting the plaited panel. The foundation skirt is a two-piece gathered model closing at left side-front.

7743 — Ladies' Tunic Blouse (20 cents). Seven sizes, 34 to 46 bust. Size 36 requires 4¾ yards 36-inch tan voile—⅝ yard 27-inch white voile for collar and cuffs. No. 7688—Ladies' Two-piece Skirt (20 cents). Seven sizes, 24 to 36 waist. Size 26 requires 2⅝ yards 36-inch voile. Width at lower edge, about 1⅞ yard. Long graceful lines are given to this frock of pale tan voile by the tunic which is attached to the blouse under the cord girdle. It is plaited in front below a square yoke, and for the long gathered sleeves with deep cuffs, flowing sleeves in three-quarter length may be substituted. The tunic may be made with irregular or straight around lower edge. It is worn over a simple two-piece skirt closing at the left side seam, and with inserted or large hanging pockets. Coarse machine-stitching makes an attractive finish. This stitching should be done with coarse silk floss, and may be in the same shade as the tan voile of the dress, or it may be old blue, or rose-color. The thick silk cord girdle is a new suggestion, and is very attractive. It may be bought complete, or silk tassels may be sewed to silk cord.

7863—Ladies' Dress (25 cents). Seven sizes, 34 to 46 bust. Size 36 requires 6¼ yards 40-inch Georgette crêpe—1⅞ yard wide and 2¾ yards narrow filet lace—1½ yard velvet ribbon. Width at lower edge about 1⅝ yard. These redingote frocks work out very attractively in sheer fabrics like Georgette crêpe and chiffon voile. White Georgette crêpe is selected for this model with trimming of filet lace and black velvet ribbon. The waist opens in front over an inset vest with V neck, and a soft fulness is thrown over the bust by the gathers on the shoulders in front. Quite smart in style are the long sleeves gathered to deep cuffs, but for these may be substituted short sleeves with turn-back cuffs. Over the two-piece skirt which is gathered at the back, is arranged a tunic that forms an apron panel effect front and back. The skirt closes at left side seam.

7592—Ladies' Blouse (20 cents). Nine sizes, 34 to 50 bust. Size 36 requires 1¾ yard 40-inch black Georgette crêpe—1¼ yard white lace—⅝ yard white Georgette crêpe—⅜ yard 36-inch satin for piping—⅞ yard 36-inch lining for underbody. Into the armholes of the underbody the sleeves are sewed, and the blouse armholes are finished with a piping of satin. A band of white lace is applied to the underbody showing through the Georgette crêpe of the blouse.

7818—Ladies' Dress (25 cents). Nine sizes, 34 to 50 bust. Size 36 requires 2⅜ yards 44-inch Poiret twill—3½ yards 36-inch taffeta—½ yard 40-inch white Georgette crêpe for vest. Width at lower edge about 1½ yard. The long lines of this frock of wool and taffeta adapt it particularly to the figure that is inclined to embonpoint. The tunic may be pointed or straight, and is mounted on a two-piece skirt closing at the left side seam.

"It's So Handy!"

Quaintly Charming Frocks for Summer Social Functions

Dress 7698 — Dress 7902 Emb. 12461 — Dress 7625 — Dress 7576 Emb. 12377

Dress 7739 Emb. 12413

7739—Misses' Dress (20 cents). Five sizes, 12 to 20 years. Size 16 requires 4⅜ yards 44-inch white organdy—⅞ yard 36-inch lining for underbody. Width at lower edge about 2 yards. Embroidery No. 12413, blue or yellow transfer, 20 cents. Summer-time frocks will be largely of cotton fabrics, among which organdy holds first place for afternoon wear, in white or pastel colors. Very simple and girlish is this model with plain gathered collarless blouse closing at the back, and with long or short sleeves. The skirt is a one-piece gathered model. The gathered peplum sections may be omitted.

Dress 7695 — Dress 7883 — Dress 7648

7698—Misses' Dress (25 cents). Three sizes, 16 to 20 years. Size 16 requires 6½ yards 36-inch plaid voile—1½ yard white voile—⅞ yard 36-inch net for underbody. Width at lower edge about 1⅝ yard. The tunic falling in deep points in front and shortening up toward the back is a most attractive feature of this charming frock of plaid voile. The waist closes on the shoulder and under the left arm, and is in jumper effect, worn over a front-closing underbody into the armholes of which the flowing sleeves are sewed. Another style of sleeve slashed at the elbow is provided in the pattern. The skirt is a two-piece gathered model with straight lower edge.

7902—Misses' Dress (25 cents). Three sizes, 16 to 20 years. Size 16 requires 6 yards 40-inch Georgette crêpe—6 yards wide, ⅞ yard narrow, filet lace banding—2 yards ribbon for girdle. Width at lower edge about 1⅜ yard. Embroidery on collar and cuffs No. 12461, blue or yellow transfer, 20 cents. For afternoon social functions Georgette crêpe frocks are highly favored in white, flesh-color, and biscuit, and filet lace makes a dainty trimming. The blouse is in jumper effect, closing at shoulder and underarm, and the flowing sleeves are sewed into large armholes. The back of the waist has extensions carried around in girdle effect in front. Attached to the front-closing underbody is the two-piece gathered skirt which closes at left side seam, and on this is mounted a one-piece gathered tunic.

7625—Misses' Evening Dress (20 cents). Three sizes, 16 to 20 years. Size 16 requires 4⅜ yards 44-inch organdy—2¾ yards wide and 4 yards narrow satin ribbon. Width at lower edge about 2 yards. Charmingly youthful is this evening frock of lilac organdy with apron tunic over a draped skirt.

7576 — Misses' Evening Dress (20 cents). Three sizes, 16 to 20 years. Size 16 requires 2⅜ yards 44-inch organdy for skirt—¾ yard 36-inch satin for bodice and trimming—1¾ yard 10-inch lace for sleeves and shoulder draperies. Width at lower edge 2 yards. Embroidery No. 12377, blue or yellow transfer, 15 cents. The draped bodice of flesh-color satin gives a charming touch of color to this frock of white organdy, and the satin is used for the ruchings, the upper one in festoon style. No pattern for these.

Just What Girls and Boys Need for Vacation Time

7419—Child's and Girls' Circular Cape. (15 cents). Six sizes, 4 to 14 years. Size 12 requires 4 yards 44-inch check cloth—¾ yard 44-inch plain cloth for collar, revers, and belt—2⅞ yards 36-inch lining. Instead of the open neck and large collar illustrated, this cape may close to the neck with a standing collar as a finish.

7866 — Girls' and Juniors' Dress (20 cents). Five sizes, 6 to 14 years. Size 12 requires 3¾ yards 36-inch percale—¾ yard 36-inch linene for collar and trimming. Scallop No. 11854, blue or yellow transfer, 10 cents. The waist closes in front, the two-piece skirt at left side.

6069—Child's Overalls and Guimpe (15 cents). Seven sizes, 1 to 8 years. Size 4 requires 1⅜ yard 36-inch batiste for guimpe—1¼ yard 36-inch galatea for overalls. The overalls close on the shoulder, and the guimpe sleeves may be long or short; the short sleeves with turn-back cuffs.

"Citizens of the World"

The patriarch Abraham and the apostle Paul, John Wycliffe and Christopher Columbus, Benjamin Franklin and Abraham Lincoln, Florence Nightingale and Clara Barton, were "citizens of the world."

They thought universally, to some extent saw every man as his brother's keeper, and were prophets of the day when a great contest would be waged to make the world one world, and that one safe for democracy.

The Christian Science Monitor

An International Daily Newspaper

embodies this idea in a daily newspaper. It publishes the news of all the world. It circulates throughout all the world. It advertises firms in all the world. Its editorial columns give courageous attention to all phases of the world's activities.

It regards all men and women as created free and equal, respects religious freedom, insists on medical freedom, and is a volunteer for service in the cause of all "citizens of the world."

The Christian Science Monitor, 3¢ a copy, is on sale throughout the world at news stands, hotels and Christian Science reading rooms. A monthly trial subscription by mail anywhere in the world, for 75c.

Best for Baby

After many years' use by parents of all classes, in Royal Nurseries and humble homes, Savory and Moore's Food has the reputation of being a thoroughly reliable food for infants.

The experience of parents, nurses, and medical men all goes to show that babies *do* thrive remarkably well on this famous food, that its use prevents infant ailments, and that it builds up a strong constitution, so important in later life. You may therefore bring up baby on Savory & Moore's Food with the assurance that you are doing the best you can for your child.

MOTHER'S GUIDE FREE

Savory & Moore's little Book, "The Baby," is full of useful information on Infant Management, and contains hints on such subjects as Feeding, Teething, the Toilet, Exercise, Weight, Infant Ailments, and many others. It is just what a young mother requires, and will prove invaluable in the home. A Free Copy may be obtained on application to Savory & Moore, P.O. Box 1601, Montreal.

Conservation and Education Were Outstanding Topics at Quebec Convention

The fifth annual convention of the Quebec Homemakers' Clubs met at Macdonald College on June 12th and 13th. Sixty-four members were in attendance, representing all but two of the thirty-seven clubs.

In the absence of Dr. Harrison at Petawawa, the delegates were welcomed by Prof. Lochhead, who said that he was glad to welcome them for two reasons at least; first, that they represented the new spirit in the progress of Quebec, and secondly, because of their potential power as an organization representing the rural women. He commended the clubs for their war work. One of the finest things in this war had been the service of women, who, in a spirit of self-effacement, had done wonderful service in every kind of work. He hoped that there might be some means of organization whereby the women of the towns might aid the rural women, bringing about a better understanding and raising the standards of living in both town and country.

Mrs. Yeats, of Dunham, replied to the address, and believed that the clubs were realizing more deeply the significance of their motto, "For Home and Country," and that not only in their more individual work as homemakers, but in the broader duties relating to the school and community, and now more particularly since the granting of the franchise, women must study and strive to prepare themselves for the great opportunities that were theirs.

Mrs. N. C. Macfarlane, demonstrator to the clubs, then read her report as follows:

The year 1917-18 has been for the Quebec Homemakers' Club one of marked activity and progress. The clubs recognize as never before the importance of their object, not only in respect to the home and community, but to that larger collection of homes and communities—the nation. "The object of the Homemakers' Clubs shall be to study the most scientific way of conducting home work in order to economize, strengthen and preserve the health of the family; to discuss the best expenditure of money in order to secure the highest conditions of home life; to provide better financial, social and intellectual advantages for farm boys and girls and yet keep them on the farm; to carry on any line of work which has for its object the welfare of home or community life."

In connection with the first clause of this object, the club members are making every effort consistent with doing their share of the necessary war work to become more thoroughly acquainted with the subjects of food and food preparation, the school lunch, sanitation, medical inspection, household financing and the better arrangement of work in order to save time and energy. The studies in respect to foods have been well supplemented with practical demonstrations, that on canning being especially appreciated, as a factor not only in preventing waste, but by insuring the housekeeper a means of having a supply of fresh fruits and vegetables throughout the year, a most important one in maintaining the health of the family.

To aid in the matter of food control, the secretaries of the clubs have been placed on the mailing list of the Canada Food Board, and all important items from the Canadian Food Bulletin are read and discussed by the clubs for the purpose of fulfilling the demands and requests of the office as intelligently as possible. When any announcement is not fully understood, the secretary is requested to write directly to the office for information. Constructive and not destructive criticism is the object of the clubs. Forty practical demonstrations on the making of meat and wheat substitutes were given to the Quebec Homemakers' Clubs and other organizations by Miss Babb, assistant demonstrator. From their previous studies along the lines of food and nutrition, the clubs were well prepared to use the advice and instruction given to the best advantage, and reports show that the demonstrations were of real help to the housekeepers in their efforts to aid in conservation and substitution. This year the clubs are planning a gardening campaign, from which we hope to hear results at the next convention.

The many applications for literature from the Circulating Library on the subject of household accounts proves that the second phase of our aim is not neglected and that we are awakening to our responsibilities as consumers. Let us repeat once more that it is more important to teach a woman how to spend a dollar wisely than to tell her to save it, for wise spending is the truest conservation, and we can only spend wisely when we have a knowledge of food values, textiles and household furnishings, nor should we neglect to make a comparison in our budget between the amount spent for material comforts and that spent for the higher things of life, such as education, both mental and spiritual, of the children of to-day, who are to be the citizens of to-morrow.

The School Fair work, which will in the long run greatly help to keep the boys and girls on the farms by arousing their interest in and creating a greater respect for the professions of homemaking and agriculture, received even more than its usual share of attention, many of the clubs assisting with the prize list and doing a great deal to encourage the children to exhibit at the fairs. The Macdonald College demonstrators to the Quebec Homemakers' Clubs, co-operating with the Government demonstrators and the Macdonald College demonstrators for rural schools, gave nearly four months of their time to this work. Sixty-eight practical demonstrations on bread-making, cake-making and canning were given in the schools at various centres throughout the province. The School Fair Cookery Bulletin was revised and a new edition published.

It is now three years since the Homemakers' Clubs in Pontiac County, believing that the girls should have an equal opportunity with the boys for instruction in school fair work, arranged that demonstrations be given in the schools. At that time very few fairs were held in the province, but the work has increased so rapidly that the demonstrators to the Quebec Homemakers' Clubs find that in the past year they have had to encroach on the time which should have been devoted to club work, and as both are of equal importance, we hope that sufficient help may be obtained to sustain each.

The Travelling Libraries established in October, 1914, were called in and checked over. No books were missing and no damage was done other than the ordinary wear and tear to either books or cases. The library records showed that in all 520 books had been loaned since that time to the members. We urge that clubs which have not already made use of the Travelling Library should place their names without delay on the waiting list. These libraries contain the standard works on household science subjects and every homemaker should make an effort to do some reading along these lines every year. We note with pleasure that the clubs at Stark's Corners and Wyman are starting libraries for the use of their own clubs. We suggest that they arrange to have their librarian's name on the mailing list of the Publication Departments at Washington and Ottawa, in order that they may receive the list of monthly publications and add to their library anything which may be of value to them. Many of these bulletins are inexpensive, and contain a vast amount of information in an easily digested form.

The reports of the respective clubs show no diminution of effort in regard to Red Cross and other patriotic endeavors. The value of the work done, together with the amount of money contributed, represents a total well over $4,000.00. Despite the deep gloom of the war cloud, when one reads a report showing how a small group of a dozen or more busy rural women, who rise with the sun and cease not their labors until long after its going down, have raised two hundred dollars for Red Cross purposes and knit numerous pairs of socks as well, it is impossible not to see the silver lining. One sees a vision of days after the war, when this same spirit of patriotism will be directed toward the improvement of the schools and other essentials to the welfare of the rural community.

Last year an appeal was made that an effort be put forth to induce every woman in each vicinity where there was already a club to become a member and thus declare herself an ally of those who had banded themselves together under the motto, "For Home and Country" The reports show an increase in membership of 210, but there is still much to be done. We recommend that the clubs make a list of the women in their respective districts, in order that they may keep before them a constant appeal for their help and support in this work. The aim of our society is such that, if fully understood, no woman in any district can afford to do without us, nor can we afford to do without her. It was also advised that at least two meetings a year be devoted to subjects relating to education, that the men of the community be invited to attend and, whenever possible, leading educationists be invited to address these meetings. The reports show that there has been a great deal more co-operation between the men and women in the rural work, but very little was reported in respect to meetings suggested.

BINBROOK, ONTARIO, WOMEN'S INSTITUTE.

This Institute has adopted a Belgian child, and is keeping two prisoners of war in addition to the regular Red Cross and patriotic work.

Owing to pressure of work due to war conditions and the increase of School Fair projects, no organization work could be planned by the demonstrator, and the five new clubs organized this year owe their existence largely to the efforts of individual club officers and others interested in rural work, who succeeded in interesting the women of these districts to the extent of calling a meeting, at which the demonstrator and the officers of leading clubs were given an opportunity to present the aims of the organization.

In this coming year we feel that considerable time must be set aside for further organization. In the opening years of the war, Red Cross and other obvious forms of patriotic work absorbed the attention of people so completely that for a time it was almost forgotten that the Homemakers' aims were as truly patriotic as those of any other society. Our efforts along this line usually met with the remark: "Oh, the war will soon be over, and then we shall concentrate our efforts on the home and community." But the war has gone on, and the events of the past year have made it plain to the most skeptical that the homemaker has a large, distinct and important part to play in deciding the issue of this great struggle. The three important factors in the winning of this war are man-power, sufficient food, and money. In these days of conservation of food, clothing, everything, in fact, that will provide for our armies overseas and money to buy Victory Bonds, the nation turns to the homemaker. She is ready and eager to do her part, but alas she has been untrained for her profession. In the majority of cases she knows as little of food values as the clerk from the store knew about military drill. When the civilian is asked to serve his country in the capacity of a soldier, he is put under competent officers and thoroughly drilled for his work. Is it demanding too much that in future our homemakers be drilled for their work—the homemakers who have in their charge the army of the coming generation, whose duty it is to build up a strong and united Empire? In the meantime we have organizations such as the Homemakers' Clubs, upheld and supported by the Schools of Household Science. With these clubs it should be a matter of duty to extend their influence and do all possible to assist the homemakers of the Province.

The problems of homemaking, which involve all the important questions relating to conservation to-day, were studied by our clubs and similar organizations in other provinces before the demands of the war made food control necessary. As a natural result, we were already prepared to co-operate in a practical way with the authorities of the Food Board.

Here in our Province the Homemakers' Clubs were the first organizations to receive practical demonstrations on school lunches; one of the most important types of conservation, viz., conserving the health of the child; the canning of fruits and vegetables and the making of meat and wheat sub-

(*Continued from preceding page.*)

stitutes, the last named being put on even before the Food Pledge Cards were issued. All this is not merely for the sake of idle boasting, but that we should truly appreciate the work we are doing and its place in the making of the nation. In these days of stress and mighty endeavor, we, as an organization, should not fail to play our part. It is requested that every club make itself responsible for one organization meeting, and arrangements be made for such as early in the year as possible.

The Homemakers' Clubs' petition to the Government requesting a yearly grant was presented again this year by Mr. William Hodgins, member for Pontiac County. Letters were sent to the representatives in the counties in which we have organized, requesting their support for this petition. Encouraging replies were received from Messrs. Hay, Vilas, Mercier and Bissonette. The Minister of Agriculture has offered us a grant of ten dollars to each County Executive, but for this year only on receipt of a short report. This grant, though not as much as we hoped for, is encouraging, inasmuch as it shows recognition of our object on the part of the Government. Our progress toward a permanent provincial grant seems slow, but if we continue to do good work, our efforts will, I am sure, ultimately bring us success.

Last year we bade good-bye to Miss Fisher as head of the School of Household Science. This year we greet Miss Hill, who takes, as you may see, the same deep interest in our welfare as her predecessor, often sparing members of her staff to assist in the work.

Since our convention was held last June the franchise has been granted to the women of Canada. The rules of the Quebec Homemakers' Clubs forbid the discussion of religion and politics from the narrow standpoint of creed and party, and we are determined to stand by this rule, but the leaders are fully awake to the grave responsibility involved in this new order and shall endeavor to meet it by preparing studies along general lines of Civics and Government.

The first address of the afternoon was given by Miss Robina Stewart, R.N., Johns Hopkins, who read a paper on the "Conservation of the Child." Miss Stewart, from her wide experience, gave much valuable information in relation to the child welfare movement, its importance and its methods of work, following this with practical advice in regard to the necessity for the care of young children. The delegates felt that they had gained many new ideas in regard to this matter of such vital interest.

The next speaker was Mr. Desilets, of the Department of Agriculture, Quebec, who explained the work of the Cercles de Fermieres, the organization among the French-speaking women corresponding to the Quebec Homemakers' Clubs. It was felt that the aims and work of the two organizations were practically identical, and that much could be gained by each from a better mutual knowledge and co-operation. Both Mr. Desilets and Mlle. Anctil, of the Montreal French Technical School, who followed with further explanations, expressed their desire and hope that such co-operation could be brought about.

At the evening session Prof. McCready, of the Resources Committee of Ontario, spoke on "Education for Country Life." He believed that the reason the educational system of to-day was unsuited to the rural districts was because the people there did not demand a better one. He stated the probable reasons for this apparent indifference, and proceeded to outline a form of education, both for the one-teacher school and for the more desirable consolidated school, which he believed would meet the rural need, and urged the clubs to do all in their power to improve their school conditions. A brief discussion followed, led by Miss Drummond, of the Macdonald College High School.

After the session, Miss Hill held a reception for the delegates and members of the staff in the Main Apartment, where a pleasant social time was enjoyed and refreshments served by the graduating class in Household Science.

The following day, in Room 117, Miss Zollman gave a very practical and much-appreciated talk and demonstration on Dressmaking and Remodelling, showing how to choose and alter patterns, test and prepare materials, cut, construct and fit garments, afterwards giving many valuable hints on combinations and adaptations in the remodelling of old garments.

The members then proceeded to Room 101, where Miss Kirby illustrated in a very capable way the prescrvation of fruits and vegetables by demonstrating the canning of beans, beets, tomatoes and rhubarb. Methods of drying were also clearly explained, and a number of samples of canned and dried products were on exhibition.

Instead of proceeding to the dining-room for lunch, the members returned to Room 117, where the Household Science students had prepared for each a school lunch. Each delegate opened her package and spread out its contents, then went to a central table, where she was served with a cup of tea, which she took back to her place. This novel form of demonstration was apparently much enjoyed, and the lunches served seemed amply satisfying.

The afternoon session, in charge of Mrs. MacFarlane, was taken up with the discussion and passing of resolutions previously drawn up by the Provincial Executive and further reports of branch clubs, a number of members leaving the meeting early in order to visit the barns, where Prof. Barton conducted them through to see the cows at milking time and to visit the horse stables and the piggery.

The last session was held in the Assembly Hall in the evening. Mrs. MacFarlane introduced Miss Canon, of Cornell University, who has charge of the rural study clubs of New York State. Miss Canon outlined the growth and work of these clubs, whose organization is similar to that of the Quebec Homemakers' Clubs. The special work done by the study clubs during the war was explained and the fact emphasized that, because they were organized and had previously studied household problems, they were ready to act effectively when the emergency arose.

Miss Hill, in giving a resume of the convention, spoke of the way in which the two leading topics, Conservation and Education, had been carried out, and touched briefly on the main thoughts of the different speakers. She then dwelt on the oustanding features of the convention as it had appeared to her from listening to the addresses and reports, and said she felt that throughout it all ran the keynote of co-operation and a community spirit which showed itself in the work done in the past and planned for the future "for Home and Country."

Food Conservation.

Literature published by the Canada Food Board was sent to many of the secretaries of Ontario Branch Institutes, where summer meetings were held, for distribution to those in attendance. The chairman of the Board, Mr. H. B. Thomson, made a special appeal to the officers and members, quotations from which will be found below:

"On the occasion of your summer meeting, I want to thank you for your splendid co-operation with us and also to urge upon you the necessity for continued and even greater efforts than in the past. The food supply of our Allies is still dangerously low. Their cereal supplies are almost exhausted, and this continent has already shipped all its surplus. Amounts which will be available from more distant countries cannot possibly be large. Our own remaining supplies are small, and from them we must still share with our soldiers and Allies. The Mother Country and our Allies are also calling upon us for largely increased exports of meat, cheese, butter and other fats, and we must not fail them. The necessity for conservation is more urgent even than at any time heretofore. The next two months especially will be an exceedingly critical period, and we must do our utmost to support those who are 'bearing the brunt' of war sacrifices.

"In order to save wheat, the Canada Food Board has made arrangements for the milling of large quantities of corn flour, barley flour and other substitutes, and these are now available in ample quantities to meet domestic demands. No excuse should be accepted from dealers, because they can obtain plentiful supplies from the millers. The Women's Institutes can do more than almost any other agency in the Province to encourage the use of these substitutes. Fish, also, is available in large quantities if the demand for it can be so stimulated and organized as to make it practicable for local dealers to handle supplies of fish and offer them to consumers at only a moderate advance over wholesale cost.

"Another extremely important way in which the Women's Institutes can give invaluable leadership in rural communities is by encouraging utilization to the utmost extent of vegetable gardens. Great quantities of vegetables have been grown this year in all parts of Canada. These represent an important food resource, of which we should take the fullest possible advantage. As the fresh vegetables become available, they can be used in making a wide variety of appetizing, nutritious and healthful dishes. They are an important addition to our food supply, and their use will mean a large saving in those foods which are required overseas.

"The gardens will do much more than provide for present requirements. The surplus production should be canned, dried or stored, and thus made available during the fall and winter months. By so doing, every housewife can contribute to the attainment of the final victory. This work should be promoted and encouraged by Institute workers. There are many other ways in which you can help, but these will vary in different places, and your own organization can find many opportunities for food service.

"Co-operation of the organized women of Canada is required to-day as at no other time in our history. This is a time when the woman in the home can do vital war service. Well-fed soldiers will win the war. Such is our slogan. Let us see that provision is made to the limit of our power for feeding not only our soldiers, but also our civilian Allies overseas."

ONTARIO REPORTS.

Extract from a report of the clinic held under the auspices of the Emo Women's Institute, following medical inspection conducted by Dr. MacKenzie Smith, of the Women's Institute Branch:

"The good done by the clinic cannot be expressed in words when we consider the amount of suffering the thirty-seven children operated on have been saved from. I have asked a number of mothers about their children since the operations, and the answer invariably is: 'He seems a different child.' No sore throats and no colds. We had no trouble conducting our clinic, and not one patient gave us an anxious moment after the operation.

"Again thanking you, I am,

"Yours respectfully,

"MRS. GEO. A. LOCKING."

The Zurich Institute is planning some special work along the line of school improvements. The members are striving to make the school a more home-like place, considering the fact that so much of their children's time is spent in the school.

North Bruce Women's Institute Meeting a Big Success.

At the annual meeting thirty-eight representatives were present from the different Branches in the District, with the exception of the Branch at Tobermory. The reports were one and all exceedingly good. Of course, patriotic work was predominant, being naturally the first care of the women, but they showed their earnestness of effort and willingness by giving a good deal of attention to other matters, such as food conservation, medical inspection in the school, school gardens, libraries, etc. It would take too long to give a report of all the activities.

Our Lion's Head Branch had the best financial report. The president, Mrs. Hacking, stated that they make a systematic canvass each month of residents of the town for Belgian Relief and Red Cross work. All lunches are cut out and all non-patriotic socials barred. Just lately they have been holding a series of meetings in the town hall, where addresses are given by persons who can authoritatively give information and answer questions called up by war-time problems, such as "Do the soldiers really get the socks?" This is a question often asked. The first meeting of this kind was so good the Institute was asked to "carry on," and addresses have been given on "Peace at the Present Time," "Salvage of War," and other subjects.

Spry Branch hit on a bright idea for beating the middle man out of his profit. They bought a fleece, and are having the wool made into yarn, which it is

Wash Day Comfort

The Connor Ball Bearing Washer will take the hard work and drudgery out of wash day; will cut wash day in half and leave you more time for more enjoyable and profitable occupation.

Will not injure the clothes no matter how delicate the fabric may be.

The Connor Ball Bearing Washer will wash the clothes to snowy whiteness and always produce the most pleasing and satisfactory results.

It is an investment, not an expense, which you should decide upon making at once. The sooner you purchase a Connor Ball Bearing Washer the sooner you will combine pleasure with profit on Wash Day.

At your dealer or direct.

J. H. CONNOR & Son, Limited
Ottawa, Ontario

There IS a difference in Washing Machines. The Connor Washing Machines will give you best results.

VOLPEEK
WILL STOP THE LEAK

Don't throw away your Pots and Pans. "Vol-Peek" will mend Graniteware, Tin, Aluminum, etc., in two minutes without tools. Always keep it in the house. At dealers or from us, postpaid, 15 cents.
Vol-Peek Mfg. Co., Box 2024, Montreal, Can.

Consolidated Financial Statement of the
National Council, Y.M.C.A. of Canada
CANADA - ENGLAND - FRANCE

The National Council of the Y.M.C.A. herewith presents a complete statement of its finances for the year 1917, covering its entire service Overseas and in Canada.

The Executive Committee of the Council arranged last November to have a complete statement for the year 1917 ready for publication before the recent Red Triangle Fund Campaign, but owing to conditions arising out of Military operations in France, this has been unavoidably delayed. It is presented now at the earliest date that existing conditions have permitted.

The portion of the following statement which concerns England and France has already been submitted to the Overseas Military authorities. Audited statements of the funds handled have been submitted to the Militia Department at Ottawa and for the past two years regular accounting has been made as well to the authorities in England and in France. In addition to the regular audit in France, the canteen business is checked every month by the Military Field Cashiers, to determine the amount which is paid to Military units as indicated in the Expenditures. Printed copies of the audited statements are posted up in the huts for the information of the soldiers.

The General Operation Account shows on the one hand the entire receipts of the National Council; first, from the gross sales of its Military canteens in Canada, England and France, and second, from subscriptions received during the year. On the other hand, there is shown the entire expenditures for the year, including, first, the cost of the goods sold in the canteens and, second, the expenditures connected with the entire service which is carried on under the direction of the National Council.

The Balance represents the excess of receipts over expenditures. Of this the sum of $118,351.43 was the balance at the National Headquarters at Toronto, and the remainder was Overseas. This balance at the end of the calendar year represents the amount available to carry on operations until the time of the campaign in 1918. While the financial statement is drawn up on the basis of the calendar year, the receipts from the campaign of one year have to serve until the campaign of the next year. The above balance at the National Headquarters was by April 30th, just before the new campaign, not only used up but changed to a deficit of $237,930.13. This deficit was, however, offset by the balance overseas, which has to be maintained there as a working balance to carry on operations.

The item of $240,524.86 is a special amount which had to be expended for the purchase of canteen and other supplies in Canada for shipment to France. Beginning with June, 1917, on account of the scarcity of supplies in Great Britain, much of the purchasing formerly done there had to be transferred to Canada. The long period of time required for the shipment of these supplies to France involves the continuous employment of a large sum. The amount expended for this purpose, as at December 31st, has had to be treated as an expenditure and placed in a Reserve Account against the merchandise in hand. It is, however, a possible asset and will, when realized upon, be devoted to other forms of service to the soldiers, when it is no longer required to maintain the canteen service in France.

It was possible to provide for this expenditure only because the amount asked by the National Council in 1917 was oversubscribed by more than the amount required just at the time the Canadian Purchasing had to be undertaken. But for this it would have been necessary either to borrow this large amount or greatly curtail the service in France.

It is to be remembered that the goods at the front in France, where the greater part of the stock is carried, are subject to enormous risks. The English Y.M.C.A. in the German offensive of March and April suffered losses in huts and canteen supplies of nearly One Million Dollars. In the more recent offensive the American Y.M.C.A. has suffered losses nearly as large, and the National Executive have deemed it a matter of prudence to be prepared to meet a similar loss if it should fall on the Canadian Y.M.C.A.

The National Council has from the first declared the policy of devoting to the service of the soldiers whatever balance remains in the Military Fund at the close of the war. This policy has been made known to and accepted by the Overseas Military authorities. The need for the Y.M.C.A. service will continue all through the period of demobilization and the plan of the National Council is to use whatever balance then exists to keep up the efficiency of the service to the soldiers during that important period.

The National Council of the Y.M.C.A., under which the Military Work is conducted, is a representative body of the various Y.M.C.A.'s throughout Canada, but it has no authority over or financial responsibility for any local branch. The funds which it handles have no connection with those of any local branch of the regular Y.M.C.A. It wishes to make clear, therefore, that the funds which are acquired in or subscribed for the Y.M.C.A. Military Work have not been and will not be used in connection with the regular work of any of these branches, but will, according to the policy already announced, be kept in the Military Work and devoted exclusively to the service of soldiers.

The service represented in the expenditures of the accompanying statement covered at the opening of the present year, 96 centres of operation in France and 76 in England, including all regular camps and units, base camps, convalescent camps, hospitals, railway troops, cavalry, London and Paris, and forestry units from the north of Scotland to the south of France.

There were on the Overseas staff 133 Secretaries carrying honorary commissions, 50 of whom were at the expense of the Y.M.C.A. for pay and allowances and the remainder at the expense of the Government. There are also a considerable number of other ranks, non-commissioned officers and men, detailed to the Y.M.C.A. staff by the Military authorities. A number of these, who are given non-commissioned rank because of special responsibility, are at the expense of the Y.M.C.A. for the extra pay over that of their regular rank. Civilian help is also employed where required and where circumstances permit.

In Canada the soldiers are served in 38 centres, including camps, barracks, Red Triangle Clubs, hospitals, naval stations and on troop trains. This has required approximately 100 Secretaries, who work on a civilian basis and are entirely at Y.M.C.A. expense. There is also required a considerable staff of employed helpers, exclusive of the committees of ladies who render their service free.

The scope and variety of the entire service, in so far as expenditures can reveal them, are indicated in the accompanying statement.

Signed on behalf of the National Council of the Y.M.C.A.

G. H. WOOD,
Chairman.

F. L. RATCLIFF,
Chairman of Finance Com.

CHAS. W. BISHOP,
General Secretary.

General Operations for the Year ended 31st December, 1917

RECEIPTS

Operating Balances brought forward from 1916:—		
(a) At National Headquarters	$ 6,730.22	
(b) In England and France	59,963.43	
		$ 66,693.65
Remittances from Canada in 1916 received Overseas in 1917		123,606.67
Gross Canteen Sales:		
In Canada	153,544.03	
In England	594,263.21	
In France	2,233,990.09

				$4,329,653.97

AUDITOR'S CERTIFICATE

We have audited the books, vouchers and accounts of the National Council Headquarters at Toronto, and of the Central Territorial Division, for the year ended 31st December, 1917, and have been furnished with the audited statements of the Maritime and Western Divisions of the National Council for the same period. We have also been furnished with the Annual Statement for England for 1917, duly audited, and the Annual Statement for France for 1917 with the auditor's Certified Statement for the six months to June 30th. Owing, we understand, to Military restriction on civilian travel between England and France, it was impossible for the auditor to go to France and complete the audit to 31st December, 1917. We have agreed the Canadian and Overseas statements with the above General Statement, which combines them, and, according to the books and statements furnished, the above statement in our opinion, correctly sets forth the operations of the National Council at home and overseas.

Toronto, July 3rd, 1918.

expected will not cost them more than about one-third the present price of yarn.

The Colpoy's and Mar Branches both had splendid patriotic work reports. The Colpoy's Bay Branch have sent socks and Christmas boxes to their boys, had concerts and bazaars for Red Cross, sewing class and lunches. Mar, besides knitting socks and sewing, have a mite box, sent Christmas boxes and contributed to the W.C.T.U. fund for hot chocolate for the firing line.

Patriotic Food Show at the Industrial Exhibition, Toronto.

The readers of the CANADIAN HOME JOURNAL, who may attend the above Exhibition, should not omit a visit to the Patriotic Food Show Building. Food conservation and substitution are of vital importance to those who are serving their country in their own homes.

It will be of interest to know that Macdonald Institute, Guelph, has charge of the exhibit of fats, sugars, rations and also war breads; the Household Science Department of the Toronto University will demonstrate with fish; the Women's Institute Branch will have charge of the fruit and vegetable exhibits, where not only will the various ways of preparing vegetables be emphasized, but also the canning and drying of the same.

The demonstrators will be in their respective circles from 9 a.m. until 9 or 10 p.m., and information on the above mentioned exhibits may be obtained.

BRITISH COLUMBIA REPORT.

Surrey Institute Studies Bees.

On June 5th the members of the Surrey Institute met at Mr. Hugh's Apiary, where they enjoyed a demonstration on bee keeping. This is an industry peculiarly suited for women, and one which the majority of women who have attempted it have made a success. Certain sections of British Columbia are ideal for bee culture. It is, therefore, gratifying to see the proportion of Institutes that are bringing this industry to the front; no more patriotic action could be taken at the present time.

Kaslo listened to Mr. Keen, Speaker of the Provincial Legislature, on "Guardianship of Children and Minimum Wage for Women." Mrs. Norman gave a talk on "Canning and Preserving," Miss Hayes, "Strawberries, and How to Can Them."

Sooke met, and discussed "Home Canning." Canning clubs could be inaugurated in the districts to the great benefit of all. This is a line of work that the women's clubs of the United States have taken up to the mutual benefit of the country and city.

Tappen Women's Institute met on June 5th. Topics for discussion were: "British Columbia Laws." and "Some of the Little Things that Help to Build Character." The members of the Institute all over British Columbia are showing in no uncertain manner a determination to know and understand "Laws," and the object and result of "Laws."

Keep Baby's Woollens Soft and Sweet

Even little garments are dear now—you must make them last, and of course you want them always soft and comfy for the important wee person.

The little woollens need never shrink a thread—never stiffen or grow thick—not after repeated washings if you cleanse them in the pure, creamy Lux lather. It's so simple to whip the delicate Lux flakes into a rich suds—so simple to squeeze the suds through the little garments—then take them out absolutely sweet and clean and fresh.

Lux harms nothing that pure water may touch.

Teaching Truths Concerning The Beginnings of Life

(Continued from page 12.)

a "mistake" as rapidly as possible. To guard little children from stories of wrong and horror by which they are terrified, or their minds fouled by adults or other children forms no small part of the parents' task.

We pass on from this to the methods of instruction of older boys and girls of the period of adolescence. With the development of their own bodies comes the application of the various truths you have been trying to teach them from Nature or in allegorical form. Let the application be made tenderly and beautifully; let it be in connection with flower-life, with color, and sunshine and gladness. Give to them the thought of fullness, of development and the greatness of the trust that God, their Father-Creator, has put into their keeping.

Then slowly and carefully, without shock or tale of horror, point out that from the beginning of the ages it has been the Arch Fiend's plan to spoil or destroy any or all of God's beautiful work, and against this, God's most beautiful thought, has he levied his most vigorous onslaughts. Show them how the breaking of law brings its own punishment, and the slighting of a trust is sin. Never let them have to say in awful bitterness of soul, as they view a broken, ruined life, when their years are but few, "This would never have happened if Mother and Father had taught me about such things, *but they did not, and I did not know.*"

There occur to me, as I write, several instances, and that these are personal experiences will possibly be forgiven me when I say that, as such, I can vouch for their absolute accuracy.

Many years ago, before the thought of studying medicine had come to me at all, I had the good fortune to read Dr. Mary Wood-Allen's little books, which are classics for this teaching. I was so glad to find someone who put into language the thought of the beauty of God's work for which I was trying so hard to find expression. Thus, when other girls but a few years younger came to me with their puzzling questions, I told them eagerly and as well as I could the story as it had come to me, always in connection with flower life and beauty.

I count it among my great blessings to have had some of these girls come back to me in later years. Three of them, now happy married women, have at different times said to me somewhat as follows: One said, "I never think of the birth of a baby or of marriage relations except in connection with a flower; you told me about it that way, you know." Another, a trained nurse before her marriage, said: "I can see you yet, sitting there with a flower in your hand, explaining things to me, and then warning me so earnestly agaimst possible dangers I might meet."

The third is a mother of a number of children. All may be called "better babies," because each was deliberately planned for and greatly desired.

One day, in chatting to her, remembering that she had been a motherless girl, I said: "How did you ever get such sane ideas about all these things?" She turned a pair of surprised eyes on me. "Why, you told me all I ever knew about them." "I! Why, my dear, how could I have told you, when I did not then know myself?" "Not the actual facts," she replied, "but you *set my thought in that direction,* and the rest was easy to follow out."

That is it—the thought set in the right direction, and all is well. And, oh, my readers, wasn't it worth while? It was unpopular then, and rather peculiar, but even that was of no moment when one considers the harvesting.

The books written by Dr. Wimfield S. Hall are cheap, simple, scientifically true and adapted to all ages:

"The Mother's Reply," "An Open Letter to Parents"—For mothers of young children.

"The Doctor's Daughter," "Life's Story"—Young girls.

"Life Problems"—Older girls and young women.

"John's Vacation," "Strength of Ten"—Young boys.

"Chums"—Older boys and young men.

"Sex Hygiene"—Parents and adults.

Smoked Glasses

(Continued from page 10.)

dinner and when you weren't here by ten o'clock and there was no message I began to get worried."

"No message!" interjected her husband. "But I left a letter with Julia. She knew that I went to consult with Dr. Ryall."

"Then why didn't she tell me?" besought Jeanette, piteously. "She just hinted things and we found that you had taken your bag and that Dr. Oswald had your practice and I remembered what you had said about going to the front and we thought that you had gone there and were never coming back. We decided not to tell anyone, not even father and mother, for a week, but just to say that you were away on business and if there was no word by that time ——" she broke down again.

Evan was still too bewildered for more than an inarticulate murmur.

"You may go now and I'll bid you Godspeed." Jeanette consented, dabbling her eyes with a crumpled ball of wet linen. "I realized the truth as I lay awake in the dark. I would have given worlds for the touch of your hand." She took it up now and pressed it against her wet cheek. "Or even for the memory of a farewell unshadowed by anything except the sorrow of parting. Perhaps God will be good and send you back to us. But if it is necessary that you sacrifice your life for the greater good——

"I've been reading and I know that many a life is saved and many a boy kept from becoming a permanent cripple, because the surgeon is on the spot and has the nerve and the skill to act quickly. You may be instrumental in sending hundreds of other men back to waiting wives and mothers and babies even if you never come home to us. I dreamed last night of the boys who were undergoing operations without chloroform . . . and who were calling for their mothers . . . over in those hospitals which are so close to the firing line that no woman is permitted to enter."

"I can't understand Julia," ejaculated Evan, with a guilty fear that he *did* understand. "I'd like to shake the little wretch. You must have been in torment for a week while I was—"

"Some surgeons use the knife for cancer instead of permitting the victim to suffer for years," observed a cool, clear voice at the doorway. "This seems to be the proper cue for the entrance of the heartless and designing maiden." Julia's burnished hair was wind-tossed and her cheeks glowed from vigorous outdoor exercise. "Come on, Witch Marian," she added to the wee mite by her side. "Run and hug papa and then aunty will tell you a fairy story."

Papa, returned, had charms, but one of aunty's fairy stories would have demoralized the following of the Pied Piper himself. Julia ignored the fusillade of questions and accusations which were hurled in her direction and calmly extended her arms to the child.

"Once upon a time, Witch Marian—" the voice was low and musical, but there was a penetrating quality about it which made it perfectly audible above the exasperated voices of the other two. Evan saw that he must listen or resort to physical violence. He chose the former alternative.

"There lived a grey fairy and a green fairy and several pretty little rainbow fairies," the tale continued. "Now the grey fairy was once a beautiful sea shell pink fairy, but when all of the little rainbow fairies came and when she found herself in her own little house o' dreams she was so busy that she neglected her own gossamer soul dress and it became drabbled and soiled. Then she was the grey fairy."

Jeanette was listening intently.

"The green fairy was the grey fairy's sister," the voice crooned on. "She was just the naughtiest fairy ever! She

(Continued on following page.)

Set The Pace In Your Own Home Town

(*Continued from page* 13.)

of Hearts and the following jingle used on a poster:

"The Queen of Hearts she made some cakes
All in a war-time day,
The Knave of Hearts he thought those cakes
Fit to steal away.

Won't You Come and Steal Away One of Our War-Time Cakes?

"In return for which we will steal away a few of your pennies to help—" (name of cause for which sale is being given).

The Candy Booths.

Without any decoration the candy booth is, of course, attractive to the children. Nevertheless let us trim it up a bit. Popcorn balls hung by bright colored ribbons are appropriate for this table inasmuch as we are urged to use corn instead of flour, and molasses instead of cane sugar. At each corner of the booth place tins of corn syrup and honey—(these being advocated as the best of substitutes for sugar). The recipes of war-time candies are easily obtained either from the various magazines or from the Educational Department of the Food Board at Ottawa. All lovers of chocolate will be glad to know that there is plenty of chocolate and cocoa, and we are urged by the Government to use more freely this nutritious food. The chief change in our war-time candy is, instead of chocolate cream to have centres of dates, cherry, nut, etc. Therefore, the following lines are suggested for the chocolate poster:

Give me quick a chocolate cream, that's what I used to scream,
But give me now a chocolate nut and sweetly then I'll beam.

The following is suggested for the molasses poster:

Molasses candy is sticky and good, molasses candy is yellow
Molasses candy is best of the bunch, fit for a good little fellow.

The Pie Booth.

The only difference that one can really make between war-time pies and peace-time pies is in the matter of crust. For instance, serve a deep apple pie instead of an ordinary pie and sell custard, lemon, etc., pies. Really the best way to do with pie is to substitute and use puddings made with bread crumbs, and what is really better than a "Brown Betty Pudding"? While these puddings could hardly be sold at a bazaar still the housewives of the community will be able to make dishes appropriate for the table and the follcwing poster could be used:

Little Jack Horner sat in a corner eating his war-time pie,
He took one bite as if by right, and said: "What a good boy am I."

Many attractive decorations could be used for this table.

War Ditties for the Little People.

Now let us come to an interesting booth where are sold little booklets, "War Ditties for Children," and a booklet of war-time recipes. If you have a branch of Girl Guides in your district you might get them to compile these booklets.

The best way to present this to them would be to have a competition between the different patrols, awarding the prize to the patrol handing in the best recipes. The captain and the patrol leaders between them can design and make the appearance as attractive as possible. If you have no Girl Guid s in your district, this is a form of patriotic work which would probably appeal to any group of girls.

Appropriate sayings or verses can be scattered throughout the book, as, for instance, in the "Hints on Gardening" section: "Live close to Nature for great content."

Our "War Ditties for Children" we must make just a dear little book, for which you would gladly part with at least fifteen cents. It would hardly pay, of course, to have these little books printed, but perhaps you could get someone who would be generous with his time to typewrite them off; and if the girls are still good-natured, they could help to make attractive little covers, as well as help to compile the jingles.

Please, dear reader, do not smile at our samples for these ditties, for the writer does not come from a poetical family, but we feel sure that when you make up the real book you will be able to think out better verses yourself. The following is merely suggested to put on the poster for the booth at which these little books are to be sold:

Jingles, jingles to the children tell;
It honestly will help grim hunger to quell.

"War Ditties for Children" Sold Here.

Needless to say, we will jot down only a few ditties, but the verses given for the various posters, especially the ones for the candy, might also be used.

A Song of Bread.

Mary, Mary, do you always eat *white* bread?
Ask your daddy to buy for you *brown* bread instead.

Wishing.

I wish I had a sugar mountain ever so high,
Filled with all the goodies for which children sigh;
And I wish somewhere I'd find a whole pile of ships,
Or perhaps I'd whittle them from bamboo chips.

Then with you I'd take a trip across the deep, blue sea,
And say to French children, "These cakes are from me;
I've far more to eat than is good for me, they say,
So let's 'divvy up' and hold old Bill at bay."

Now, dear reader, what are you going to do about this war-time sale of cooking? Will you not take the initiative in your district, or if you have neither the time nor strength to do it yourself, interest some friend who has, and make the conserving of food *attractive* as well as practical. You know from your own experience that if a thing becomes stylish, so to speak, the rank and file of people will fall into it quicker and with more spirit than if they read volumes of books on the same subject or listened to the most oratorical of speeches. Make it "the thing" in your district to serve unfrosted cakes and war-time candies only. We emphasize again—make it stylish.

The old saying is still true that "great oaks from little acorns grow," and small ideas sown here and there through rural communities (for of such communities is Canada largely composed) will soon mount up to a mighty wave which will sweep from "the Atlantic to the Pacific"; and surely every housewife wishes to be riding upon the crest of that wave, holding firm over her heart, for the sake of her boys in France, her merit badge of a "Soldier of the Kitchen."

Smoked Glasses

(Continued from preceding page.)

was always playing pranks and pulling curls and getting into all sorts of mischief.

"There was a king fairy, too, with a heart of gold. But the grey fairy had forgotten that he was a king. She couldn't see his heart nor his crown. Nothing but his everyday. brown robe."

"Was there a dragon?" demanded Witch Marian, wriggling onto her knees and putting both dimpled hands on aunty's shoulders.

"Yes, and he was such a funny dragon," twinkled Julia. "He had a queer name, too. He was called the Dragon of Domestic Dullness. 'Course you never heard that name before. And

(*Continued on page* 41.)

AN IDEAL SUMMER OUTING.

The Provincial Government of Ontario earned the gratitude of all lovers of out-of-doors when it set apart, in 1893, nearly two million acres of heavily timbered land starred with beautiful lakes and winding streams, as a preserve for the wild things and a recreation ground for the people. They called it Algonquin Park. Away up in the "Highlands of Ontario," 200 miles north of Toronto, 170 miles west of Ottawa, and two thousand feet above the level of the sea, this lovely region remains to-day unspoiled, a perfect refuge for the creatures of the forest, and an ideal camping ground for the sportsman and business man. The Grand Trunk operate hotel and log cabin camps, which offer first-class accommodation in this wild and rugged playground. Illustrated descriptive literature may be had for the asking. Write C. E. Horning, D.P.A., Toronto.

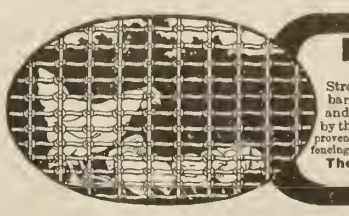
Turnbull's "M" Bands For Babies

Are a necessity for every Infant from the date of its birth

They are made only of the softest and purest Australian Merino Wool, finely knitted, thus keeping the baby warm and comfortable.

The tapes, which are attached to the tabs front and back of the "M" bands, and go over the shoulder, carry all the strain of the diaper, absolutely preventing any stretching of the garment.



The diaper is pinned to the tabs, which not only provide a firm hold for the pin, but due to the support given by the tapes keep the diaper snugly in proper place, no matter how active the infant may be.

Put up in sanitary boxes in sets of three. Price $1.50 per box.

Sold by the best dry goods shops or direct by mail.

Send for a box to-day—giving age of Baby

Knox Butter Scotch Rice

Wash one-third cup rice and cook until nearly tender in a double boiler with two cups of milk, scalded, and one fourth teaspoonful salt. Meanwhile cook together in a shallow pan one cup of brown sugar and two tablespoonfuls of butter until it gets very dark brown, but not burnt. Add to this the rice and milk and finish cooking until the rice is tender and the carmmel melted. Soak one envelope Knox Sparkling Gelatine in one-half cup cold water until it is softened and then dissolve it in one cup of hot milk. Strain into the cooked rice mixture and turn into a cold, wet mold.

MRS. KNOX'S Book on "Food Economy" contains many more delicious and inexpensive recipes for cool, summer dishes like the one above—most of them made from little odds and ends of meat, vegetables and fruit that are ordinarily thrown away She has prepared this book to help the patriotic housewife keep her pledge to Mr. Hoover and at the same time to serve low-cost foods that are appetizing and nutritious. Every recipe approved by the Food Administration. Send for a copy. Free for your dealer's name and address.

Our Neighbors at The Tansy Patch

(Continued from page 18.)

It was war to the hilt between Granny and Salome from the start. Granny attacked first, without the slightest provocation. Salome had gone through the spruce wood to call the children home to dinner. Perhaps Granny found Salome's expression rather trying. Salome always did look very well satisfied with herself. At least, something about her seemed to grate on Granny's nerves.

"Yah!" she shrieked vindictively, "your grandfather hanged himself in his horsestable. Go home, jail-bird, go home."

Outraged Salome was too much overcome to attempt a reply. She came home almost in tears.

"Ma'am, my grandfathers both died most *respectable* deaths."

"You mustn't mind what Granny says, Salome," I said soothingly.

"Indeed, ma'am, nobody should mind what a lunatic says. But it is hard for a decent woman to have her grandfathers insulted. I do not mind the name she called me, ma'am, but she might respect the dead."

Granny respected nothing on earth. T. B. who, although he hated her, had a certain pride in her, told tales of her repartee. On one occasion a new minister had stopped on the road and accosted Granny over the fence. He was young and callow, and perhaps Granny's eyes disconcerted him, for he certainly worded his question rather inanely.

"Can you tell me, madam, where I am going?" he asked politely.

"How should I know where you are going, gosling?" retorted Granny. Then she had burst into a series of chuckles which had completed his discomfiture. The poor young man drove hastily away, crimson of face—"looking like thirty cents," declared T. B. with a relish.

On another occasion Granny routed an automobile. One, filled with gay hotel guests, had stopped at the gate. Its driver had intended to ask for some water, but Granny did not allow him to utter a word.

"Get out of this with your demon machine," she yelled. She caught up the nearest missile, which happened to be her dinner plate, and hurled it at him. It missed his face by a hair's breadth and landed squarely, grease and all, in a fashionable lady's silken lap. Granny followed this up by a series of fearsome yells and maledictions, of which the mildest were "May ye never have a night without a bad dream," and "May ye always be looking for something and never finding it," and—finally—"May ye all die to-night. I'll pray for it, that I will."

The dismayed driver got his car away as quickly as possible and Granny laughed loud and long.

"My old Granny's the limit," declared T. B.

If Joseph was Granny's favorite, poor Charity was her pet detestation. Charity was the oldest of the family; she was eighteen and a good-hearted, hard-working creature. Almost all the work that was done in that house was done by Charity. Consequently, she had little time for visiting, and her calls on us were few. She was a dark, rather stocky girl, but had her share of the family's good looks. She had dusky red cheeks and a very pretty red mouth. Granny vowed that Charity was "a born fool"; Charity was very far from being that, but she certainly did not possess very much "gumption," as Salome said. She had no taste in dress and went about one summer wearing an old rose gown with a bright scarlet hat.

"Oh, if only something would happen to one of them, ma'am, before they dislocate my eyes," groaned Salome.

One day something did happen. A glad Salome told us of it.

"Charity Conway won't wear that dress again, ma'am. Yesterday when she was going to church she found a nest of five eggs in the field. So she put them in the pocket of her petticoat and when she got to church she forgot all about them and sat down on them and the dress is ruined, ma'am. It is a good thing, but I am sorry for poor Charity, too, for Granny is mad at her and says she won't buy her another dress this summer."

PART II.

If Charity came to see us but seldom, Dorinda made up for it. Dorinda was a constant guest. Dorinda was sixteen and Dorinda wrote poetry—"bushels of it," so said T. B.

The first time Dorinda came she wanted to borrow some mutton tallow.

"I have chapped hands and I find it difficult to write poetry with chapped hands."

"I should think you would, miss," said Salome; but she got out the mutton tallow.

Dorinda bored us to death with her poetry. It really was the most awful trash. One line, however, in a poem which Dorinda addressed to the returned soldiers of the Boer War, always shone like a star in our family memory.

"Canada, like a maiden, welcomes back
her sons."

But Salome thought it wasn't quite decent!

"If there was only a wood-pool near here!" sighed Dorinda. "I can write my best only by a wood-pool."

"Why not try the pond?" suggested Salome.

"My Muse," said Dorinda, with dignity, "only inspires me by a wood pool."

I cannot remember the names of all Dorinda's poems. Some of them were, "Lines on a Birch Tree," "Lines to My Northern Birds," "A Romantic Tail," and "Lines Written on a Friend's Tansy Patch."

Dorinda was stout but very good-looking. She had magnificent hair—great masses of silky brown curls. She always dressed it beautifully, too. But, like all mortals, Dorinda was not satisfied.

"I wish I was sylph-like, Mrs. Bruce," she sighed. "A poetess should be sylph-like."

The relations between Dorinda and Aunt Lily were not as cordial as their common addiction to literary pursuits might pre-suppose. There was some antagonism between them, the cause of which we never knew. But it resulted in T. B. hating Dorinda with an unbrotherly hatred and deriding her poems unmercifully.

One little white blossom of pure affection bloomed in the arid desert of T. B.'s emotional life. He loved his Aunt. She sympathized with his pursuits and, in spite of her lackadaisical ways, was not afraid of his snakes. T. B. would not allow Granny to abuse Aunt Lily.

"How did you stop it?" queried Salome, anxiously.

"The first time she turned her tongue loose on Aunt Lily I went up to her and bit her," said T. B., coolly.

"You ought to bite her oftener," said Salome, vindictively.

"There ain't none of the rest of us worth standing up for," said T. B. "Granny's tough biting."

T. B. figured conspicuously in Aunt Lily's diary. She seemed to centre her maternal affection in him.

"I wish I could educate T. B.," she wrote, "but alas, I am poor. How bitter a thing is grinding poverty! My poor brother is a genius, but he makes no money. And I fear he will never find the treasure he seeketh. Like myself, he is misunderstood and unappreciated. My beloved T. B. lacks many things which should pertain to youth. I patched his best trousers to-day."

Many of T. B.'s speeches and exploits figured in the diary.

"For, perhaps, in spite of all, he may be famous some day," wrote Aunt Lily, "and then this neglected diary, written by a woman whose hopes in life have been blighted, will be of inestimable value to a biographer in search of material. I have noticed that the boyish pranks of great men are of surpassing interest. I could wish that T. B. used less slang. But English undefiled is seldom heard to-day. Alas, for it! I feel that T. B.'s association with the refined family who are now sojourning at the Tansy Patch may be of great help to him."

I don't know that we "helped" T. B. very much, but Salome tried to do him good in a spiritual way. She was much horrified to find that T. B. was a skeptic and prided himself on it. Accordingly, Salome took to lending him books and tracts and bribing him to read them, with doughnuts. One of them was the "Memoir of Susanna B. Morton"—an account of the life and early death of a child of extraordinary piety. Salome used to read it and weep over it Sunday afternoons. T. B. enjoyed the book, but scarcely, I fear, in the way Salome desired.

"Ain't Susanna a holy terror?" he would say to me with a grin. T. B. had a sense of humor and that book tickled it.

Una, too, told him sweetly that she meant to pray for him; but this roused T. B.'s dander instantly.

"You ain't! Don't you dast! I won't be prayed for," he shouted.

"Oh, T B., aren't you afraid of going to the bad place?" whispered poor Una, quite aghast.

"Nix on that"—contemptuously. "I don't believe there's any hell or heaven either. When you die that's the end of you."

"Wouldn't you like to go on living?" asked Dick, who enjoyed drawing T. B. out.

"Nope. There's no fun in it," said the youthful misanthrope. "Heaven's a dull place from all the accounts I've heard of it. I'd like a heaven full of snakes and ants and things, though. There'd be some sense in that kind."

"How are your ants coming on?" I queried.

T. B. was transformed in a moment. He sat up, eager, alert, bright-eyed.

"They're durned int'resting," he exclaimed. "I sat all day yesterday and watched their doings in that nest below the garden. Say, but they're quarrelsome little cusses—some of 'em like to start a fight 'thout any reason, far's I can see. And some of 'em are cowards. They gits so scared they just double theirselves up into a ball and let the other fellow bang 'em round. They won't put up no fight. Some of 'em are lazy and won't work. I've watched 'em shirking. And there was one ant died o' grief 'cause another ant got killed—wouldn't eat—wouldn't work—just died. Tell *you*, I wish humans was as interesting as ants. Well, so long. I must be gitting home to dinner."

Always in the winter, which we spent in our town home, the children kept up a correspondence with T. B. He wrote very interesting letters, too, allowing for eccentricities of grammar and spelling. Aunt Lily wrote me wondrous underlined epistles, full of sentiment, and Dorinda sent us a poem every week—on "Memories of Other Days" or some kindred subject. We often wondered what life must be in the house beyond the spruces in winter, when Granny must perforce be cooped up indoors. Salome shuddered over the thought of it.

It was not until our fourth and last summer at the Tansy Patch that we were ever asked to partake of a meal in the Conway establishment. One day, not long before our final departure, T. B. came over and gravely handed us a formal invitation, in Aunt Lily's handwriting, on a soiled, gilt-edged correspondence card. We were asked to supper the next evening at seven o'clock. Salome got one, too.

"Surely, ma'am, you'll never try to eat a meal in that house!" she exclaimed. "Why, I *have* heard that they've been known to mix up cakes *in the wash-pan*, ma'am. And remember the dog and the soup, ma'am."

"But they threw the soup out," said Una.

"I think Mr. Bruce and I must go," I said. "I do not want to hurt Aunt Lily's feelings. But you can please yourself about going, Salome."

Salome drew a deep breath.

"I'd rather go to supper with the king of the Cannibal islands, ma'am," she said. "But if you are determined to go, I'll go too, and we'll all be poisoned together."

I really believe Salome was curious. She wanted to see what sort of meal "them lunatics" would put up.

We all got a surprise. The Conway supper table was as pretty a one as I have ever sat down to. The linen was spotless. The china and silver old and good—evidently relics of Granny's palmy days. The decorations of ferns and wild flowers were charming, and the awful lamp, with its hideous red globe, which stood on a corner table, cast a very becoming rose-light over everything.

"You see, we can put on style when we want to," said T. B., slyly.

All the family were dressed up for the occasion. "Paw" in a dark suit and white shirt, was handsome and presentable. Aunt Lily for once had her hair done nicely and she and the girls, in their pretty muslins, looked quite charming. Even Granny had on a new black silk and a fresh cap; and, if she could only have held her tongue, might have passed for a decidedly handsome and aristocratic old dame. But that Granny could not do.

"I hope you've got more in your head than you carry on your face," she said when Dick was introduced.

Having said that, however, she behaved herself quite well during supper.

(Continued on following page.)

Our Neighbors at the Tansy Patch

(*Continued from preceding page.*)

The bill of fare presented to us was surprisingly good and—what was still more surprising—quite fashionable. Charity must have studied household magazines to some effect. Everything was so delicious that we could not but enjoy it—despite sundry disconcerting recollections of gossip concerning snakes and wash-pans. We had angel cake that night and, whatever it was mixed up in, it was toothsome. Salome, in particular, was much impressed by the "style" and menu. She never spoke quite so scornfully of them afterwards.

"They may be lunatics, ma'am," she said, as we went home. "But that silver was solid, ma'am, and that cloth was double damask and there was initials on the spoons; and when all's said and done, ma'am, there's *family* behind them whatever they've come to."

"I hope you got your craws full," was Granny's parting salutation.

We all noticed how pretty and chipper Aunt Lily was that night. She was quite bright and animated. The reason therefor was disclosed soon after when Aunt Lily informed us that she was going to be married. She was very well satisfied about it too, in spite of her tired heart and blighted life. We discovered that the bridegroom elect was a common-place farmer living near the hotel.

"He's no beauty," T. B., informed us, "and Granny twits Aunt Lily with it. But Aunt Lily says she'd marry him if he was as ugly as a gorilla because it is his soul she loves. I dunno nawthing about his soul, but he's got the dough and he's going to educate me. Aunt Lily told him she wouldn't have him if he didn't. I'm going to live with 'em, too. Say, won't I be glad to get away from Granny's tongue and Dorinda's poetry? It makes me feel young again."

"How on earth will that woman ever keep a house, ma'am?" said Salome. "I pity that poor man."

"He is very well able to keep a servant." I said, "and I have always had a suspicion that Aunt Lily is not by any means as die-away as her looks, Salome. The woman who arranged that supper table must have something of what you call 'gumption.' Anyhow, everybody is so well satisfied that it seems a pity to carp."

"Oh, I like the creature and I wish her well, ma'am," Salome rejoined, with a toss of her head. "And I'm glad poor T. B. is to have his chance. But say what you will, ma'am, George Black is marrying into a queer lot, and that is my final opinion, ma'am."

Aunt Lily meant to give up keeping a diary, so she informed me.

"I shall not need it," she said. "I can pour out my soul to my husband. I have put the past and all its sadness behind me. Will you help me select my bridal suit, Mrs. Bruce? I *did* want to be wedded in a sky-blue gown—the tint of God's own heaven, Mrs. Bruce. But George says he would like a plain dark suit better and I believe that a wife should reverence and obey her husband. I am no new woman, Mrs. Bruce, and I believe in the sacredness of the conjugal tie. The secret of life is devotion, Mrs. Bruce."

"I'm very glad you are taking T. B. with you," I said.

"I could not dream of leaving him behind, Mrs. Bruce. My heart is knit to his. I trust that in my home his surroundings will be more uplifting than they have hitherto been. In an atmosphere of calm and joy I feel sure that he will develop, Mrs. Bruce."

The next week Aunt Lily and T. B. went to the new atmosphere of calm and joy and we departed regretfully from the Tansy Patch. As we drove away in the still evening we heard "Paw" fiddling gloriously on his stoop; and as we turned the corner of the road and passed the house Granny shook her stick at us with a parting malediction.

"May yer potatoes always be rotten," she shrieked.

But—"Paw's" fiddle followed us further than Granny's howls, and our memories of our Tansy Patch neighbors were not unpleasant ones.

"When all is said and done, ma'am," was Salome's summing up, "them lunatics were interesting."

THE END.

B&B Adhesive Plaster Tape

Has a Thousand Uses

Mends Rubber

A Rubber-Coated Tape

Strong and enduring. It sticks to anything that's dry and stays stuck. It mends anything, and mends it firmly, whatever the material.

Insulates Wire

Saves Countless Dollars

Think of the things you throw away when a bit of tape could mend them.

Lawn hose, for instance. You can double its life if you mend the breaks with B & B Adhesive.

Any rubber article can be mended instantly.

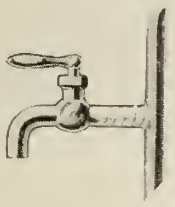
Leaks are stopped in metal pipes, and in automobile inner tubes.

Clothing tears are mended so you cannot see them, by attaching B & B Adhesive on the under side.

Grips are made for golf clubs and for tennis rackets. Simply wrap them with the tape—no wetting. And it sticks like glued-on canvas.

Broken handles are repaired in a moment, and for good.

Anything broken, anything torn—whatever it is made of—can be lastingly repaired.



Electric wire connections can be insulated with it, for the tape is rubber-coated.

Prevents Chafing

Fruit jars can be sealed.

Chafing and blistering of hands and heels can be pleasantly and easily prevented.

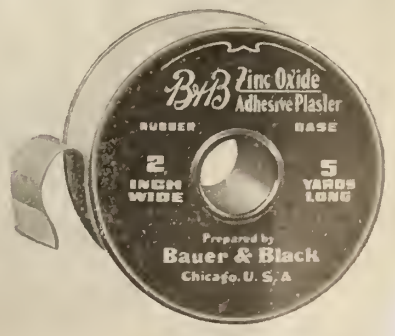
Stops Leaks

Ever-Sticky Rubber

This is fabric tape, one side of which is ever-sticky rubber. Surgeons use it for attaching bandages, for holding splints and strapping sprains. Millions of yards are yearly used for every day repairs.

Be sure to get the right kind—B & B Adhesive Plaster Tape. Made by experts in a special way, to fit this all-round service.

It comes on spools in various widths and lengths. But the larger spools, five or ten yards, are most economical.



Get it to-day, and always keep it handy. Carry a spool in your car and in your travelling bag.

Our Adhesive Book pictures 80 uses. Ask your druggist for it free—when you buy B & B Adhesive.

Sold by Druggists In All Sizes

Today Will Never Come Again

TIME wasted on street cars and other ways by some men during the year would buy a Ford Car for them, figuring their time at its money value.

If a man earning $2400.00 loses one hour each day, his lost time for the year would be worth $300.00, or half enough to buy a Ford Car.

Whatever *your* time may be worth, a Ford will make it more valuable.

Perhaps you are a salesman or traveller. The horse is too slow—the street car doesn't always travel just where you want to go, and waiting for trains means hours at a time wasted.

With a car, you are hampered by nothing. You go and come just when you are ready, and travel just where you please. Every city street, every country road is a road for the Ford.

Sit down and figure up what a Ford would save you in time and money, and even without considering the added comfort and convenience in your daily life, we believe you will be convinced that you should get your Ford without further delay.

After The War—What?

(Continued from page 8.)

widows with poverty and low wages, and the like? (Surely reconstruction is needed here.)

Or we go into a court-room, and hear the judge and lawyers, and see the officers and the jury—all men; not a woman official, and never a woman called on the jury, even when the prisoner is a helpless woman accused of a crime in which she took part as the victim of a man who has escaped arrest and will never be even tried for his crime. But now we must turn around, get a new orientation on these problems, and do some social reconstructing here, for these problems concern the community—and women form half of every community.

Useless Judges and Officials.

Or we peer a little farther into the sacred mysteries of official life, and we find judges, court clerks, sheriffs, registrars, crown attorneys and a host of minor officials (this in Ontario at least) with so little to do, and costing so much in salaries and fees, that we wonder if the Provincial Government doesn't need a push or a pull around, so that they can get a new orientation, and perhaps do some useful reconstruction, and save a lot of money for the war-debts! Some of these county judges have so little to do that they get quite rusty in law matters, and rusty in temper as well. Why not bunch four or five counties in a group, and have one or two able-bodied and bright-brained judges who would go about to the towns and villages and hold court when cases require them? And as for the sheriffs, registrars and all the other officials, why not have a central office in the district formed by the group of counties, and man (or woman) it with enough officials to do the work well, and send the surplus officials off to dig, or plow, or make boots, or do something productive and useful to the community? Better still, why not set these well-informed and experienced officials to teach the older scholars in public and high schools the nature of our civil and social life and institutions, so as to give them broad ideas of citizenship? Also, why not get these officials to give public addresses on community life in its various phases, explaining the relation of the village or town to the county, and the county's relation to the Province, and the relation of the Province to the Dominion, and so on. Such officials would be the most competent persons to speak of these things from practical and official experience, and they would thus add interest and value to school and community life. The money now spent on them in salaries and fees would be productive in the most important sense by improving citizenship and social conditions in the community.

How to Develop Leaders.

Leaders are needed in every community; but leaders already exist, in the persons of the clergymen, doctors, lawyers, town and city officials, manufacturers, merchants, school-teachers, labor advocates, retired men and women who have had wide reading and experience of life. All these should be utilized for social instruction and guidance. Members of Provincial Legislatures and Dominion Parliament also should be leaders in all such matters as these; and if the people were really desirous of knowing about social, political, economic and other questions of direct concern to every community, they could obtain the services of these legislative leaders. By such activity, carried on in debating clubs, social centres, communities and groups, the people would have developed from among themselves men and women who could with profit handle any ordinary subject of discussion for the benefit of the public. Singing and dramatic representation of historical events, pageants of local interest, and all such forms of entertainment and enlightenment as could be utilized, would develop the talents of the community in a surprising manner, and bring about reconstruction and improvement on the safest and sanest possible lines.

Let us think reconstruction; let u desire it and determine on it, and l us begin to practise it in our own pe sons and circumstances, rememberi that a community, a city, a nation, t world, is made up of individual men a women, and the characteristics, a habits, the training, the ideals of on t,

(Continued on page 42.)

Monarch Floss

Write for Shade Card

THE good old-fashioned occupation of hand knitting is now enjoying an astonishing revival in popularity. Wherever you look you will see ladies busy with the knitting needles, producing socks and other comforts for the soldiers and innumerable articles for use in their own home circles.

And what occupation could be more suitable as a pastime than to knit, whether from motives of patriotism, economy, or both?

Almost limitless are the things you can make with a set of knitting needles and a few balls of the beautiful Monarch Floss.

This beautiful yarn—Monarch Floss—is a 2-ply yarn, made in our own plant by expert spinners from a very fine grade of Australian wool. It is uniform in size throughout every inch of its length and of a beautiful soft texture, giving the garments made from it a softness, elasticity and finish that you will be very proud of indeed.

Ask Your Dealer For Monarch Floss

Monarch Floss is Made in

30 SHADES

And put up in one-ounce balls. All good dealers carry a full range of this popular yarn. They can also supply you with "**Monarch Down.**" This is recommended where a heavier yarn than Monarch Floss is required. Like Monarch Floss, it comes in 30 shades, put up in convenient one-ounce balls.

Your Real Success In Life Is YOUR BABY

It is your baby who shall inherit the country our boys are redeeming and saving to-day, by dying for it. It is really for the baby that the war is being fought.

It is upon the baby of to-day that the great work of Reconstruction will fall, and we must see that they are prepared for the responsibilities.

No child can be mentally and morally strong who is not physically strong.

Are we giving the baby a fair chance? Surely not. Listen: In the Province of Ontario in 1916, 7,000 babies died under one year of age; 9,352 under five years of age.

A large number of babies die because their mothers do not know how to care for them, not because they do not love them.

The baby's chief needs are:

FARE, CARE and AIR

Fare: Your baby will have the best chance of living if breast fed. Nearly every mother can nurse her baby if she desires. Seven to ten times more "Bottle Babies" than "Breast Babies" die every year. Breast-fed babies can stand heat, sickness and dirt much better than "Bottle Babies."

Very often a baby's digestive organs are injured because the mother caters to the child's wishes rather than to the needs of the child.

A child will thrive on milk alone for the first twelve months.

Many babies cry from over-eating as well as from hunger. The following diets for various ages will be of value to mothers:

FROM THE BOTTLE TO TABLE FOOD.

Diet, 12-18 Months.

Note—All cereals to be used by children should be cooked for four hours; all vegetables for 30 minutes.

First meal, 6 a.m.—Milk, 8 to 10 ounces, and thick barley water. The juice of one-half and later of a whole orange may be given at 9 a.m.

Second meal, 10 a.m.—(1) Milk with stale bread.

Third meal, 2 p.m.—(1) Chicken broth, with stale bread broken in, (2) drink of warm milk if desired, stale bread.

Fourth meal, 6 p.m.—(1) Milk with stale bread.

Fifth meal, 10 p.m.—Milk, 8 to 10 ounces, and thick barley water, 2 ounces.

No bottles after the first year; drink milk from cup or glass. Use pasteurized or scalded milk.

Diet, 18-24 Months.

Breakfast, 7.30 a.m.—(1) Juice of whole sweet orange, (2) cereal cooked at least three hours, corn meal, sweetened (one-half to one teaspoonful of sugar), with milk. Glass of milk, warmed, with very stale and preferably dry bread.

Second meal, 11 a.m.—Glass of warmed milk with very stale bread.

Dinner, 2 p.m.—Choice of (1) one cup of broth or soup made of beef, and thickened with farina, (2) soft boiled or poached egg, one-half baked potato and glass of warmed milk. Dessert, stewed prunes.

Supper, 5.30 p.m.—Well cooked cereal with milk, glass of warmed milk, stale bread and milk.

Give at least four glasses of milk a day. No food between meals. Water several times a day.

Diet, 2-3 Years.

Breakfast, 7.30 a.m.—The juice of one sweet orange. A well cooked cereal, oatmeal, sweetened (one-half to one teaspoonful of sugar), poached egg with stale bread or toast. Glass of warmed milk.

Dinner, 12 to 1 p.m.—(1) Soup, chicken, thickened with peas, (2) chop, (3) asparagus, baked potato. All vegetables should be very thoroughly cooked and mashed. Glass of warmed milk. Dessert—Stewed prunes.

Supper, 5.30 p.m.—Well cooked cereal, bread and butter and cocoa, apple sauce.

No food between meals. Water several times a day. Out-of-doors as much as possible.

Diet, 3 to 6 Years.

Three meals a day: 7.30, 12.30, 5.30.

Milk should be the main article of diet.

Cereal must be cooked three to four hours.

Scene outside Baby Clinic, Brampton, Ont., June 25, 1918.

Oatmeal should be given several times a week on account of its action on the bowels.

Bread—Dried off—not browned—in oven. Whole wheat or graham bread is best. Graham or saltine crackers can be given, and zwieback.

Care: (1) *Bathing.* The best time for baby's bath is before the morning feeding, between 8 and 9 o'clock. He should be bathed daily. Baby should have his own towels, and wash cloths. The temperature of the water should be 90 degrees to 100 degrees F. In hot weather frequent sponging will make the baby feel comfortable.

(2) *Clothing.* All baby's clothes should be loose and roomy, hanging from the shoulders. Do not put too many clothes on the baby. In summer he only requires a shirt and diaper and thin muslin slip. In winter, protect him from cold and draughts, but do not put on so many clothes that he will perspire.

(3) *Sleep.* A baby must have sleep. Out of twenty-four hours, a young baby requires 18 hours' sleep; at six months, 16 hours; at one year, 14 hours. The sleeping room should be darkened and well ventilated, windows open top and bottom; protect baby from draughts.

Air. The baby should be in the open air as much as possible, sleeping and awake. Mosquito netting should be used to protect him from flies. In cold weather, protect him from draughts.

Exercise. The baby needs exercise. This will make him grow.

Have we all got sufficient of the spirit of universal motherhood to want to see that every baby has a fair chance in life?

Every man and woman in the Province of Ontario should see that a Better Health Campaign is started at once.

The Government will assist you. The Provincial Board of Health is particularly interested in the child up to six years of age, and will send to any part of the Province:

A CHILD WELFARE EXHIBIT

free of charge, upon request. This exhibit consists of posters, a model layette and photographs illustrating baby welfare work in England and Canada.

2. A trained nurse to accompany the exhibit.

3. Free moving pictures in connection with the exhibit.

4. Free child welfare clinics for infants and children under six years of age.

The Ontario Department of Agriculture, through the Women's Institutes Branch, is prepared to carry on a limited amount of medical inspection in the rural schools, and to assist in the holding of clinics.

PLANS FOR MEDICAL INSPECTION.

through the co-operation of the Women's Institutes and School Boards.

1918.

Procedure Necessary in Arranging for Medical School Inspection and School Clinics.

1. Any Women's Institute wishing to promote or assist in bringing medical school inspection to a community will first have to secure the consent of the Board of Trustees of the schools concerned. The schools inspected in any one centre should include at least three rural schools and not less than one-third of the pupils examined must be from the rural communities. A central committee composed of one representative from each Board of Trustees, two representatives from each Women's Institute concerned, and one representative from each municipality (or such other representative committee as may be approved by the Department of Agriculture) shall have direction of the work.

2. The Department of Agriculture will furnish a lady doctor, who has had experience in medical school inspection, on condition that the committee in charge will furnish the necessary clerical assistance. A person experienced in office work or who has acted as secretary in an Institute will serve the purpose. The Department does not assume responsibility for either salary or travelling expenses of the assistant.

3. The Institute or central committee will be required to provide and pay for the necessary transportation for the doctor and assistant. The Department will pay for the board and lodging of the medical inspector only.

4. The Department will supply cards on which to keep records, also notification slips.

5. If a community desires a second inspection six or more months after the first, the Department will be glad to co-operate upon conditions as outlined above, except that the committee in charge will be required to pay in addition the living expenses of inspector throughout the inspection period.

CONDITIONS UPON WHICH THE DEPARTMENT OF AGRICULTURE WILL RENDER ASSISTANCE IN THE HOLDING OF CLINICS.

The persons operated upon must have been examined in connection with medical school inspection carried on under the direction of representatives of Women's Institutes and School Boards. Assistance will not be rendered for clinics at which less than five patients are to be operated upon.

Baby Clinic, Port Hope, Ont.

The Department of Agriculture will make grants to Women's Institutes upon the following conditions:

$30.00 for a one-day clinic.

$50.00 for a two-day clinic.

The local committee or sub-committee appointed by them in co-operation with the medical inspector will be expected to make arrangements for clinics including the financing of the same. Definite arrangements should be made with the doctors as to the fee which each is to receive. The Department has found the leading surgeons willing to render services in connection with the clinics at a very reasonable rate.

The Department should be informed several days in advance as to the plans made for clinics.

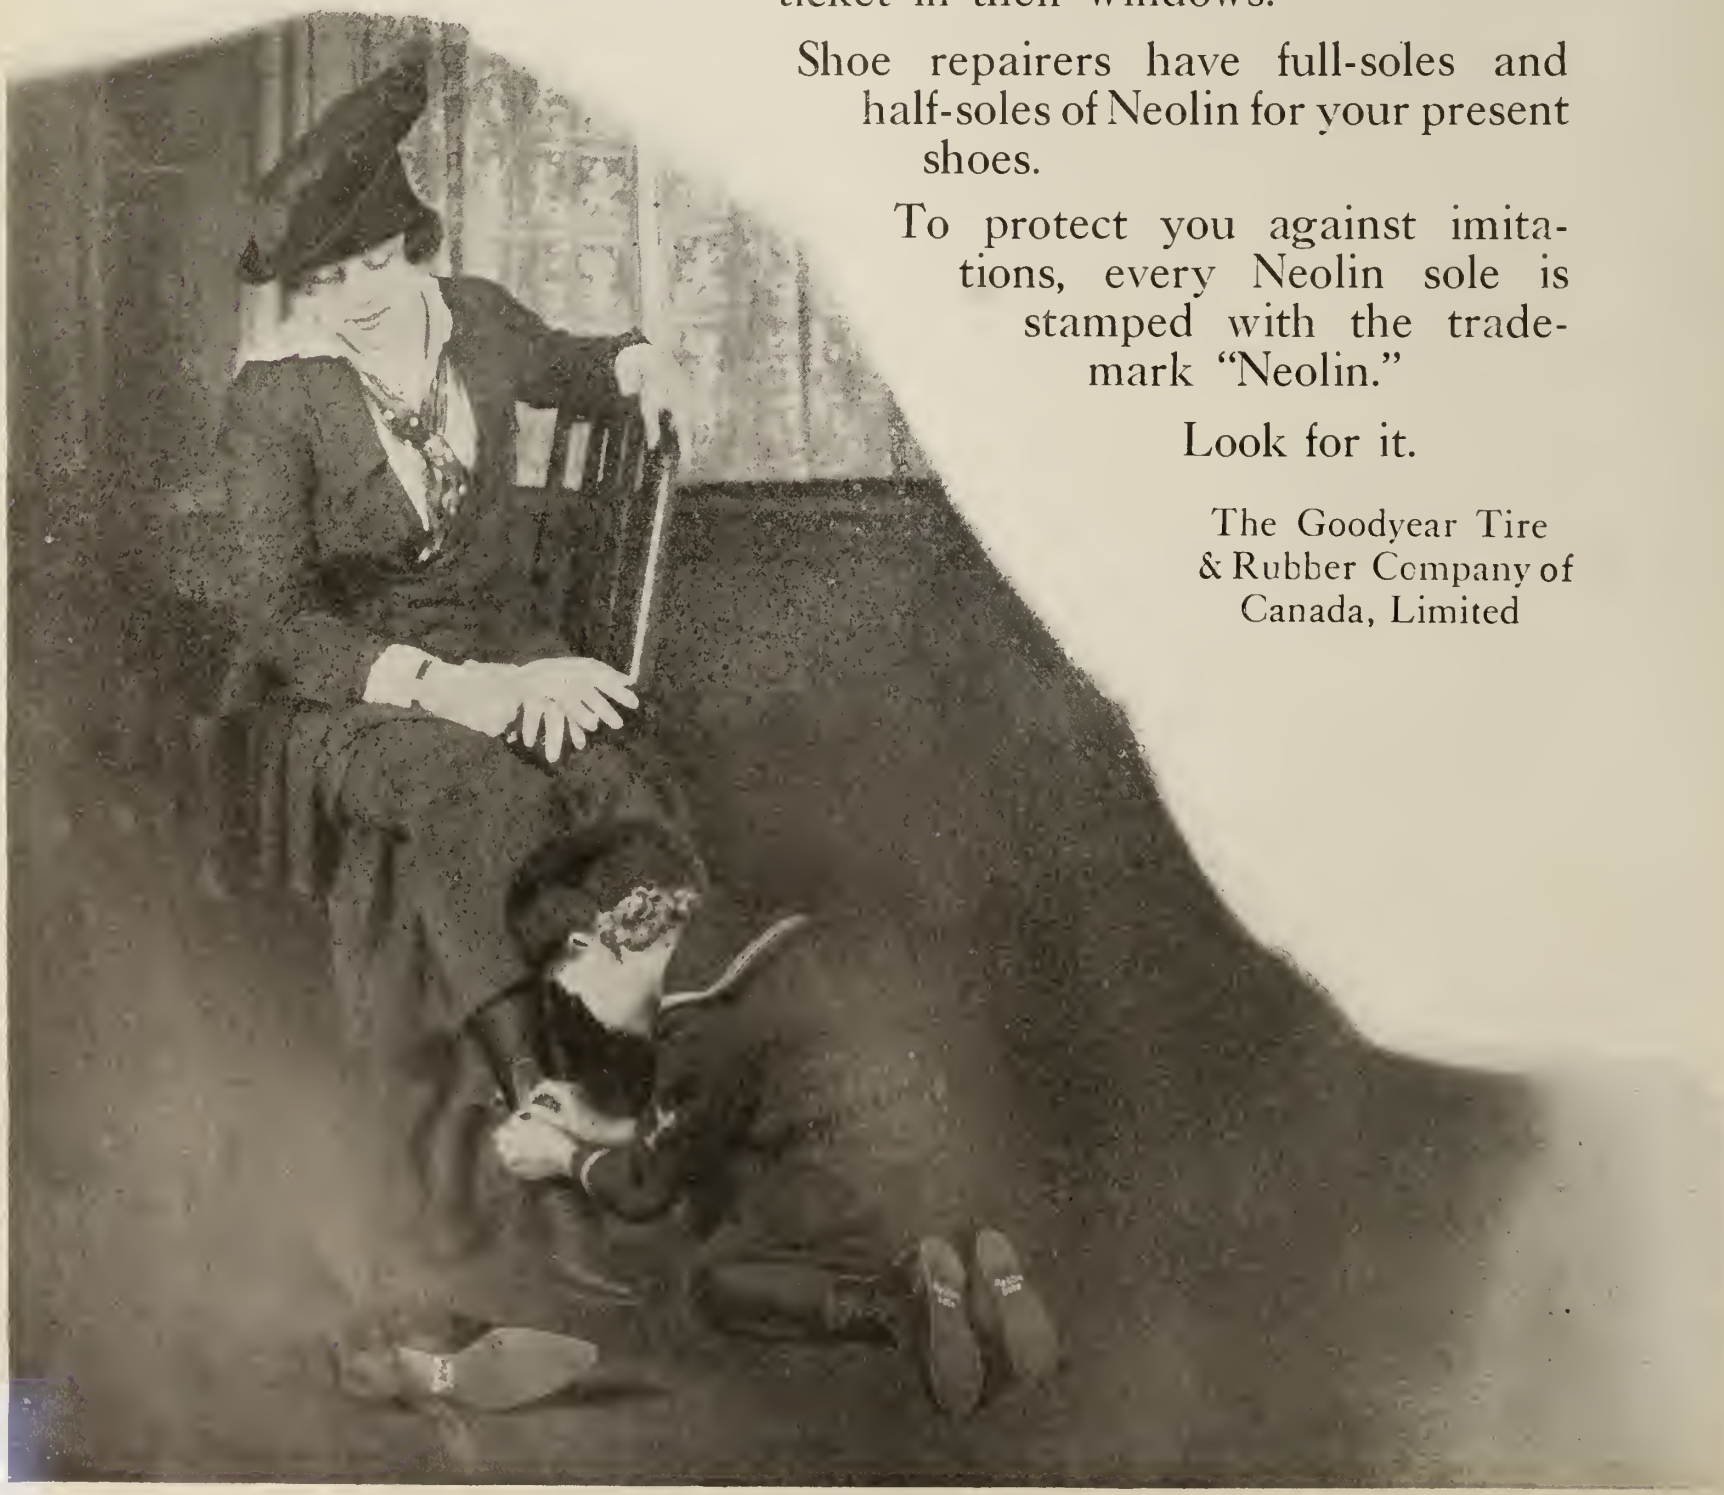
Neōlin Soles



We'll Return Dry-footed

It's a regular slop-foot day out -- drenched sidewalks and mud-surfaced crossings. But mother and son will go and come foot-dry. Wet-foot colds are not for them. Their shoes are Neolin-soled.

What a blessing is Neolin to mothers these days of sudden coughs and insidious sore throats. A blessing for its water-tight protection.

And a blessing every day in the year for its lasting wear that saves on shoe-bills, especially for the kiddies. For its shape-holding that keeps wet uppers smart. For its quiet tread that will not scratch floors or furniture.

Shoes for the whole family come Neolin-soled -- many styles and prices. Shoe merchants who stock them show the Neolin price ticket in their windows.

Shoe repairers have full-soles and half-soles of Neolin for your present shoes.

To protect you against imitations, every Neolin sole is stamped with the trade-mark "Neolin."

Look for it.

The Canadian Home Journal

NOTICE TO SUBSCRIBERS

Yearly subscription price for Canada and Great Britain is $2.00; United States, $2.50; Foreign, $2.60. Remit by Express or P. O. Order. Add collection charges to cheques.

Subscriptions must be paid in advance.

To change address we must know former and new address. No address changed later than 15th.

We have discontinued the sending of receipts for money paid by subscribers. The first figures on the wrapper of your journal will show to what date your subscription is paid.

The Canadian Home Journal is published on the 25th of each month preceding the date of issue by

The Canadian Women's Magazine Publishing Co., Limited

Volume Fifteen — WILLIAM G. ROOK, President, Toronto — Number Five

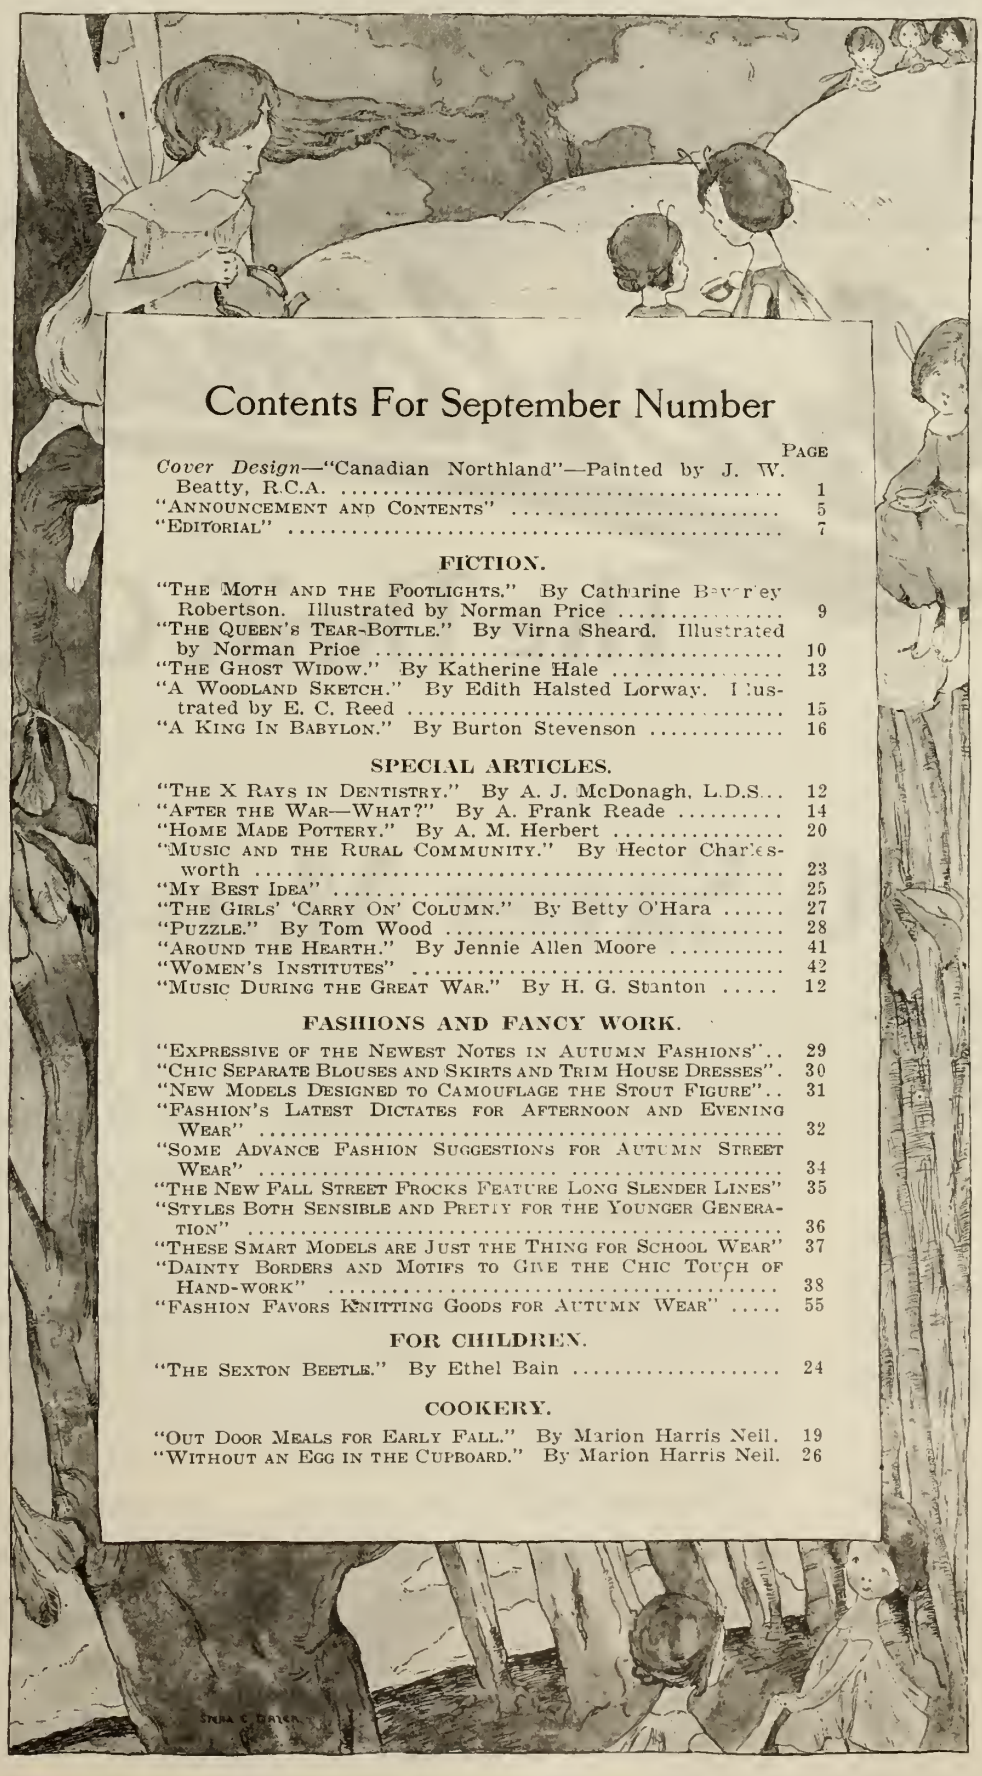
Copyright, September, 1918, in Canada by The Canadian Women's Magazine Publishing Company, Limited, Toronto

The October Number will be the Largest Number of Canadian Home Journal Ever Published

It will contain many additional pages of important matter of interest to Canadian women and will substantiate our assertion to our readers that the increase in price would be followed by a greatly enlarged and improved magazine.

The following short stories will appear in October:

ON THE KOOTENAY TRAIL.



By Eric A. Darling. A gripping story of a man's search for gold in the far North. This sketch is illustrated by one of America's outstanding illustrators, Dan Sayre Groesbeck, who is now overseas fighting with a Canadian Battery. While travelling from Chicago overseas, Mr. Groesbeck remained for a few weeks in Canada, and we were thereby able to secure some of his work for "Canadian Home Journal." There will be three drawings by this artist in the October number, each an example of the excellent character work for which Mr. Groesbeck's illustrations are famous.

THE ROSE ENCHANTED.

Another of Virna Sheard's delightful Fairy stories, complete in two instalments. Illustrated by Norman Price.

THE BIRD IN THE BUSH.

A French-Canadian story by Cameron Nelles Wilson, illustrated by E. J. Dinsmore.

"Without an Egg in the Cupboard." By Marion Harris Neil.	26

THE AUTUMN WIND FAIRIES.
Drawn by Stella E. Grier.

ARE YOU TRYING TO WRITE?

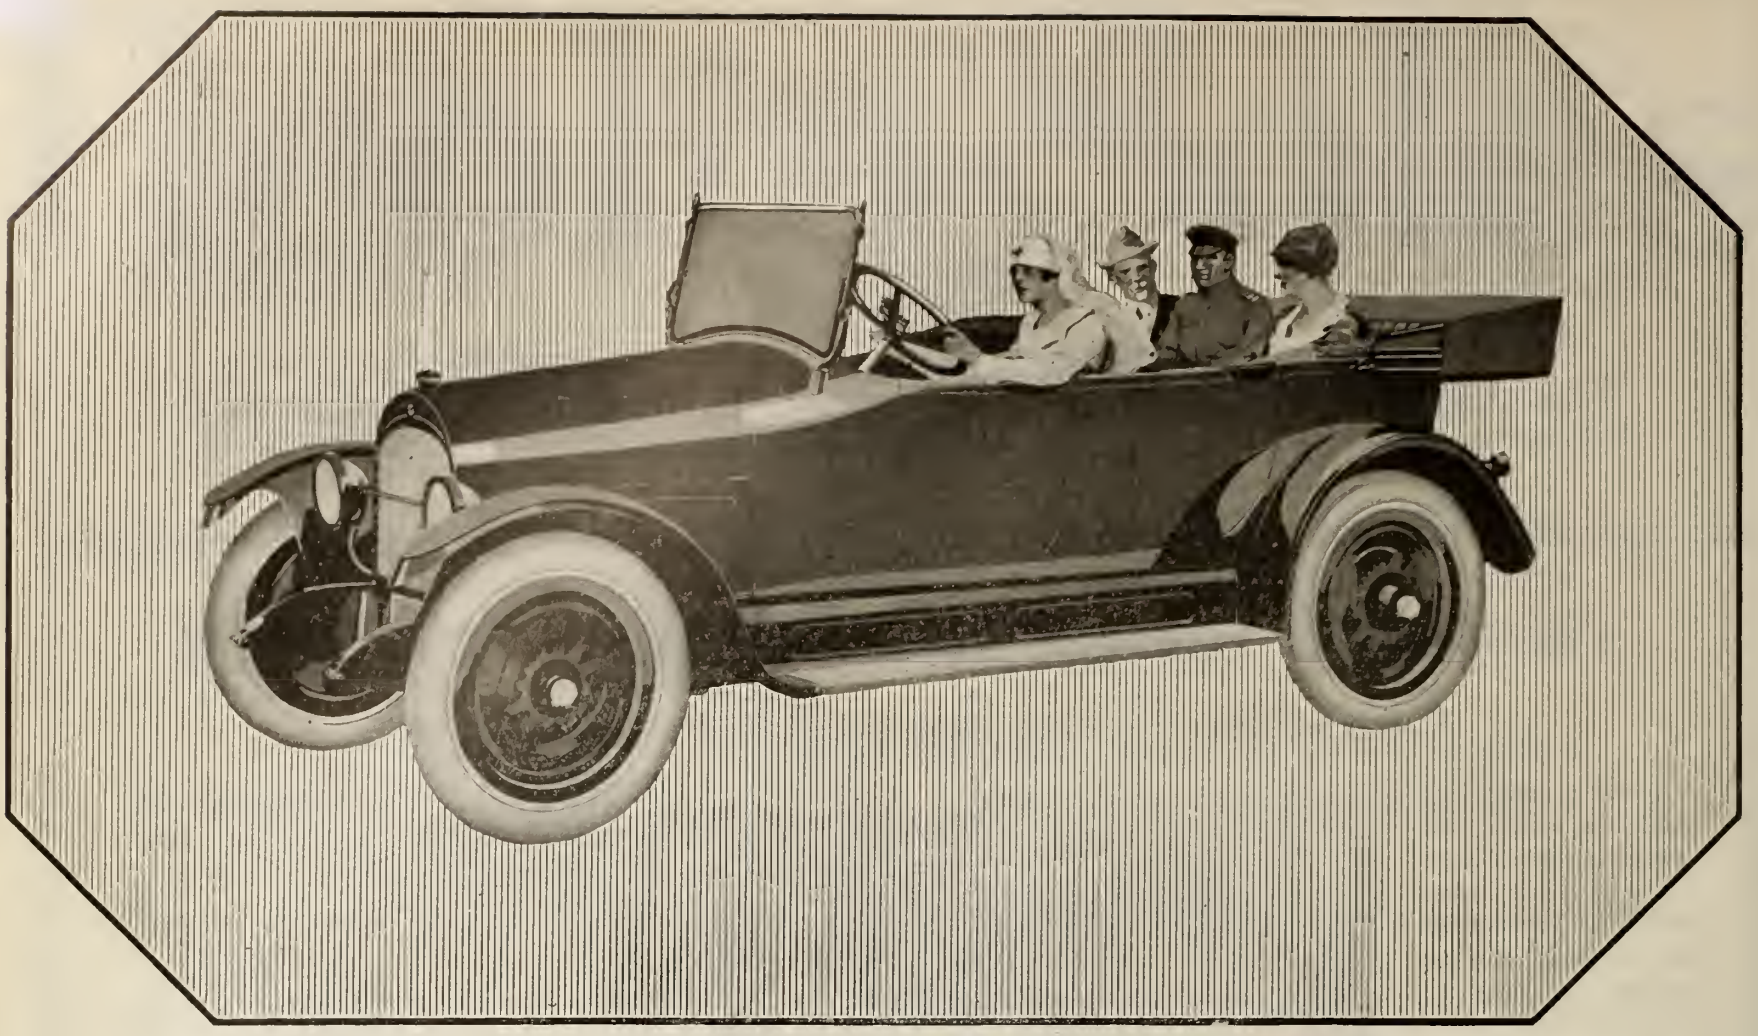
If so, do not miss Katherine Hale's article in the October number. It contains advice for all who are striving to express their thoughts in both verse and prose. Miss Hale tells why there are such large numbers of people writing verse at the present time—there is a reason. Watch for this article.

CULINARY MATTERS.

The Cookery pages for October must not be overlooked. The subjects taken up by Marion Harris Neil are as follows:

"Wholesome Foods at Reasonable Cost."

"When Our Friends Drop In."



"The Usefulness of Salt."

A MOVIE FAVORITE

W. G. Rook has interviewed another of the popular film people, and a complete account of this "star" will be published in the October number.

FASHIONS.

Seven pages will be filled with Fashions in the October number, showing the newest costumes, neckwear, blouses, skirts, coats and millinery, suitable for Fall wear. These are "Pictorial Review" Fashions, and patterns may be purchased for all designs illustrated.

The Thrift Car

Model 90 Saves Man-Power!

THE decreased man-power means every Canadian at home must do *more* work and in *less* time.

A Model 90 car can save *you* many hours a day; conserve your energy; give you a wider radius of activity; multiply your usefulness and benefit your health!

As motor car property is appraised more carefully, the esteem for the Overland Model 90 rises.

It is noteworthy that—

Substantial families accustomed to the best find this car expresses their thrift spirit without lowering their standards.

Its comfort, beauty, roominess, and complete accommodations are a revelation to those who knew Model 90 only by its reputation for economy and efficient performance.

This car is built both as a touring model and as a five-passenger Sedan.

To-day one can not wisely select a car without the utmost consideration of the character and resources of the institution behind it.

To own a Model 90 is to be a beneficiary in the protection of the Willys-Overland policy of fair treatment and comprehensive service.

To transact business with such a concern assures complete satisfaction and makes the element of risk negligible—now and later.

Five Points of Overland Superiority:
Appearance, Performance, Comfort, Service and Price

Willys-Overland, Limited

Willys-Knight and Overland Motor Cars and Light Commercial Wagons
Head Office and Works, West Toronto, Ontario
Branches: Montreal, Que., Winnipeg, Man., Regina, Sask.

Canadian Home Journal

EDITORIAL

OUR AIM

TO publish a magazine which will be worthy of Canadian womanhood.

To at all times keep both editorial and advertising columns clean, wholesome, and truthful.

To be a leader in thought, and a fearless speaker in all vital questions.

To, as far as possible, publish and reproduce the work of Canadians that our readers may become familiar with their own people, their own literature, and their own country, with its wonderful possibilities and glorious history.

ENGLAND DRIVES WOLF FROM THE DOOR. When you think that before the war there was barely enough foodstuff in England to last for ten weeks, it seems marvellous to learn now that England is almost self-supporting; that next year Canada may keep her golden bushels of grain at home which otherwise would go to the Mother Country.

The report of the British Food Production Department is inspiring in that the number of acres now under cultivation throughout the United Kingdom has increased by four millions, and that in two years.

From the "Literary Digest" we obtain many cheering facts: In 1916-17 the United Kingdom produced enough foodstuff to carry them for one-fifth of a year; in 1917-18 enough to last for one-fourth of a year and the prospects are that in 1918-19 England will be nearly self-supporting—providing for four-fifths of the year.

The British Minister of Agriculture gives to women a very large share of credit due for increased cultivation, calling it one of the outstanding achievements of the war. If the sacrifices made by the women, of comfort for discomfort, and luxuries for hardships, have been great, they have also received compensation, in that to many of them life in the open has brought back the greatest of all gifts—health—and given them the inspiring feeling of helping bring victory nearer.

Before the war, women in England were employed chiefly as cotton and wool operatives, in domestic service, sewing, and to a slight extent in clerical work. The average pay was seven shillings and sixpence per week. The war has at least put an end to sweated women's work. To-day women in England are better fed, better dressed, have better houses and better furniture than ever before, one reason for this being that the money comes into their own pockets, and they know how much they can count on and how to plan their weekly budget.

Women are not only working in munition factories and on farms, but are building ships. A Glasgow shipbuilder said the other day that if the Government would provide the yard, he would build a ship entirely with woman labor, keeping only five or six men to train and supervise.

Taking into consideration the facts that England is almost self-supporting, that the submarine menace is daily being lessened, that shipbuilding is increasing, the situation must be disheartening for the enemy, and give renewed hope and encouragement to the allies.

One of the secrets of the women's success in their "back to the land" movement lies in the fact that they have worked together as one force, the educated and uneducated, trained and untrained, and the feeling and hearty co-operation between the leaders and the rank and file, have been a revelation of what Patriotism has meant to them. Patriotic work has been their slogan. Many of the finest parks in England have been cut up and used for cultivation. There are few, if any, flower gardens to be seen now. Instead are sturdy regiments of vegetables—a truly formidable army against the Hun, and proving that in re-discovering her own wonderful land resources, England has also driven the "wolf from her door."

ALL WOOL AND A YARD WIDE. Thanks to the careful planning and forethought of manufacturers, importers and dealers, the better cloths and garments for the coming winter contain the usual amount of wool. Women have heard much and read more about the inevitable shortage of wool, and scare tales have predicted that all the new suits, coats and dresses for the coming season would be mostly cotton. However, now that Autumn has arrived and we are able to inspect the Fall and Winter goods, we find them quite as fine in quality, beautiful in color, and as well made as in former years.

This does not mean that there is an abundance of wool, but it shows that at least for another Winter there will be but little change in the quality of our clothes. The manufacturers are working in closest co-operation with the Government, and if the time comes when some must go without wool, it will be those at home in comfortably warmed houses, not the boys in the trenches. This is exactly as every true Canadian woman would wish. Until that time let us appreciate the efforts of those who have made it possible for us to secure our usual supply. Conserve wool—yes. It is too precious to be wasted, but at its present cost there are few who can afford to waste it.

THE SUBMARINE SEEKS SAFETY ON THE SURFACE. A paradoxical state of affairs has arisen in connection with the German U boats, of which the enemy so proudly boasted and upon which they relied to bring ultimate starvation to England. Now we are told that these boats, built specially for the purpose of submerging and destroying with their torpedoes, are rendered helpless when they go beneath the water, so deadly is the new depth bomb employed by the allied "chasers."

An interesting article in the "Scientific American" explains that in the early stages of the war the merchantmen were practically unarmed, and the submarine could therefore effectively and easily attack above the water. When the merchantmen were later fitted with guns, the U boats were driven under the water and forced to resort to torpedoes in attacking the large vessels. But to-day sees a complete change, for aircraft, mine-fields (one of which covers an area of 22,000 square miles), drifters, destroyers and chasers with their deadly depth bombs have made travelling beneath the water more difficult than on the surface. During the diving process the submarine is at the mercy of the enemy, for we are told that while diving, manoeuvring to avoid being rammed cannot be accomplished skilfully. The submarine may be and generally is better armed than the average destroyer, but as soon as it gets below the surface the deadly depth bombs are immediately brought into use by the chaser, and the life of the U boat is at an end. In short, the submarine is no longer a submarine, but an ordinary surface craft.

ENGLISH BOYS AND GIRLS ARE GATHERING HORSE CHESTNUTS. There is a campaign being carried on in England at the present time among the children which it is hoped will result in the saving of much valuable grain for food. The common horse chestnut has been found to contain properties which may be made use of, for food and in industrial processes,—the children are therefore asked to gather as many of these nuts as possible and send or take them to a place prepared to receive this unusual crop. It is estimated that two hundred thousand tons can be gathered, every ton of which will save half a ton of grain for food.

In many countries these nuts have been used for years as food for animals. In Geneva horse chestnuts are used extensively for stock, a single sheep receiving two pounds night and morning. Poultry and pigs eat them after preparation.

If your skin is pale and sallow, try the new steam treatment given in the booklet, "A Skin You Love to Touch." With your Woodbury's Facial Soap you will get one of these interesting booklets

What causes skin blemishes

Every girl ought to have a clear attractive skin . . . . The way to remove blemishes and to remove their cause

EVERYONE is immediately attracted by a *clear* skin—soft, free from blemishes and unsightly spots.

Every girl longs for it.

If your skin is not as clear as you would love to have it, find out just what is causing the blemishes that keep you from having this charm which everyone feels the moment they see a clear, lovely skin. Then start at once to remove not only the blemishes, but their *cause*.

What skin specialists say

Skin specialists say they are tracing fewer and fewer skin troubles to the blood—and more to the bacteria and parasites that are carried into the pores with dust, soot and grime.

To keep your skin clear from the spots and blemishes caused in this way, you must remove the blemishes you already have and be eternally vigilant to *prevent* the appearance of fresh ones. New skin is forming every day, as old skin dies. This is Nature's way of helping you. You must do your part to keep this new skin clear as she means it to be.

How to remove skin blemishes

Just before retiring, wash in your usual way with warm water and Woodbury's Facial Soap and then dry your face. Now dip the tips of your fingers in warm water and rub them on the cake of Woodbury's until they are covered with a heavy cream-like lather. Cover each blemish with a thick coat of this soap cream and leave it on for ten minutes. Then rinse very carefully with clear, hot water; then with cold.

Use this treatment *regularly* until the blemishes disappear, and supplement it with the regular use of Woodbury's in your daily toilet. Rub the cleansing antiseptic lather thoroughly into the pores, and rinse first with warm water, then with cold. This will keep your skin so firm and active that it will resist the frequent cause of blemishes. Before long you will be rewarded with the clear, radiant skin that the steady use of Woodbury's always brings.

You will find that the 25 cent cake of Woodbury's will last for a month or six weeks of any facial treatment as well as for general cleansing use for that time. It is for sale at drug stores and toilet goods counters everywhere throughout the United States and Canada.

MADE IN CANADA

Send for sample cake of soap with booklet of famous treatments and samples of Woodbury's Facial Cream and Facial Powder

Send 6c for a trial size cake (enough for a week or ten days of any Woodbury Facial treatment) together with the booklet of treatments, "A Skin You Love to Touch." Or for 12c we will send you the treatment booklet and samples of Woodbury's Facial Soap, Facial Cream and Facial Powder. Address The Andrew Jergens Co., Limited, 5209 Sherbrooke Street, Perth, Ontario.

A special treatment for an oily skin and shiny nose is among the famous treatments given in the Woodbury booklet you get with the soap. Secure a cake today and the booklet that goes with it

The Moth And The Footlights

By CATHARINE BEVERLEY ROBERTSON.

Illustrated by Norman Price.

A Story of Life Behind The Scenes, And The Struggles And Ambitions of Little Patsy

PATSY'S tired little feet felt vainly for a firm and solid footing. Flickering lights danced madly before her aching eyes. She gasped for breath.

"Indeed, indeed, I wouldn't mind having nothing to hang onto," she told herself, "if only there were something to stand on! I am so tired—so very, very tired! I wonder how much longer I must swing from these clouds? If only I could get a really firm hold on one of them, it wouldn't be so bad.—How funny! They were footlights before—not clouds—and I got into this dreadfully-uncomfortable, painfully-annoying position by trying to climb across to the stage, where all the beautiful people were! Oh, dear! Clouds are so thin and feathery! I can't hold on much longer—oh—oh—I'm falling! —I'm falling!"

And—sure enough—so she was! She landed in the middle of the sleeping car aisle, all smothered in green burlap, and horribly sore all over—especially in her wrist, which hurt awfully. And then the porter came and brought his little ladder, and she climbed into the "upper" again; and dreamed awake, till morning.

The train was late, and Patsy would *not* spend a whole dollar for breakfast in the diner, so she nibbled a cake of chocolate instead, cheering herself with visions of coffee and rolls, and a boiled egg, at a cheap and nice restaurant near the Grand Central Station. She gazed out of the big window at the majestic Hudson and the Palisades; and worried her little cake of chocolate as a small puppy might worry a rather stale and very unsatisfactory bone. She told herself that New York probably wasn't such a dreadful place after all, and that lots of other girls had gone on the stage and become famous, just as she was going to do; and that there *wasn't* a dreadful, sinking feeling somewhere around her heart at all, at all!

But she might as well have tried to persuade herself that there was no sinking feeling in her poor little "tummy." Poor Patsy! When the train at last rushed into the black tunnels that lead to the New York Central depot, her little thumbs curled up inside her tiny fists, her big eyes blinked hard, and she had definitely decided that she just couldn't keep from crying another minute, when suddenly she heard the echo of her little brother's voice; sounding just as it did as he ran beside the train, pulling out of the home station back in Canada. "Good-bye, Sis: Play the game, old sport; And—and don't blubber!" Her eyes stopped blinking; her thumbs took up a determined position on the outside of her fists, where the thumbs of all pugilistically-inclined young "Soldiers of Fortune" belong.

With a grinding of brakes the train came to a stand-still. Patsy grabbed her suit case and staggered to the vestibule. She almost ran along the platform, shedding, "No, thank you's" to shining-faced, red-capped porters. She followed big, weirdly-designed fingers pointing to "the street." Then she found herself in the shadow of the big, black "Elevated"; and completely surrounded by raucous-voiced individuals whose verbal intercourse with their fellow-men seemed limited to the one idea: "Taxi!"

Patsy stood on the sidewalk and gasped. She had forgotten all about the coffee and rolls. Then she dashed for the middle of the street where the cars were. Her life was saved by a big policeman who grabbed her, just in time, from under the wheels of a taxi. Restraining her first impulse to embrace the man of buttons, she gasped: "Please put me on a car—*please*—a Broadway car." She knew that she must take a Broadway car; they had told her so in the letter from the girl's club where she was going.

So the policeman put her, coffeeless, roll-less, eggless, on the rear platform of a car. She walked in with a sigh of relief, and was called back, and "down" by a conductor with an unclean celluloid collar and an East-side twang, who explained to her with biting sarcasm, the "pay-as-you-enter" system.

Then came the first sight of New York streets—everything so big that Patsy felt smaller than ever. She was dreadfully afraid that the conductor would forget to tell her when they reached One-hundred-and-tenth street, so she was kept busy looking for the number at each corner.

After a twenty minutes' ride of bewildered amazement, she found herself standing at the corner of One-hundred-and-tenth street and Broadway, looking at the number of the house on the corner, and peeping again at the number on the piece of paper in her pocket-book.

With that lope peculiar to the fragile traveller burdened with a suit-case, she started for the club.

When she arrived, the doors of the dining-room had just opened for lunch, and she smelled coffee! Patsy felt that she could hardly wait to have the nigger elevator boy show her to her room. When she came downstairs, however, minus her hat and gloves, and stood at the door of the big dining-room, full of girls — strange girls — a wave of terror, of desperate loneliness swept over her, hot tears rushed to her eyes, and she stumbled blindly out through the door again, upstairs, and into her little room. She turned the key in the lock, and walked up-and-down — up-and-down — biting her lips, setting her teeth; determined that she would not "blubber!"

Then came a knock at the door; and a voice just bubbling over with friendliness, called: "May I come in?"

Patsy opened the door, and felt her hand clasped by a big paw. Through her swimming eyes, she saw brown, quizzical eyes smiling at her; and she heard the jolliest voice in all the world saying heartily: "I'm Nell; one of the old girls. Been crying?"

Patsy shook her head, and her mouth took on a funny, crooked little curve.

"Why not? It's one of the unwritten laws of the club that every new girl shall weep on my shoulder, the day of her arrival. Believe me, my dear, it's the correct thing to do!"

"I never cry—well, hardly ever;" and Patsy smiled the funny little crooked smile again.

"Are you hungry?"

"Oh, no!" But Nell had heard before, that funny high falsetto that proclaims a big, lumpy ache in the throat. "I don't think I'll take any lunch; I don't feel like eating anything."

"Well, we'll just get acquainted while I have mine. I'm starving—didn't get up for breakfast this morning. Maybe you could eat a roll and drink some coffee—yes?"

Patsy began to giggle; then she laughed outright. "Coffee and rolls? Nell Whatever-your-name-is, to tell the truth, at this precise moment I'd gladly relinquish all my hopes of fame and fortune for a cup of coffee, a roll, a little pat of butter, and a boiled egg! But I *couldn't* go into that dining-room all alone! Take me under your wing, Nell, and I'll try to behave like a human being instead of a—a—"

"A prune?" enquired Nell.

"What's a prune?" said Patsy.

"A prune, dear child," said Nell, "is a half-human individual with a marvellous family-resemblance to quite half-a-million other half-human individuals, ancient and modern. She slowly simmers her way through life, until she is so stewed in the sickly-sweet juice of her half-baked emotions, that her sense of humor has utterly evaporated!—I hope that I make myself clear?"

"You do," giggled Patsy.

"In that she 'emotes' when it would be wiser to think," proceeded Nell; "she is like unto all other prunes that are—that have been—and that will be! I may add that 'the woods are full of them!' "

"I'm not a prune—indeed I'm not!" protested Patsy earnestly. "I'm just lonely and tired. I've been travelling all night, and I fell out of the berth, and had horrid dreams; and mother's away back *there*, and I'm away off *here*—and I want her—and—"

"And some coffee and rolls?"

"Yes—and a b-b-b-boiled egg—" and Patsy fell in with the traditions of the club—in short, she wept on Nell's shoulder, wept copiously, but without bitterness—unprunishly!

When stately Anne discovered that the new blonde girl's aspirations were dramatic, she sighed: "Poor lamb! Another to the slaughter!" and asked her to tea in her room.

Anne, Nell and Margaret hailed respectively from the United States of California, Maine and Matrimony. Margaret also came from Alabama—which accounts for her nick-name among her cronies — "Balmy." "Balmy" lived in New York—not because she liked it particularly, but because New York was so big that no one knew about the big, beautiful husband who had fallen in love with another girl; at least no one but Anne, and Nell—and she wanted them to know.

Nell liked New York. Nell was a peculiar girl in some ways. She loved New York! She came from Boston! Anne, like unto Nell and Margaret, was "in the business." She was the only one of the three girls who played "leads." She was a leading-woman simply and solely because she was "the type"—and she was perfectly cognizant of the fact. Her exquisitely-chiselled features were the joy and delight of Nell; whose pug nose and sunburned skin were her despair! Anne's well-groomed blonde hair and pink-and-white cheeks were really a great comfort to Margaret, too, whose complexion and hair were distinctly "washed-out"—as she expressed it: "Dunducketty mud color!" Anne was quite the most business-like person who ever wore a hundred-dollar gown to a manager's office—and walked home to save car-fare!

"I'm a clothes-horse," she told the scandalized Patsy, as they drank their tea. "I can't act, and I know it! I used to think that I was the greatest thing that ever struck Broadway; but I stopped fooling myself many moons ago! Now Margaret can *act*. Ye gods! Wait till you see her, with a decent part. Why 'Balmy' can do more acting in ten minutes than I can do in three acts and an epilogue! But she *can't wear clothes*—and that's her tragedy. For the managers' slogan is this, and the sooner you realize it, the better for your career: 'Talent is from the skin out!' I am a leading woman—not an important one, I grant you—but still I get a very decent salary, and would have had quite a little bank account if I hadn't been ill all last season. And Margaret—poor lamb—gets work only when the part is one that requires no style to speak of, and can't be played by a 'clothes horse.' "

"I can't believe it!" said Patsy.

"You will, dear, all too soon," replied Anne, grimly. But she made such a lovely picture of beautiful blondness that Patsy could hardly wait to get back to her room, to write to her chum about the beautiful leading lady who was going to condescend to be her friend.

"Let me see," mused Anne. "How had we better start you off? Of course you haven't any money to speak of—so you'd better go in for the distinctly ingenue type—that doesn't cost so much in the dressing line. Or perhaps I'm mistaken? But if you have a large bank account, you're the first stage-struck girl I've ever met who thought it necessary to a stage career."

"But I'm not stage-struck," expostulated Patsy: "It's a very real ambition with me. I've wanted to

(*Continued on page* 51.)

"She landed in the middle of the sleeping car aisle."

The Queen's Tear-Bottle

A Fairy Story
Told To The Man-Who-Was-Rich

By VIRNA SHEARD.

Illustrated by Norman Price.

IN a country that is called new, there was a great new city, and in that city, among many others a high, white building, and in the building there was a room wherein sat a Man-Who-Was-Rich.

The room was most beautiful, though only in a stiff, uncomfortable sort of way, because it had been made for business, and not pleasure.

There was a heavy carven desk, and a heavy carven table, and a heavy carven chair upright and hard. The panelled walls were of mahogany.

The Man-Who-Was-Rich sat before his desk with his overcoat on, for the room was cold. He had turned the collar up to his ears, and his face wore an expression not pleasant. Bushy grey eyebrows drawn together, and a close-shut mouth accounted chiefly for the expression—that is outwardly, although his eyes were of a flinty-grey and inclined to be cynical at the best of times. But only extreme discomfort could loosen his tongue, and he was suffering from discomfort now.

A thin veil of grey lay over furniture and floor. It blurred the windows where a film of frost did not creep across them. It lay an impalpable thing on the gilded steam pipes; it showed faintly on ledger and day-book.

The Man-Who-Was-Rich glanced around with an exclamation of annoyance. At that moment the great office door opened and a brisk sort of little man stepped in.

"Didn't hear me ring, so I just came along to see if you were down," he said chirpily.

"Beastly weather—eh, what?—O yes, I know—I know. Weather doesn't count with you. But conditions might, now?—Conditions. No coal—plumbing on the rocks—roads simply awful—trains blocked—everything on the bias! Might as well lock up, eh?—Blizzard going strong still—" glancing at the window.

"I shall stop down-town my usual hours, Jenkins," answered the Man-Who-Was-Rich. Then as an afterthought—"Have you seen the woman who dusts?"

"Not for days," he returned. "She hadn't the sense to send a substitute either. So thoughtless. But I cheer myself with Wilde's philosophy—Oscar Wilde, you know. You remember his classic? 'Remove not Dust! It is the bloom of the Ages!' Pretty thought, eh?"

The other smiled grimly. "That fakir!" he said.

"From my point of view, genius!" laughed Jenkins. "Well, good-bye till the weather becomes civilized. Horribly cold in here! Look out for pneumonia, old man. Horribly cold! Seem to be getting up a bit of steam though—bye-by."

The door closed. A metallic clicking followed. A spasmodic symphony from the gilded pipes.

The Man-Who-Was-Rich rose and shook himself, as though from a sudden icy wave.

"Outrageous!" he said. "Outrageous—in such a building. There is absolutely no excuse!" He touched the bell; pushed it harder, waited. No one answered. Then he sat down heavily at the desk again. A quick step came along the hall. A knock.

"Come in!" he called.

An office-boy entered,—a boy in his early 'teens, with the quick movements, the keen face, and the sharp tongue of one who had learned early to fend for himself. He wore the blue clothes and brass buttons so beloved of his kind, and he carried a dust cloth that apparently he loathed.

Ducking his head with more deference than he usually accorded, he swept his eye around the neglected room.

"I come in to dust, sir," he explained. "Don't want to disturb you—but the dust-lady ain't been round these three bad days."

"What detains her?" questioned the man shortly.

"Couldn't say, sir," the boy replied, busy with the despised rag. "Coal is short on the East Side, I hear. Mebbe she ain't had her share. The blizzard's been sumpthin' fierce. Mebbe she jest couldn't climb through."

"Perhaps not," admitted the other.

"Yes, sir," said the boy.

No sound followed but the disjointed clicking of the pipes.

"Where is the janitor?" queried the Man irritably, breaking in on the pipes.

"Got a swelled knee from somethin'," said the boy. "In bed, sir."

"Oh!" answered the Man.

"Yes, sir," assented the boy. Then he volunteered a few words.

"Isn't much doin'. Most of the offices closed today, sir—froze out. Bells on this flat on the blink. Some of the gentlemen couldn't get down, I guess. Traffic blocked most everywhere."

"I got down," said the Man.

"Elevated?" inquired the boy, working briskly.

"Certainly not," was the reply.

"O, yes sir," he answered. "My car."

About all the grey bloom was gone now, and the boy stood by the door. He grinned cheerfully.

"Anything else, sir?"

"No —" the Man said. "No, thanks." "I'll look in about noon," the boy volunteered. "Guess you expect your two clerks, don't you, sir?"

"I have been expecting them all morning," answered the Man-Who-Was-Rich. The words were bitten off.

"Yes, sir," nodded the boy. "Too bad, sir—but—hopefully, "mebby it's a good day fer them to be off. All the mail trains delayed, you know. Electric an' telephone wires jest naturally took this time to strike work too—ain't no excuse I can see."

"I wondered at the silence," remarked the other, looking up. "Underground wiring too—perfectly absurd to have them out of order. Are they working at them, do you know?"

"Yes, sir," answered the boy. "Cold work, too, sir,—down below zero."

"I imagine so," he assented.

"Yes, sir. Well, I'll be in at noon to see if you need me."

The Man-Who-Was-Rich heard the light steps swing along the hall. Silence returned. The pipes had ceased clicking, but accomplished little.

An hour passed. The Man decided to go home, then remembering his car was ordered for four, and that the telephone was useless, decided not to go. At best, he detested the Elevated, and the Elevated at noon, and on such a day, was anathema.

Lunch would be a break though. He concluded to take lunch early. There was a place two blocks away where he often dropped in.

Turning up his coat collar, he went out. An icy sleet stung his face, and the wind between the high buildings almost carried him off his feet. Drifts of snow swirled along the pavements, and where the asphalt was uncovered it was of a slipperiness unbelievable. A man going headlong across the street knocked against him heavily, and he fell.

When he got up he felt shaken from head to foot. With an exclamation of rage he retraced his steps slowly to the tall building. Every joint in his body seemed racked. He was dizzy from the fall, and now the beating sleet made him see red.

For a moment the Man-Who-Was-Rich clearly realized that he was no longer young. He took the elevator up to his office, shook himself free from snow and sat down again at his desk.

Presently came the quick steps of the office boy, and his knock.

"Come in!" answered the man, rather eagerly.

The boy came in. He was a cheerful boy.

"Shall I fetch you some sandwiches, sir?" he asked.

"Why, yes—you may," consented the Man.

"All right, sir," he nodded.

When he returned he bore a small Japanese tray whereupon was a tumbler, a bottle of milk and a blue plate decorated with four good-sized sandwiches.

"Light fare, sir," he grinned, "but jest better'n goin' out in the blizzard—"

"Much better—thanks," assented the Man-Who-Was-Rich.

"Yes, sir. Shall I go now, sir—or is there anything else—"

"O, you may stop a moment," said the other. "I will see, presently."

He ate a sandwich. Another. Another. Then the last. Also he drank the milk.

"They are very good," he remarked then, "these sandwiches. Better than any I remember for—for quite a while."

The boy grinned. "Me mother made them, sir," he explained. "There's jest her an' me. I got the milk by luck."

"Your mother made them?" he questioned harshly. "Have I taken your lunch?"

"Oh, no, sir!" he laughed. "Only a bit of it. I got plenty left."

"Well, it was decidedly good of you," said the Man. Taking some coins from his pocket, he held them out. The boy shook his head.

"No—no thank you, sir," he said. "Mother made them sandwiches, so I guess they were hers. She's got queer ideas—on—on—on hospitalities."

The Man-Who-Was-Rich slipped the coins back in his pocket. He looked the boy over.

"Where do you take your lunch?" he asked. "And are you sure you have enough left?"

"Sure? Yes, sir!" he replied. "Us office fellers get our lunch together all in one room. Bring it with us—you know. Say, we have a pretty gay time! We have an hour. We divvy up lunch mostly. Then we have shows. But I guess you wouldn't be interested?"

"Go on," said the Man.

"Half-hour shows, sir; any feller that can do a song or dance or give a monerlogue—"

"12.30 to 1.30." He nodded. "It's 12.20 now," taking a Waterbury out of his pocket.

"Ah, indeed," said the Man-Who-Was-Rich. "And to-day—what do you have to-day by way of entertainment, for instance?"

"The Egyptian," he answered. "The Egyptian, sir."

"I don't understand exactly," remarked the other. "I thought you gave these—these affairs yourselves. The office-boys;—talent might be developed that way, one would suppose."

"O, yes, sir, we do give them," he assented. "But the Egyptian blew in, an' needed the coin, so we let him go ahead. He's great, too!"

"What are his tricks,—this Egyptian?" questioned the Man-Who-Was-Rich, a slight vibration of interest in his voice. "Sleight-of-hand? Snake-charming—the Mango-flower or imitation of it—that sort of thing?"

"O, no, sir! He tells stories," explained the the office-boy.

"Quite likely," acquiesced his listener. "Most of them do, the Orientals—and so on—"

The boy looked puzzled, then smiled.

"Y're wrong, sir. It's yarns he tells. Jest yarns, ye know. About things that sort of couldn't be. Made up ones you wisht was true. 'Rabian-Nights stuff. He keeps you jumpy to know how they are goin' to pan out."

The Man-Who-Was-Rich raised his grey eyebrows.

"O, I see," he said. "But to get such an effect from a lot of practical boys, why he must be an artist, one would say. Where does he come from—this Egyptian fellow?"

"Down round by the East River Side. He lives among the Turks an' Armenians an' Dagoes that wear turbans—when they get here, mostly, or fezzes."

"Oh," smiled the other. "In some foreign quarter."

"Yes, sir, I've heard he works at beaten metal. I met him once with his old father. Taller'n him yet, sir, fer all his age. I bet you, sir, you would think that old man was a thousand years old! He's got a white beard like—like Niagara Falls!"

The Man-Who-Was-Rich laughed. It was a long time since he had laughed that way.

"Indeed," he nodded. "Quite an apt description. So this Egyptian, son of the ancient party, is coming to-day to tell you office-boys impossible yarns—is he?"

"Yes, sir," he answered. Then as by inspiration. "Would you like to come along and hear him, sir? Kinder dull on this flat. Won't you come along?"

The Man glanced around. It was dull. A silent telephone, frost-clouded windows. He turned to the office-boy.

"Why, thanks—I think I will," he replied.

"We'll be on our way, then, sir," said the boy with alacrity.

They went down the echoing halls. The boy took the stairs, and the Man-Who-Was-Rich followed; after an almost incredible descent they entered a narrower passage and passed into a darkish room with court windows. About a dozen boys were gathered around an open grate fire. A coal fire, red and bright. The place was warm.

"They let us have the grate lit at noon, sir," explained the boy, "for the pipes don't do much business in this room."

The Man seemed to find this satisfactory. They all rose and nodded to him, making way as he approached. His boy brought a chair for him over by the warmth. There were wooden chairs and a wooden table in the room.

An open fire was pleasant, the Man-Who-Was-Rich remarked to him as he sat down.

(*Continued on following page.*)

The Queen's Tear-Bottle

(*Continued from preceding page.*)

"Yes, sir," he agreed. The others seemed overawed, and their voices died to whispers.

"This sooth-sayer of yours?" questioned the Man. "Has he arrived?"

"O, the Egyptian?" grinned the boy. "I hear him outside a-shakin' the snow off. We can take an extra bit of time to-day, most all the offices bein' closed, but yours, sir."

"I should consider mine closed also," he answered.

The boy acquiesced. "Here comes Abydos Khon!" he said; then *sotto voce:* "It's only when he's up against it we can get him, sir. We mostly take up a collection before he begins an' hand it in."

"Ah, indeed!" said the Man-Who-Was-Rich.

The door swung open, and into the fire-lit room a man entered.

The boys all saluted him noisily, and he bowed to all collectively, but impressively.

"This is Mr. Mavor—John W. Mavor," announced the office-boy to him. Then—"Mr. Mavor, meet Abydos Khon!"

The Egyptian saw a tall, heavy man, worn of face and grey of hair. A man of poise, a perfect product of his time.

The Man-Who-Was-Rich saw one who seemed to belong to other places and other days. His face, neither old nor young, was of an almost flawless beauty of feature. His eyes were strangely luminous, and his hair thick, but silvery white. He wore it cropped about his ears, as a child's hair is often cropped. On his feet were high boots of brown leather—the uncouth boots of Russian peasants, and he wore a heavy cloak of coarse brown woollen stuff. This cloak was fastened about the waist by a leather belt with a silver buckle. It was hooded, and had wide sleeves. Almost it gave the impression of being the surtout of some holy order.

Having greeted all, the Egyptian sprang lightly onto the table. There he sat cross-legged in the old, old fashion of the East.

One boy took a cup from its peg and passed it around until twelve dimes were collected. Then he threw in his own. The Man-Who-Was-Rich held out his contribution, a large piece of silver.

The boy shook his head. "No, thank you, sir," he said. "You are a guest. We have one now and then—mostly boys from the other buildings. But it's understood. Abydos Khon is always satisfied."

Sweeping the silver into his hand, he gave it to the Egyptian, who placed it in some pocket of his surtout. No atom of his dignity was lost. He bowed, including all. Then the boys gathered closer to the table, their brass buttons twinkling with every movement of their restless young bodies. Settling down, they turned expectant faces towards Abydos Khon. They had overcome their first shyness of John W. Mavor, and he felt he had lost any formidable aloofness. Besides, the story-teller only was the man of the hour.

Abydos Khon sat very still. His face shone in the fire-light, as though cast in bronze. The silvery hair had a metallic glitter; the silver buckle on his belt gleamed against his rough cloak. His hands were folded together in a repose unspeakable, and his whole body was a thing set in perfect calm.

But though he might have posed for the figure of a graven image, from his eyes looked out a spirit as of living flame. When every face was turned towards him, the Egyptian spoke, and his voice was low, but clear as temple-bells at twilight.

There was no flaw in his English, but a cadence and rhythm separated it from all English the Man-Who-Was-Rich had hitherto heard.

He leaned forward in his chair to listen.

The Egyptian began slowly, his face rapt as in a dream.

"I will relate to you, my little ones," he said, "the story of the Queen's Tear-Bottle.

"It is a most ancient story, being handed down from the priests of the Temple of Amen-Ra—the Lord of the Sun and the Horizon—unto this day.

"It has been written upon the stones of the walls of palaces, and enrolled upon illuminated papyrus. It has been painted in imperishable colors on the Sarcophagus of a King. It has been told by word of mouth, and sung and chanted; and made into a dance also—a dance of death and tears—and it has been played by players before light-hearted court people, and it has been woven into books of romance.

"But the time is short, and I cannot give it to you as it should be given, with flowers of speech and music of lute and string, and colored lights and golden tapestries and the scent of incense. Nay, with my poor voice only can the story be told. So of your kindness have patience if it unfolds not to your liking.

"Now, in the rich days of Egypt, before the gods of different strengths were dead; when the Pharaohs were on the throne, and Karnac was a city, when the Israelites were slaves, and the priests, my far-off kinsmen, made burnt-offerings to Amen-Ra and the littler gods, his satellites, there was a mighty King in Egypt.

"Great was this King, and greatly to be feared. Yet he was just, and well beloved of his people. His bow-men and spear-men and charioteers were as the sands of the sea, and his tame war-lions were many. Also he owned slaves from every country, and his camels and herds were legion. His palaces shone with amber and beaten silver, and his silken tents had walls of embroidery, while the arabesques upon the hangings were set in jewels, and there were golden bells above the curtained doors. Vast were his treasures and hidden in many places. Chests of gems, and bags of coin, and boxes of attar-of-rose and ointments of the Orient.

"But of all this mighty King's possessions, he loved but one thing only, and that was his wife, Aureanta. Not in the East and not in the West had one been found so beautiful! In the South she knew no rival. But they had brought her captive to the King from the far North—so of the North one might not speak, for the Queen averred that others there had no less beauty than she.

"Now, although Aureanta had been brought captive to Egypt, she was the daughter of a northern Prince, whose army had been overthrown.

"So, although they called her but a beautiful barbarian, she was versed in many things, new and strange in the land of the desert, and looked and seemed a very princess even from the day she came bound to Egypt.

"When the King saw her, he marvelled at her white and gold beauty, for her skin was as the leaf of the white lotus, and her hair gold as a wheatfield in the sun.

"And the King loved her madly and made her his wife, against all the counsels of his wisest men and readers of the stars—as is the way of Kings.

"But the Queen Aureanta loved him as well; therefore, in spite of the wise men, there was joy and dancing at the wedding feast, and no shadow rested upon the land of Egypt for many days. It was the time of roses, and the young King and Queen were often seen walking in their garden beneath the palms. And the people, so seeing them, were happy, for it is a beautiful thing to look on youth and love and summer weather.

"Yet this is but earth, and so trouble approached. Dark as a cloud that blots out the sun, it came nearer and nearer on silent wings.

"For reasons no man could tell, the gods seemed angry, and sacrifices were offered to them in the temples, by day and by night. The smoke of them blackened the air incessantly; the sound of incantations and prayers was never still. The temple-bells rang from dawn to dark. But it availed not. The gods were angry. It seemed they liked not to look upon too great joy. Rumors of wars were on the wind, and wars broke out. Little wars at first, and then those that were greater.

"From Asia came the Persians, hordes and mighty hordes of them, and the tribes of the Hittites, long the enemies of Egypt, and these banded together Then also the Bedouins joined their train, and outlaw Arabs came who knew no ruler, but were beyond all grace.

"The King of Egypt gathered his bowmen and spearmen, and took his army of sworded chariots, and swiftly made dread battle upon these, the oncoming foes; and he pressed them back the way they had come, though the roads ran red with blood and were salted by the bones of the fallen.

"With bows and arrows and two-edged spears and catapults they fought, and also with liquid fire and the sworded chariots that mowed the battalions down as grain.

"The Great Gates of the walled city, wherein the Queen and the people remained, were fast closed.

"Outside the walls many smaller enemies camped, awaiting the day when perchance they might break in and pillage and kill and bear away slaves.

"Still to the borders of the sea the King pursued his enemies, and the battle raged by night and day.

"Throughout Egypt the wells had been poisoned, and the people on the little farms died by hundreds, and the food grew less and less, and pestilence was in the air.

"In the palace within the city walls, the young Queen from the North sat among her terrified maidens. She had put away her robes of beauty and wore a woollen mourning gown of white, girdled at the waist with a woollen cord only, and her golden hair was unbound.

"As they were there together, a sound of running came over the mosaic floors of the palace, and a youth entered, panting and spent, the dust thick upon him.

"He threw himself at the Queen's feet. 'What now, Cresta?' she cried, trembling. 'O, quickly! Tell me what news has brought you thus spent and troubled!'

" 'The battle still rages on the border, your Majesty, but to-day we lose and the King hath been wounded—yet not grievously. He sent me that you might not by chance hear worse report, and also to bear to you his love.'

"She stooped and touched the boy, 'Rise,' she said, 'O dear runner. Return to the King. Tell him I catch my falling tears in the crystal bottle he gave to me. They fall through all the hours of his absence. Tell him I will lay them on the altar of the gods—as my sacrifice. Bear to him also my eternal love!'

"The runner departed, and the Queen sank back upon her floor-cushions. From beneath the woollen folds above her heart she took a crystal bottle, and as her tears fell, they were caught and held within it. Many and bitter were her tears, and long they fell. All through the day they fell ceaselessly and through the night—for she thought of the battle lost, and the King wounded and spent.

"But on the morning of the next day an old, old Minister of State came to the Queen.

" 'Your Majesty,' he said, in his quavering voice, 'the people need bread. There is, indeed, wheat in the city, but the people have no money wherewith to buy it.'

"Then the Queen called her maids-of-honor. 'Bring all my jewels,' she commanded, 'and my golden ornaments, and all my coin stamped with the King's seal.'

"This they did and laid them at her feet. The Queen gave them to the Minister of State, sealed in caskets and held in leathern bags—and she summoned her pages to help him bear them away.

" 'Take them,' she said, 'to the dealers in wheat that they may

(*Continued on page* 45.)

"As her tears fell they were caught and held within it."

The X Rays In Dentistry

And Its Miraculous Power in Locating Disease

By ANDREW J. McDONAGH, L.D.S.

Only a few short years ago, perhaps not more than a decade, one would necessarily need a full quota of audacity to assert that a single inoffensive-looking little tooth, which gave no apparent trouble, might be the cause of serious illness or death. Nevertheless, to-day that is quite a common statement in medical and dental papers. The popular belief has been to regard the teeth as a sort of non-vital appendage, nothing more than instruments for mastication.

Observe the change which has taken place in dental and medical literature in the last few years. Take up almost any journal devoted to the healing art, and observe the space which is given to this subject; and as a natural consequence, we find in the minds of the general public, particularly in certain localities, a firm belief that all the physical ills to which humanity is heir are either caused by or directly aggravated by an unhealthy condition located in the mouth. And you will find, as a result, serious thinking men and women going to the dentist and begging him to extract all of their teeth, because of some ailment of which they do not know the cause.

Now the question arises, what has brought this about? How much truth is there in it, and what results are obtained?

About twenty-three years ago, Dr. Conrad Roentgen, an experimenter with electrical currents, who lived in Germany, discovered by accident what he was pleased to term the X Ray, meaning a ray or an energy, the properties of which were not known, and to-day this peculiar phenomenon is called an X Ray. By some who wish to give the honor to the discoverer it is called the Roentgen Ray.

This ray has a unique property or power of penetrating substances usually considered opaque, and by this power it is possible to make photographic imprints of the different densities of any substance; consequently, it is quite possible, by casting a shadow through a living bone upon a sensitized plate, to tell where any of that bone had been dissolved out or destroyed by disease. In this way one can tell the location of an abscess in bone; consequently it was discovered that there were many abscesses in the jaws of people which had never been suspected and could not possibly have been discovered without the X Ray.

Here we see one of the great reasons for the present belief that the teeth are responsible for a great deal of the ill health of the nation.

Coupled with this discovery was an astounding assertion published broadcast throughout the country by Dr. William Hunter, of London, England, in which he claimed that over 90 per cent. of the cases of anæmia, pernicious and otherwise, which came under his care were directly traceable to mouth conditions. Dr. Hunter was emphatic and very insistent in his condemnation of unhealthy conditions of the mouth, and his words had a great effect. True, he was not the first to make these assertions, but he was the most forceful up to his time.

Dr. Osler, Dr. Chas. Mayo, Dr. Miller, Dr. Weston Price and a host of others have done a great deal to advance Dr. Hunter's propaganda.

The question is asked, how much truth is there in it, and are we really all going to die if we are unfortunate enough to have a so-called dead tooth in the mouth?

It would be foolish to deny, in the face of evidence which is presented to us every day, that mouth conditions, particularly so-called dead teeth, appear to be the cause of numerous diseases, including neuritis, heart disease, arthritis, neuralgias, eye infections and other troubles.

But we must not go to the opposite extreme and assert that the teeth are always the cause of these diseases; the tonsils are a very great factor in causing septic trouble, and we may have infections originating in places in no way connected with the mouth.

It is also true that we may have very great mouth lesions and many comparatively large abscesses in the jaws, and have no constitutional complications as a result. Pathologists tell us, however, that if you have those unhealthy conditions in the mouth, and they are left uncared for, in all human probability it is only a matter of time until they manifest themselves constitutionally.

What does the X Ray do for us to discover these hidden conditions or to prevent them? An example or two may be more impressive than any other kind of description.

Take the case of a lady who is suffering from what is diagnosed as heart disease, and no doubt at the time the diagnosis was correct. She was in such a bad state of health that she could not walk upstairs nor perform any duty which required exertion. Her physician, as a last resort, had radiographs made of her teeth. The radiographs revealed the fact that most of the teeth, although well filled according to the old style of filling, had small septic areas about the ends of the roots. After consultation, it was decided to extract all of these teeth. The patient, after recovering from the shock of the extraction, which was quite severe, immediately recovered her health. That was eight months ago; she has since gained nearly forty pounds, runs up and down stairs without any trouble, heart symptoms have disappeared, and she feels like a new being, notwithstanding the fact that for four years previous life seemed not worth living.

The foregoing is one of a type of which we meet many in a full practice.

Another type is one who has rheumatism. Probably more cases of rheumatism present themselves to the radiographer than any other type, and great numbers of them get relief, a little slowly sometimes because of the nature of the disease, but get relief when the focus of infection, revealed by the radiograph to be at the roots of the teeth, is removed, by extraction of the teeth or sometimes by treating and making the teeth healthy. Unfortunately, it is not always possible to accomplish the latter in these cases.

Just an example of this type. A physician came into the office on crutches; the joints of his feet and legs were so sore and unable to perform their functions that he could not walk unassisted. The radiograph showed three teeth affected; these teeth were removed, and his gums, which were in an unhealthy condition, were made healthy. Inside of two weeks he was walking with one cane, and in six weeks all symptoms had disappeared.. To-day he is carrying on his practice in apparently as good health as ever he was.

Another case—a patient suffering from iritis, so severe that he lost the use of one eye. A radiograph revealed the fact that there was an old root and some dead bone underneath the gum in his jaw. An operation by an exodontist removed the tooth and dead bone, and in three days the affected eye, of which he had not had the use for three months, regained its former usefulness and health.

We might go on enumerating cases of this sort till we wrote volumes, because there are so many of them on record now that this side of the question is taken as an accepted fact.

But there is another side of the question: many radiographs are made of teeth which show septic areas, large and small, and the person in whose mouth the teeth are situated is in perfect health so far as he can tell. To discuss this phase of the question fully would require an article in itself, but this we may say, either that this person has sufficient power of resistance in the blood to counteract the effect of absorbed septic material, or the products of bacteria of these septic areas do not contain harmful germs or organisms.

True, it is possible—many would say probable—that the constant absorbing of those poisons will break down the resistance of a healthy body and eventually lead to some disease. But the fact that there are septic areas showing in the radiograms of the mouth does not necessarily mean that the patient has at that time any constitutional disturbance as a result, and one needs to be careful and moderate in making a diagnosis simply on the strength of a radiograph.

We have to remember, too, that, although it is said that a radiogram never tells a lie, there are radiograms and radiograms. Two operators will often make a radiographic examination of the same area and show entirely different results, and two experts, reading the same radiogram according to their experience, will give entirely different diagnoses. Consequently, to get good results from dental radiograms, they must be made carefully, made by a proper machine, handled by an expert and read by one who has experience and judgment.

Under these conditions, dental radiograms become a blessing to humanity and one of the greatest discoveries of the age.

From another prominent dentist the following examples are given:

Neuritis.—Mrs. H., aged 37, has worn four bridges for years without trouble. A year ago she began to be severely annoyed periodically with blotches on her face, and irritation, largely on the back. She tried her family physician, tonics, holidays, rest, till finally her dentist recommended her to have some skiographs. From the evidence there, it was decided to remove, first one, then the rest of the bridges, extending over months, till finally all were removed, and eventually a gold plate was inserted, since when she has been restored to perfect health, with no return of neuritis.

Anæmia.—Miss A., aged 22, in business, but so distressed in the morning that she did not feel able to proceed either with breakfast or to business. At her dentist's suggestion, after consultation with her medical adviser and with his consent, skiographs were taken and two badly abscessed teeth found and shortly removed. Bridges were inserted, since when she has not missed a day at business, and is growing strong.

Their name is legion—the cases that might be detailed, and it would become wearisome to the average reader, but of a surety, X Rays for teeth have come to stay, for our physical comfort and health.

Music During The Great War

By H. G. STANTON

In Collaboration with Hector Charlesworth.

The war has probably upset more theories than any other event in modern times, and has been the means of proving many doubtful theories, so that they are now established as facts. Among many other things it has gone far to establish music's place in the world in a manner little thought of five or six years ago.

The war upset the theory and established the fact—as to being prepared.

The war upset the theory and established the fact—that the warring countries could not man or finance a war of such magnitude and duration.

And so, one could elaborate upon the theories and facts, covering practically every field of science and endeavor.

To the millions of music-lovers throughout the world, the history is being written and shows, to a much greater extent than most of us thought possible, the need of music, as against music being a non-essential. Perhaps few people actualy realize just what advance has been and is being made in this respect.

When war was first declared, there was a national shout of enthusiasm and a rush to help. Only the serious thinkers and leaders of affairs realized the magnitude of the call and the need for preparation. But when these facts came home to the people generally, little could we wonder at tremendous confusion. Plans, theories and schemes were advanced faster and in greater numbers than could possibly be taken thought of. Out of the mass came "economize," "discontinue all luxuries." That did not seem to answer, and we reverted to the other extreme, "Business as usual." It was out of these extremes, actual facts began to find their way, and since we began to realize that the motto, "Business as usual," was fallacious and misleading in purpose, and unworkable in practice, the question of what industries were essential and what non-essential has necessarily risen.

It was, perhaps, to be expected that the status of the musical trades and industries, which is necessarily the basis of musical art, because it is in a large degree an art dependent on mechanical production, would be questioned. The query, "Does music involve economic waste?" at once arises, and certain individuals have to their own satisfaction answered it in the affirmative. The attitude of such individuals is like that expressed by the American humorist, Artemus Ward, during the American Civil War, that he was willing to sacrifice all his wife's relations to the cause of the Union. These individuals by reason of deficiencies in temperament, sympathy or education, care nothing for music themselves, and for that reason, are willing to dismiss the claim of those who not only regard music as a necessity of their own lives, but as a real and important factor in present day requirements.

It is significant that the proposal to classify musical effort and production in all its phases under the head of non-essential industries has met with serious consideration only on this continent. In those European countries which have experienced the horrors of war on their soil, or at their very doors, no such idea has been mooted, nor would it for a moment be entertained. In European countries, and by most of the leading statesmen and thinkers of Great Britain, the theory that music is an important and essential factor in civilization in time of peace, and a valuable aid in maintaining the public morale under stress of war, would not be regarded as debatable. Allegations to the contrary would be dismissed as frivolous.

THE GHOST-WIDOW

by KATHERINE HALE

A Story of Tea-cups and Shells---The Human Element in the Great Romance of Munitions.

"Through the enchantment of the mid-summer evening, the girl felt the ghost draw nearer."

OVER the lawns of "Stonehurst," past the beautiful old house, through the latticed garden gate and among thick grasses that prefaced the orchard crept the ghost. A hammock seemed to swing lifeless in the bloomy dusk. It was a wide mauve strip between dark apple trees. The girl it contained was shadow-slight, and she lay there as motionless as the still evening. A tent of trees stretched to the brow of the hill beneath which lay the town. Sometimes her eyes followed the lights in this gleaming valley, but for the most part she looked up into a sky where the first stars gleamed.

And always, through the enchantment of the mid-summer evening, the girl felt the ghost draw nearer. Her spirit went out to meet him as involuntarily as goes out the salutation of a wife in greeting to her husband after each day's adventure. She was used to his coming, for this special evening of mid-August was an anniversary. Always it seemed to be a night of fair weather. So softly the years had gone by that she did not stop to count them since that twilight in this spot under this sky, when all the beautiful youth in the world seemed to be concentrated in one hour—a lover's moment—pulsing in the still dial of sunny days.

Seventeen years ago from nearly every Canadian town a group of boys went out to fight for England at South Africa. Who recalls the gallant company now? Only mothers perhaps, and these ghost-widows who keep a shadowy tryst.

As this girl looked into the deep-hued sky her thoughts like white clouds drifted to and fro. She went far back in memory to a night when they two had danced the nineteenth century out and had seen the twentieth come in, standing on the steps of the town hall in the heart of the little town. That was an hour of moonlight and strange clouds.

"The birth-moment of a new century is rather awful. Do those piled up clouds look very important to you?" she had asked the boy beside her, who had answered, "Not half as important as the dance together we are missing."

It was the September after that he had left for camp. And then came South Africa, and death.

And time had passed; little-town years, divided between vague and sometimes restless dreams and the easy security of every day life. One danced and played bridge, and as years went on one learned to drive motors instead of horses and gradually the girls of the little social set who had not married drifted off to hospitals and learned to be nurses, or to business colleges and learned to be stenographers, or else they surrendered themselves to somnolence, and pretended that life anywhere else would be ugly.

Then came 1914.

Looking over the rim of the orchard into the gleaming valley town, the girl saw in a blaze of light the windows of the great munition works, an adjunct to her father's own mill where so many women were employed.

The war had taken this town like other places and twisted it into new shapes under its burning fingers. The going out of the men, the levelling of social laws, the incomes wrecked, the fortunes made, these were inevitable. But the significance of the new time lay, for Edith Morse, in that glowing centre of light, an industry never dreamed of before in Brockton—the making of munitions.

Persistently the brilliant windows drew her eyes back from the home-sick contemplation of stars, the far-off road of youth, to the present so sharply dramatic. And is it strange, in an almost early Victorian heroine, that she longed, as she tore herself from the persistent lonely dream to come nearer to those lights, to creep a little closer to the angry heart of the war, to feel for herself what the great thing is that, two decades ago, had reached out its tentative fiery finger to take away her lover, to touch this thing, to work in it, to fight on the burning decks, not to wave farewell to an outgoing vessel from the shore?

Across her dreams strode, in the familiar way that unfamiliar figures take in dreams, a man who was working on the deck of this blazing vessel of war. He had come that day to a Red Cross meeting in the interests of a possible hostel for the workers, many of them strangers in the town, and he had seemed to her a singularly forceful person. His strength, his poise, his easy sureness were unlike those of the young men, bank clerks, factory and foundry owners, the few wealthy business men and their sons, that in the ordered orbit of a country town life she habitually met. Into her mind had flashed the chance remark of somebody's frank brother when an intimate group had been discussing the limitations of Brockton society.

"You girls in small places are all cooped up, like little old-fashioned hens. You never have a chance to meet the right sort of men. They are certainly not to be found in 'our set,' as you call it."

Asked to verify this bold statement, he added that his greatest pal was a good example of the kind of man he meant. Originally a foundry man, now an expert in his own line of business, which was distinctly a scientific business; "an incredibly clever chap" who probably didn't know the name of a new dance.

A request to produce this valuable product for inspection brought forth the unpardonable verdict. "Not on your life. You'd be mutually bored." And there the matter ended.

The little episode drifted through Edith's consciousness, tormented by memories. It was as though the vault of velvet, the tiny stars, the bloomy tree tops, all drew her mind away on a tidal wave that went out yearningly towards youth while the near lights of the town, and above all the insistence of that semi-circle of blazing windows, was the return of the tide pounding in on the actual sands of to-day.

And at last she left the song of stars and listened only to the return of the tide.

"To-morrow," she decided, "I shall see if they can give me any work at munitions."

II.

The manager of the works seemed to be in no whit surprised, or, indeed, gratified, at her business-like application. He told her that the job was not a difficult one, and that when she had learned the process of manufacture he would not waste her time as a mechanic. He was badly in need of inspectors.

"If you really mean to help us," he said. "I would like you to go in with the girls and see the game from beginning to end. I am aware that there are improvements to be made. The truth is we've been so busy that the main thing is speed. We need a few people like you who will work with their eyes open, educated women who can help us. You had better take the night shift from eleven p.m. to seven a.m.—easiest hours for you at first."

John Morse felt that it was his patriotic duty to leave his daughters free to do theirs as they saw it. He did not see any particular object in Edith's learning to make munitions. Two years ago the very thought of her entering a factory on any business whatever would have been intolerable. But the war had changed everything and everybody. He was her not unwilling escort on the night of her initiation.

"Only this once," she protested, as they walked down the winding path that rambled through the grounds. "You know it's absurd for a 'new woman' to have her father take her to business."

She turned to him in the moonlight and her slim fairness made her look very young.

"Takes me back to a September night when you started off to boarding school, and we took the longest road to the station to put off the evil moment, do you remember, Edie?" he asked her.

"Yes, you and I walked this way and mother and Fan drove over," she answered softly, and gave his arm a little squeeze.

"Your mother used to be interested in the people in these cottages," he remarked. They were out beyond the garden gate at the bottom of the hill where a collection of small buildings stood. Edith stooped to tie her shoe lace, and as she did so she noticed a ray of light across the road from an open door, also the raucous voice of a gramophone grinding out "Tipperary," and the wail of a small child with a good-sized grievance. A girl in a vivid yellow sweater came out of the small garden and hurried on in front of them.

"No gramophones in mother's time, were there Dad, or any silk sweaters emerging from these cottages? I remember Mrs. Murphy lived in this very one; she used to come up for milk, bare-footed."

"They're all at work now, the war is making 'em rich," he returned. And in a moment he had left her at the door of the factory.

McAinsh, the manager, met her at the door and she crossed into a world whose ways and language she did not know.

At first, as she learned the various processes of shell-making, she was so engaged with minutiae that her fellow-workers were shadowy. For the first time in her life she turned the entire force of her will into the attainment of mechanical detail, and to do this it was necessary to concentrate every moment of the long nights and to sleep nearly every hour of the summer days. And because of an inherent power of concentration she attained this new knowledge quickly, though on the day that she was appointed an inspector it seemed that she had been years instead of days in the acquirement of what she had to know.

Then she came back to life again—the life of the people all about her. But still through the never-ceasing din, the ringing voice of the steel, the lower voice of the machines—these fellow-workers seemed shadowy.

Everything was thrown into high lights, the light that casts deep shadows. As at night she went to work alone through the familiar streets, these lights seemed to beckon her on, out of the valley of recollection to this vivid reality.

The girls she met in the cloak room were formerly mill hands, seamstresses, servants, small workers in small places, Jews and Gentiles, black and white, bond and free. They all shouted, they all joked, they all chewed gum. Gum, indeed, seemed to be one of the necessities of life. It was sold on the premises. Working with them Edith was so keen on her own apprenticeship that she did not notice the quality of theirs. Having to inspect the work, she felt at once, notwithstanding, their response to the requisite exactness, that, for the most part, they were slovenly in technique, lacking in discipline, and always self-conscious.

An Inspector of shells examines twelve different processes, each one of which must be exact, from the tap at the top to the base. Edith, going over hundreds of shells a day, found very few that were defective, yet the women had conquered the process without a ray of joy in the work.

"I tremble as I touch them, so strange they are,
and bright;
Each one will be a comet to break the purple night.
Gray Fear will ride before it and Death will ride
behind,
The sound of it will deafen, the sight of it will
blind."

The lines haunted her as she watched the transformation of these "weapons of the Lord" from their dark beginning to the shining finish.

Gradually certain forms detached themselves from the crowd of workers as the nights went on; those strange nights of rapid movement, peopled by denizens of another world.

At four in the morning work stopped for twenty minutes and there was tea and food in the main workroom.

Edith persistently sought for acquaintance with her fellows, but as persistently it was denied, and what mutual ground there was seemed to slip from under her feet.

At patriotic meetings in the town all sorts and conditions of women foregathered and you could talk bandages, and kit bags, and last news from the trenches as eagerly with one as with another. The social restraints of generations were in a moment discarded. But this was a different phase. Here work was a topic taboo. These women were plainly tired of work and their personalities were too formidable for a delicate touch to unlock. The conversation was of "movies" and "dates" and

(Continued on page 48.)

The Third of a Series of Articles on Reconstruction in Canada

After the War—What?

By A. FRANK READE.

Food Control—Shall It Be Continued After The War?—Yes! And Much More Drastic And Comprehensive!—Canadians Must Face The Grim Facts.—Various Ways of Preventing World Famine.—Seeking New Sources Of Food.

Food control by the Government; shall it be continued? What a foolish question, in face of the cold facts which make us tremble as we enter the fifth year of this world-war! Look at one of these awful facts: since this war started as many human beings have died of starvation as have been killed in battle!

This world-war is proving to be Canada's testing-time. Customs and traditions which were smugly accepted two years ago are being questioned, examined, and in many cases denounced and abandoned. There is a new point of view, and many things look different from the altered angle. Problems of finance, of industrial management, of scientific research, of invention, even of National Government, are being solved by new methods, the very suggestion of which would have shocked us before 1914.

Food Control, an Old Idea, Brought Down to Date.

Food control was first put into operation 3,633 years ago, and it was a great success. We read that "the famine was sore in all the earth," as well as in the land of Egypt; and a young Hebrew, just turned thirty, saved the situation. Read the story as told in Genesis, chapters 41, 42. Joseph's administration of the office of Food Controller was marked by several strong and wise features:—He took the "long view," saw seven years ahead and provided for them; he was made absolute dictator, so that when all the land of Egypt was famished, and the people cried to Pharaoh for bread, he told all the Egyptians, "Go unto Joseph and what he saith to you, do." Joseph gathered all the food; he stored it; he distributed it.

Practically all the countries in the world are now following the example of Joseph more or less closely, each government dealing with its own people; but as I write there comes a cable from London, England, telling of a conference in London between the Food Controllers of the United Kingdom, United States, France and Italy. I was delighted to note that—

Satisfactory progress has been made, and the establishment of an Interallied Food Council, composed of the Controllers, is now an accomplished fact. A resolution adopted emphasized the need for economy and the elimination of waste, as well as increased production in order to build up the stocks as insurance against all possibilities. It concludes:

"We cannot administer the food problem on the basis of one year's wants. We must prepare for long continuance."

If, then, we are to have Food Control after the war, not on the basis of one year's wants, but during "long continuance" in order to achieve victory, the Allied Food Council is adopting one of Joseph's principles; and possibly they may adopt all the others, and absolutely gather, store and distribute all essential foodstuffs, regardless of millers, elevator companies, grocers' combines, retailers' associations, and distributers' wretchedly overlapping methods (they do not deserve the name of systems) which are costing housewives an average of two cents per pound additional on every article they have brought to their door. (See Report of Canadian Royal Commission on High Cost of Living.) When the Allied Food Council takes control of the Food Boards of all Allied countries and the overseas Dominions (including Canada) we may look for far more drastic measures than the Canada Food Board ever dreamed of.

How to Help the Good Work Along.

Readers who remember the closing paragraph of my August article will be ready for my next suggestion. For the sake of those who did not see the August issue, let me say that I suggested a question to be asked by each reader of himself or herself: "What is my ideal of reconstruction for myself?" I also advised reading and talking about reconstruction in your own life and habits, and planning for changes of attitude—a new "orientation" towards these new and big problems.

Now let me apply my suggestion practically. Take the question of eating. Did you ever consider it seriously—what it means to you personally? Eating is your method of individual reconstruction—restoring the worn-out tissue, and building up your new body bit by bit (more literally, bite by bite) with the food you consume. The food you eat is immensely important to your physical, mental and psychic (spiritual) life. I remember a food advertisement which used the slogan, "Tell me what you eat and I will tell you what you are." Suppose we all began to study seriously the problem of food—how to select it; how to prepare it (not necessarily cook it, because it is argued by some that cooking kills the vital elements in food); how to chew food (Fletcherize) so as to get all the good out of it; how to aid digestion, by exercise, music, etc. Suppose we studied also how to discover good, nutritious foods that are not now on our bills-of-fare. What would happen? The possibilities are delightful to anticipate. Let's "pretend," and see what we might possibly find.

Suppose we should find, as John Wesley did, that a pound of food per day, properly chewed, and eaten with thankful heart, would put an ordinary person through as much work as Wesley did; wouldn't that be a big and delightful surprise? See what it would mean in economy of money!—and of time!—and of fuel now wasted in elaborate cookery!—and of temper spoiled by standing over a hot stove, stewing and fussing! Think, also, what it would mean if we could do as much work as Wesley did, or half as much! If we could reach only fifty per cent. of his output we would double, treble, quadruple our present capacity!

Banish the Cook and the Kitchen Stove.

Or suppose we should discover, in the course of our studies, as Mr. and Mrs. Eugene Christian found. Although they were both so impaired in

Early autumn at one of Canada's natural falls, Webster's Ravine, Dundas, Ontario.

health as to be almost totally disqualified for the performance of their daily work, less than a year of study and experiment resulted "in the total elimination of all stomach disorders and our complete restoration to perfect health." Wouldn't that be just splendid? These two Christians say that man's primitive food was plants, and that during his whole life primitive man would not eat more than a half-dozen different varieties of food, while it is estimated the average American can select from a thousand articles of diet. They believe that diet should be confined to plants, fruits and nuts in their natural (uncooked) state; the hickory nut, that has ripened in the top of a mountain tree, whose life-giving properties have been filtered through a hundred feet of clean, white wood; the delicious apple or peach, nursed in the lap of nature, rocked in her ethereal cradle, and kissed from the odorous blossom of infancy on to maturity and reddened, ripened and finished, ready for use, by the soft beams of the life-giving sun, the parent of all light and life. These products come from the hand of Nature in finished condition; they are done; but when cooked they are undone.

Here are three ideal meals for a perfectly normal person, as tested, tried and proved by Mr. and Mrs. Christian:—

BREAKFAST.
One red apple. Two ounces Pecan meats.
Six or eight black dates.
One very ripe banana, sliced, with thick cream.
One glass milk.

LUNCH.
Two Bartlett pears. One ounce Pecan meats.
Three Turkish pulled figs. One ounce Pignolia nuts.
Cold slaw with olive oil. One cake of unfired bread.
Four prunes with thick cream. Sweet butter.
Glass of egg-nog.

DINNER.
Half-pound of grapes. Two ounces mixed nut meats.
Vegetable salad with Hygeia dressing.
One cake unfired bread. Cream cheese.
Six or eight black dates.
Very ripe red banana with thick cream.
Pint of whole milk.

There is a whole world of new philosophy in this Christian method of eating. I have not room even for a summary; but here is a suggestion:—

There are five different classes of food: Water, proteids, carbohydrates, fat, mineral salts.

There are five different digestive organs: Mouth, stomach, liver, pancreas, intestinal glands.

There are five different kinds of digestive fluids: Saliva, gastric juice, pancreatic juice, bile, intestinal juices.

The ultimate and most scientific end that can be attained in the study of the food question is, to find in foods the exact requirements of a normal body; in other words, a perfectly balanced bill of fare. This is rendered extremely difficult when we subsist upon foods which have been changed by any process from their elemental condition; but in subsisting upon natural or elementary foods it is but a matter of time when the taste will dictate the quality, the hunger the quantity, and the perfectly balanced bill of fare becomes possible.

What is a Well-Planned Meal?

A well-planned meal containing the proper combination of foods is not difficult to prepare. The essential ingredient, a repairing material, is protein, found abundantly in meat, eggs, cheese and nuts. The starches and sugars technically known as carbohydrates, are required also, together with fats for fuel for effort. These two fuel-furnishing foods can be used alternately, thus securing a variation. Scientists who have given the question of food values special attention report that a diet of protein, fat and carbohydrates alone would cause starvation more quickly than if all food were withheld. There is a necessity of introducing some mineral salts, which yield iron, calcium, magnesium, phosphorus and potassium.

A supply of iron is obtained from raisins, whole wheat, dried beans, prunes and meats, or the yolks of eggs. Calcium is contributed by milk, dried peas and beans, celery and citrus fruits. In meat, peas, beans, milk and prunes there is magnesium. Phosphorus forms a quality in meat, milk, egg-yolks, whole wheat, dried peas and beans. Potassium is furnished in potatoes, parsnips, cabbage, turnips and apples.

Hunting for New Sources of Food.

Or, suppose we start in a search for new, cheap, nutritious foods. An American writer makes the startling statement that there are 30,000 new vegetables and fruits which have been thoroughly tested and proven to be exceedingly valuable and desirable. The mention of a few of these will show new directions in which food may be sought and produced, much of it in back yards, and other waste places.

Take the common, despised sunflower as an example. It is looked upon as useful only for chicken-feed; yet it is one of the most valuable plants that could be grown, and it would pay for most extensive cultivation. It originated in the western United States, was cultivated by the Indians before the time of Columbus, and Champlain in 1675 found the Indians cultivating it for food purposes, and making hair-oil from the seeds; yet we owe the logical development of the sunflower to the Russians, who cultivate it as a crop, and get twice as much money for it per acre as for any other crop, even wheat. Such a statement sounds sensational, until the many uses of the sunflower

A WOODLAND SKETCH

By
EDITH HALSTED LORWAY.

Illustrated by E. C. Reed.

An Amusing Story of The Adventures of Four Boy Scouts

Frank, the Captain.

"Aw, Gee, might as well sleep in a bed, as have to sleep on a porch that's been made by men," and a tan, ten-year-old boy sorrowfully took off his knapsack. "Might as well stay home, as go on a route march that way."

"You can do as you like about the staying home part," responded a wise mother, "but you aren't going to sleep out in the woods, no matter how many rain coats you have under you—no, not even if the sun *is* shining at intervals. It is the first day it hasn't rained—yes, poured, young man, in weeks, and you are not going to roll up your clothes in a bundle and leave them on the ground, even if the soldiers do it; however, you can do as you like about going."

The maid parted the blue velvet portieres, "You are wanted at the phone, Mrs. Norwood."

Frank remained standing while his mother took down the receiver. An expression of absolute blankness covered his features, although his mind was active, formulating ideas. It was only a week since he had bumped his head severely against that wall which separates an adult's focus of things in general, from a child's. As yet he was not mentally tall enough to climb over the wall, and all the grown-ups once safely over seemed to have forgotten even how to climb back—so, hang it all, what was the use of a fellow talking, and arguing against a stupid, stolid, apparently invincible adult world!

Bill.

All his ten years of existence, from his babyhood up, it had been necessary for him at intervals to become acquainted with that same wall; but it was not until after his tenth year birthday party, that having bumped his head severely against the barrier, he recognized its existence. Invitations in gold writing, with blanks left for the date, and the "o'clock" had gone to fifty "kids." Of course that meant fifty presents. Naturally the quickest and most efficient method was to stand by the door, seemingly to shake hands with each arrival, in reality to collect in the gifts, very much as if he were collecting the tickets to a performance. This method would save having his name called out, and allow of his simultaneously taking the present with one hand, shaking hands with the other, and saying "thank you" with his mouth.

He had a table by the door on which he could put the gift when unwrapped, with the basket underneath in which to throw the tissue paper. Perhaps he would save the ribbons; he had not been sure about that part, thus he would be ready quickly for the greeting and receiving of the next gift, especially the receiving process, connected with the next gift.

To his great humiliation, disappointment, and chagrin, no presents appeared—not one. To each guest present he had given a gift on his or her birthday, and here was no return! It was much worse than insulting, it was straight graft. He had given, and he had received not. He had been a hypocrite and smiled cheerfully while shaking hands with forty children—quite as it had been drilled into him by his mother and debutante sister that he must do. At the time of their instructions he had not given it much thought. It had seemed no hardship when he was to receive a gift at the same time, but to stand there and to smile and smirk with no reward, was—to put it mildly, "getting on his nerves."

Finally the maid had opened the door for Billy Findley—a crisp, clean Bill, almost unrecognizable in his spreading Buster Brown collar and his "don't-touch-me" party air. No shaking hands with Bill! Frank grasped him by the coat sleeve.

"Hey, there! where is my present?"

"I haven't any present. Let go my sleeve."

"Why haven't you one? Where is the fifty cents your mother gave you last week?"

"Aw, I did a lot of things with it; mostly went to the movies. It is none of your business, and you let go my sleeve."

Bill was squarely built and a man of action. The word "guest" meant nothing to him, and the word "host" nothing to Frank. Frank had hold of his newly pressed sleeve. That was sufficient cause for a fist blow. The result was a regular fight. Before either one had had time to claim the victory, the debutante sister, much disturbed, had separated the two. She had smoothed down Frank's ruffled hair, twisted the Buster Brown collar back to its original angle and sent Bill into the parlor to play "drop the handkerchief." Frank she had returned to his post as host.

"Look here, Frank," she had said, "I am ashamed of you. That was an awful thing to have said. The idea of asking Bill where his present was, just as if it were a ticket! How would you feel if some one asked you that at his party?"

How would he feel? It was insulting to ask such a question. He could no more sense the answer than if a dumb person were to suddenly lose his voice and some one were to ask him how he felt about it. Frank would no sooner think of going to a birthday party without his present, than of going to school without his shoes, nor would any of the other fellows as far as he knew, but just his luck, at *his* party all rules of gift etiquette seemed to have been called off.

"Of course they didn't bring presents," continued his sister. "Some of mother's friends were saying that it was a mercenary habit to have children bring presents to parties, and a stop should be put to it, so mother wrote on the invitations, 'Please do not bring presents'—I guess she forgot to mention it to you."

Only one guest out of the fifty, for of course they all came, had broken the parental law. She was a late comer, and by that time Frank had lost all heart to open the box. Later she had come up to him and with a pleading look had asked him why it was not opened.

"You might know chocolate peppermints are my favorite candy," she had said.

With a jerk Frank was brought back from the contemplation of past tragedies to the reality of the present, for the voice of his mother was saying over the phone to Bill's mother, "I spoke to the other mothers about it and we decided we would let the boys do as you and the doctor thought best; of course *I* don't think it is wise to let them sleep on the ground and not take any food with them."

"Food!" interrupted Frank. "I told you we each had a quarter of a pound of flour and some oatmeal, and some—gee, I have forgotten what all, but anyway it is all there in the cook book, and we are each going to cook our own bread."

"It certainly is not wise," continued his mother, in a maddening way, just as if she had not heard. "They might as well go and dig up a pneumonia germ as do what they want to do. About the food, I told Frank he could take the rations according to the book he had, for you know boys, if they get too hungry their stomachs will guide them to a farm house."

All of a sudden Frank felt a great wave of fellow feeling towards Galadio, whose picture was shown forth from a page of the school reader. He knew now how that great man had felt when standing before those in authority, he disavowed that the earth revolved around the sun, yet under his breath he said, "Nevertheless it does." He, Frank, was placed in that same position, for it was only the other day that the drill master had exhorted them to get out into the open more—to rough it, to live close to old mother Nature, for only thus would they grow sturdy, and ready to be true soldiers if the need arose; and here was he, captain of the scout squad, being babied and made a sissy of by the woman for whom he meant to grow sturdy and fearless. The bands of parental authority seemed tight, yet like Galadio he could only bow to the yoke and under his breath say, "Nevertheless, you are all wrong." By the time his mother had hung up the receiver he had forced a fairly cheerful expression. "Well, suppose I'd better be getting my kit ready."

"When is it you are to be back?" asked his mother.

"Oh, in about four days."

"It would be well to get an early start in order to get the cottage opened up and the cots and blankets well aired before sundown."

"Cots and blankets aired! what nonsense!" he thought to himself.

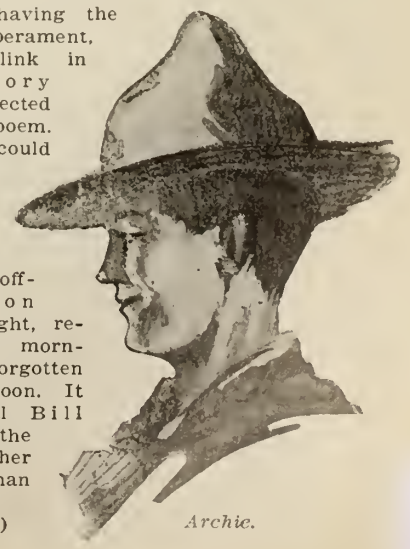
The captain mounted the stairs two at a time. He was making a brave attempt at three, but failed in that. His despondent mood had quite left him, and he whistled gayly as he packed his kit. Into it he put his cook book, his individual frying pan—a tiny doll-like thing, his quarter pound of flour, a small bag of sugar, some butter which already was becoming greasy, a candy box full of oatmeal and various minor ingredients necessary for cooking. For milk and eggs they were to part sufficiently from the primitive to obtain from a civilized farmer. Lastly, there were four potatoes and four chops, one for each day.

Galadio at Cunningham.

His cartridge belt he buckled around his waist. True, the boys were not allowed to take their shooting outfits unless accompanied by an older person—another thorn in the flesh—but the outside world, especially the girl next door, must not know that. therefore the cartridge belt. though hot and heavy, must be donned for its soldier-like touch.

The four scouts, including their captain, walked merrily along the country road, making brisk time over the dry stretches, slower over the muddy places. It was one of those days in spring, when, after a month of rain and raw days, it seems as if Nature had pressed an electric button and started into activity her drowsy buds, and the calling songs of her mating birds. They were walking through "Lovers' Lane," a favorite haunt of the boys. "All the world loves a lover," especially the boy of ten, for are not lovers something to be teased, something to be annoyed! Around the bend in the road a young man was helping a girl over a fence. Ordinarily this would be the signal for the young scamps to lie low, until the couple had reached the other end of the woodland path. The time this took depended upon the stage of the courtship. If the couple were just good friends and walked briskly along, it was a five minute walk, but an extra two minutes must be allowed, if there were any rough places to be helped over, and shy glances to be exchanged while anywhere from five to ten minutes was allotted if there were frequent kisses and they sauntered arm in arm. When the couple had reached the little wharf, they would unfasten a canoe and paddle over to an island, well known for its trilliums. Here, after beaching the canoe, they would be lost to view in the island shrubbery. It was then the boys, like Indians, would creep through the woods, unfasten a row boat and "beat it" over to the island. There, tying the canoe to their boat, they would be well into the middle of the stream before discovered by the luckless couple. Whereupon there would be entreaties from the girl and a stern command from the man, shouted through a pair of megaphoned hands to "Bring that canoe back." At which the young imps would laugh back derisively.

"Will you take it now or when you get it? You sit down and hold the lady's hand, we'll call for you later"; and they always did—but at their own convenience.



Only once had Frank and Bill clean forgotten all about a couple stranded on the island until after eleven p.m., but that is another story, a story with a sad ending, for two young gentlemen were unable to sit down for some days.

Trudging along they reached the brow of the hill. Here for a few minutes they threw off their kits and flung themselves on the turf for a short rest. Below them across the green landscape like a great piece of blue crepe paper, lay the rippling lake. The smoke of an out-going steamer was drawn like a pencil mark across the horizon. Sweet scented breezes were around them, and Nature beamed benevolently upon the earth.

"Sort of looks like that poem about spring, in the reader, doesn't it, so sweet-smelly and all?" volunteered Archie.

It was evident that Archie Durston, despite his freckles and sturdy build, had bearings toward the poetical. The three others not having the artistic temperament, found no link in their memory which connected with the poem. In fact, they could not recall *any* poem. Poetry was a thing to be "learnt-off-by-heart" on Thursday night, recited Friday morning, and forgotten Friday afternoon. It was practical Bill who came to the rescue. "Rather be outdoors than

(*Continued on page* 56.)

Archie.

A King in Babylon

By BURTON E. STEVENSON.

Had the Hand of the Little Slave Girl Been Knocking For Four Thousand Years?

CHAPTER XXVII—*Continued.*

CREEL and I looked at each other a little sheepishly. I wasn't convinced; I was sure Creel wasn't, either. But we pretended we were—that seemed the only thing to do.

"I guess that's another one on us, Billy," said Creel, and looked around the tomb. "But where is that man Allen?"

Davis was sweeping it with his shaft of light.

"He isn't here," he said. "I'll wager . . ."

He stopped again, and this time we all heard the sound—a soft and regular breathing.

By a common impulse, we tiptoed forward. And there, on the bottom of the great sarcophagus, was Jimmy Allen. He was lying on his side, his head pillowed on his arm, and sleeping as calmly as any infant.

It was Creel who got his voice first.

"Well, I'll be jiggered!" he said softly. "He *is* crazy! To come over here alone . . ."

"He wasn't alone," I burst in, unable to pretend any longer. "That wasn't a bat we felt—I know it wasn't!"

Davis snorted impatiently, but Creel stood biting his lips and staring down at the sleeping man.

"That only makes it worse," he pointed out, at last.

I agreed with him . .

And just then Jimmy stirred, and opened his eyes, and smiled calmly up at us.

"Hullo, fellows!" he said, precisely as he had once before on this very spot. "What are *you* doing here?"

"We were looking for you," answered Creel savagely. "What do you mean by such a fool caper?"

"Oh," said Jimmy, "I thought I would see how it felt to sleep in this tomb again . . ."

"Again?" echoed Creel.

"I spent a night here some four thousand years ago;" said Jimmy.

"Alone?"

"Oh, no," and he glanced at the rear wall. "I had company then—just as I had to-night."

"Look here, Jimmy," Creel blurted out, "of course it is none of my business, and I don't take any high moral stand—but I think you ought to cut it. Assignations in tombs are hardly decent . . ."

"What do you mean?" demanded Jimmy sharply.

"Oh, we didn't see her," said Creel; "she was too quick for us. She knocked the torch out of Davis's hand and bolted . . ."

"No, she didn't," said Jimmy. "She is still back there. Put your ear against the wall and you can hear her."

Davis, with a strange glance at him, went to the back wall and placed an ear against it. There was something in his face which drew Creel and me to his side.

"There is undoubtedly a noise in there," he said, and Creel and I laid each an ear to the wall and listened with bated breath. For a moment I heard nothing; then there came a faint tap-tapping—I could fancy a tiny fist beating against the stones—beating for forty centuries! And I found myself turning a little giddy.

"It must be some stones dropping out of the roof," said Davis.

"It is Tina knocking to get out," said Jimmy, 'just as she did the first night. I told you she hadn't died, but was waiting and hoping and beating against the wall!"

He was sitting up in the sarcophagus, and looked around at our startled faces with a mocking smile.

"Tina?" echoed Davis. "Was that her name?"

"It was my name for her."

"It sounds suspiciously modern," Creel commented. "I'm afraid your imagination is running dry, Jimmy."

"Oh, no," said Davis quietly, "Tina is an Egyptian name. There is a record of the family of Pet-Baal, a priest in the temple of Amen, and one of the daughters was named Tina."

"She knows I am here," continued Jimmy; "she sensed it, somehow, as soon as I entered. She's aching to get at me!"

"Love?" queried Davis.

"Oh, no!" said Jimmy, coolly. "The reverse! I don't blame her—she was only nineteen when I walled her up in there! But if she did get out, I would be in for a pretty strenuous time."

Davis strode over to Jimmy, his eyes gleaming with exasperation.

"Look here, Allen," he said, sternly, "do you expect me to believe this nonsense?"

"Oh, do as you please," said Jimmy with a shrug. "Whether you believe it or not, it's true!"

"You are speaking seriously?"

"Entirely so."

"You mean to tell me that whoever or whatever it was that was walled up in that tomb has survived for four thousand years?"

"You believe in the immortality of the soul, don't you?"

"Yes; but the soul doesn't waste forty centuries hanging around the place where the body is buried. It's out in the universe seeking new adventures! Anyway, how could a soul knock against a stone wall?"

"I don't precisely know," answered Jimmy, meditatively. "You see, all that sort of knowledge has somehow slipped away from me. But it seems to me I have heard of souls rapping against tables and things."

"Rubbish!" said Davis, and abandoned an argument which plainly led nowhere, and rejoined us at the wall.

"It doesn't sound like stones dropping out," commented Creel. "It's too quick and regular."

"It sounds like nothing," I said, "except a hand hammering to get out. It starts in slowly, and then quickens, and then stops for a while as though to get breath, and then starts in again."

"It's an Egyptian trick of some sort," said Davis impatiently. "A pendulum arrangement, perhaps, set in motion by a current of air. They were experts at such tricks—their temples were full of them! We'll see for ourselves to-morrow."

"Oh," said Jimmy, suddenly standing up and looking at Davis, his eyes intent; "you're going in there to-morrow, are you?"

"I certainly am," snapped Davis, "and none of your cock-and-bull stories will stop me!"

"I'm not trying to stop you," said Jimmy. "I'm not afraid! Haven't I told you I would never be afraid again? But if you are going to let her out, I've got to get ready!" and he clambered slowly out of the sarcophagus. I saw that he was attired only in his pajamas, and that his feet were bare.

"Didn't you wait to put on your shoes?" asked Creel.

"One doesn't need them in the sand," said Jimmy. "Are you ready to go back? All right, come along!"

As he turned toward the passage, I could have sworn that the beating against the wall increased in fury, as though the prisoner in the tomb raged at being balked of its prey. Jimmy must have heard it too, for he smiled back over his shoulder.

"Revoir, Tina!" he cried. "Don't worry. You'll see me to-morrow!"

And then from in front of us came the crash of falling masonry.

"Good God!" cried Creel. "The roof!"

A moment later, Davis's torch was playing over the pile of debris which half-blocked the entrance.

"We can just get past," he said; "but move carefully," and he squeezed through into the outer chamber. "That was a near thing," he added, when we stood beside him, and he threw the light over the fissure in the roof from which the stones had fallen. "There's the bat!" he cried, and I saw its gray shape flit across the ceiling and disappear in the darkness of the corridor. "Perhaps you'll still talk to me of ghosts!" he added grimly.

Jimmy laughed.

"Have they been talking of ghosts?" he asked.

"They have been scared to death!" snapped Davis. "By shadow—by clouds—and by a bat. I'm glad to see that you, at least, have got some nerve left!"

Jimmy laughed again.

"Better than that!" he drawled. "I haven't any left. I have said good-by to nerves forever!"

He stretched his arms above his head and yawned tremendously.

Davis glanced at him, then he turned his light back again to the crumbling roof.

"I'm afraid I'll have to brace it up to-morrow, before I go to work in there," he said. "Awful waste of time!"

"Why not let well enough alone, Davis?" asked Creel impulsively. "You've got the coffin and the king's mummy. That ought to be glory enough!"

"But I haven't solved the mystery," snapped Davis. "Do you suppose I could rest content with anything less than that? Do you suppose I want to spend the rest of my life blaming myself for a coward!"

"Of course you don't!" said Jimmy quietly. "Play the game! That's right! That's what we all must do!" and he led the way into the outer air.

Silently we crossed the sand back to the oasis. As we neared it, the weird chant from the native camp floated again to our ears.

CHAPTER XXVIII.

IN the midst of breakfast, next morning, Mustafa appeared and called Davis aside, and talked long and earnestly into his ear, while the explorer listened with evident anger and impatience.

We all of us watched the conference curiously, but without remark. In fact, we seemed to have lost the faculty of speaking, except when speech was necessary, even Ma Creel—and only those who know her can appreciate what a change that meant! For the most part, we sat moodily, with bent heads, as though there was something weighing us down. And that was it precisely—there *was* something weighing us down . . .

It was worse than ever that morning. It affected even our native servants. At any rate, the boy who waited on the table dropped a tray of dishes with a crash that made us jump nearly out of our skins, and the cook upset the coffee and had to make it over again. And all the time Mustafa talked and talked and waved his hands .

I suspected what the trouble was, and so, I think, did Creel. Perhaps Jimmy also was able to divine it, for he glanced at the two men from time to time with an enigmatic smile. There were dark circles under his eyes, and I saw how his hand trembled when he raised his cup to his lips. Evidently there was less truth than bravado in his boast that he had said good-by to nerves! As for Mlle. Roland, who, as usual, sat opposite him, her pallor was startling, and her eyes were like coals of fire. I was sure she was burning with fever; and I have wondered since if she had a presentiment . .

Davis came back at last, and sat down without looking at us, and went on with his breakfast.

"Well," said Ma Creel, "what was it about? You'll have to tell us sooner or later, you know!"

"It is nothing very serious," Davis answered. "The natives have got an idea that there is something the matter with that tomb, and they have notified Mustafa that they won't enter it again."

"You don't care, do you, since you've got the mummy out?"

"I had intended to—ah—explore it a bit further," explained Davis.

"What do they think is the matter with the place?" Ma Creel demanded.

"They think it's haunted—they all believe in witchcraft, you know. A piece of the roof fell in last night, and they consider that a warning to stay out. I had to pull down part of a wall to get the coffin out, and it weakened the vaulting."

"Then it *is* unsafe?"

"Mustafa and I are going to rebuild the wall. You said I could have Mustafa," he added, turning to Creel.

"Yes, take him," said Creel. "I won't need him. Our principal scenes to-day are the ones showing Jimmy's finish—those and a few fillers to connect things up."

"What *is* Jimmy's finish?" Davis asked, with what was for him unusual curiosity.

"The siren—the reincarnation, you know, of the woman he had buried alive—lures him out into the desert; and then, at the moment he catches her and crushes her to him, she changes to a mummy in his arms; and he goes mad when he finds that he can't throw the thing off, and wanders around with it clinging to him, until he finally falls exhausted in the sand and dies."

(Continued on following page.)

For Those Who Missed The First Chapters

A NEW YORK company of moving picture actors goes to Egypt to film a picture which it is believed will make a tremendous "hit." Davis, an Egyptologist, joins the party at Luxor, and with an outfit of camels, donkeys, etc., they journey into the desert. While Davis accompanies and directs them, his real object is to complete excavations in certain ruins in which he believes he will find the tomb of an ancient king.

He is correct in his supposition and the tomb of Sekenyen-Re is unearthed. The plot of the picture and the real become strangely interwoven in this land of mystery and superstition, and it often remains for the old Egyptologist to give a reasonable solution of the many uncanny happenings.

In the last instalment the precious casket was carried out of the tomb, and as it lay in the tent in semi-darkness one of the party believed he saw the spirit rise slowly from within, join another form hovering near the foot and noiselessly disappear. Shortly after it was discovered that Jimmy Allen was gone. The men of the party were aroused and at once proceeded over the oasis toward the natives' quarters, where they found their leader chanting a weird melody to ward off the evil spirits which he said were abroad that night. Resolutely turning toward the excavations, the men entered the tomb, to find that they were not alone. There was a soft rustle as of a woman's skirts; suddenly something brushed past and the torch was knocked to the floor.

A King in Babylon

(Continued from preceding page.)

"Cheerful stuff, I must say!" grunted Davis. "Do you mean to tell me any American audience will stand for such rubbish?"

"They'll eat it up!" said Creel cheerfully. "And now you two run along," he added to Jimmy and Mlle. Roland, "and get into your togs. I will want you first in your harem costume, Princess, and you in your khaki, Jimmy. Where is that mummy, Digby? Over in the ruins?"

"No; I've got it in the property-tent," said the careful Digby.

"Well, get it out; and, Billy, be sure you take plenty of film."

"I'll be off and do some real work!" scoffed Davis, and presently I saw him and Mustafa crossing toward the ruins.

Half an hour later, we were hard at work. First we did a scene showing Jimmy and Creel carrying the papier-mache mummy between them over from the ruins, and then I panned them up to the entrance to the tent. Then we rolled back part of the top to let in the light, and I shot them as they brought the mummy into the tent and laid it on a table, which had taken the place of one of the cots. Then they went to bed (a lighted lamp and the tinting to be given the film subsequently indicating that night had fallen); and then we changed the lighting so that it would be concentrated in a sort of soft, uncanny glow on the table, and Mlle. Roland took the mummy's place there, and I reeled back and made a double-exposure; and Jimmy woke up and saw her lying there, gazing at him alluringly under half-closed lids, for all the world like that picture of Venus by Cabanel at the Met.

He raised his head and looked at her a moment; then sat up in bed; and then, as though the lure was irresistible, he slowly rose from the cot and stole toward her; and she slipped from the table like a snake, looking back at him over her shoulder, and glided out of the tent. He hesitated a moment, glanced at his sleeping partner, and followed.

And then Creel woke up, discovered Jimmy and the mummy both missing, and rushed to the door, and stared out into the night. It was well done, and I felt sure would get across with any audience. All of these scenes, as well as the ones which followed, would be tinted, and so would be doubly effective. Outside the tent, I panned them to the edge of the desert—Jimmy following the siren; and then Creel in search of them; and there we had to stop, for it was too hot to think of venturing out on the sand.

"We will wait till afternoon for the finish," said Creel. "You two go and rest—you've got some hard scenes ahead. But if you do as well this afternoon as you did this morning, it will be a hummer!"

"Thanks!" said Jimmy, and they walked away together, back toward the tents.

"Queer couple that," said Creel meditatively, looking after them. "I can't for the life of me make out whether they hate each other or are desperately in love. What's stranger still, my wife hasn't been able to make up *her* mind, either. And she's a regular clairvoyant in that sort of thing!"

"You would laugh if I told you what I think," I said.

"No, I wouldn't—I know what you think. You think that yarn of Jimmy's is true."

"Yes, I do!" I said.

Creel looked at me curiously.

"I'm not so sure myself that it isn't!" he said, at last. "I'm ashamed to admit it—but down at the bottom of my heart, I'm afraid—I'm afraid . . ."

"Of what Davis is going to let loose—well, so am I!"

"And yet I can't but admire the old sport," said Creel. "He would go ahead and open that wall, if he knew all hell was behind it!"

"So would you!" I said.

"Yes, I suppose I would," Creel agreed, and looked out across the sand. "Suppose we walk over and see how he's getting along."

We found him and Mustafa sweating over a rough reconstruction of the masking wall, which was still some feet from the ceiling.

"This is an awful job," panted Davis, "and I don't believe it is necessary. No more of the roof has fallen. Damn those fool natives, anyway!"

"Come on to lunch and rest awhile," said Creel. "*You'll* be having a heat-stroke, first hintg you know!"

"You have another try at those fellows, Mustafa," Davis directed. "Offer double pay to any who will come over here and build up this wall. Tell them I shan't ask them to enter the inner tomb. And make it clear to them that they *lose* double pay for every hour they won't work."

"Vurry good, saar," said Mustafa, and departed.

"You haven't started to open up that wall, then?" Creel inquired.

"No," said Davis; "I don't dare do that till this roof is safe." Then he looked at Creel curiously. "Good heavens, man, *you* don't believe that ridiculous tale!"

"I don't know what to believe," answered Creel, moodily. "So many things have happened . . ."

"Nothing has happened," rapped out Davis, "that isn't susceptible of a perfectly commonplace explanation—such as bats, for example!"

"Perhaps you are right," admitted Creel reflectively; "and then again perhaps you are wrong. Anyway, I'm taking no chances. I am going to get my picture so far finished this afternoon, that it won't matter *what* happens."

"Nothing is going to happen!" broke in Davis impatiently. "I hope I am going to find another mummy—it *may* be the body of a woman who was buried alive; but take my word for it, it will be quite as dead and innocuous as that papier-mache fake you brought along with you!"

"Well, I hope so!" said Creel, and we walked back together to the tents for lunch.

"Got through the wall yet?" Jimmy inquired, in the course of that meal.

"Oh, no," Davis answered; "I've got to brace up that roof first."

"Expect to get through this afternoon?"

"Yes—at least I will make a hole big enough to see what is inside. If there is nothing there, I won't have to go any farther."

"Oh, yes," said Jimmy, "there is something there!"

"I think myself there is," agreed Davis coolly; and after that the conversation languished.

Half an hour later, as I was wandering about trying to find a place cool enough to take a nap in, I came upon Jimmy seated at the edge of the oasis nearest the ruins, carefully braiding together some leather thongs which he had secured somewhere—perhaps from Digby, who had everything. For a moment, I didn't understand what it was he was doing; then I saw that he was making a whip—and a particularly vicious-looking whip, at that!

"What is that for?" I asked, sitting down and watching him.

"Don't you remember, there was to be a whip," said Jimmy, and turned a thong up into a loop at the thick end to go around his wrist.

"But all that has been cut out," I reminded him.

"Just the same, I rather fancy I'll need a whip," said Jimmy, and to the other end he attached a cruel lash that would cut through any hide. "There!" and he cracked it. "What do you think of that!"

"I don't like the looks of it," I answered candidly. "What are you going to do with it?"

"Never mind," he said. "This isn't your game, Billy—you ought to thank heaven for that!" and he walked away and left me alone, very uncomfortable in my mind. I didn't like to imagine how he was going to use that whip—and yet I couldn't help it—and I had a vision of cruel streaks of red across white shoulders . . .

When we started out to take the final scenes, there was a little bulge around Jimmy's waist under his pajamas which I was certain was the whip. But I soon forgot all about it in the excitement of our work.

Our morning scenes had ended at the edge of the oasis, with Jimmy, just from his bed, following the siren through the moonlight. We picked the story up there, and showed her luring him across the descert; then other scenes of Creel following the trail in the sand, losing it and picking it up again. It was great, for if ever a woman looked like a vampire, Mlle. Roland did as she enticed him on and on, keeping just beyond his reach, gliding from between his fingers as he tried to grasp her, with a tantalizing smile parting her red lips, and her eyes glowing with hatred. And as the game went on, Jimmy's eyes began to glow, too, and the sweat ran down across his cheeks, and he fairly panted for breath.

Those Amazing Prices

Would be necessary to make those foods as cheap as Quaker Oats

Saves $2 Per Package

In Quaker Oats you get 1000 calories of food value for five cents.

The large package yields 6221 calories. That same food value in meats, on the average, would cost at least $2 more.

The following indispensable foods, universally used, would need to sell at these prices to be as cheap as Quaker Oats:

Round Steak, 4½c lb.	Lamb, - - 4₂c lb.
Chicken, - 2½c lb.	Eggs, - - 3½c doz.

The average meat meal costs you 7 or 8 times what the same nutrition costs in Quaker Oats.

Remember that. Oats form the greatest grain food in existence. To-day they mean immense reduction in your cost of living.

Make Quaker Oats your basic food. Mix it in your flour foods. For the young and old it means ideal nutrition at a trifling cost.

Quaker Oats

The Extra-Grade Oat Flakes

When you ask for Quaker Oats you get the utmost in oat food.

They are flaked from queen grains only—just the rich, plump oats. We get but ten pounds from a bushel.

Flavor means so much in oat food that you should get this brand. It costs no extra price.

35c and 15c Per Package

Except in Far West

Quaker Oats Bread

1½ cups Quaker Oats (uncooked).
2 teaspoons salt.
½ cup sugar.
2 cups boiling water.
1 cake yeast.
¼ cup lukewarm water.
5 cups flour.

Mix together Quaker Oats, salt and sugar. Pour over two cups of boiling water. Let stand until lukewarm. Then add yeast which has been dissolved in ¼ cup lukewarm water, then add 5 cups of flour.

Knead slightly, set in a warm place, let rise until light (about 2 hours). Knead thoroughly, form into two loaves and put in pans. Let rise again and bake about 50 minutes. If dry yeast is used, a sponge should be made at night with the liquid, the yeast, and a part of the white flour.

This recipe makes two loaves.

Quaker Oats Pancakes

2 cups Quaker Oats (uncooked), 1½ cup flour, 1 teaspoon salt, 1 teaspoon soda dissolved in 2 tablespoons hot water. 1 teaspoon baking powder (mix in the flour). 2½ cups sour milk or buttermilk, 2 eggs beaten lightly, 1 tablespoon sugar, 1 or 2 tablespoons melted butter (according to the richness of the milk).

Process: Soak Quaker Oats over night in milk. In the morning mix and sift flour, soda, sugar and salt—add this to Quaker Oats mixture—add melted butter; add eggs beaten lightly—beat thoroughly and cook as griddle cakes.

Quaker Oats Muffins

2/3 cup Quaker Oats (uncooked), 1½ cups flour, 1 cup scalded milk, 1 egg, 4 level teaspoons baking powder, 2 tablespoons melted butter, ½ teaspoon salt, 3 tablespoons sugar.

Turn scalded milk on Quaker Oats, let stand five minutes; add sugar, salt and melted butter; sift in flour and baking powder; mix thoroughly and add egg well beaten. Bake in buttered gem pans.

A King in Babylon

(Continued from preceding page.)

We did quite a good deal of this, for the chase was supposed to continue through the night and into the next day—we would show the sunrise in one scene, if we could work it; but finally Creel indicated that we had enough.

"All right," he said; "we'll do the final scene here."

I don't know whether or not Jimmy heard him, but he sprang forward, swift as a dart, caught the girl before she could escape, and crushed her to him.

"I've got you, damn you!" he said, between his teeth. "I've got you at last!"

She fought to get away—she fought like a demon; hut he held her tight, and slowly bent back her head with a remorseless hand and kissed her on the lips. And at his touch, her eyes closed, a shiver ran through her, and her arms fell limp . . .

"Stop, Billy, stop!" yelled Creel. "Hold your pose, Jimmy. Bring up that mummy, Digby! By heaven, the girl's fainted!" he added, and ran forward and caught her from Jimmy's arms. "Stand still, man! We'll look after her in a minute. Reel back six feet, Billy. Now, Jimmy, take the mummy—hold it as you were holding the girl—that's right! Now kiss it! Kiss it! All right, Billy!" and I ran six feet through again. "Now! Go ahead! You see it's the mummy, Jimmy! Stare at it a moment—then try to throw it off! Stop, camera!" and he ran forward and fastened the mummy's arms about Jimmy's neck. "All right! Try to throw it off! Fight it!" and I took a thrilling scene while Jimmy fought with the clinging monster, and finally dropped exhausted to the sand. "Great!" said Creel, and held up his hand to me to stop.

All this while he had been holding the girl's limp body over one arm, and gesticulating with the other; and now, at last, he had time to look at her; and just as he did, she straightened up and rubbed her eyes.

"Feeling better?" he asked.

"I am quite well," she said, and stood away from him.

"Sure?"

"I am ready to go on."

Her voice was utterly expressionless and her face was pale as death; and she was rubbing her lips with the back of her hand, as though they had been poisoned. And all the while, Jimmy was looking on with that infernal smile of his. I've got the word for it at last—infernal!

Creel looked at her and then looked at Jimmy, and his face hardened. There was really nothing to complain of, for that long, passionate kiss was strictly in the part, but I saw that Creel wasn't pleased. A kiss can be faked, you know; most of them are.

"All right," he said. "Sit down under the umbrella and rest. I won't need you for awhile."

"Thank you," she said, and went over and sat down under the big white umbrella Digby had brought along, while Creel went ahead with the final scene.

I am bound to say that Jimmy did it well. He staggered on, with the mummy clinging to him, around and around; and finally he managed to fight it loose, and threw it to the ground, and smashed its head in with his foot. And right there we did another double exposure, so that at the instant he had his foot raised, the mummy changed to the siren—but he set his face, and brought his foot down upon her head, and fell upon her and tore her limb from limb—only it was the mummy's blackened members he strewed about him on the sand. And then, after a period of unconsciousness, he awoke in his right mind, with the fragments about him; and even as he stared at them, they seemed to run together and change to a living woman; and then, as he jumped at it, back to fragments again.

No wonder he went mad, and tore those fragments into little shreds, and scattered the shreds to all the corners of the compass. And then his senses returned again, and he tried to get back to the oasis, and wandered this way and that; discovering at last, that he was travelling in a circle; and finally dropped from exhaustion.

And so Creel, in the character of his comrade, found him, just before he died; and the last thing his eyes saw was the girl's face, smiling down at him, in mocking triumph, over Creel's shoulder.

So ended "A King in Babylon."

CHAPTER XXIX.

WE were not very far from the oasis, but the journey back to it seemed a thousand miles, I was so weary and overwrought—and a moving-picture camera is no light burden. Mlle. Roland seemed ready to drop at every step, but she declined Creel's proffered arm and plodded doggedly on through the sand. Jimmy, at the rear of the procession, and apparently quite fresh despite the fact that he had worked harder than any of us, drew forth his whip and amused himself by cracking it; and somehow it seemed to me that he was driving the girl on with it. I could see her start, every time it cracked, as though the lash had been laid across her shoulders.

Creel, at last, could stand it no longer, and turned angrily and shouted to him to put the whip away. He didn't put it away, but he stopped cracking it. Once, when I glanced over my shoulder, I saw that he was running it lovingly through his fingers; and his eyes were on the drooping figure of the girl ahead of him.

We reached the oasis at last, and Mlle. Roland went straight to her tent, and presumably to bed. At least, I saw no more of her. Jimmy dived into our tent, to change from his pajamas; while Creel and Digby and I went on to the property-tent to get rid of our burdens.

"Thank God that's over!" said Creel, as I was sealing up the film. "I wouldn't go through it again for a million dollars!"

Of course, that was just a manner of speaking. I knew quite well that, had he had any reason to think any portion of the film a failure, he would have ordered a re-take without an instant's hesitation. But I had developed a few inches from the end of every spool, and had found them all as brilliant and clear and beautifully lighted as any I had ever done.

"I am going to get away from here as soon as I can," Creel added. "I can't stand it any longer. We'll start to-morrow, if possible, Digby, so get your props together. If we get safe back to Luxor. . ."

"Why shouldn't we get back to Luxor?" I demanded.

"No reason that I know of. *When* we get safe back to Luxor, perhaps I'll take a few scenes there, just for the background. What do you think of that whip business?" he asked suddenly, in another tone.

"I don't like it."

"Where did he get the whip?"

"He made it—I happened to see him doing it. You thought of using a whip, you remember."

"Yes—but he knew I had cut out those scenes. Besides, there's a whip among the props."

There was a moment's silence, then Creel turned to me, his face very grim.

"Did it seem to you that he was using it on the girl?" he asked.

"Yes, it did," I said, "and I couldn't have stood it much longer."

At that moment Jimmy stuck his head in at the door.

"I'm going over to see how the professor's getting on," he said. "Don't you want to come along? I sort of feel that I can promise you a thrill or two."

Creel and I looked at each other. I think we both felt that we had had thrills enough to last for a long time—but we also had a burning curiosity as to what would happen next. It proved too much for us.

"All right," said Creel shortly, reading consent in my eyes. "Come along, Billy," and we joined Jimmy outside the tent.

I saw then that he still carried the whip in his hand.

"What in blazes are you doing with that thing?" Creel demanded. "I'm sick of the sight of it."

"It will come in handy, I fancy," said Jimmy, coolly, and cracked it like a pistol-shot.

The sun was dropping toward the horizon as we came out upon the sand, and again I heard rising from the native camp that weird chant to drive off evil spirits.

"They're taking no chances tonight," commented Jimmy; "they're not waiting for the sun to set. I don't know but they are wise!" he added grimly.

I wonder how he knew the meaning of the chant. Perhaps Davis had told him—though that seemed hardly likely; perhaps he just knew!

(To be continued.)

Out-Door Meals For Early Fall

By MARION HARRIS NEIL,
Author of
"Economical Cooking."

For a Children's Summer Watermelon Party.

Temperance Punch.

For the Picnic.

September is the Queen Month of the Year, With Its Harvest of Fruits and Beautiful Blossoms.

Many of our instincts are now being explained by science. We are accustomed to finish a heavy dinner by eating fruits, cooked or raw. This we do, instinctively or scientifically, because the acids and peptones in the fruit assist in digesting the fats so abundant in the heavier foods. Cultivated fruits, such as strawberries, cherries, apples, etc., contain on analysis very similar proportions of the same ingredients—about one per cent. of acid and one per cent. of flesh-forming albuminoids with over eight per cent. of water. Digestion depends upon the action of pepsin in the stomach on the food, which is greatly aided by the acids of the stomach. Fats are digested by these acids. The acids and peptones in fruit peculiarly assist the acids of the stomach.

While fresh fruit may, in most cases, be freely indulged in, much of the mortality arising from summer and fall diseases is due, more or less directly, to the use of unripe, or still worse, stale fruit. This is especially the case with children, both because they are more sensitive to disease, and because they lack judgment as to the quantity and quality of the fruit they eat. Green apples are a source of anxiety to every careful country mother. The old-fashioned rule is not to eat an apple until the seeds are black; but children are apt to be color blind where apple seeds are concerned.

Many excellent fish come in this month, such as salmon, halibut, codfish, haddock, mackerel, flounders, smelts and herrings.

A plentiful crop of mushrooms proves a great help to housekeepers now, and they should be glad to remind themselves of different ways of using them. For instance, with eggs for breakfast, au gratin for luncheon, on toast at all times, they are acceptable. They must be chosen with care, and on no account eaten when stale or reheated. Small mushrooms stewed in milk and thickened with peanut flour or barley flour make an excellent substitute for a meat dish, but are greatly improved by a garnish of a few slices of cooked bacon or even slices of toasted or fried bread.

This is the time for out-door meals, and picnics which can be made most delightful. Where money does not count there are all sorts of delectable outfits for picnicking. There are thoroughly equipped baskets for from one to six persons, and if the picnickers do not enjoy a hot meal in the woods it is because they are too indolent to prepare it. But nowadays this kind of a picnic basket with its expensive fittings is for the favored few; the average picnicker must depend on makeshifts as formerly. Use paper napkins, wooden plates and cups that fit one into the other.

A corn roast is great fun for September or early October days. Choose a wooded spot, not too remote from trains, boats or cars, unless all the guests have automobiles. There should be an open space large enough for a bonfire. Start the fire early in the morning for a supper, or the night before—with some one paid to watch it—for a lunch. The bed of ashes must be a deep one.

Allow, at least, three ears of corn for each person. Let the guests shred the silk from the corn as it adds to the fun. Leave on the outer husks and tie them back into place. Place the corn among the ashes and watch carefully that it does not burn.

Besides corn, have white and sweet potatoes to roast in the ashes. Harvest apples stuck on long, smooth sticks and toasted or roasted are delicious, and there may be boxes of marshmallows to toast at the end of the feast. Make coffee over a separate fire, have bread and butter, egg and sardine sandwiches, pickles, cheese and plain cake.

The *piece de resistance* at a picnic is the sandwich, and the fillings should be varied as much as possible. Have the sandwiches dainty. Cut two slices across the loaf, butter each so they fit together neatly, fill with the sandwich mixture, and cut the slices diagonally to make two sandwiches. Wrap in waxed paper. Mark the kind of sandwich on the outside of each package to avoid confusion in unpacking. Fish, when all bones have been removed, and the meat pounded to a paste, makes a very nice filling. A thick mayonnaise dressing will serve to give it a proper consistency for spreading. Nuts should always be chopped fine, and mixed with chopped olives or cream cheese. The latter may also be palatably mixed with a paste of canned red peppers. Peanuts mixed with mayonnaise make another good filling, so do also small crisp cucumber pickles, seasoned with boiled dressing. Deviled eggs should be carried in a tin box lined with waxed paper or the two halves of an egg may be fitted together and wrapped in the paper, they can then be tucked in odd corners, taking less room.

Salad can be put into glass jars—the wide-mouthed kind to keep it from looking "messy." This refers chiefly to potato, cabbage or salmon salad, fruit and tomato salads get too runny if the dressing is not carried in a separate jar.

Small, dainty pieces of celery are nice if the distance is not far and they are kept fresh. If the pieces are wrapped in wet paper, then a napkin put around them, they will be found crisp and delicious.

WATERMELON.—For a children's out-door party secure a fine watermelon; remove a large slice lengthwise, placing a number of china negro dolls here and there on the melon.

A dainty way of serving a melon is to cut the red meat into two-inch squares, taking out all the seeds without breaking the pieces too much. Place the pieces in glass fruit jars, screw on the tops, and place in the refrigerator. Serve the melon on green leaves in dainty plates.

TEMPERANCE PUNCH.—Into a saucepan pour four cupfuls of water, add one cupful of grated maple sugar, one cupful of honey or corn syrup and two cupfuls of chopped pineapple, and cook slowly for twenty-five minutes; add one cupful of strained orange juice, one-half cupful of strained lemon juice and one cupful of grape or loganberry juice. Cool, strain, dilute with ice water, and serve from punch glasses.

PRINCESS SANDWICHES.—Chop one pound of cold cooked left-over meat of any kind, and add two tablespoonfuls of chopped pickles. Mix to a smooth paste with two tablespoonfuls of melted butter substitute and three tablespoonfuls of cream; season to taste with mustard, salt and pepper. Spread between slices of bread and trim into shape.

WALNUT AND CELERY SANDWICHES.—Butter some war bread and cut into thin slices. Wash six stalks from the white part of a head of celery; drain, dry and chop very fine. Chop one cupful of shelled walnuts, mix them with the celery and moisten with mayonnaise dressing, then season to taste with salt and paprika. Spread on the bread, put the slices together, and cut into triangles.

SALMON SANDWICHES.—Free canned or cold cooked salmon from skin and bones. Mash and add one white of hard-cooked egg, finely chopped, and one tablespoonful of chopped pickle; season to taste with salt and pepper, and moisten with mayonnaise dressing. Mash one hard-cooked egg yolk, add two tablespoonfuls of melted butter substitute, two tablespoonfuls of grated cheese, and salt and paprika to taste. Remove crusts from a loaf of war bread and cut off five slices lengthwise. Spread three slices, on both sides, with butter worked until creamy, remaining slices on but one side. Spread the two mixtures alternately, between the slices of bread. Wrap in greased paper or cheesecloth, place a light weight on top and allow to stand until serving time. Cut into finger-shaped pieces and serve.

PRUNE AND CREAM CHEESE SALAD.—Select large prunes for salad making, then wash and soak them in cold water over night. In the morning steam them until tender. Then extract the stones. Chop one-half cupful of English walnut meats and mix them with a cream cheese, mashed to a paste, season to taste with salt and paprika, and soften with a little vegetable oil. Chill the prunes and fill the cavities with the cheese paste. Place on crisp lettuce leaves and serve with French dressing.

BAKED BEAN SALAD.—Put into a salad bowl three and one-half cupfuls of cold baked beans, add four thinly sliced onions and mix well together, then add seasoning of salt, pepper and paprika, one teaspoonful of vegetable oil and one cupful of vinegar, and mix again. Garnish with hard-cooked eggs, cut in rings, and shredded lettuce.

FISH MOLDS.—Coat some small wet molds with liquid aspic jelly, then set them in a cool place. Free one-half pound of cooked white fish from skin and bones, and rub it through a sieve. Mix one and one-half tablespoonfuls of gelatine with one-half cupful of tomato pulp, then dissolve, and allow to cool, then add the fish, one tablespoonful of mayonnaise dressing, two tablespoonfuls of liquid aspic jelly and one cupful of whipped evaporated milk or whipped cream. Fill the molds with this mixture, and when firm, turn out. Garnish with parsley.

JELLIED CHICKEN.—Singe and draw one chicken, put it into a saucepan of boiling water and cook very slowly until tender. Lift out the chicken and set aside to cool, then cut the meat into neat pieces. Put the skin and the bones into a saucepan with four cupfuls of the liquor, one onion cut into rings, one teaspoonful of salt, one bay leaf and one-fourth teaspoonful of whole white peppers, and simmer until reduced to two cupfuls, then add one and one-half tablespoonfuls of gelatine and when the gelatine is dissolved strain. Arrange a layer of the chicken in a wet mold; then some slices of hard-cooked eggs and chopped parsley, then more chicken, and so on until the mold is nearly full. Fill up the mold with the stock and allow to become firm. Turn out and garnish with parsley. Serve cut in thin slices.

BEAN LOAF.—Mash one cupful of cooked beans, add one and one-half cupfuls of bread crumbs, one cupful of cooked tomatoes, one cupful of cream or milk, one teaspoonful of salt and one-half teaspoonful of pepper. Allow to stand for thirty minutes, pack into a greased bread tin and bake in a moderate oven for one hour. When cold cut in slices and serve.

TOMATO CHEESE.—Use fresh tomatoes. Cut them in halves, squeeze out the juice and rub sufficient of the thicker part through a fine sieve to make one-half cupful of puree. Dissolve one tablespoonful of gelatine in a little lukewarm stock or water, allow it to cool slightly and strain into the tomato puree, then add one tablespoonful of mayonnaise dressing or thick cream, season to taste, and stir occasionally until beginning to set. Take a flat tin or box, rinse it out with cold water, pour in the tomato mixture, and set aside in a cool place until firm. When required, cut the tomato cheese in small neat squares and serve garnished with lettuce or watercress.

CHEESE, OLIVE AND NUT SANDWICHES.—One dill pickle, chopped, ½ cup (2 ozs.) chopped English walnut meats, ½ cup (1 gill) mayonnaise dressing, buttered slices brown bread, 1 small bottle stuffed olives, chopped, 1 cup (¼ lb.) grated or cottage cheese, crisp lettuce leaves.

Into a bowl put pickle, olives, nuts, cheese and dressing. Mix and spread between liberally buttered slices of brown bread. Before placing together, lay a lettuce leaf between the slices, cut with a biscuit cutter, and serve at once.

A cheese and nut sandwich that is novel is made as follows: Into one cup of green-apple sauce, stir sufficient finely chopped nut meats to make a paste thick enough to spread upon well buttered brown or gluten bread which has already been spread with cream cheese. Cut into triangles and serve at once.

DEVILED HAM AND EGG SANDWICHES.—One can deviled ham or tongue, ½ cup (1 gill) French or mayonnaise dressing, 2 hard-cooked eggs, chopped, ¼ teaspoon salt, ¼ teaspoon pepper, thin bread slices.

Mix ham and eggs well, add dressing and seasonings. Mix again and spread on thin slices of bread which have had all crusts removed.

EXCHANGE SANDWICHES.—One pound boiled ham, 2 bell peppers, 1 small onion, 2 stalks celery, 4 sour pickles, 2 hard-cooked eggs, ½ cup (1 gill) mayonnaise dressing, crisp lettuce leaves, thin slices buttered bread.

Put ham, peppers, onion, celery, and pickles through food chopper, mix with eggs cut in small pieces, and mayonnaise. Spread on lettuce leaves between bread slices. Cut into desired shapes.

HAM AND ALMOND SANDWICHES.—Mix equal parts ground ham and ground almonds, season to taste and moisten with thick sweet cream. Serve between thin slices of whole wheat bread.

FRUIT SANDWICHES.—One cup (¼ lb.) stoned dates, 1 cup (¼ lb.) preserved cherries, 2 cups (½ lb.) figs, 2 cups (½ lb.) chopped nut meats, 1 tablespoon preserved ginger, crackers, buttered.

Put dates, cherries, figs, nut meats, and ginger through food chopper. Place in greased baking-powder cans and press down well. Stand over night, and when wanted for use dip cans in hot water and loosen contents with a knife. Cut into thin slices and place between crackers. Decorate each sandwich with a cher-

Be Sure to Get "La Camille" With The Genuine "Ventilo" Features

The Ventilo Back and Front Shield give such comfort and permit such superior corseting results, that they are widely imitated. Look for the name. Insist on "La Camille." Not only is it stylish, comfortable and hygienic, but it represents most value for your money. "La Camille" quality has not been cheapened despite trying conditions, and prices have advanced only in a moderate degree.

Don't buy a corset over the counter without trying it on. Visit one of the dealers below. Be fitted to a "La Camille" and get sure comfort, style, durability, economy.

Home Made Pottery

By A. H. HERBERT.

A Primitive Art Which Should Be Revived

"God doesn't think much of money—look at the kind of people he gives it to."

A queer little sentence, yet its homely philosophy has clung persistently to memory long after the rest of a quite famous book has slipped away leaving very scant impress of its reading. It is the dictum of an author hurled in the face of the American continent, which, consciously or unconsciously, set up a New World criterion for social distinction, namely the standard of money and money-getting. In fact when fe use the words Modern, Democratic, Successful, or Progressive we nearly always understand that the system or achievement to which they apply derives its value from the dollars embarked in it or the coins amassed thereby.

Nearly three-quarters of the population of this continent now measures its chance of success and happiness solely by its individual pecuniary wealth or its personal ability to sell talents for cash. Mere silver and gold stamped with the state seal seems fatally accepted as the guarantee of our future prospects. And in the face of conditions as we find them to-day, the above quotation sounds almost like blasphemy. Yet to the sane and logical, is it not undeniably true? For never yet did money make the happiness or power of any human soul with a normally well balanced intellect. All our great men, all our brainy giants, all our artists and men of letters, our statesmen, our warriors and heroes from the time of Caesar down never once drag their cash possessions into the pages of secular history as factors in their advance to fame; simply because mere money plays an almost infinitesmal part in the growth and development of human talents and character.

Such a large proportion of our nice girls who possess ordinary mediocre talents and ambitions waste many precious hours in lamenting their own peculiar leanness of purse, and evolving mad schemes by which to fatten it. Quite a few covet idle hours for fashionable pleasure-seeking and extravagant dress. But the greater and saner majority crave more dollars so as to attain more leisure for education and some means whereby a few expert lessons might be obtained in a longed-for hobby or Art. A few years ago many an amateur musician envied the girl who could look forward to completing her studies in Germany. Many a working housekeeper or business woman to-day feels unkindly used by fate because she cannot afford the proper instruction in sketching, wood carving, sculpture or like accomplishment. In this respect women of modest means in large cities fare better than girls who long to cultivate amateur attainments and find themselves immured in small towns and rural districts. And too often both classes abandon the whole idea of a hobby, because, dollars being scarce, teachers are impossible, or regular trips for them in a neighboring city are out of the question.

Yet if a small amount were spent in magazines, if the eyes and intellect were forced to careful observation each time the city shops and streets could be visited, you would find that lack of ingenuity and intelligence was the chief drawback, and that after all mere cash had very little to do with it. And Hand Made Pottery is one of those delightful Primitive Arts that scorn the assistance of money, and hold out wooing possibilities to anyone with the finger-ache to fashion things, and the eyes to observe and criticize and measure and appraise the creation of skill.

Everybody who has a taste for artistic vessels, and who has ever rambled through ordinary Art exhibits cannot fail to admire the attractive models turned out by amateur workers. And yet you can achieve the same varied and lovely results by just using your hands and your eyes, some patience and a few coppers.

I can assure you this is no garbled statement for I myself have made Pottery without a lesson, and without even having seen anyone at work. Art exhibits and a little reading attracted our family to the work, and a stranger who gave lessons told us the name and the price of the clay, and where to get it. She was encountered casually at a Craft exhibition, and also vouchsafed the information that it only needed wetting with water. It sounded so simple, so unbelievably easy, that one of us wrote a woman's page in a city daily, and got a reassuring endorsement of the simplicity, and a few details as to actual procedure.

Now all you need to buy is the modelling clay which you will get at any Art supply store for about five cents a pound. Two pounds will do to start with. Take it home, put it in a crock or delft bowl and wet generously, very generously if you are going to leave it for a week before beginning. The longer it stands wet, the easier it is to handle and mould. There is no danger of it spoiling.

For use it should be about the consistency of good pie crust or biscuit dough. If you are going to start at once you must not more than wet it thoroughly. The more you mix and squeeze and handle it the better, and you can keep your work unfinished for weeks and months even, by setting it away with a wet handkerchief or rag laid over it, until your piece of Pottery is modelled to exact smoothness and shape.

When a vessel is completed you must allow it a whole week to dry before it can be fired. As it dries it will shrink a little, and the better show up crookedness and flaws. You can then redamp by enfolding lightly with wet cloths until the moisture has permeated the entire article evenly, and proceed to remedy the defects, or you can smash it up and begin all over again. In fact the oftener the clay is thus broken up and reworked, the better material it is to perfect. And any unsatisfactory maiden effort may be thus indefinitely reconstructed as long as the clay has never been fired.

When you are quite ready to embark on your new enterprise take a good lump of clay, and knead it on a smooth table, bake board or some perfectly level surface that will not warp with the continued moisture nor stain the clay. Supposing you set out to make a square flower jar as we did. After you have reduced sufficient mud paste to the desired doughy softness, roll it out as you would pie crust, using a child's rolling pin if you have one, a round bottle or anything that will attain the desired result. Roll, till the clay is about a quarter of an inch thick, then cut out five pieces say five inches square, four for the sides and one for the bottom. Place them together so as to have each side overlapped at one join, and overlapping at the other. Damp your finger, and run it up and down the edge of each section and it will readily adhere to the next section. Then you have a four sided article without top or bottom. Wet the top square edge of this and place your fifth section on like a lid. It will exactly fit. Gently press and pat and damp all edges and seams until the whole structure is securely welded together without trace of crack or juncture. This will be your most difficult operation, and should be done slowly and carefully so as not to derange your sides or angles. An ordinary wooden meat skewer is splendid for moistening and rubbing the inside joins and eliminating all scars and crevices. You can use the blunt end of a darning needle, the blunt or sharp end of a knife, or any of the plasticine tools you might have to slice off thick or uneven parts. Your own ingenuity will suggest your own makeshifts. When it is all finished, either when still damp or after it has dried out, you can produce a nice smooth finish to the surface by rubbing it over with a wet rag very lightly. But remember your creation does not need to resemble a china teacup in perfect contour and evenness. Such measured accuracy belongs only to machine products.

Be sure and have your vessel built stoutly and let it be apparently seamless so that it will stand the firing. And see that it be neither tipsy nor lopsided when dried out, and you will be sure to have a presentable jar. You can put four little legs on it by cutting four little cubes say an inch high, wide and thick, and sticking one on the bottom of each corner. Remember

MONARCH KNIT

WHETHER your purchase consists of hosiery, sweater coats or knitting wools, you may depend altogether upon the Monarch Trade Mark to protect you against inferior quality and indifferent wear. For despite abnormal conditions on the market for raw materials, Monarch-Knit products still remain true to one high and unalterable standard of quality. This alone, don't you think, makes it well worth your while to ask for Monarch-Knit goods by name rather than to take a chance on an unknown and untried brand?

Monarch Knit Sweater Coats

You'll yield to the charms of a Monarch Sweater Coat from the moment you first put it on. Its soft, closely woven and generous folds form a grateful covering into which the body snuggles with a feeling of delicious comfort and warmth. Serviceable enough for the chilly Fall evenings when it adds a touch of refreshing and piquant color to one's costume. Quite good looking enough for general informal wear. It's a garment you'll be proud to own. Your choice of silk, silk mixtures and wool, in a wide range of refined and uncommon color combinations.

Monarch Knit Hosiery

The soft yet firm texture—the silky sheen and trim ankle fit—the refined colors of Monarch-Knit Hosiery delight the eye as well as the touch. But that is not all. Fine, sturdy yarns and double-spliced heels and toes assure a lingering durability not often found in hosiery so moderately priced as Monarch-Knit. In all sizes in silk, mercerized, cotton or cashmere for men, women and children.

Monarch Floss

For patriotic or family hand-knitting, Monarch Floss combines great beauty with real economy. A 2-ply yarn, Monarch Floss, is spun by expert spinners in our own plant from a very fine grade of Australian wool. It is uniform in size and of a soft, downy texture, yet strong and extremely durable. Where a heavier yarn than Monarch Floss is required, you will find in Monarch Down—a 4-ply yarn of excellent quality—just what you need. Both come in 30 different colors, and are put up in handy one-ounce balls.

Manufacturers of Sweater Coats, Fancy Knit Goods, Hosiery and Knitting Yarns.

Music and The Rural Community

By HECTOR CHARLESWORTH

One of the Stimulants that Restless Young People in the Country Want—Whether They Know It Or Not—Is Music.

On several occasions in the columns of this journal, the writer has laid stress on a phase of music which gives it vital importance to the whole community; that is, its mission as an enricher of social life. In no other field is this aspect of its mission quite so clear as in the village or rural community, where it has been much neglected. The problem has of late received a good deal of attention in the United States, where for two or three years past there have been definite efforts to make music play a more vital part in community life or social organization. As has been said in the past, the development of reproducing instruments, like the phonograph and the player-piano, has served important ends by diffusing good music in districts where it was almost unknown a few years ago. Efforts are now being made to take advantage of the enthusiasms thus created to definitely stimulate musical effort.

Those who have studied the question from a practical standpoint hold the view that in the development of music on a communal basis may be found an aid to the solution of a great economic problem, which has given publicists much concern, viz., the depletion of rural population owing to the desire of young people to go to the cities and escape from the uninteresting conditions of farm and village life. One of the most eloquent exponents of the idea is the celebrated New England writer, Kate Douglas Wiggin, whose "Rebecca" books show her intimate acquaintance with farm conditions. A few months ago, Mrs. Wiggin spoke at a music festival held in rural Maine, and speaking of conditions in the average agricultural community, she said:

"It is impossible to deny that there is too little diversion, recreation, sport, play, too little pleasure, too much monotony of the daily task without the happy interruptions that lift the spirit and give it wings."

With reference to the part that music could play in rectifying the situation, she said: "Here is a refining, a civilizing influence, here an art and science, which, in its simplest form, can be grasped by a child; here is an outlet for joy and sorrow, a bond of fellowship, a stimulus for body, mind and soul, and what are we doing with it in the smaller towns all through the State?"

The question which Mrs. Wiggin asks with regard to her own State of Maine is applicable to most of the provinces of Canada. The novelist also called attention to the loss in the quality of church choir work and the decrease in the number of singers, as well as the decay of the once popular village singing school. She held that in each village of 100 people there ought to be growing up every year or two one good pianist, one violinist (even if he were only a fiddler), in addition to players on the flute, 'cello and cornet. She believed also that talent for quartettes and other concerted vocal numbers would prove available with a little stimulus. She held that it was a serious and noble undertaking to promote an effort which would give so much pleasure to the community as a whole, and pointed out what could be done in such organizing centres as the rural schools and churches.

There is no doubt that Mrs. Wiggin is on the track of a fine idea, and it is a singular fact that, though the means of musical enjoyment have materially increased of late years, there is perhaps less real musical effort in rural communities than there was fifty or sixty years ago. About the period of 1860 there was a good deal of music in connection with town and village life. When the late King Edward VII visited Canada as Prince of Wales, just prior to the American Civil War, he was greeted by choruses of singers in many of the small places of Upper Canada. The old-fashioned village quartette, to which jocular allusions are sometimes made, was a real and vital institution. Not long ago, in glancing over a biography of Stephen C. Foster, the American melodic genius, many of whose songs, like "Suwanee River" and "Old Black Joe," because of their real inspiration, are as popular as when they were written, I was interested to note that originally most of them were published in quartette form, because in his day there was in almost every village a quartette which eagerly sought out new popular songs to increase their repertoires. These organizations perhaps had little idea that the works of Foster would one day be recognized by the critical as immortal achievements, but undoubtedly their musical efforts did much to add zest to rural life in pre-Confederation days.

On every side the complaint is made to-day (and was made before the present war, for it is a condition which has merely been accentuated by the world-conflict) that, while cities are growing larger, the countryside is being drained of its best product. Even before the boys donned the khaki, farms in many districts were being worked by middle-aged people, whose sons and daughters had gone away to seek the deeper experiences that they believed were to be found in the cities. "Why is it," asks an American writer, "that the rural district does not give what the cities seem to give so abundantly?" There is, he argues, many an untried solution to the want of social life in the country, and assuredly music is one of them.

In a paper written not long ago by one of the staff of the State Normal Schools of Tennessee this idea was definitely put forward, and it is interesting to learn that in some school sections of Tennessee the practice of placing phonographs in country schools has been adopted with excellent results. This educationist points out that the social instinct is just as keen and quick in the country as in the city. For my own part, I should be disposed to say that it is more so. He further deprecates the idea of treating the rural life problem as merely physical. In reality, dissatisfaction with country life is due to lack of opportunities for the satisfaction of social, intellectual and spiritual needs. We have already at hand one means of satisfying these needs in the various phases of musical effort.

Music in itself is an eminently social art, because it is the only one of the fine arts that can be practised in co-operation with others. As entertainment, it has this very important augmented interest that it stimulates to active participation. The educationist above quoted points out that music, if practised consistently under the guidance of someone who aims to bring out the latent capacity of the performing group, is not only a wonderful social power, but it is "a whole lot of fun." In this sense, it is possible to maintain that every musician, who knows a little and has the power to pass it on, is a missionary.

The advocates of community effort in behalf of music, especially for rural localities, point out that it is essentially a cheerful art. Its great factor as a foil to the hard and uninteresting conditions of life is its power of evocation. As one writer has put it, music "calls unto the soul to live its golden hours *now*." Therefore, in considering the social needs of the rural community, it is clear that music may inspire social conditions and centres of interest, about which the young people will as gladly congregate, even though they may be at home, as they now seek them abroad. Unquestionably, one of the stimulants that restless young people in the country want—whether they themselves know it or not—is music.

Not long ago, "The Musician," a Boston monthly, related two instances where a transformation had been effected in the life of rural communities by enlisting the interest of the young people in the art. Last summer a small farming community paid two singing school teachers a moderate sum for two weeks' training in sight singing. Simple and familiar numbers were, of course, used. As a result, there have grown up various musical organizations, quartettes, double quartettes, choruses with local leaders. They practise before church, after church and at every favorable occasion, in addition to regular rehearsals. In a few months the quality of the compositions performed has steadily improved, and the young people of the whole district have found a new and delightful source of entertainment and social interest that will inevitably tend to relieve dissatisfaction.

The Sexton Beetle

By ETHEL BAIN

Sexton Beetles Amongst the Most Remarkable Phenomena in Nature's Realm—A Glimpse into Their Habits and Activities Constitutes This Story.

Children's Story

"A feast! A feast! Oh, come to the feast."

Bushy, the Red Squirrel, awakened with a start and nearly fell off the branch, where he had been dozing in the heat of the summer afternoon. "A feast! A feast! Oh, come to the feast," the queer little voices repeated. "What feast?" chattered Bushy, as he rubbed the sleep dust from his eyes. "Where is it?" he called, for naturally Bushy wouldn't miss a feast if there was anything to eat. He looked here and there, but could see nothing, so scampered down the tree, and there before his eyes the strangest procession flew into sight. Bushy rubbed his eyes again to make sure he wasn't dreaming. But no, the little procession buzzed along, the noise of the many wings disturbing the sultry air. "Well, I never," gasped the squirrel. "I'll come to the feast since you've asked me," he went on, as they disappeared from view.

Noiselessly he followed, and soon he saw the procession again, but what was happening now? He stopped suddenly, and couldn't believe his own eyes, then with one bound he was in the midst of the buzzing, chattering insects. "Leave him alone," he snarled fiercely, whilst his bushy tail lashed the air furiously. "Leave him alone," he snapped again, and gently laid a forepaw on the breast of the dead robin the carrion bugs were hoping to feed upon.

"Sting him! Eat him up!" all the angry bugs cried at once. "It's our feast," one bolder than the rest buzzed as he tried to settle on the squirrel's nose.

"Why, you're as bad as Mrs. Mosquito," exclaimed Bushy, as he struck down the insect with his paw. "You invited me to the feast, and here I am. I don't care what you say, but you're not going to eat my friend, Bobbie Robin, so there!" finished Bushy, who was now thoroughly angry.

"No, no," cried the leader of the Sexton beetles. "Be quiet, bugs," he went on as he pushed his way to the squirrel's side who was now surrounded by the furious insects. "Stop," he commanded. "Bushy Squirrel doesn't know who or what we are and it wouldn't be fair to sting him. Why, I don't suppose you've ever seen any of us before, have you?" he asked of the Red Squirrel.

"No, indeed, and it looks as if I won't want to see any of you again," replied Bushy.

The Sexton beetle laughed, for he was good natured. "I don't suppose you will," he cried. "But there, I think that as you are here now you had better stay. You see we have very special work to do wherever we are. In fact, every living creature has work of some kind, however small it is. What is it?" he asked of another Sexton beetle who flew up to him at this moment.

"There is no work here for the carrion bugs," said the other beetle. "They can go."

"All right," replied the leader. "Tell them, then set to work. Come over here with me," he went on, addressing Bushy, "then you can see all that is going on without being in the way." So saying, the Sexton beetle flew a few feet away from the dead robin and Bushy followed him.

"What lovely wing covers you have," remarked the Red Squirrel, as the beetle folded his wings and tucked them away under the glossy black cases with their bright coloring.

"You'd know me again?"

"I should just think I would, with those two yellowish red bands across your back. I couldn't mistake them, for the edges of the bands are so uneven. Do tell me what those carrion bugs were going to do to my friend."

"Eat him up."

"What?" cried the Squirrel.

"I said they wanted to eat him up," repeated the Sexton beetle.

"But what for?"

"That's their work."

"Work?"

"Yes. Listen. Those carrion bugs were awfully disappointed because they couldn't have a feast. They found the dead bird with the same strange scent that we have. Only in this one way are the carrion bugs and Sexton beetles alike. Carrion bugs feed on decaying flesh and many a dead bird, mouse or snake provides food for these insects which live on nothing else. Bobbie Robin has only been dead a few hours, so he is saved from being eaten by these insects and we shall bury him."

"Bury him?"

"Yes, for this is our work. Don't you ever wonder why you see so few dead birds or small animals about? You know there are always some dying."

"That's true," replied Bushy Squirrel. "Come to think of it, I have wondered where they disappeared to."

"Well," said the Sexton Beetle, "we are Mother Nature's undertakers, for we bury all we find, instead of leaving them to decay with the heat of the sun. If they were left, the decaying flesh, if not found by the carrion bugs, would soon breed disease which would be carried to mankind by certain flies. Watch my companions now."

"What are they doing?" asked Bushy, as the beetles walked all over and around poor Bobbie Robin.

"They are finding out how much work there is to do, but watch closely for they are going to commence."

The beetles arranged themselves all about the body and were pushing their way, head first, underneath the dead bird. Bushy saw loose earth being thrown out on all sides, whilst the workers' legs moved without stopping.

"Wonderful, but how do they do it?" eagerly asked the Red Squirrel.

"Look at my head," replied the leader.

The puzzled squirrel looked, then cried, "Why, your head is shaped like the back of a shovel, but still I don't understand."

"Then watch me." The next moment he was digging with his head, his legs pushing back the loosened earth. Soon a fair sized hole was made and the Sexton beetle stopped. "There," he cried. "Do you understand now?"

"Yes," replied the Red Squirrel. "The lower half of your legs are like little rakes."

"You're right, but look at your little friend now."

"Why," began Bushy, then stopped, for he had turned just in time to see the last beetle climb out of the grave, which was now quite four inches deep. The dead bird had been slowly lowered into the ground, as the busy workers inch by inch had shovelled out the earth beneath. "That's awfully kind of you," exclaimed the squirrel. "Now tell me what is that one doing?" as he saw another beetle fly down into the grave.

"That is a female beetle, and she will now lay her eggs on the body. Afterwards we will fill in the grave. Mother Earth will keep the eggs warm and they will soon hatch. The grubs will then feed on the flesh, eating it so quickly that it has not time to decay. Next, they pass into the larvae or chrysalis state. In due time they will emerge, by breaking open their cases and pushing their way up through the earth to air and sunshine. Here they will develop, their wings will dry and cases harden, then they are ready as Sexton beetles to do their share of work in the world."

"Which goes to show that we are all useful, alive or dead," remarked the squirrel.

"Indeed we are, but see now, my fellow workers are filling in the grave."

Sure enough, they were pushing back the loose earth with their curious heads. At last they had finished and started to clean themselves of every tiny bit of dirt which clung to their bodies whilst working, for ever you will find that the beetles are very clean and do not like to be dirty. This done, every beetle's wing covers opened and the pretty transparent wings were spread in flight. "Good-bye," they cried, "Don't forget us."

"Indeed I won't," chattered Bushy, as he stood beside the little grave and watched them disappear.

"Poor old Bobbie," he said to himself, "but I'm glad you're useful, even if you are dead, and I'm glad, too, that those nasty carrion bugs didn't get their feast after all."

My Best Idea

Contributed by Our Readers

In this Department we will publish the best original items of general interest to housekeepers which are sent in by our readers. For each of the accepted items we shall pay the one sending it fifty cents.

If the description is not clear, we would suggest that the contributor send a rough sketch, making the idea plain, which can be used as a guide to the artist who will illustrate this page.

The CANADIAN HOME JOURNAL *cannot return the items submitted, therefore it is advisable to keep copies of matter sent for consideration.*

Address "My Best Idea," care of CANADIAN HOME JOURNAL. *Give your name and address.*

A Bedroom Desk.

In a small bedroom a writing desk may be added that will not occupy space when not in use, and with very little expense.

A board stained or enameled the same as bureau and of the same width can be attached to one end at desired height by hinges, so placed that when up it will form a table, and kept in place by brackets with hinges the same as used on a sewing machine.

Sweet Grass Cushions.

The tops of sweet grass dried make an excellent filling for pin cushions. Quantities of this can be gathered from the fields and dried by children.

Pin cushions so filled with the sweet scented grass would sell readily at novelty sales.

Nellie C. Newcomb,
Hopewell Hill, N.B.

"Canadian Home Journal" Soldier Books.

After my "Canadian Home Journal" has been read I clip local items and interesting news from the daily papers, paste these over the advertisements in the Journal, and send them off to my soldier friends. Try it, if you want to receive some really grateful remarks from the trenches.

Miss Harris,
Toronto.

A Useful Box.

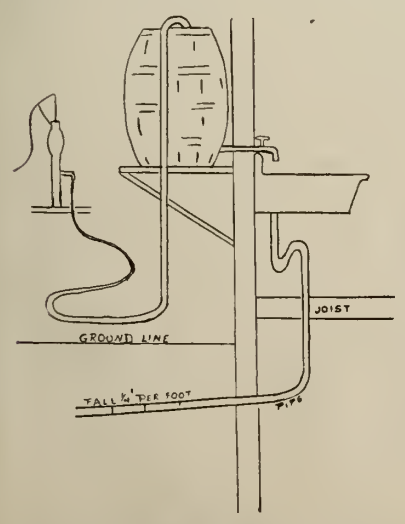
In a stairway leading from the kitchen, I have made use of the bottom step by having it made into a hinged lid. In this sort of box I keep all the rubbers, overshoes, etc., thus keeping a tidier kitchen.

M. C.,
Kincardine, Ont.

To Bring Back Color.

I had a rose-colored sweater on which something was spilled which took the color out. I soaked this part of the sweater in strong vinegar for five to ten minutes, and then allowed it to dry. After three applications of the vinegar, the color all came back, and after I washed the sweater it looked as good as new.

I have since tried this method of bringing back colors on other fabrics, and have found that it worked successfully each time. B. B.,
Quebec.



For Overseas Boxes.

In printing addresses on cotton-covered boxes to be sent overseas, it is neatly and quickly done if the name is printed on the cotton with an indelible pencil and then pressed with a damp cloth and warm iron. This is much better than trying to do it with pen and ink.

C.,
Elmira, Ont.

An Inexpensive Water System.

Carrying buckets of water to the house has worn out many a woman. The following simple and inexpensive

device is a wonderful saver of steps: Place a barrel on a shelf built on the side of the house as illustrated. Bore a hole in one side of barrel and another in the wall and through these put a pipe and attach a tap for the sink. Put in sink and drainpipe as in drawing. Connect hose to pump and into the barrel and the outfit is complete.

Elmira, Ont.

Improved Portable Wood Box.

In addition to castors on wood box as suggested by "Delighted Housekeeper," Truro, in April number of Magazine, I would like to pass on an excellent idea of an acquaintance of mine here. He made a slat bottom on the main wood box and then made a drawer to pull out. This drawer catches all the chips, etc., which keeps your wood box nice and free and also has the advantage of enabling you to get a handful of chips for your fire at any time without the trouble of moving the wood.

M. E. M.,
Vancouver, B.C.

To Mend a Broken Doll Quickly.

Bind broken parts with adhesive court plaster tape. It will hold firm and fast indefinitely.

Carrot Pie.

Carrots make a delicious pie if prepared in the same way as pumpkin. They are easily kept during the winter, and a fresh carrot pie may thus be enjoyed at any time.

A Candle Cork.

When the cork of the glue bottle has been removed do not use it again, but instead insert a stump of a candle. It will not stick, and the glue will not get as dry as it would if the cork were used.

Baking Potatoes.

Before baking potatoes let them stand in hot water for at least fifteen minutes, and they will bake in less than half the ordinary length of time.

Lengthen the Life of Your Broom.

Do you let your brooms stand bristle downward on the floor when not in use? To increase the length of usefulness of brooms and brushes, tack a heavy cord to one side of the handle a little above the middle, and hang up with the brush end down. These articles should be kept clean by washing occasionally with warm soapy water.

An Easy Sunday Roast.

Place your beef in a small earthen crock with the seasoning, but no water. Cover tightly and set on an asbestos mat over a slow fire. When you return from church you will have meat with a delicious flavor and nice golden brown gravy all ready to be thickened.

MRS. O. E. WILLSON,
Dunnville, Ont.

A Yard or So of Cheesecloth.

Surely few things are cheaper than cheesecloth; and do you know how very useful it can be around the kitchen? A yard or two, cut in half-yard squares, should always be on hand. It takes but a minute to launder these pieces, and they can be used over and over again. Two of them together make a strainer for fruit juices and fats; lettuce and cucumbers for salads are dried quickly with the cloth. A piece can be wrung out of hot water to keep sandwiches moist. It is better to wipe meat and fish with the damp cheesecloth than to wash them under the cold water faucet. Think of the calories that are washed away in the run of the water!

For Sticky Table Drawers.

Don't send for the carpenter when your table drawers and doors stick in hot weather. Instead, save his bill by rubbing a little brown soap on the table or door-frame that sticks and it will move smoothly.

Rock These Grates Gently

The fire-box is the heart of the range, but the grates are the heart valves of the fire-box.

If the grates fail, the fire-box cannot make good.

The Pandora grate has three bars and each bar has three working sides which gives it three times the life of an ordinary grate.

They are fitted together like the parts of a good machine.

That is why they work with minimum effort—a gentle pressure.

And you rock them gently once to clear your fire of ashes. There is no racking "shaking" with Pandora grates—just one gentle rock.

"The Magic of the Pandora"—Booklet Free

This is one of the many features of the Pandora Range described in "The Magic of the Pandora," a little booklet full of information that every woman will want before she buys a range, Write for it to the nearest McClary Branch.

McClary's Pandora Range

The Best Washer You Ever Met!

Never gets tired or cross! Never "skimps." Handles light or heavy goods—blankets table cloths, or handkerchiefs—a full tub or a few articles equally well. Doesn't wear or tear the most delicate fabrics, and only takes half the time! Isn't that the kind of a washer to have in your home? Then go to your dealer's to-day and meet the—

Maxwell "Home" Washer

—a ball-bearing washer—light, noiseless, easy-running—of handsomely-finished cypress. Specially-designed dasher makes it best for washing everything. Enclosed gears mean safety. Write us for booklet—FREE.

MAXWELLS LIMITED, Dept. I, St. Marys, Ont. 36

Without An Egg In The Cupboard

By MARION HARRIS NEIL.

Author of "Salads, Sandwiches and Chafing Dish Recipes."

"Oh, I Can't Make or Bake Anything! There isn't an Egg in the Cupboard!"—Hearing a Young Housewife Saying This Recently Set Me to Thinking What the Years Have Taught Me to Do When I Cannot Spare Even One Egg—Here are Some of My Tested Eggless Recipes.

Oatmeal Gems.—Into a bowl sift one cupful of flour, one teaspoonful of baking powder, one-half teaspoonful of salt, two tablespoonfuls of brown sugar, one-half cupful of cornmeal and one and one-half cupfuls of fine oatmeal. Rub in two tablespoonfuls of butter substitute, and stir in two cupfuls of milk. Divide into greased and floured gem pans, and bake in a hot oven for fifteen minutes.

Suet Pudding.—One cupful of finely chopped suet, one cupful of barley flour, one cupful of brown sugar, three teaspoonfuls of baking powder, one-fourth teaspoonful of salt, one-half teaspoonful of powdered nutmeg, one-half cupful of seeded raisins and one cupful of milk or water.

Mix the suet with the barley flour, add the other ingredients, and make into a smooth batter. The pudding may either be steamed or boiled or baked. For steaming, put it into a greased mold, or baking dish, cover with a greased paper or a tin lid, and set in a larger saucepan of boiling water, or in a steamer. Cook for one and one-half hours.

For boiling, tie the mixture up in a floured pudding cloth and boil from three to three and one-half hours. It may be baked in the same way as cake. Serve with any preferred sweet sauce or hot milk, or as a cake without sauce.

Rice and Cheese Rabbit.—One cupful of rice, one-fourth cupful of cheese, two cupfuls of milk, two tablespoonfuls of cornstarch, two teaspoonfuls of salt and one-fourth teaspoonful of pepper.

Cook the rice in plenty of boiling salted water until tender, then add the milk and the cornstarch mixed smooth with one-fourth cupful of water. Cook and stir until thick and smooth, add the seasonings and cook for five minutes. Remove from the fire and add the cheese, chopped fine. Stir the cheese through the hot mixture until it melts, and serve on toast or crackers.

Steamed Brown Bread.—Into a bowl sift one and one-half cupfuls each of cornmeal and ryemeal, two teaspoonfuls of baking soda and one teaspoonful of salt, then mix in three-fourths cupful of molasses or syrup and three-fourths cupful of sour milk. Beat thoroughly and steam in well-greased, covered molds for three and one-half hours. Remove the covers and bake the bread long enough to dry the top.

Huckleberry Pie.—Use two large saucers, as these will hold plenty of juice. Put in each one a cupful of huckleberries which have been picked over, washed and dried. Sprinkle with one tablespoonful of grated maple sugar, the same of water, and cover with a flaky crust a little smaller than the top of the saucer, and bake for twenty-five minutes in a moderate oven. Heat and mash either one cupful of ripe currants or blackberries, and mix with it one cupful of sugar, into which has been stirred one teaspoonful of cornstarch. Cook for a few minutes, and when the pies come from the oven, raise the crust and pour this juice over the huckleberries. Replace the crust, and serve either hot or cold.

Raisin Scones.—One cupful of barley flour, one cupful of flour, two tablespoonfuls of butter substitute, two tablespoonfuls of grated maple sugar, one cupful of milk, one-half cupful of seeded raisins and two teaspoonfuls of baking powder.

Sift the flours into a bowl, cut and rub in the butter substitute, add the sugar, raisins, baking powder and milk, and mix together. Roll out the dough on a floured baking board and divide it into two rounds, each round being quartered. Bake in a moderate oven for twenty minutes.

Sardine Crackers.—Six sardines, one teaspoonful of made mustard, one teaspoonful of lemon juice, one teaspoonful of Worcestershire sauce, one teaspoonful of vegetable oil, crackers and lettuce or watercress.

Remove the skin and bones from the sardines and put the fish into a bowl with the mustard, lemon juice and Worcestershire sauce, beat well together, then add, gradually, the oil. When the mixture is smooth, spread it on crisp crackers and surround with the lettuce or watercress.

Empress Pudding.—One-fourth cupful of rice, two cupfuls of milk, one-half cupful of honey or maple syrup, one-half teaspoonful of vanilla extract and jam.

Wash the rice, boil it in the milk until very tender and allow it to cool, then add the honey and vanilla extract. Grease a pudding dish, spread a layer of the rice mixture at the bottom, then a layer of jam, and continue until the rice is finished. Bake for thirty minutes in a moderate oven and serve from the same dish.

Grape Mousse.—Mix together two cupfuls of rich cream, three tablespoonfuls of sugar or honey, one teaspoonful of lemon extract and one cupful of grape juice. Beat well, and pack in a wetted mold with a tight cover. Pack in ice and rock salt for two hours. In the winter, this can be buried in the snow and left for four hours, with excellent results, no salt being needed.

Eggless Fruit Cake.—Cream together one cupful of brown sugar and one-half cupful of butter substitute, add one cupful of sour milk, one teaspoonful of baking soda, one-half teaspoonful each of powdered nutmeg, cloves and ginger, one and one-half cupfuls of seeded raisins, one-half cupful of chopped nut meats, one cupful of barley flour and one cupful of flour. Bake in a shallow greased and floured pan in a moderate oven.

Sago Pudding.—Wash one cupful of sago, drain it and put it into a saucepan with one and one-half cupfuls each of water and milk, and cook until clear. Add one-fourth teaspoonful of salt, two tablespoonfuls of sugar or honey, and one-half glassful of currant or grape jelly. This pudding may be eaten warm with milk, or molded and served cold, with cream.

Cafe Parfait.—One cupful of thick cream or evaporated milk, one-half cupful of sugar or honey, one-half teaspoonful of vanilla extract and one-half cupful of strong coffee. Whip up the cream or evaporated milk, add the sugar or honey, vanilla and coffee and mix lightly together. Put the mixture into a wet mold, cover with paper and the lid to prevent water getting in and pack in ice and rock salt. Let stand for three hours. Or in place of the coffee use two tablespoonfuls of melted chocolate.

Corn Meal Griddle Cakes.—Scald one and one-half cupfuls of yellow corn meal with two cupfuls of boiling water, add one cupful of lukewarm milk, two tablespoonfuls of melted butter substitute, one tablespoonful of maple syrup or molasses and when cool, add one cupful of rolled oats put through the food chopper, one teaspoonful of salt and four teaspoonfuls of baking powder and beat well together. Bake on a hot greased griddle until nicely browned on both sides. Serve hot.

Corn Toast.—In an omelet or small frying pan cook one-half tablespoonful of finely chopped onion and two tablespoonfuls of butter substitute, two minutes, stirring all the time. Add one and one-half cupfuls of canned corn, one pint of milk or cream, one-half teaspoonful of salt and one-fourth teaspoonful of pepper. Bring to boiling point and allow to simmer slowly for five minutes. Pour over pieces of toasted bread and serve hot garnished with sprigs of parsley.

Boiled Fruit Cake.—Into a large saucepan put two cupfuls of seeded raisins, one cupful of brown sugar, one cupful of water, one-half cupful of butter substitute, one-half teaspoonful of salt, one teaspoonful of caraway seeds, and three teaspoonfuls of mixed powdered spices. Bring to boiling point and boil for eight minutes. Cool to lukewarm, and sift in one cupful each of barley flour and flour and one teaspoonful of baking soda. Mix well and flavor with one teaspoonful of lemon extract. Bake in a moderate oven for one hour and fifteen minutes.

Bread and Fruit Pudding.—One-half fill a bowl with stale bread broken in small pieces, cover with boiling milk and allow to stand over night. Next day squeeze out the bread, straining off all the superfluous milk. Beat up the bread pulp with a fork, add one tablespoonful of melted butter substitute and one teaspoonful of vanilla extract. Now prepare some fresh fruit, such as peaches, plums, apples, etc., cutting it in pieces if large, and removing any stones if necessary. Then well grease a pudding bowl, and put into it the bread pulp and fruit in layers, beginning and ending with the bread, and sprinkling each layer of fruit with maple syrup or honey. The bowl should be nearly full. Cover it with a greased paper and steam steadily for from three to four hours, according to size. Turn out and serve with hot milk or any preferred sweet sauce.

The Girls' "Carry On" Column"

By BETTY O'HARA.

How Should The Girls Treat The Boys In Khaki?

I have received such heaps and heaps of letters from girls all over this Canada of ours whose one idea is, "How Can We Help Win the War?" Some can give up everything and put their entire effort into this work, while as for others, though they are just as ready and anxious to do their share, circumstances or fate or whatever it may be, seems to have placed a warning finger on their shoulder and bids them first think of the folks at home who are to a great extent dependent on them for their maintenance. But do not despair, there is enough work for all. And I am going to tell the girl in the office just how she can do much to improve the outlook of "Our Boys," in some cases, especially the returned soldiers who are inclined to think that our Canadian girls are not very appreciative.

"Oh, Canadian girls are good to us when they have a little charity to hand out, but otherwise they do not pay much attention to us," said a returned soldier to me the other day, as he stood on his one foot supported by a pair of crutches. I wonder if it is true. I hope not. It is a stern indictment to hand us, don't you think?

But let us first consider what we can do for those men who are still waiting to serve "Over There," and there are thousands of them; they are on our streets and in our theatres and everywhere the boys in khaki are drilling and working.

A few months ago the authorities in Canada decided to establish Hostess Houses throughout our country, in camps, training grounds, and everywhere the men in khaki congregate. And such a success has followed their efforts that many of the commanding officers all over the country are writing to the headquarters and asking that their camp may have an established Hostess House.

These Hostess Houses are carried out under the supervision of the Y.W.C.A. A hostess who lives there continually in the quarters provided for her is always on duty. She meets the boys and if they wish to ask any of their friends to the camp they are always sure of a warm welcome at the Hostess House. This has also done away with the necessity of the soldiers' friends having to go to the camp to get into communication with the boy whom they wish to see. Now the soldiers receive their lady friends in the Hostess House where they can have afternoon tea, music, or anything they wish, under the proper environment.

Then for the boys who are strangers in the city, as most of them are, a number of girls take turns going out one night each week, and after the men have finished their day's work they come over to have a talk with the girls; a game of cards or a dance; instead of walking about down town and standing on the street corners trying to pick up a chance acquaintance with some girls who should be spending their leisure time a little more profitably than at this precarious occupation.

I was very much interested in some of my experiences the other day at one of these Hostess Houses, at an aviation camp, and I must confess it was one of the most enjoyable evenings I have ever spent among our soldiers. The building itself was very unpretentious. The hostesses' quarters, a sitting room, and a kitchen completed the rooming arrangements. There was no plaster or paper on the walls and the furniture was odd pieces which this or that person had donated; but with a few flags and some cretonne plus a little camouflage the sitting room was most attractive.

What appealed to me most was the air of congeniality and good fellowship, the utter disregard for class distinction which pervaded the whole atmosphere. "Well, you know I came here once and I liked the way they used me; so now I come quite often," said one of the air mechanics who does much of the team-work around the aviation camp, in answer to a query of mine as to what he thought of this new order of things. He had been a farmer all his life, and on account of pressing duties of a farmer's only son he had been forced to give up his schooling when quite a young lad, as his manner of speech betrayed. So he spends many of his evenings at the Hostess House with the girls and the smile he wears tells everyone how much he enjoys it.

"Come again," we said to one of the cadets, as he went out the cadets' door; "Well, you just bet I will. I have never been here before, and I thought the entertainment here was sort of a religious affair but it isn't. It just reminds me of the good old times we used to have at home when our bunch came in for the evening. I just love it, and I sure am going to bring some of the other fellows along too. I know they will enjoy it." And if I should tell you who made this appreciative announcement you would be very much surprised. He is an American, and his father is a multi-millionaire whose name is a household word in Canada as well as in the States.

And that is what the girls in the Hostess Houses are doing for our soldiers. They make not the slightest difference between the men. They are every one welcome and know it. The men can go there, have a dance, play cards or have a musical evening--anything they like. These girls are broad-minded enough to help every man in the camp and improve the social welfare of the defenders of our country, the only distinction is the color of the suit for every man who enters there must be khaki clad—that is the only price of admission.

If this war has done anything it has forever let down the bars to social distinction, and wherever we find a military uniform on man or woman there we find the utter disregard for "class" as we used to express it. If he is a good sort that is all that matters, and the sooner civilians fall into line the better it will be.

So whenever you girls have any spare time you would like to give to war work, don't forget the Hostess Houses and volunteer to give some of your time there. The experience will be well worth the effort.

Then for the girls who live in hospital towns, yours is a greater responsibility. On your shoulders depends the soldier's re-adjustment as he goes back to civil life. On you depends his lasting impression of the land of his birth as he comes back to it from the most harrowing experiences that any man has witnessed for generations. I often wish some of you girls from whom I receive so many letters could hear some of the tragedies through which these boys of ours have passed, and see some of the suffering which is so much a part of my daily life. I am sure you would realize as you never did before what Canada's manhood has given to its country.

The people of England make much of our wounded soldiers; they entertain them in their homes, take them for motor rides, they are asked to spend their week-end leave in the houses of our mother-land across the sea, where everything is done to make the boys from the colonies feel that they are not so far from home after all.

"Well, if you are in your blues you're jake, when you're in Blighty," said one returned soldier, after telling me of some of the good times he had while in the hospitals in England. And that expresses it. You're just the white-haired boy. And I must say that from my various conversations with soldiers and my daily experiences with them this opinion when they return to Canada does not always follow, at least we do not seem to make much effort to make our appreciation known as far as the returned soldiers are concerned.

But there is one thing above all others I would like to impress on the girls who are to come continually in contact with the returned men. Never allow your zeal and patriotism to help the soldiers run away with your good sense, or in the slightest degree influence your ideas of propriety. There are no two ways of treating the men we come in contact with whether they be soldiers or civilians. For just as sure as you make exceptions to the rules, you fail proportionately to reach the very goal which you are striving to achieve. For there is no one in this wide world who loses his respect for a

The September Puzzle

By TOM WOOD.

Pictures 1, 2, 3 and 4 each represent a conversation in which may be found the name of the place indicated in the wording beneath.

Numbers 5 and 6 represent "square words."

Each little picture represents one of the words which comprise the square of words, which if guessed correctly, read the same from left to right and from top to bottom.

Can You Guess Them ?

Two prizes will be given, first one dollar and fifty cents, and second one dollar, for the best solutions, judged according to neatness and accuracy.

All are eligible to compete.

Answers must be received before September 30th to be included.

The correct solution of the July puzzle:

1—Amherst.
2—Shediac.
3—Toronto.
4—Coquitlam.

5—W A R M	6—R I P E
A L O E	I C O N
R O P E	P O N D
M E E T	E N D S

The following words may be made out of "Patriotic": Pa, pac, paca, paco, pact, pair, par, para, pari, part, pat, patriot, pi, pic, pica, picot, picra, piratic, pirn, pit, pita, poa, poi, port, pot, pro, proa, practic, protatic, a, act, actor, ai, air, ait, aortic, apo, aport, apricot. apt, arc, art, at, atop, atrip, attic, tac, tacit, tact, tap, tapir, tar, taro, tart, tat, ti, tiar, tic, tip, tipcat, tip-cart, tipt, tiro, tit, to, top, topi, topic, tor, torc, tort, tot, tract, trait, trap, tri, trica, trio, trip, tropic, trot, ra, rap, rapt, rat, ratio, riot, rip, rit, roc, rot, rota, I, iatric, io, ir, iota, irp, it, o, oar, oat, oca, optic, or, orc, ottar, cap, capot, captor, car, carp, cart, cat, cit, co, coat, coati, coir, cop, copra, cor, cot, cotta, cottar, crap, croat, crop.

The first prize is won by David Scott, 43 Rosebery Avenue, Ottawa, Ont., who submitted a correct solution and 115 words made from "Patriotic."

The second prize goes to Miss Annie Thompson, Box 16, Queensboro, Ont., who also had a correct solution and 112 words made from "Patriotic."

Address all answers to puzzle: The Puzzle Department, "Canadian Home Journal," 71 Richmond Street West, Toronto.

Neck-piece 6893

Fur Set 7961

7784—Ladies' Blouse (25 cents). Seven sizes, 34 to 46 bust. No. 7933—Ladies' Two-piece Tunic Skirt (25 cents). Six sizes, 24 to 34 waist. Width at lower edge about 1⅝ yard. The costume in medium size requires 6⅝ yards 36-inch satin—⅜ yard 40-inch Georgette crêpe for vest and cuffs—1¼ yard embroidered organdy for overcollar—⅞ yard 36-inch lining for underbody. Indispensable for the well-dressed woman's wardrobe is the frock of satin in black, dark blue, or taupe. This is a particularly graceful model with a novelty in the girdle which rises much higher in front. The rolling collar of the blouse turns back from a gathered vest of white Georgette crêpe, and white Georgette is used also for the cuffs that finish the gathered sleeves. In place of these sleeves, however, three-quarter length flowing sleeves may be selected. One of the new pointed tunics is mounted on a two-piece gathered foundation to form the skirt, which closes at left side-back.

7592—Ladies' Blouse (25 cents). Nine sizes, 34 to 50 bust. No. 7922—Ladies' Two-piece Tunic Skirt (25 cents). Six sizes, 22 to 32 waist. Width at lower edge about 1½ yard. The costume in medium size requires 6⅞ yards 36-inch taffeta—⅝ yard 40-inch Georgette crêpe for vest, cuffs, and frills. Embroidery No. 12372, blue or yellow transfer pattern, 20 cents. From the front-closing vest of Georgette crêpe long rolling revers turn back. The waist is mounted on a front-closing underbody, and if desired, the neck may be filled in with a gathered chemisette having standing collar. Quite a novelty is displayed in the skirt which has a tunic draped at one side.

7929—Ladies' Blouse (25 cents). Six sizes, 34 to 44 bust. No. 7926—Ladies' Tunic Skirt (25 cents). Seven sizes, 22 to 34 waist. Width at lower edge about 1⅝ yard. The costume in medium size requires 5¼ yards 36-inch black velvet—¾ yard 36-inch white satin for collar and cuffs. Distinctive charm is given to this frock of velvet by the one-sided tunic which is arranged at the front and side of the skirt. The blouse, too, is new in style showing the tendency toward closer fitting effects. It closes in surplice style, and the neck may be finished with a shawl or pointed collar. It is mounted on a front-closing underbody with square or V neck, and one-piece sleeves gathered to deep cuffs may replace the flowing sleeves.

Chic Separate Blouses and Skirts and Trim House-Dresses

Blouse 7951
Skirt 7915
Beading 12377

7951—Ladies' Blouse (20 cents). Eight sizes, 34 to 48 bust. Size 36 requires 2¼ yards 36-inch voile. No. 7915—Ladies Two-piece Gathered Skirt (20 cents). Six sizes, 24 to 34 waist. Size 26 requires 2⅝ yards 44-inch serge. Width at lower edge about 1½ yard. Beading No. 12377, blue or yellow transfer, 15 cents. The separate blouse and skirt always combine well to form a practical morning dress. This blouse closes at center-front in an applied plait, and a large collar finishes the open neck. Long one-piece sleeves are gathered to deep cuffs, and are perforated for shorter length with turn-back cuffs. A novel belt and oddly shaped pockets give a distinctive touch to the otherwise simple skirt which closes at left side seam.

7930 — Ladies' Morning Dress (25 cents). Eight sizes, 34 to 48 bust. Size 36 requires 4¼ yards 36-inch figured percale—½ yard 30-inch white piqué for collar and trimming. Width at lower edge about 1⅝ yard. The trim lines of this dress make it particularly good for morning and house wear. Below a square yoke the front of the dress is gathered.

7907—Ladies' Morning Dress (25 cents). Nine sizes, 34 to 50 bust. Size 36 requires 6½ yards 27-inch blue chambray—⅝ yard 36-inch tan linen for trimming—½ yard white lawn for collar—1½ yard edging. Width at lower edge about 1⅝ yard. Tho very simple in style the odd little trimming touches on this dress lift it above the commonplace. It closes at center-front, and plaits and trucks give a panel effect front and back. A belt encircles the waist-line, and the sleeves are perforated for shorter length.

7911 — Ladies' Morning Dress (25 cents). Nine sizes, 34 to 50 bust. Size 36 requires 4⅝ yards 36-inch check gingham—½ yard 27-inch white linen for collar. Embroidery No. 12460, blue or yellow transfer, 15 cents. Width at lower edge about 1⅝ yard. Dainty checks of pink, blue, or lavender and white gingham are in great favor for simple house and morning dresses, generally relieved, as in this case, by a touch of solid color or white in the collar. This collar is square and is rolled at the side edges. A yoke effect is formed by extending the back over the shoulders.

Blouse 7937
Skirt 7910

Blouse 7832
Skirt 7905

7937—Ladies' Blouse (20 cents). Nine sizes, 34 to 50 bust. Size 36 requires 1¾ yard 44-inch striped organdy—⅜ yard plain organdy for collar and cuffs. No. 7910—Ladies' Two-piece Gathered Skirt (20 cents). Six sizes, 24 to 34 waist. Size 26 requires 3⅜ yards 36-inch velvet. Width at lower edge about 1½ yard. For afternoon wear in the home, a simple blouse of organdy, Georgette crêpe, or voile may be combined with a satin, serge, or velvet skirt. The blouse is gathered on the shoulders in front, and for the open neck with shawl collar pictured, high neck with standing collar may be substituted, as the blouse is made with convertible collar. The sleeves are perforated for shorter length. Novelty is given to the skirt by the oddly shaped pockets.

7832—Ladies' Blouse (20 cents). Eight sizes, 34 to 48 bust. Size 36 requires 2⅜ yards 36-inch voile. No. 7905—Ladies' Two-piece Gathered Skirt (20 cents). Seven sizes, 22 to 34 waist. Size 26 requires 2⅞ yards 44-inch check worsted. Width at lower edge about 1½ yard. Featured on the blouse are the new tucked revers joined to a square collar, perforated for round outline. Another attractive feature is the gathered vest or plastron which is cut square at the top. Large pockets are applied to the skirt, which may be lapped over to form a jabot effect. They button onto the belt and are perforated so that the jabot trimming sections may be cut off.

7647—Ladies' Blouse (20 cents). Six sizes, 34 to 44 bust. Size 36 requires 2 yards 40-inch Georgette crêpe—1 yard 40-inch satin for collar. Embroidery No. 12367, blue or yellow transfer, 15 cents. The blouse is gathered on the shoulders in front, and a shawl collar of satin is knotted cowboy fashion over the gathered frills.

7589—Ladies' Blouse (20 cents). Six sizes, 34 to 44 bust. Size 36 requires 1⅛ yard figured Georgette crêpe—⅜ yard 40-inch plain Georgette.

New Models Designed to Camouflage the Stout Figure

7960—Ladies' Jacket (25 cents). Seven sizes, 34 to 46 bust. Size 36 requires 3¼ yards 54-inch broadcloth—¼ yard 36-inch velvet for collar. Length at center-back 43 inches. No. 7830—Ladies' Two-piece Gathered Skirt (20 cents). Seven sizes, 24 to 36 waist. Size 26 requires 2½ yards 54-inch broadcloth. Width at lower edge about 1½ yard. The long simple lines of this suit of taupe broadcloth make it particularly becoming to women of full figure. Instead of the square collar, the neck may be finished with a shawl collar, and the belt sections are extensions of the underarm piece. The skirt is a plain, medium narrow model, gathered at the top and closing at left side seam.

7946—Ladies' Dress (25 cents). Eight sizes, 34 to 48 bust. Size 36 requires 3⅝ yards 44-inch serge—2½ yards 36-inch satin—3⅝ yards fringe—⅞ yard 36-inch lining for underbody. Width at lower edge about 1⅝ yard. This is admirable to give length of line to stout figures. It shows the smart new overdress effect, the overdress in panel style, closing at left side-front and on the left shoulder. It is worn over a foundation dress of satin consisting of a front-closing underbody joined to a two-piece skirt closing in front. In addition to the long plain sleeves there are shorter flaring sleeves.

7924—Ladies' Dress (25 cents). Six sizes, 34 to 44 bust. Size 36 requires 4 yards 36-inch black velvet—1½ yard 40-inch black Georgette crêpe—⅜ yard white Georgette for collar—1¼ yard lace—⅞ yard 36-inch lining for underbody. Width at lower edge about 2 yards. Braiding No. 12321, blue or yellow transfer pattern, 15 cents. Velvet is one of the most fashionable fabrics for the coming season's afternoon gowns, and it is particularly effective combined, as in this case, with Georgette crêpe, and with the fashionable touch of hand-work in the braiding on the front panel. The closing is at left side-front, and there is a panel front and back.

Tunic Blouse
7912
Skirt 7830

7916—Ladies' Blouse (25 cents). Six sizes, 34 to 44 bust. No. 7919—Ladies' Two-piece Tunic Skirt (25 cents). Seven sizes, 22 to 34 waist. Width at lower edge about 1½ yard. The costume in medium size requires 4⅜ yards 36-inch black satin—3 yards 40-inch Georgette crêpe—⅞ yard contrasting satin for tunic facing—⅞ yard lace—⅞ yard 36-inch lining for underbody. Beading No. 12348, blue or yellow transfer, 20 cents. Here is a charming afternoon gown of satin and Georgette crêpe that the stout woman will find very becoming. The surplice blouse has sash extensions, and is mounted on a front-closing underbody. A tunic of Georgette is arranged each side of the two-piece satin skirt.

7936—Ladies' Dress (25 cents). Eight sizes, 34 to 48 bust. Size 36 requires 6⅜ yards 36-inch velvet—1½ yard fur banding—¼ yard white Georgette crêpe for vest. Width at lower edge about 1½ yard. In black, seal brown, or wisteria velvet this would make a charming afternoon and theater gown for the stout woman. It is in overdress or redingote style, closing at left side-front, and is mounted on a foundation dress that consists of a sleeveless underbody with square neck joined to a two-piece gathered skirt that closes at center-front. Instead of U-shaped neck outline with revers and round collar as illustrated, the overdress may be made with V neck and shawl collar. For the plain sleeves with turn-back cuffs, one-piece sleeves gathered to deep cuffs may be substituted.

Fashion's Latest Dictates for Afternoon and Evening Wear

7961—Ladies' and Misses' Set Consisting of Three Styles of Capes and a Muff (25 cents). Cut in one size only requiring for cape illustrated 2 yards 36-inch velvet. Many of these smart little coatees are fashioned of plush and fur fabric instead of the real fur.

7390—Ladies' and Misses' Capes (25 cents). Sizes small, medium, and large, corresponding with 34, 38, and 42 bust. Medium size requires for the cape illustrated ⅝ yard 54-inch seal plush. Five different styles of capes may be developed from this pattern.

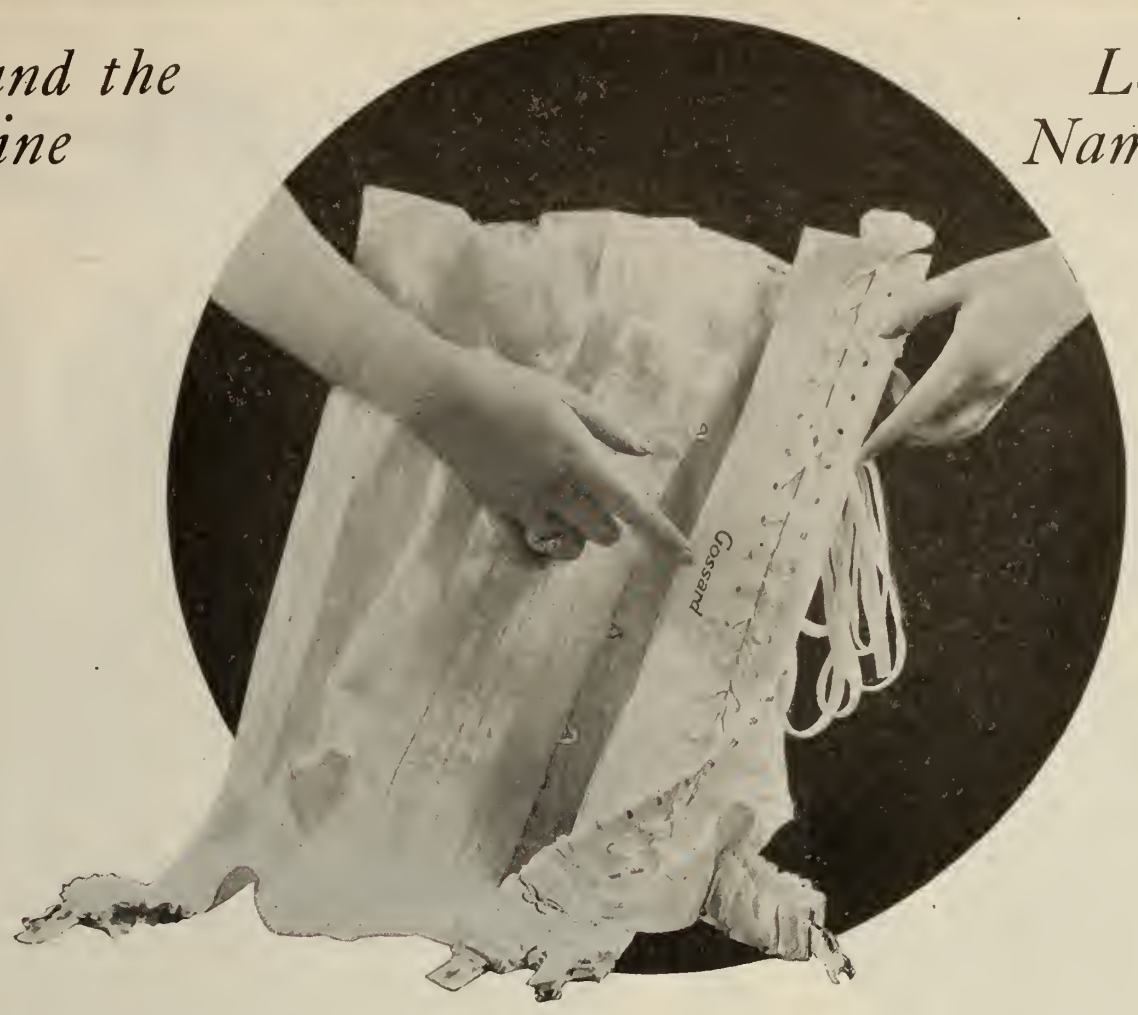
Cape 7390

7375 — Ladies' Evening Blouse (25 cents). Six sizes, 34 to 44 bust. No. 7382—Ladies' Tunic Skirt (25 cents). Five sizes, 24 to 32 waist. Width at lower edge about 1¾ yard. The costume in medium size requires 5 yards 36-inch taffeta—3⅞ yards 40-inch Indestructible Voile—4¼ yards silver ribbon. Taffeta and Indestructible Voile are attractively combined in this evening frock, the taffeta forming the surplice waist and the draped tunic, while the voile is used for the underbodice, the short puff sleeves, and the skirt. Silver banding and silver flowers give an added touch of elegance. The waist closes under the left arm and has short extensions that are joined to sash ends looped in front. The tiny puff sleeves drop from the top of the arm and are fastened underneath, but for these may be substituted long flowing sleeves. To form the skirt, a gathered two-piece tunic is mounted on a one-piece gathered foundation.

6933—Ladies' Evening Blouse (25 cents). Six sizes, 34 to 44 bust. No. 7941—Ladies' Skirt (25 cents). Five sizes, 24 o 32 waist. Width at lower edge about 1⅜ yard. The costume in medium size requires 3 yards 40-inch satin—2⅜ yards 40-inch Georgette crêpe—2 yards 27-inch lace for flounce—1¼ yard banding. A touch of lace softens many of the new evening gowns, and filet, princess, and Chantilly are among the favored meshes. The blouse of this frock crosses in surplice style front and back over an underblouse. The outer blouse extends over the shoulders to form a sleeve effect, but there are perforations for cutting off the extensions and using short puff sleeves instead. The skirt is in tunic effect and has a deep girdle.

7936—Ladies' Dress (25 cents). Eight sizes, 34 to 48 bust. Size 36 requires 3⅜ yards 44-inch check cloth—1¾ yard 36-inch black satin—¼ yard 40-inch white organdy—2¼ yards 36-inch lining for underbody and top of skirt. Width at lower edge about 1½ yard. In smart redingote effect is this dress that is decidedly chic for Fall street wear. The redingote closes at left side-front, and a shawl collar finishes the V neck. If preferred, however, oval neck with revers may be substituted, with a square collar perforated for round outline at the back. Plain one-piece sleeves with turnback cuffs may be substituted for the sleeves illustrated, and the redingote may show the irregular lower edge, or may be cut straight around. The foundation consists of a sleeveless underbody with square neck joined to a two-piece skirt gathered at the top and closing at center-front.



7895—Ladies' Blouse (25 cents). Five sizes, 34 to 42 bust. No. 7919—Ladies' Tunic Skirt (25 cents). Seven sizes, 22 to 34 waist. Width at lower edge about 1½ yard. The costume in medium size requires 3 yards 54-inch tan wool Jersey—2½ yards 54-inch navy blue wool Jersey—3½ yards fringe for trimming—⅝ yard 44-inch white organdy for collar. Wool Jersey has lost none of its popularity for street frocks, and the combination of tan and blue is particularly good. The blouse is gathered on the shoulders, fastening at center-front and with jumper sections crossing at the underarm and buttoning onto the skirt.

Demand the Genuine

Look for the Name ***Gossard***

Why women in war time insist upon GOSSARD CORSETS

The Original Front-Lacing Corsets

The name ***Gossard*** on the inside of the corset guarantees the increased efficiency of any woman who works—whether it be house work, office work, factory work or any one of the many duties that patriotic women have so cheerfully and uncomplainingly assumed during these war times. No garment is so essential for the well being of the women of our country as the Gossard Corset.

The name ***Gossard*** is your guarantee of **health.** Your family physician will tell you that a correctly fitted Gossard safeguards your health by giving a hygienic body support that can be found only in the unequalled design, soft pliable materials and scientific boning that characterize these world-famed corsets.

It is your guarantee of a priceless **all-day comfort.** A correctly fitted Gossard will conserve your energy and increase your efficiency.

The name ***Gossard*** is your guarantee of true **corset economy.** It is your guarantee of a wearing service that alone is worth the price of the garment whether you pay $2.00, $2.50, $2.75, $3.00, $3.50, $4.00, $5.50 or more.

Only in a Gossard can every woman attain the ideal proportions of her type and so these original front-lacing corsets permit a clothes economy by enhancing the beauty of the most inexpensive frock or suit.

It is your guarantee of **inimitable style.** The perfect front and perfect back of a Gossard are and always will be the despair of those attempting imitations.

There is at least one store—and always the best stores—in every city selling the genuine Gossard Corsets. You can identify them by the Gossard signs displayed in their windows and by their advertising of Gossards. Demand the genuine. Look for the name ***Gossard*** on the inside of the corset.

Some Advance Fashion Suggestions for Autumn Street Wear

7958—Ladies' Jacket (25 cents). Six sizes, 34 to 44 bust. Size 36 requires 2⅞ yards 54-inch Oxford cloth—¼ yard 20-inch velvet for collar. Length of jacket at center-back 45 inches, perforated for 42-inch length. No. 7688—Ladies' Two-piece Skirt (20 cents). Seven sizes, 24 to 36 waist. Size 26 requires for skirt with inserted pockets 2⅜ yards 54-inch Oxford cloth. Width at lower edge about 1⅞ yard. Here is one of the new very long jackets which are among the advanced fashions for Fall. This smart model is quite tailored in style, buttoning in single-breasted fashion and with mannish notched collar and revers. The jacket is perforated for V shaped neck with shawl collar should this be preferred. At the center-front of the jacket a full-length panel is formed, while the sides and back are in two sections with the skirt section gathered to the body. The two-piece skirt may have inserted pockets or large hanging pockets, and closes at left side seam.

7750—Ladies' Coat (25 cents). Seven sizes, 34 to 46 bust. Size 36 requires 3¾ yards 54-inch check wool velours—⅜ yard plain velours for collar. Length at center-back 50½ inches. No matter how many suits are in the wardrobe the coat is an absolute necessity, particularly to wear over afternoon frocks. This model shows the simple lines that are in vogue.

7960—Ladies' Jacket (25 cents). Seven sizes, 34 to 46 bust. Size 36 requires 3¼ yards 54-inch tweed. Length at center-back 43 inches. No. 7830—Ladies' Two-piece Gathered Skirt (20 cents). Seven sizes, 24 to 36 waist. Size 26 requires 2½ yards 54-inch tweed. Width at lower edge about 1½ yard. For utility wear there is nothing more practical or that will give better service than tweed, which wears indefinitely. It shows to good advantage in this suit which displays the new long jacket that will be so much in vogue for the Fall and Winter. The jacket is a single-breasted model belted across the front, and is arranged in soft plaits below the waist-line front and back. For the open neck and square collar may be substituted a V-shaped neck with shawl collar. The skirt, like most of the new models, is very simple in style, gathered a little at the top and closing at the left side seam. The belt has extension tabs at each side.

7943—Ladies' Dress (25 cents). Six sizes, 34 to 44 bust. Size 36 requires 5⅛ yards 36-inch black velvet—⅜ yard satin for collar—2½ yards moleskin—2⅛ yards 36-inch lining for underbody and top of skirt. Width at lower edge 1⅝ yard. The slim silhouette featured this season is admirably brought out in this charming afternoon frock of velvet which is in redingote style with a panel front and back that is an extension of the square yoke. At each side of the panel below the yoke there are set-in gathered sections. The redingote is worn over a two-piece skirt gathered at the back and attached to an underbody at slightly raised waist-line. High, oval, and V-shaped neck outlines are provided. The closing is arranged at the center-back, one of the new style touches of the season.

7934—Ladies' Dress (25 cents). Six sizes, 34 to 44 bust. Size 36 requires 2¾ yards 54-inch figured tan wool cloth—2⅜ yards 36-inch navy blue satin—¼ yard cream Venice lace for vest—2¼ yards silk braid—⅞ yard 36-inch lining for underbody. Width at lower edge about 1½ yard. The fashionable surplice closing is illustrated in this model, the waist crossing over a lace vest which is mounted on the front-closing underbody. A large square collar perforated for smaller outline finishes the neck, and a choice is offered of long plain sleeves or long one-piece sleeves gathered to deep pointed cuffs, the latter style illustrated. Under a tuck the two-piece skirt is attached to a two-piece yoke. Decided style is given to the frock by the four flying panels, but these may be omitted if desired. Narrow silk braid forms a smart trimming.

7952—Ladies' One-piece Dress (25 cents). Eight sizes, 34 to 48 bust. Size 36 requires 4⅜ yards 44-inch gabardine—⅝ yard 36-inch black satin. Width at lower edge about 1⅝ yard. The jabot drapery that is so fashionable is introduced on this frock of dark blue gabardine which is suitable for early Fall street wear. The dress closes at center-front and may have high neck with standing collar. Perforations, however, permit of cutting the neck in a V finished with a pointed or round collar of satin. The sleeves may be long or short. The amount of satin given provides not alone for the collar, but for the facing of the drapery on the skirt.

DESCRIPTIONS CONTINUED ON PAGE 48

If your local dealer cannot supply these patterns, send dir : to the Pictorial Review Co., 263 Adelaide St. W., Toronto.

The New Fall Street Frocks Feature Long Slender Lines

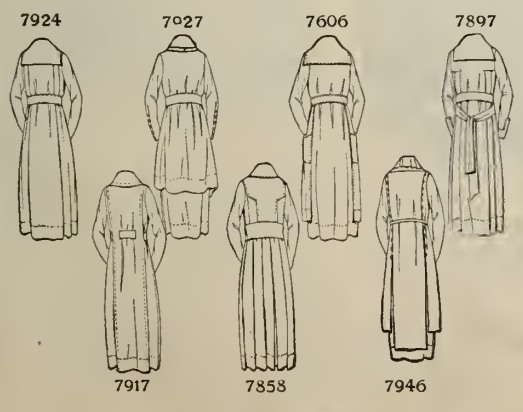
7858—Ladies' Long-waisted Dress (25 cents). Nine sizes, 34 to 50 bust. Size 36 requires 4¾ yards 44-inch serge—⅝ yard black satin—¼ yard dotted organdy for overcollar—⅜ yard fringe. Width at lower edge about 2⅝ yards. A square yoke that descends into a panel at center-front and back is a distinctive style feature of this simple frock of blue serge. The waist closes on the shoulder and at left side-front, and is attached at low waist-line to the three-piece plaited skirt cut with straight lower edge. The fashionable sash of self-material is displayed, the ends finished with chenille or silk fringe.

7606—Ladies' One-piece Dress (25 cents). Nine sizes, 34 to 50 bust. Size 36 requires 3¼ yards 54-inch Poiret twill—1 yard contrasting satin for lining panels. Width at lower edge about 2 yards. The fashionable flying panels are featured on this frock of navy blue Poiret twill, which otherwise is quite simple. Rows of coarse machine-stitching being the only decorative note. The frock buttons all the way down the center-front, and a large square or pointed collar may finish the open neck. Large patch pockets are applied to both panels, and the panels are attached to the underside of the belt. The lining for the panels should be cut just like the outside, and should be stitched to the panels.

Dress 7924
Braiding 12420

Dress 7917

Dress 7927



Dress 7858

Dress 7606

7924—Ladies' Dress (25 cents). Six sizes, 34 to 44 bust. Size 36 requires 2⅞ yards 48-inch navy blue gabardine—1½ yard 36-inch satin—⅜ yard 40-inch Georgette crêpe for collar—⅛ yard 36-inch lining for underbody. Width at lower edge about 2 yards. Braiding No. 12420, blue or yellow transfer pattern, 20 cents. Ideal for Autumn street wear is this frock of dark blue gabardine combined with black satin. The dress, which closes at the left side-front, has a panel front and back, the front panel braided in soutache. At the sides there are separate waist sections of black satin joined to the gathered skirt sections of gabardine. The waist is mounted on a front-closing underbody with V or square neck.

7917—Ladies' One-piece Dress (25 cents). Six sizes, 34 to 44 bust. Size 36 requires 4¾ yards 44-inch check worsted—½ yard black satin for collar—⅝ yard contrasting cloth for facing of drapery sections. Width at lower edge about 1¾ yard. The fashionable panel effect is introduced on this frock of check worsted at the front and back, but the plainness of the front panel is relieved by inserted sections that form jabot-like folds toward the bottom. As these sections show the underside of the material, a facing of contrasting satin or cloth would be an attractive touch. Instead of making the dress with open neck and large collar, the closing may be continued to the top of a standing collar.

7927—Ladies' Dress (25 cents). Nine sizes, 34 to 50 bust. Size 36 requires 5¼ yards 36-inch black velvet—⅜ yard 40-inch Georgette crêpe for collar, vestee, and cuffs—⅜ yard fringe—2¼ yards 36-inch lining for underbody and top of skirt. Width at lower edge about 1½ yard. The pointed tunic is new and smart. It is mounted on a two-piece skirt closing at side-front.

Dress 7946

Dress 7897

7946—Ladies' Dress (25 cents). Eight sizes, 34 to 48 bust. Size 36 requires 2⅞ yards 44-inch plaid worsted—3¼ yards 36-inch black satin—⅞ yard 36-inch lining for underbody. Width at lower edge about 1⅝ yard. This smart costume will go a long way in wool conservation, as only the overdress is fashioned of wool material, while the foundation dress consists of a front-closing underbody of lining with satin sleeves, joined to a two-piece skirt, also of satin. The front and back of the overdress are in panel style, and are longer than the sides. A single or double collar may finish the slightly U-shaped neck which is perforated for V outline with shawl collar. The closing of the overdress is at the left shoulder and left side-front.

7897—Ladies' Dress (25 cents). Nine sizes, 34 to 50 bust. Size 36 requires 5¼ yards 44-inch blue serge—⅝ yard 48-inch white broadcloth for collar—3 yards braid. Width at lower edge about 2½ yards. A blue serge frock is an essential requirement of the well-dressed woman's wardrobe, as there is nothing quite so smart for street wear. This model shows the fashionable panel front and back, which is an extension of the square yoke, and below the yoke at each side of the panel plaits are inserted. The front closing may be continued up to the top of the standing collar which is provided in the pattern, or if preferred, the dress may be made with V neck and large square collar as illustrated. Short sleeves with turn-back cuffs may be substituted for the long plain sleeves.

If your local dealer cannot supply these patterns, send direct to the Pictorial Review Co., 263 Adelaide St. W., Toronto.

Styles Both Sensible and Pretty for the Younger Generation

7950—Girls' and Juniors' One-piece Plaited Dress (20 cents). Five sizes, 6 to 14 years. Size 12 requires 3⅜ yards 44-inch check cloth—⅜ yard 27-inch white piqué for collar and cuffs. Below a square yoke this smart frock is plaited. Perforations permit of shortening the sleeves. The dress closes at left side-front under a plait, and at center-front of the yoke.

7901—Child's Dress (20 cents). Three sizes, 2 to 6 years. Size 4 requires 4 yards 27-inch chambray—⅜ yard 36-inch check gingham. The waist may have round or fence collar, and long or short sleeves.

Girls' and Juniors' Dress 7950 | Child's Dress 7901 | Girls' and Juniors' Dress 7914 | Girls' and Juniors' Dress 7945 | Child's Dress 6796 | Boys' Suit 7846 | Girls' Dress 7948

7914—Girls' and Juniors' Dress (20 cents). Five sizes, 6 to 14 years. Size 14 requires 3¼ yards 40-inch Georgette crêpe—1 yard 36-inch taffeta for overblouse—5 yards fringe—1½ yard velvet ribbon. Here is a charming frock for afternoon wear to be fashioned of white or some pastel tint of Georgette crêpe, and with overblouse section of taffeta trimmed with picot edged ribbon. The dress closes at the back, and the skirt, which is a one-piece gathered model, may be tucked or plain. The overblouse points may be longer if preferred.

7945—Girls' and Juniors' Jumper Dress (20 cents). Five sizes, 6 to 14 years. Size 12 requires 3 yards 36-inch plaid taffeta for the dress—1¾ yard 36-inch velvet for jumper. The new oval collarless neck-line is featured on this smart afternoon frock, tho there are perforations for V-shaped outline should this be preferred. The jumper is open under the arms, and fastens on the left shoulder. The skirt is a straight gathered model, tucked above the hem. Short sleeves finished with a ruffle may replace the long sleeves gathered to band cuffs that are pictured. This would make an ideal party frock in white or pink Georgette crêpe, with jumper of matching taffeta.

6796—Child's Empire Dress (20 cents). Five sizes, 1 to 5 years. Size 5 requires 3¼ yards 27-inch challis—1¾ yard velvet ribbon—½ yard 27-inch lining. A cunning little frock for the small maid is presented in this model to be fashioned of the new flowered challis or voile. Long and short sleeves are provided, and the skirt is a straight gathered model.

Child's Dress 7812 | Child's Dress 7321

7846—Boys' Suit (20 cents). Three sizes, 2 to 6 years. Size 4 requires 1⅛ yard 36-inch velvet—1 yard 36-inch crêpe de Chine. This smart suit is designed for the little man's best wear, and may have black velvet trousers with blouse of white or pale yellow crêpe de Chine. The collar with deep tabs buttoning onto the trousers front and back is a new feature. Perforations are provided in the patterns for cutting off the tabs, leaving a small round collar.

Child's Dress 7288 Scallop 11659 | Misses' and Juniors' Coat 7938 | Girls' and Juniors' Coat 7935

If your local dealer cannot supply these patterns, send direct to the Pictorial Review Co., 263 Adelaide St. W., Toronto.

These Smart Models Are Just the Thing for School Wear

7642—Boys' Top Coat (20 cents). Five sizes, 1 to 5 years. Size 4 requires 1⅞ yard 54-inch covert cloth—2 yards 36-inch satin for lining. Here is a cunning top coat for the small boy to be fashioned of navy blue serge or covert cloth. The coat may fasten to the neck, or it may be worn with fronts rolled back.

7503—Child's Single-breasted Coat (20 cents). Three sizes, 2 to 6 years. Size 6 requires 2⅛ yards 54-inch broadcloth—⅜ yard 36-inch velvet for collar and cuffs—2⅜ yards 36-inch lining. A smart feature is the surplice collar.

7596—Girls' Double-breasted Coat (20 cents). Five sizes, 4 to 12 years. Size 8 requires 2¼ yards 44-inch serge—⅝ yard 20-inch velvet—2¼ yards 36-inch lining.

7923—Girls' and Juniors' One-piece Dress (20 cents). Eight sizes, 8 to 17 years. Size 12 requires 3 yards 44-inch wool poplin—½ yard 36-inch satin for collar and trimming. For school wear this is a very attractive frock on simple lines. It may be fashioned of tan or brown wool poplin and closes at center-front. It is made with a yoke extending down into the front and back panel, with plaits each side.

7850—Child's Coat (20 cents). Three sizes, 2 to 6 years. Size 6 requires 2¼ yards 54-inch wool Jersey—3¼ yards 36-inch Pussy Willow satin for lining. Wool Jersey is just as smart for the little folks as for their elders. It is employed in making this coat which may close in double-breasted or surplice style.

7953—Juniors' Dress (25 cents). Three sizes, 13 to 17 years. Size 13 requires 3 yards 44-inch check cloth—⅝ yard white linen for collar and vest. Scallop No. 11854, blue or yellow transfer pattern, 10 cents. A touch of novelty is given to this frock by the inserted draped sections.

7956—Girls' and Juniors' One-piece Dress (20 cents). Nine sizes, 6 to 17 years. Size 12 requires 2¾ yards 36-inch figured poplin—¾ yard 36-inch velvet for collar and trimming. A square or round collar may finish the open neck, and the sleeves are perforated for shorter length. The inserted sections that give a draped effect may be omitted.

7942—Girls' and Juniors' Dress (20 cents). Five sizes, 6 to 14 years. Size 10 requires 1⅜ yard 36-inch voile for blouse—2½ yards 36-inch linen for skirt, belt, and suspenders. Frocks like this combining two materials are very smart for school wear, and for colder weather this may be fashioned of blue serge combined with plaid worsted. The waist closes in front and may have long or short sleeves. The three-piece side-plaited skirt closes at left side-front.

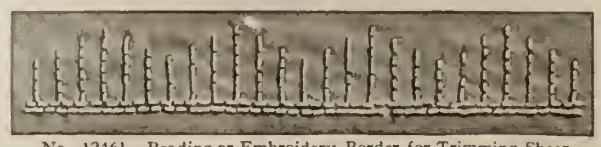
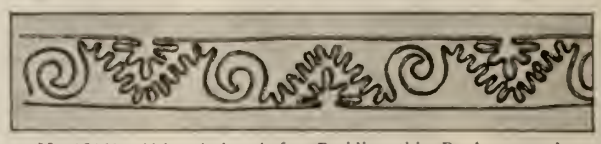
Dainty Borders and Motifs to Give the Chic Touch of Hand-work

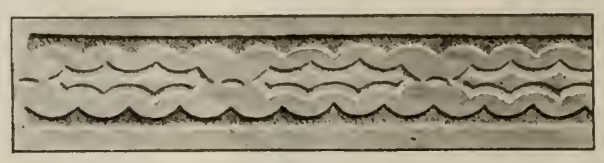


No. 12283—Motif and Border for Bead or Embroidery Work

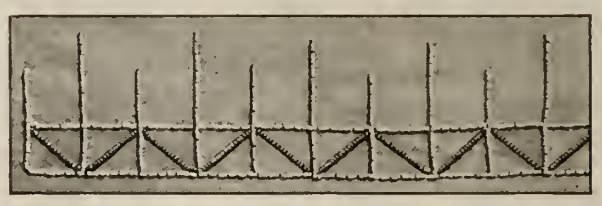


Pictorial Review Transfer Pattern No. 12283, blue or yellow, 15 cents. This pattern contains seven motifs nine inches high and three yards of border two inches wide. The motifs are charming for blouses and frocks of voile, Georgette crêpe, chiffon, or satin. Beads and embroidery silk may be combined in working out the border as well as the motifs.

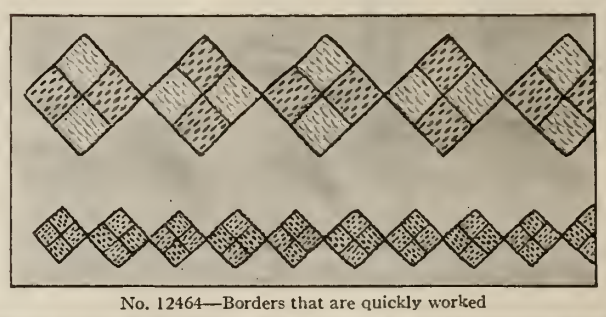
Pictorial Review Transfer Pattern No. 12461, blue or yellow, 20 cents. This attractive little beading border would be very effective on a frock of Georgette crêpe or voile worked in glass or chalk beads. The same idea may be carried out in embroidery silk if applied to heavier materials. The embroidery may be worked in outline, chain, or simple running stitch. 3½ yards of two-inch border are supplied.



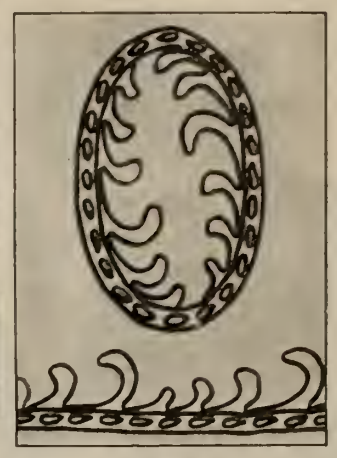
Pictorial Review Transfer Pattern No. 12463, blue or yellow, 20 cents. For the early Fall utility frock nothing smarter as a trimming can be used than this braiding border worked out in soutache, altho, if preferred, beads or heavy silk may be substituted. To braid one yard of the border, four yards of braid are required. It is surprizing how rapidly this design works up.



No. 12461—Beading or Embroidery Border for Trimming Sheer or Heavy Frocks



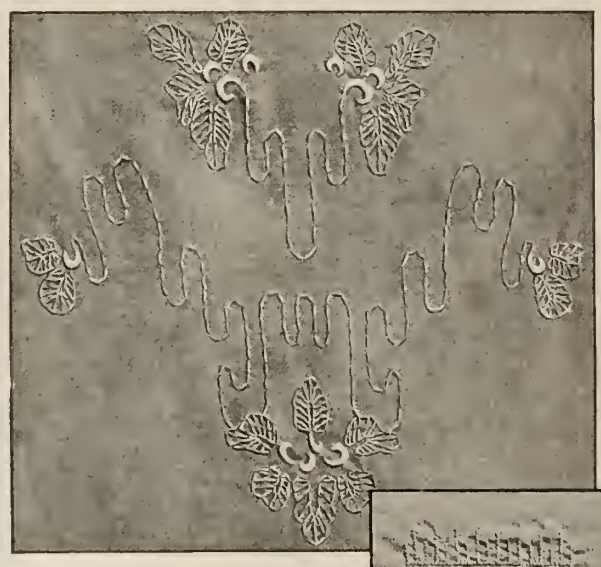
No. 12463—Altho designed for Braiding this Border may be carried out in Beads or Embroidery



No. 12465—Exceptionally effective Border for the Serge, Jersey, or Gabardine Dress

No. 12462—Beading Border for Dress or Blouse

No. 12464—Borders that are quickly worked

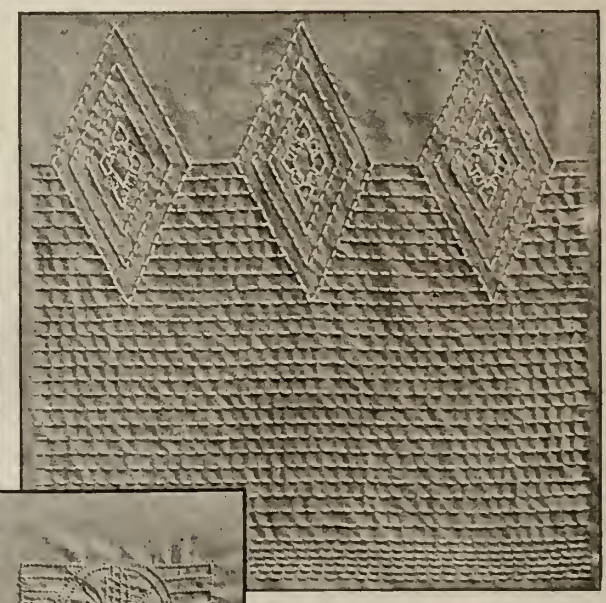


No. 12300—Oval Motif and Border for Braiding or Beading

Pictorial Review Transfer Pattern No. 12300, blue or yellow, 15 cents. Easy to work, yet very effective are the motifs and border included in this design which may be carried out in soutache braiding or rat-tail cord. Six yards of border 1¾ inch wide, and thirteen motifs 4 by 6½ inches are included in the pattern. To braid each yard of border, 8½ yards will be required.

Pictorial Review Transfer Pattern No. 12467, blue or yellow, 20 cents. One large and two small motifs are provided in this pattern. The conventional and scrolly stems should be embroidered in loose running stitch, with raised satin stitch for the crescent-shaped motifs.

Pictorial Review Transfer Pattern No. 12468, blue or yellow, 25 cents. This handsome border is 18⅞ inches deep, and the pattern supplies 2½ yards. Eighteen bunches of beads are required to bead one yard of the border. Carried out in bright jet beads it would add distinctive style to the simplest blue serge, gabardine, or Jersey frock, while in white chalk beads the border would look pretty on Georgette frocks.



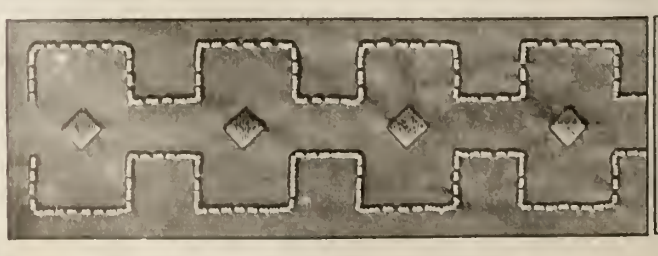
No. 12467—Dainty Embroidery that is easy to do

Pictorial Review Transfer Pattern No. 12465, blue or yellow, 20 cents. This novel border lends itself to beading or embroidery. The design may be carried out in chain or outline stitches in colored silk or mercerized cotton, filling in the center spaces with blanket stitch. Or if desired, the flat satin stitch may be used to fill in. Pattern provides 3½ yards of 2½-inch border.

Pictorial Review Transfer Pattern No. 12462, blue or yellow, 20 cents. Simplicity itself is this charming border which may be carried out in beads of two colors. There are 3½ yards of 3-inch border given in the pattern.

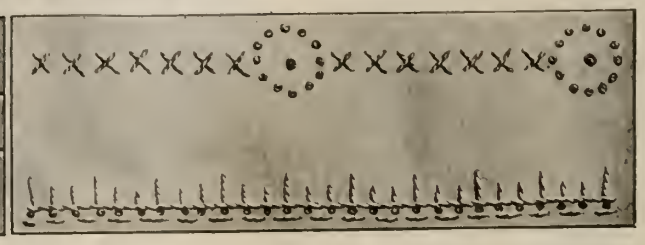
Pictorial Review Transfer Pattern No. 12464, blue or yellow, 20 cents. Two borders are supplied in this design, 1⅜ inch wide and 2⅞ inches wide. The pattern provides 3½ yards of each border.

No. 12468—Handsome 18-inch Border for Beading



Pictorial Review Transfer Pattern No. 12469, blue or yellow, 20 cents. Motifs for braiding, beading, or embroidering that fit every little corner are provided in this pattern. There are nine different motifs with duplicates making a total of twenty-four.

Pictorial Review Transfer Pattern No. 12466, blue or yellow, 20 cents. Novel yet easy to work is this three-inch border which may be carried out in beads, braid, or embroidery, or the "Wall of Troy" design may be worked in beads, while the diamond-shaped motifs along the center may be worked in embroidery silks. 3½ yards supplied.



Pictorial Review Transfer Pattern No. 12460, blue or yellow, 15 cents. The pattern provides 3½ yards of two borders, ½ and ⅞ inch wide.

No. 12469—Beading, Embroidery, and Braiding Motifs

No. 12466—Three-inch "Wall of Troy" Border

No. 12460—Two different sized Borders for trimming Children's Clothes

Carnation
— for every recipe

Improves Every Dish Prepared With Milk

YOU'LL be proud of the wonderful deliciousness Carnation Milk adds to your favorite dishes.

It gives a richer, more appetizing flavor to soups, sauces, gravies, and creamed vegetables—you add its *quality* to everything you cook.

And it is economical—for using Carnation Milk you need less butter in your cooking. Carnation Milk is *whole* milk, rich and pure, evaporated to the consistency of cream. Contains neither artificial sweetening nor preservatives.

When thoroughly chilled it whips beautifully—delicious for cakes and fruits.

Try Carnation Milk—in any recipe that calls for milk.

A Fine War-Time Dish

Macaroni With Cheese and White Sauce

½ pound macaroni, 4 tablespoonfuls butter, 4 tablespoonfuls flour, ½ teaspoonful salt, 1 cup Carnation Milk, 1 cup water, ¼ to 1 pound cheese. Break macaroni in small pieces and cook in boiling water until tender. Make white sauce of the butter, flour, seasonings, milk and water. Grate cheese and stir into the white sauce until melted. Drain the macaroni, mix it with the white sauce, put into baking dish, and cover with bread crumbs. Brown in the oven.

KEEP three or four cans handy in your kitchen cabinet. Because it is sterilized and comes in an air-tight can, sealed safe from contamination, it will "keep" for months.

Stays fresh for several days even when the can is opened.

Order a supply with your groceries—your grocer is the Carnation Milkman.

"From Contented Cows"

You "Sun-Worshippers" Need Mennen's Talcum Powder.

THE burning caresses of Old Sol are pleasant smiles when Mennen stands guard between you and him.

While at play you need the protecting film of Mennen's Talcum Powder to prevent friction, chafing and sunburn.

After your bath, a generous sifting of Mennen's over your whole body will keep you cool and refreshed for hours. Your clothing will feel loose and comfortable, and won't irritate you when you perspire.

Shake Mennen's on your linen—into your shoes, to prevent chafing and blistering—between the sheets on hot nights—a score of uses—a variety of kinds.

Don't think the use of talcum is confined to babies—no one ever outgrows Mennen's. The first Mennen baby is 39 years old—and is still using it. The trouble is, most grown-up skins are neglected—Let Mennen's mean to you what it has meant to millions of happy babies.

There's a big difference in talcums—some are good and some are inferior. Mennen's was the first Borated Talcum, and it is our belief that nothing better is made.

It is safer to buy Mennen's.

Your Druggist has Mennen's Talcum Powders in a variety to satisfy every need:—
Borated—also Violet, Flesh Tint, Cream Tint, Sen Yang (Oriental)—each charmingly perfumed—and the new masculine powder and package of Mennen's Talcum for Men.

Around the Hearth

By JENNIE ALLEN MOORE

SMILES.

"It is easy enough to be pleasant
When life flows along like a song.
But the man worth while
Is the man who can smile
When everything goes dead wrong."

"Every time the baby looks into my face he smiles," said Mr. Meekins.

"Well," answered his wife, "it may not be exactly polite, but it shows he has a sense of humor."

When I read that in the funny column, I smiled. Then I read it aloud, and the family enjoyed a laugh at the expense of humble Mr. Meekins and the irony in his wife's reply.

I was reminded of something I once saw in a street car in the form of an advertisement, and it started like this—"Smile, and when others see you smile, someone else will smile, and soon there will be miles and miles of smiles, and life is made worth while, and all because you smile."

No one can estimate the value of a smile, nor can conceive of how long it lives, travelling down the years of our lives. Going back to the years of our childhood, we can recall instances where an unexpected smile reassured us on some occasion of misunderstanding or stage fright. You "walked on the grass," or you plucked a forbidden flower, and the janitor, knowing you did not purposely disobey, and were properly frightened, smiled indulgently.

One instance of my own rises up—that of making a mistake in the church ceremony, and taking a kneeling position when I should have been seated. I was very young, but I still remember how sheepishly I crawled up on the seat, and stole a glance at my mother, who smiled back at me.

That was what I needed for comfort in my childish mortification. That smile helped me to bear the teasing that followed. It never died, and inspired me to pass on that same forbearing smile at childhood's blunders. Alas, that it were not more universal in dealing with our little ones!

Allow me to cite an instance where a woman won my admiration in dealing with her small sons. She lived in an elegant home; and, to use her own words, given with much merriment and laughter, she said—"I was upstairs sewing, and heard considerable noise on the front stairs. It sounded as though much exertion were being expended, so I went to see what was being brought up. It was their little wagon loaded with sand. One was hauling, the other shoving, their faces red and perspiring, and such a mess of sand on the carpet as you can imagine."

And yet she stood and laughed heartily, and smiled whenever she thought of the incident. They didn't intend to spill the sand, but you see the wagon jolted on those steps. Blessed are the mothers who can see the humor of such a situation!

* * *

There are many different kinds of smiles—the smile of joyousness in a light heart, the genuine smile of welcome, the fleeting smile of recognition, the pathetic smile of patient suffering, the smile of forgiveness and of tender musing.

Some smiles are born of natural good humor, of kindliness, courage, a sense of right that permeates the life and all its motives. Such a smile with such a backing is always triumphant, because it is founded upon and cherished in a disposition that excludes gloom and pessimism.

Not so with the superficial smile that is adopted for social purposes; the sneering and sarcastic smile that is intended to crush; the meaningless smile with no significance; the bitter or sardonic smile that covers a hurt; they are all on the surface. They convey no blessing, they carry no meaning or value, are useless, barren, except as they reveal the mentality of the persons who wear them.

There are occasions when a smile is harmful. There are wrongs that are supported by the smiles of weak characters who cannot frown upon a doubtful remark or questionable story. They do not appreciate such things, and yet are unable to discountenance them when the rest of the company applaud.

It is not always easy nor practicable to speak the word that would discourage, but one can refrain from smiling, and thus show their disapproval. There is no more fitting nor effective rebuke can be given than that of serious silence.

A stranger was asked to address a small club of men. He told a story decidedly shady, whereupon a musical member, thinking to dissipate the oppressive silence, sang a song pitched too high, and carried through with difficulty. At its close, the chairman fittingly launched the dual humorous and caustic comment: "The singing was too high, even as the story was too low, so now that we are evened up, we will continue the programme."

* * *

A little tribute to the memory of a prominent railroad man, who died recently, read: "He whistled and laughed, and joked his way through life, and withal there was a serious vein in his humor, which indicated that he was a man of depth."

Reference was then made to a banquet, where the jollity and raillery subsided when he recited one of his own poems, "Will the Lights Be White?" Two of the verses are as follows:—

"The blue light marks the crippled car,
The green light signals 'Slow,'
The red light is a danger light,
The white light, 'Let her go.'

"Swift towards Life's terminal I trend,
The sun seems short to-night,
God only knows what's at the end—
I hope the lamps are white."

I had a slight acquaintance with this man, and had heard of his gradual rise to his high position. He must have encountered all the trials and discouragements which other men meet in their career. Yet this was his record—he smiled happily through it all. Such a disposition is to be envied, but how seldom we meet such cases!

I *knew* a man who won a reputation in Parliament for wearing "the smile that won't come off." He was noted for that smile. At all times, under all circumstances, the smile was in evidence. When the Opposition railed upon him, denounced his utterances, and accused him of unfair dealing, robbery of public funds, and intrigue, he sat and smiled.

When he rose to reply, he still smiled. He could summon all his native wit, his clever repartee, his scathing sarcasm, and hurl them at his opponent—but the smile remained.

This man's smile did not fade away when he entered his own home. He carried it into all the relationships of life, and although there were sad occasions and trying ordeals to meet, there was always courage and trust speaking through that smile. Even until the brave, undaunted soul yielded to the ravages of an incurable disease, the smile was not missing.

* * *

I *know* a man—he is still alive—who simply refuses to allow his business worries into the front door with him at night. When he enters the door he shuts them out. He meets his wife cheerfully, and enters into the conversation of his children. He plays with the baby, and positively declines to think of those things that bothered and perplexed him during office hours. That man does exactly right, not only for himself and his own peace of mind, but for the happiness of his family, who are so dependent on father's moods for their evening's pleasure.

Carry a smile into your homes, men. Even though everything has gone "dead wrong" all day, rendering an irritable condition of mind; dismiss it before you cross the portals of your home. It avails nothing to nurse your gloom through the meal and all evening, making it unpleasant for the whole household. Rest assured, they have not escaped some trials through the day's work, and can understand and appreciate your effort to be cheerful by the same measure they have forced their troubles in the background.

Some man may read this and declare that it is impossible to forget entirely the day's perplexities. Tut, man, where is your will-power that you cannot order them to begone?

Strong characters do not "carry their heart on their sleeve" for everyone to read and understand. They do like Mrs. Wiggs of the Cabbage Patch—"put their troubles in a trunk and close it, then sit on the lid."

Just try a bout with a bunch of worries versus a desire to create smiles, and you'll find the game always goes on the side of the man with a smile.

* * *

"A fine thing for most women to develop (and it can be developed) is a sense of humor, an ability to see the

(*Continued on page* 47.)

First Aid For Marching Feet

BLISTERED heels every day put soldiers "out of action." Chafing, resulting from violent exercise in heavy, hastily-tailored uniforms, is causing real suffering to thousands. The soldiers in whom you are interested are no more immune than others.

Help them remove this serious "minor" trouble from military life—

Send them a box of Kora-Konia!

Of course, soldiers aren't the only ones. Any feet that march miles a day in hot weather—even in housework—will appreciate the assistance of Kora-Konia.

Sunburn and many quite serious skin abrasions also yield to its soothing influence. See how quickly Kora-Konia cures diaper rash or teething rash and how it eases the skin irritation of bed patients.

If you suffer from chafing, sore feet, sunburn, or other skin trouble, get a box of Kora-Konia at once.

We want you to learn for yourself the almost magic power of Kora-Konia. We want you to try it and see how the discomfort ceases and the skin becomes white again. Note how the powder clings to the skin all day, refusing to be washed or rubbed off.

Kora-Konia has the same soothing, healing action as Talcum Powder, but in addition contains several ingredients that make it of greater medicinal value. It is antiseptic, absorbent, lubricating, adhesive, slightly water-proof, soothing, healing.

Home And Better Health Course For Girls And Women

Instruction in "Cookery," "Canning and Preserving," "Home Nursing and First Aid," and "Sewing," Will be Given at the Soldiers and Sailors' Training School Demonstration Farm, Monteith, Ont., September 14th to October 5th, 1918.

This course is being conducted through the co-operation of the Women's Institutes Branch of the Ontario Department of Agriculture, the Monteith Demonstration Farm and the Soldiers and Sailors' Training School.

The Ontario Department of Agriculture established a Domestic Science School in connection with the Ontario Agricultural College at Guelph in 1903. Provision was made for instructing young women of the province in up-to-date methods in connection with all branches of home responsibility. The various courses offered have been very popular and names have been on the waiting list almost continuously. Very few from the far north sections of the province have been able to take advantage of this instruction, so it has been decided by the Government to utilize the splendid building at Monteith in providing similar service in that section of the province.

The instruction will consist of lectures in the mornings, and demonstrations and practical work in the afternoons, on lines of interest and value to girls and women who have home responsibilities. This course will make it possible for town, village and country girls and women in the northern section of the province to receive advantages much similar to those afforded through the short courses at MacDonald Institute, Guelph.

With food products of all kinds so very dear, the question of providing for the household is of added importance, and the instructors will emphasize the relative values of available food stuffs and will give prominence to the feeding of children.

A staff of well qualified experienced instructors who are thoroughly familiar with rural conditions, requirements and possibilities, has been engaged. The staff of the Monteith Demonstration Farm will give instruction in such features of agriculture as are of special interest to girls and women, including gardening, butter-making, small fruits, poultry raising, care of stock, etc.

One of the instructors will act as principal of the school and will be responsible for the general programme, supervision of those taking the course, care of the rooms, etc.

OUTLINE OF COURSE.

Food Values and Cooking.

Special attention will be given to the use of vegetables, the making of vegetable soup without the use of meat-stock; the canning of vegetables, fruits, and meats; the use of milk in making soups, puddings, and combinations, with special relation to children's and invalids' diet.

Cereals and Cheese.—Various methods of cooking; their high food value compared with other more expensive foods.

Meat and Meat Substitutes.—Fish, eggs, legumes, etc.

The making of simple desserts and the preparation of salads will be included in the course.

The instructor in cooking will make it a point to outline methods whereby the regulations of the Food Control Board can best be met. The members of the class will be given an opportunity to suggest, early in the course, features which they wish specially emphasized and which are of particular value to the residents of the northern sections of the province.

Canning and Preserving.

One of our most capable instructors will have charge of this feature of the work. Instruction will be given in the best way of preserving the surplus vegetables and wild fruits for winter consumption.

The drying of fruits and vegetables will be taken up.

Household Management.

A brief study will be made of plans for work, care of the home, simplicity and economy in the home, etc.

Home Nursing and First Aid.

In addition to the following features, the instructors will be prepared to give instructions upon such features of home nursing and health topics as the members of the class may suggest.

The care and feeding of children will receive due attention, and the instructor will be prepared to examine children brought to the training school by their parents on any of the following dates:—September 26th and 27th, October 3rd and 4th. Some time will be devoted on these dates to open discussion on the part of the parents who come for the day, the regular members of the class, and the instructors.

Lectures will be given on the following topics:—

Sick Room Sanitation, Ventilation, Care, etc.

Bed-making for Various Forms of Sickness.

The Bath.

Emergencies.

Hot and Cold Applications.

Bandaging.

Disinfectants and Observations of Symptoms.

The Administration of Food and Medicine.

Baby Hygiene.

Sewing.

This course will be made thoroughly practical, much attention being given to the remodelling of clothes and the making of garments for children.

Plain sewing will be emphasized and a limited amount of instruction given in fancy stitching, the making of button holes and eyelets.

Each member of the class will be given an opportunity to make a skirt or a one-piece dress in her regular class work.

Those who take this course should be able at the conclusion of the course to cut out and finish plain dresses without assistance.

The women and girls of Northern Ontario are very fortunate in having such splendid accommodation as that provided in the building erected for the training of soldiers and sailors at Monteith. The residence contains all modern conveniences with splendid dormitory, class room and dining room accommodation, well equipped modern kitchen and recreation room. The building will house comfortably forty students in addition to the staff of instructors.

Board and lodging will be provided at $5.00 a week, and no charge will be made for the instruction given.

There will be no examinations held in connection with this course. Public school training is the only educational requirement.

Provision will be made by those in charge for healthful social entertainment with music, games, etc., in the evenings. A library consisting of books bearing upon the work covered in the course, periodicals of interest to women, farm journals, healthful fiction, etc., will be available.

Arrangements have been made for transportation over the T. and N. O. Railroad at 1 cent per mile for return fare.

CANNING AND WAR COOKERY.

New ways of canning fruits and vegetables that had not been tried before and, for some members, methods of canning vegetables that had not been canned before, were all demonstrated at meetings arranged under the auspices of the following Institutes during July, August and early September. At most of the demonstrations, special attention was given to the canning of vegetables:—Lion's Head, Bowling Green, Waldemar, Sombra, Shakespeare, Dundas, Alexandria, Highland Creek, Huntsville, St. Augustine, Goulais Bay, Haysville, Kleinburg, Nashville, Tavistock, Colpoy's Bay, Milverton, Jarrett, Shirley, Newboro, Powassan, Warsaw, Burk's Falls, Delta, Smithville, White Lake, Morewood, Whitby, Magnetawan, Glen Allan, Goderich, West Hamilton, Holstein, Carling, Peterboro, Dundalk, Narva, Emsdale, Welland Port, Bobcaygeon, St. Helens, Flesherton, Kenora, Aurora, Tweed, Laskay, O'Connor.

In connection with these demonstrations, instruction was also given in war cookery.

Demonstrations in war cookery alone were held at Winger, Port Elgin, Penetang, Drumbo and Blyth.

The demonstrations for all the above were furnished by the Institutes Branch of the Department of Agriculture.

APPLICATION FORM
HOME MAKING AND BETTER HEALTH COURSE.
Monteith, Temiskaming.
Sept. 14—Oct. 5, 1918.

Applicants must be not less than 18 years of age.

CANNING CENTRES MAKE A RECORD BEGINNING.

For the four days, beginning August 1st, the record of the newly established canning centre at Barrie was:—159 quarts of beans, 256 quarts raspberry jam, 328 quarts blueberries, 24 quarts rhubarb jam, 24 quarts beets, 7 quarts carrots, 1 quart peas. Total 799 quarts.

On one of the days in July, the Parkhill centre put up 250 quarts raspberries in syrup, 100 quarts raspberry jam, 29 quarts beans.

With beginnings like these, it is not difficult to vision the wonderful amount of Canadian good things that will be ready at the end of the season for our soldiers overseas and in the hospitals at home.

AS THE INSTITUTE APPEARS TO THE LECTURER.

We give below impressions expressed by two of the Institute lecturers at the close of the summer series of meetings.

"I found the condition of the Branches very encouraging. Red Cross work is, of course, occupying the centre of interest, but normal activities are by no means neglected, and a broadening outlook and thought for future work and growth is shown to a gratifying extent. Girls are joining more and more and taking a definite part in the activities of the branches.

"Interest in schools, in medical inspection and gardens especially, and in child welfare in all its branches, will likely lead in Institute activities, after the war. A greater love for reading is needed and can, no doubt, be promoted. It will be slow work, so many women read little themselves and think they have no time.

"There are such boundless possibilities in Institute work, such variety in its possibilities that its growth is one of the most encouraging features of Ontario life.

"The meetings generally were very pleasant. The reports of the year's work encouraging. The women are certainly proud of their usefulness as a national agency in war time."

ONTARIO PROVINCIAL CONVENTIONS.

Preliminary plans for the annual conventions to be held at Ottawa, London and Toronto, on about the same dates as last year, are being considered by the committees appointed for the purpose.

Patriotic work will continue to be the chief activity of the Institutes until the war ceases, and for some time thereafter, and will, of course, receive attention at various sessions.

Among the topics of importance for the convention the following are suggested:

(1) *Medical Inspection.* A summarized report of this will be presented and the delegates informed as to the beneficial results of the clinics held. Child welfare in its broader meaning will be a feature of special work during the coming years.

(2) *Housing Problems.* The Provincial Government has appointed a committee to formulate plans for increasing the housing accommodation in the cities, and also advise as to assistance to be given along this line in the rural districts, especially insofar as housing accommodation for hired men is concerned. Included in this topic will be that of water supply and sewage disposal for the rural districts.

(3) *Food Problems.* A brief report from various sections as to how food conservation is being effected, and up-to-date information as to the activities of the Food Control Board will be presented.

(*Continued on following page.*)

Canadian Women's Institutes

(Continued from preceding page.)

(4) *Canning Centres.*

(5) *Production for* 1919. The needs for the coming year will be outlined and methods to be adopted, based upon past experience, recommended. What women have done to assist in production and plans for the coming season will be outlined.

(6) *Rural Education.* We hope to secure a representative of the Department of Education to outline plans for the Department of Education for the rural districts.

Some time must be given to the consideration of the work of the District Officers; how it may be made more effective, not only in stimulating the activity of the branches already established, but to extend the work into new localities, if not at this time, then immediately after the war is over.

DEMONSTRATION LECTURE COURSES.

The Demonstration Lecture Courses have now become a regular feature of the Women's Institute work in Ontario, and the Women's Institutes Branch of the Department of Agriculture begs to announce to Institute members in general that applications for instructors should be made as early as possible in the season, in order that dates may be set and instructors secured.

While the officers are expected to canvass the members as to the wisdom of taking advantage of the instruction offered, any member of the Institute is at liberty to take the matter in hand, and, if a sufficient number can be secured to make it worth their while, then the officers may be notified and application made to the Department.

There is a general tendency not to attempt such work in war time, but experience has shown that war work has not been interfered with, but rather stimulated through the holding of the two weeks' demonstration courses. While we did not urge this feature of work the first two years of the war, we have no hesitation now in strongly advising Institute members, especially in communities where there are a number of girls, to take advantage of the instruction.

The course in Food Values and Cooking will consist of lessons on vegetable and fruit canning, milk, cereals and cheese, meat, meat substitutes, war breads, simple desserts and salads.

The course in Home Nursing and First Aid covers instruction in the care of the sick room. bed-making, the bath, emergencies, hot and cold applications, bandaging, disinfectants and observation of symptoms, administration of food and medicine, baby hygiene, etc.

Instruction in plain and fancy stitches, a tailored skirt, drafting and cutting, one-piece dresses, will be given in the Sewing Course.

The instructors will be well informed as to the requirements of the Food Control Board, and will be prepared to give instruction in the use of substitutes for those foods required for shipment overseas—bacon, beef and wheat.

Fuller particulars will be sent officers or individual members who apply to the Department for the same.

WAR LECTURE BUREAU.

Women's Institutes now have presented to them a new line of patriotic war service that is sure to mak a strong appeal. The War Lecture Bureau has been established by the Canadian Government, under authority of Mr. M. E. Nichols, Director of Public Information, with Mr. Frank Yeigh as secretary. Its objects are not only to offset German propagandism, but to educate and stimulate the Canadian people as a whole to the maximum of war effort and also to strike an encouraging and heartening note. The plan in brief is the issuing by the Bureau of suggested topics for public talks or discussions, or that may be read in meetings.

Many Women's Institutes are already co-operating with this much-desired method of Canadian propaganda and several of the Government women lecturers are also giving the Bureau addresses. A practical plan of co-operation is for a Women's Institute to appoint a member as its Bureau representative, whose duty it will be to speak on the current theme or to choose a speaker for that purpose, or, as is often done, to have the suggested topic read as part of the business of the meeting.

In many places the Institute can render a community service by this method for, example, the Women's Institute of Nakusp, B.C., has undertaken to represent the Bureau in this locality, and to have the talks given before all kinds of audiences.

By addressing the War Lecture Bureau, Hope Chambers, Ottawa, names will be placed on the mailing list and full instructions given.

LITTLE BITS ABOUT ONTARIO INSTITUTES.

The Port Dover Institute has apparently interested itself in the welfare of school children, and since the first of the year has raised sufficient funds to equip a playground. This Branch also had a women's exchange to supply vegetables, fruits and home baking to the summer campers.

At Crowland, a member of the Branch has over fifty sheep, raised by herself. The wool has been offered to the Women's Institute at a very cheap rate.

A uniform programme has been carried out with success at Haldimand.

Fifty-six pairs of socks has been the average per month for the Rodney Institute.

A public rest room is being kept up by the Thedford Institute.

A request has come from the School Board at Goderich to the Women's Institute, for a woman candidate for the School Board from that Branch.

The Blyth Institute, which has been reported by the summer lecturer as being a splendid Branch, is making a study of the book on "Citizenship."

A library of over 300 books is the record of the Mt. Brydges Institute. These are looked after by the storekeeper and his wife.

Dalston and Edgar are two of the Institutes who have enjoyed a travelling library.

Last year, at North River, each farmer donated five or ten bushels of oats to the Women's Institute, which were sold and realized about $100.00.

The South River Branch has been successful in securing the rural telephone for that locality. This is an isolated district, and this convenience will be appreciated.

The Peel District Institutes are providing a prize for the champion girl (the girl getting the most prizes) at the fall fair.

The summer lecturer reports Erin Institute as being a very definite power in the village.

An egg shower was used in bringing in a nice sum for patriotic work by the Innisville Institute.

The members of the Niagara-on-the-Lake Institute have taken a great deal of pleasure in giving comforts to the Polish soldiers in camp at that place. They have been able to relieve the bareness at the hospitals with blinds and curtains. Sheets and extra suits of pyjamas have also been contributed. Twice a week, chicken broth and flowers have been taken to the sick soldiers.

TEMISKAMING.

Temiskaming Women's Institute held their annual meeting in Englehart. The

Turnbull's "M" Bands For Babies

are a necessity for every infant from the date of its birth.
They are made only of the softest and purest Australian Merino Wool, finely knitted, thus keep the baby warm and comfortable.
The tapes which are attached to the tabs, front and back of the "M" bands, and go over the shoulder carry all the strain of the diaper, absolutely preventing any stretching of the garment.
The diaper is pinned to the tabs, which not only provide a firm hold for the pin, but, due to the support given by the tapes, keep the diaper snugly in proper place, no matter how active the infant may be.
Put up in sanitary boxes, each containing 3 garments. Price $1.50 per box.

Sold by the best dry goods shops or direct by mail. Send for a box to-day, give age of baby.

Galt, Ontario.

Keep the Men Folks Working

Keep on hand and have ready for emergency the always-safe antiseptic liniment and germ-destroyer Absorbine, Jr. It is healing, cooling, soothing. It gives prompt relief from aches and pains. It keeps little cuts and bruises from being infected.

Absorbine, Jr.
THE ANTISEPTIC LINIMENT

With everybody working so hard and so fast nowadays more accidents seem to happen, more folks get hurt—even the youngsters get more cuts and bruises. Be on the safe side—be prepared—have Absorbine, Jr., in the medicine closet and be ready for emergencies.
It is harmless — safe and pleasant to use.
Stiffened muscles and aching joints from housework yield at once to Absorbine Jr. Swollen feet, after a hard day's work, are rested by it. Get a bottle to-day.

Canadian Women's Institutes

(Continued from preceding page.)

district is a large one; branches are located at all towns on T. & N. O. from North Cobalt to Cochrane, and at many community centres lying back of railroad. Also two on T. C. R., Hearst and Kapuskasing, twenty-eight in all. Nearly all these branches answered the roll call, giving splendid reports of patriotic work done during the year.

Resolutions were passed asking for a convalescent home in Northern Ontario, exemption for C men who serve or work on farms, and a more equal wage for soldier and alien.

Tobermory, although away up at the top of the Peninsula, is not taking a back seat with any one. Their financial report showed that they have spent during the year over $270 for yarn and flannel. This has been gathered by donations, grants, pie socials, etc. They have a membership of twenty-three, and held twelve meetings during the past year. The deep snow we had last winter was not an obstacle that kept these members at home at any rate.

One of the things the Hepworth Branch is doing besides the usual knitting, sewing and making quilts is sending money to support a Belgian child. This Branch is also gaining useful knowledge by gathering a collection of Canadian wild flowers to be shown at the fall fair. They tell us that along the Lake Huron shore there is a greater variety of wild flowers than can be found any place else in Ontario.

If anyone can make more money out of junk than the Hope Bay and Hopeness Branch, they will have to be extra busy. This Branch has raised quite a little in this way, also with a patriotic quilt, and have sent money and boxes of clothing to the friends of France.

One of the questions that came up for discussion recently was the War Charities Act. The Women's Institute, being an organization under Government authority, and up to the present time the only women's organization under such authority, do not require any charter or any further authority to gather money for patriotic purposes. Their accounts, books and statements have been audited and sent to the Department yearly. The only change made is that the accounts and statements are now to be sent in every six months. There were also expressions as to saving the wheat and the bacon. As some of the ladies said, "We're not thinking of the cost of the article so long as we can use it instead of wheat or bacon."

BRITISH COLUMBIA REPORT.

Lake Hill Institute met on June 18th, when arrangements were concluded for the Flower Show to be held in connection with the closing exercises of the school. This idea is one worthy of the consideration of all the Institutes in the province—the advisability of holding the annual Flower Show or Home Products Fair in connection with school closing.

Colwood Institute, though small in number, makes up in energy, as the following report will show. After business meeting and correspondence the members adjourned to clean up the ground around the hall with assistance of some of the gentlemen of the neighborhood, and a good hour's work was done. This shows that every community in British Columbia would be benefited by a Women's Institute.

On June 20th, Mount Ida Women's Institute brought forward a petition from the Farmers' Institute to ask the Government to supply farmers with stumping powder on the same terms that seed grain is supplied, giving farmers time to market their crops before such notes shall mature. The secretary is to discuss it with all the B. C. Farmers' Institutes and Women's Institutes, with a view to bringing it forward at the annual conventions.

On June 19th, Langley Fort topic for discussion was "Medical Inspection of Schools and School Bee."

South Saanich held a meeting on June 22, when the canning committee reported arrival of canning outfit. The use of a small house had been given free of rent for one month as a canning centre, and work would be started the following week. This Institute listened to a lecture entitled, "The New Outlook for Canadian Women," on June 8th by Mrs. Perry.

Tynehead, following the suggestion from the Provincial Board of Health, is working along the lines of improved sanitation of the schools.

At Harrop and District Mrs. Appiewaite, of Willow Point, gave a paper, "Reading for the Home."

Tillicum Women's Institute met on June 8th, and listened to Mr. Partington, head gardener at the Parliament Buildings; talk on "How to Prepare the Exhibits," following this with a very instructive talk on "Rose Culture." On June 19th, Mrs. Cooper, Minnedosa, Man., spoke on "The Work of The Home Economics Society of Manitoba," Mrs. Keen, of Kaslo, gave a brief outline of the history of the Kaslo Women's Institute and the work being done at present.

Shawnigan Lake and Cobble Hill met on July 4th. Topics discussed, "War Time Recipes" and "What Shall We Consider Necessaries and What Luxuries in War Time?"

Tappen met July 3rd. Topics discussed—"Mistakes We Make in Cooking" and "Utility Rabbit Keeping."

Nelson on May 18th listened to Miss Hayes on "The Value of Skim Milk" and a demonstration on "Wheat Substitutes," and on June 15th two papers on "Child Welfare and Laws Affecting Women." Both papers were well thought out, and plenty of discussion took place. A demonstration on War Bread followed.

Creston and district met on June 14th and enjoyed a demonstration on "Cheese Making" by Mrs. Geo. Cartwright, and on July 12th Mrs. Lyne gave war time recipes.

Silver Creek met on July 11th, discussing the following subjects: "Best and Easiest Methods of Washing Clothes," "The Advantages of An Annual Conference" and "Ways and Means of Making Our Flower Show a Success."

Cranbrook met on July 2nd, when Rev. R. E. Pow gave a talk on "Education Through Play." This is a splendid subject, and Cranbrook is to be congratulated upon the privilege of having the topic handled by such an authority.

Parksville met on July 10th, when the question box brought forth the following topics for discussion: "Betterment of Flower Shows," "Social Evenings for Winter Months," "Citizenship," "A Woman for Trustee" and "Canning." Altogether, the meeting was one of interest and profit.

Burton Institute met on July 10th, when Mrs. Lean demonstrated making and serving sweet and sour salads, giving recipes. Mrs. T. F. Lean was elected delegate to conference, in place of Mrs. Marshall, who finds it impossible to go. Roll call, "Quick Desserts," was well responded to.

Salmon Arm City met on July 16th. The programme was one of exceptional interest: "Canning Fruit and Vegetables," by Miss Wilcox, "Canning Fish and Fruit Without Sugar," by Mrs. Brown, and "Economy in Children's Underwear," by Mrs. Smith. Miss Wilcox's paper included many well tried recipes. Mrs. Brown caused great amusement by a reading from "Queen Anne" a recipe for canning the complexion, which fitted in with aptness, as her paper was really "Canning the Unusual." Mrs. Smith's paper demonstrated making underwear for small children from "Dad's Cast-Offs."

South Saanich met on July 8th, when the disposal of the proceeds from the Flower Show was settled. Canning committees reported that the steam pressure outfits were proving very satisfactory, about 400 quarts of fruit, vegetables, salmon and chicken having been canned up to the present date.

Boundary reports weekly meetings dealing with Red Cross and business.

Colwood held regular meeting on July 16th, making arrangements for a Flower Show to be held in August.

Nelson met on July 20th, subject, "Laws Affecting Women and Their Work." The meeting benefited by hearing one of the best papers yet given on the subject. Three life members has been the latest Red Cross work of the Institute. Biscuit competition was keenly contested.

To Win the War

The Christian Science Monitor, as an international daily newspaper, presents to its readers a clear, calm, and exact record of world happenings, and interprets them editorially from the viewpoint of Principle and universality.

The Monitor supports every right effort to win the great struggle now engaging our national attention. Its fearless exposure of the attempts of evil influences to interfere in our affairs, aids and encourages all people to united service for the certain triumph of right.

With its own news-gathering service in every part of the world, The Monitor publishes in detail the facts about the most important world events, and, through its international circulation, promotes a better understanding between peoples and nations.

The Christian Science Monitor, 3c a copy, is on general sale throughout the world at news stands, hotels and Christian Science reading-rooms. Yearly subscription by mail anywhere in the world, $9.00, or one month trial subscription for 75c.

The Queen's Tear Bottle

(*Continued from page* 11.)

be paid. Give the wheat to the people, and deal fairly by them, every one.'

"So this was done, and again the Queen wept.

"Then once more came the Minister of State. 'O, your sweet Majesty!' he said. 'The wells are empty—all save the royal wells. Where shall the people go for water?'

" 'Bid them come to the royal wells, O my friend,' she answered. 'Bid them fill their pitchers as long as water remains. See it is done in fairness to all—each one separately.'

"So he departed, and again the Queen wept.

"The little maids-of-honor, who were frightened, wept also, but could not take her for a moment from her grief.

"And once again the ancient man of State came to the Queen, and he said: 'O, wonderful Queen, there is dread illness among the people. They fall upon the streets, the little children fall, and the old men and women. There are but few to nurse or care for them, so many are stricken.'

"Then the young Queen rose, and said: 'Bring all within the palace that can be cared for here. My servants, being well, shall feed and wait upon them. I myself will go down into the city and help those whom I find, and with me I will take three of my pages to carry baskets of bread and wine and medicines, and fresh garments.'

"So she went abroad in the city, and by night and day forgot her grief in ministering to those who had fallen into the illness of death. And some mended and grew well again, and some died, but the Queen did not leave them.

"Then one day, having kept long watch by the dying, she herself fell into a faint, and the runner of the King came once more, and found her so.

"When she recovered, she looked up into his face and caught his hands. 'O dear runner!" she cried. 'What news? What news of my Lord the King? Speak quickly!' Her eyes shone, and color came once more into her face. But the young runner had no words. 'Quickly!' she commanded again. 'O dear runner!'

" 'The battle is over and done,' he told her, 'and the day is ours!'

"She drew a deep breath of gladness. 'Most glorious news!' she cried. 'But what of my Lord the King? What news of him?'

"The runner bowed his head. 'The King has passed on and into the land of peace,' he answered.

"For a little while she replied nothing. Then the boy, looking up, saw she smiled. 'Now, O good runner,' she said, 'methinks all is told, indeed. Naught is left for me but to go out and meet my Master the King. Doth he return along the road of battles?'

" 'Ay!' answered the runner. 'By the very road he went. His scarred battalions and his war-lions come with him also—triumphant, and they bring with them the captives—in legions far as the eye can see.'

"Hearing this, the Queen called her tiring-women, and bade them array her in her robes of state, also she sent the heralds to trumpet the news of victory from the city walls.

"But before she set out in her golden litter to meet those who returned from war, she went to the Temple of Amen-Ra, the Lord of the Sun and the Horizon.

"There the High Priests greeted her. She smiled upon them, even as she had smiled upon the young runner.

" 'I do not come to pray, O most high servants of the gods,' she said. 'I come but to lay my offering of tears upon the altar. I had forgotten when the people fell sick and died that I had promised my tears as an offering of sacrifice. I even forgot to weep, O Holy Ones. They were so pitiful, the little children and the old who fell ill—that if I wept at all, it was for them, and I forgot to catch the tears for the gods. I pray you, ask them to forgive me, and take you this crystal bottle—which, alas! is but half-way filled, for many tears were lost—and lay it at the feet of Amen-Ra. 'Tis now a thank-offering only—for the great war hath ended. A thank-offering, and not a sacrifice, as it should have been, O Holy Ones.'

"So the priests bowed and took from her hand the crystal tear-bottle, promising to present it to the God of the Sun, and she was satisfied. But again she spoke.

(To be continued.)

Lux-bathed from head to foot—

Her hair has just gloried in a Lux shampoo—it is silky and shines with the radiant glow of health.

Her dainty, lace and crepe-de chine frock looks like new, yet it is four years old—thanks to the unique cleansing power of the creamy Lux suds.

Her undergarments—her gossamer silk stockings—even her white kid slippers have again and again been washed with Lux—each time they look like new.

The Girls' "Carry-On" Column

(*Continued from page 25.*)

girl who throws the small but fundamental dictates of society to the winds, quicker than the returned soldier. It may be scarcely detectable, but when a girl speaks to a soldier she does not know, she is at once placed in category D—doubtful. You can quickly notice this in the first few words of his conversation.

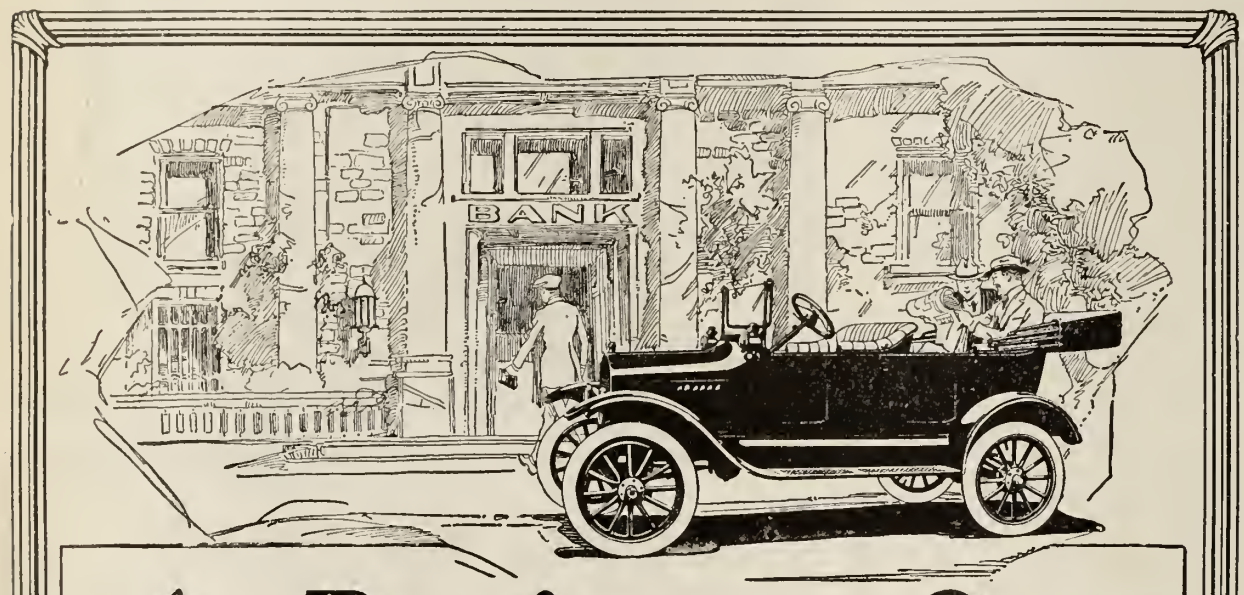
But if girls would do their best and most efficient work for the returned soldiers the way is to do it as a club or a number together. It not only eliminates the personal side of the question, but by the concentrated effort of a number, much more is accomplished.

One of the best instances of this was a club of girls who belonged to a certain business establishment in a large hospital city. These girls banded together and took upon themselves the responsibility of furnishing one of the small wards in a military hospital. By that I mean the finishing touches after the Government had provided the essentials. They bought some easy chairs, a book case, a beautiful leather couch, and a few ferns to make the ward seem a little more homelike.

Instead of the rows of white beds and lockers which rise up before one, with geometrical precision, one now sees in the centre an attractive rest room. It was the most splendid ward in the whole hospital, and you would be surprised at the amount of attention the men lavished on those flowers. They were forever reminding the V.A.D.'s that the plants had not been watered for a couple of days, and if anyone inadvertently allowed a spot to get on the table, well, it was just about as much as his life was worth to let it be known.

Nor did the girls stop at this. Every Saturday afternoon during visiting hours a number would come to the hospital to see the men in the ward they were so interested in. They brought cigarettes, candies and fruit, and the soldiers certainly enjoyed their afternoon "At Home." The ward was named after the club of girls who had taken such an interest in it, and the men who occupied it were the envy of the whole hospital. Sometimes in the evening these girls would invite the soldiers to their own homes, and girls other than club girls were invited, until finally these evenings became so popular that the club decided to entertain once a week in their own homes, the girls taking turns offering their homes. And only those who know our soldiers well will know what it means to them to be invited to a real home when their own homes are so far away. And just let me give you a "tip"—don't try to entertain the soldiers, don't make an evening for them into a formality, they hate it. Make them feel as they would in their own homes, and you have found the secret of entertaining the returned men. As soon as they feel they can drop their "company manners," so to speak, then, and only then, will they begin to enjoy themselves. And if our returned men can meet the best kind of girls under the right circumstances, the other kind will have very little attraction for them. That is what we must try to do in all our work with returned soldiers. And it is "up to the girls" in the places where military hospitals are stationed to lead the way.

QUESTIONS AND ANSWERS.



Could you please give me all the particulars required by the girls who take the course in massage? Do they live at Hart House?

COCHRANE, A.S.

That is a rather indefinite way of getting the information you wish, as reams could be written about the massage course. I am sending you a list of the qualifications necessary by mail. The girls of Hart House have no residence of their own. The girls of the present class, that is, the majority of them, are at present at the deaconess home in Toronto, where they get their room and meals. Whether this is to be continued has not been decided as yet. You, however, will be supplied with a list of reliable boarding houses in the district of Hart House by the School of Massage.

I have been thinking what I could do to help win the war. You know I just love to read the girls' "Carry On" column. My father was killed in April last year while attending the wounded under fire,

A Business Car

RECOGNIZED in its true light by the Government, the business world, and the individual buyer, the automobile has cast aside the title "Pleasure Car" and is now properly classified as a vehicle of real service—a present day necessity.

The owner not only lengthens his own business day, but he also lengthens his family's living days, thanks to the afternoons and Sundays spent in the Utility Car.

That which increases the busy man's accomplishments in the day, is no luxury.

That which widens your field of business endeavor is a necessity.

That which lengthens the life of every member of your family can well be afforded.

Owning that which saves health, time and money is true economy.

All these things are embodied in the possession of an automobile.

Don't wonder how your neighbor can "afford" a car, but use your sound judgment and ask yourself today "Can I afford to be without one?"

When you have purchased a car you have multiplied your efficiency. You have acquired a personal and business asset. Your selection should be a Ford.

Ford
THE UNIVERSAL CAR

Touring -	$690.
Runabout	$660.
Chassis -	$625.
Coupe -	$875.
Sedan -	$1075.
Truck -	$750.

Home Made Pottery

(*Continued from page 27.*)

always however that water alone is the adhesive plaster, and that all joins must be carefully smoothed out and effaced.

One of the daintiest little amateur Pottery bowls I have seen was an original design made by a member of our own family. She took a ball of clay perhaps three to four inches in diameter, and poked her fingers into the top, and burrowed down until within half an inch of the bottom. Then she began pressing the hole bigger and bigger, pushing out and thinning the clay by the same process applied with the rolling pin, until a rough, thick cup was formed. She continued the operation until it grew more like the half shell of a cocoanut. She made the bottom smooth and level and about three inches in diameter, so that it sat quite flatly on the table. Then she curved the top edges inward, made the rim artistically uneven and bulgy, and the result was a most uncommon and lovely receptacle for scarlet geraniums or small flowers.

Your articles when finished and dried out will keep indefinitely until you have a chance to take them to a Pottery to be fired, provided of course that you do not strike, upset or shatter them. But they are really as sturdy as a china cup, and by experimenting with a piece of shaped and dried clay you can readily discover the kind of handling they require. The Potter will both color and glaze them when burning, as without the glaze they would be porous. Some Potteries can only color them the usual green, and you will find it a most acceptable and harmonious shade, but in some places you will be able to vary the color and get some things done in lovely yellows, blues and reds.

You can also etch designs of leaves and conventional tracery on your jardinieres and vases, using for the purpose the sharp end of a bone crochet hook or a knitting needle. Similarly you can fashion out decorations in relief if you have a taste for sculpture and weld them to the front or rims of vessels. And if you care to study the subject, you will find that certain acids applied to outlines, ornamentations or the whole surface, will most effectively change or moderate the potter's coloring; these applications, of course, to be made before firing.

For a fair sized article it will not likely cost you more than twenty

C. N. R. TOURIST CARS THE REAL THING.

Comfortable and Economical Berths Between Toronto and the West.

Canadian Northern Tourist Cars serve those who, demanding efficiency, do not cavil at simplicity in appointments.

There is the same wide berth, the same scrupulous cleanliness, the same privacy and perfect ventilation and electric lighting as met with on the C. N. R. Standard Sleeping Cars—and they offer opportunities for economy, of potent appeal, these waste-not stressful days.

A kitchen and ready-to-use range is at the disposal of the tourist car passenger desiring to cook meals en route, and the cookery of "back home" can be enjoyed all the way; or a capable cook will be found in the porter who stokes the range and looks after the kitchen, but unless called into service keeps discreetly out of the way.

And it is not necessary to purchase first-class transportation to secure accommodation on C. N. R. tourist cars! Holders of second-class and home-seekers' tickets may book what berths they need from the fourteen comfortable roomy sections—at exactly half the rates prevailing for similar sized space in the Standard Sleepers.

These cars are of solid construction throughout, built on steel underframe, and the conventional Canadian Northern highly polished dark green finish of the exterior, and the mahogany furnishings of the interior, present a very pleasing appearance to the eye.

The Girls' "Carry-On" Column

(Continued from preceding page.)

and my only brother took his place. My sister is a matron in the Queen Mary's Hospital, and I am the only slacker in the family. I am ashamed of myself. When I was at boarding-school I knit 93 pairs of socks. And at the end of last year I spent my money buying a war bond. Do tell me what I can do to help win the war.

TORONTO.

Well, I must say that your letter is one of the most wonderful letters I have received, and I receive a good many. Why, my dear, you could sit down and be contented for the rest of your life resting on the laurels and patriotism of the rest of the family. But the most unfortunate feature of the whole war seems to be that some of us must do a great deal of sacrificing and others none at all. You are rather young to take the massage course, I am afraid, but why do you not take a V.A.D. course? I am sure that will appeal to you much more than any kind of other war work. I am sending you the qualifications. The work is voluntary. You did not say that you wanted it to be remunerative. If that if the case, write me again and I will give you some other suggestions.

Would you please give me some particulars of the Massage Course? Is it possible to take the course at any other place in Canada, than in Toronto, and what is the expense of it?

HALKIRK, SASK.

The official course provided by the military authorities for use in the military hospitals in Canada, is given only at Hart House, Toronto. There is no fee or tuition attached to it, and after the first two months of the present course the students are paid. The books and uniforms are provided by the Government.

I am a young girl of 21. I am a stenographer and bookkeeper. Since the war started I have wanted to go overseas to do anything at all. Would my stenography be of any use, or could I take a course in nursing?—but, that takes three years, and the war might be over by then. Do advise me what to do, won't you, dear Betty?

W. G. N.

I am very much afraid you are too young to go overseas in any capacity. That is too bad, isn't it?—since you are so anxious to do something to help your country. Why not take a V.A.D. course in the evenings, and when you have finished your course there may be an opportunity for you to enter a military hospital. I am handing your name in to Headquarters in your own town, and they will tell you the nearest place where you can take the course. We cannot all go overseas, my dear, so we must do as much as we can here, and if you really are in earnest you will find plenty to do. Just try it and see.

I have no brothers old enough to enlist, and I feel it my duty to do something more than knitting and Red Cross work. The Massage Course appeals to me very much. Are girls for this work very much needed?

THORNDALE, N.B.

There seems to be many applications for this course, but it is like everything else—all the applicants are not suitable. You may depend on it that if you are accepted for this course you will most certainly be needed. The Government is not giving courses such as these for their own amusement.

I am not a girl; a mother whose only son is lying somewhere in France. I am good at sewing, love children, but would like to help some other mother's boy if I only could. Could you suggest any way I could be of use?

Mrs. A. H.

I am sending you by mail the names and addresses of a couple of Canadian soldiers who have no friends. I am sure you will enjoy doing for these boys what you might have done for your own boy had he not made the supreme sacrifice.

Around the Hearth

(Continued from page 41.)

clown side of things and people, and to laugh instead of taking offence—to laugh instead of crying—to laugh instead of scolding. Laughing makes beautiful wrinkles. It makes eyes shine and faces glow, and the days slip away on golden wings. It contributes to health and industry and love."—Annie Francis.

This is a beauty secret worth knowing, and I agree with the writer. More than that, I happen to know a woman who practises that very theory. She told me she resolved when young that her face was not going to be twisted and awry with wrinkles when she became old. She is carrying out her idea, and is a delight to all who know her.

Has she discouragements? "Well, I guess." She has ill-health to begin with, fights constantly with constitutional ailments, but keeps on smiling. She is only thirty, but looks out of her eyes with the wisdom of sixty, and accepts disappointments and reactionary causes with composure and fortitude.

Part of a child's home education should be to study this little woman's rule. How often we see children, upon first waking, display a hateful frown instead of a happy smile!

This habit is not confined to children by any means, for there are grown-up people who are habitual growlers in the morning. They seem to make a virtue of scowling and grumbling at everybody and everything. Nothing suits them—the room is cold, the breakfast is not satisfactory, the weather is "beastly," and it is a relief when the door closes behind them, and they have departed for school or work.

There are half-grown boys in many homes who are fond of teasing, and the propensity seems to assume full swing in the morning when the younger members of the family are being made ready for school. The little sisters are tormented about their clothes, or their hair, and the small brothers are bullied until everybody is cross. How much pleasanter in the morning rush and hurry if everyone would assist instead of hinder, for there is no happier way of helping out than by displaying good cheer and laughing away the little vexations!

* * *

Charles Dickens says: "There is nothing so inevitably contagious as laughter and good humor." If you have never contracted the habit, begin now. Make it a purpose, a business, a religion, to dispense cheer. If ever the world needed the contagion of mirthful encouragement, it is right now.

I hear someone ask, "But how can we be glad when the last toll of our joy is exacted in the separations and casualties of this cruel war?"

"Does the writer of this appeal know what it means to part with a loved one, and follow him with anxious heart through many weary months as he faces the angry foe in France or elsewhere?"

"And does she know what it means to read a fatal message that blots the sun from her sky of happiness and hopeful expectations?"

Yes, reader, Jennie Allen Moore knows what it means to part with her boy—to see him break up his studies and shoulder his rifle to stand between her and the enemy. She smiles because he wanted to go, and she would weep had there been no such desire on his part.

She has followed him through Ypres, the Somme, Vimy Ridge and Passchendaele. And she has received the cablegram, too, that seemed to dull her senses as she read. No, he didn't die, but his cousin, in the same battery, who was gassed the same night, did.

There is no whine comes from the boys "over there." They go into the thick of it with laugh and cheer. Every speaker who has returned tells us the same story. Their motto seems to be in the words they sing—"Pack up your troubles in your old kit-bag, and smile, smile, smile!"

If those homesick, heartsick boys can keep up their spirits in the face of deprivation, suffering and death, surely those of us who are far removed from the scene of disaster should assume a courage akin to their bravery. We must not, dare not fail them. We must smile because they would have it thus, and the man or woman who faces the task of "carrying on" with a bright and smiling countenance keeps on proving that—

"The thing that goes the farthest
Towards making life worth while,
That costs the least and does the most,
Is just a pleasant smile."

The Real Test

The only real test of a piano is time—if it continues to give complete satisfaction after many years of use, it must be a good piano. The first Heintzman & Co. piano was made 65 years ago. From that first piano to the ones being turned out by our factory to-day, every one of the many thousands made has been built to last a lifetime. No smallest detail of material and construction is too small to receive the most careful and painstaking attention. The proof of this is the thousands of Heintzman & Co. pianos which are to-day the valued possessions of people who bought them years—and in many cases a generation—ago. Ask your friends who own a Heintzman what their opinion is. Their answer will be our best advertisement.

STYLE "IONIC"

Many Beautiful Styles and Finishes

In these days of many different styles of furniture and interior decoration, the piano must be in harmony with its surroundings. To meet these conditions we have designed many different styles and finishes—a piano to suit any surroundings. We would like to send you our handsomely illustrated Catalogue B, giving views and descriptions as well as particulars as to the many exclusive construction features of this great Canadian instrument — features which have earned for it the proud title,

"World's Best Piano"

Newest Fancies In Fashions

(*Continued from page* 29.)

7490—Ladies' Evening Blouse (25 cents). Five sizes, 34 to 42. No. 7700—Ladies' Draped Tunic Skirt (25 cents). Five sizes, 24 to 32 waist. Width at lower edge about 1⅜ yard. The costume in medium size requires 4½ yards 36-inch brocaded satin—1 yard 36-inch plain satin—⅝ yard 40-inch Georgette crepe—4¾ yards velvet ribbon. The sash blouse crosses in surplice style, but if preferred, it may be made with a panel front and back. It is mounted on a front-closing underbody, and long flowing sleeves which are included in the pattern adapt the gown for afternoon wear. Over a three-piece skirt of plain satin is dropped a draped tunic of the brocade.

7601—Ladies' Evening Bodice (25 cents). Five sizes, 34 to 42 bust. No. 7890—Ladies' Draped Skirt (25 cents). Five sizes, 24 to 32 waist. Width at lower edge about 1½ yard. The costume in medium size requires 4¼ yards 40-inch charmeuse—½ yard Georgette crepe—1⅛ yard silver lace—2¼ yards picot ribbon—1⅛ yard 36-inch lining.

7399—Ladies' Blouse (25 cents). Six sizes, 34 to 44 bust. No. 7928—Ladies' Two-piece Skirt (25 cents). Seven sizes, 22 to 34 waist. Width at lower edge about 1⅜ yard. The costume in medium size requires 4⅝ yards 40-inch Georgette crepe—1 yard 36-inch taffeta—½ yard white taffeta for vest. Braiding No. 12321, blue or yellow transfer pattern, 15 cents. The skirt is a simple two-piece gathered model that shows a novelty in the inserted sections each side of the front gore which give a draped effect.

(*Continued from page* 31.)

7912—Ladies' Tunic Blouse (25 cents). Eight sizes, 36 to 50 bust. Size 36 requires 3½ yards 44-inch serge—4¾ yards braid—¼ yard organdie for collar—⅞ yard 36-inch lining for underbody. No. 7830—Ladies' Two-piece Gathered Skirt (20 cents). Seven sizes, 24 to 36 waist. Size 26 requires 3 yards 44-inch serge. Width at lower edge about 1½ yard. The front-closing blouse is attached to a two-piece gathered tunic that may be pointed or straight around at the lower edge. The underskirt is a plain, two-piece gathered model closing at left side seam.

7570—Ladies' Blouse (20 cents). Six sizes, 34 to 44 bust. Size 36 requires 2½ yards 40-inch Georgette crepe—1⅜ yard lace.

7600—Ladies' Blouse (25 cents). Nine sizes, 34 to 50 bust. Size 36 requires 1½ yard 40-inch Georgette crepe—⅝ yard 36-inch satin—⅞ yard 36-inch lining for underbody. Embroidery No. 12460, blue or yellow transfer pattern providing 3½ yards of ½-inch and ⅞-inch borders, 15 cents. An overblouse with peplum is provided in the pattern, though it is not illustrated.

(*Continued from page* 32.)

7916—Ladies' Blouse (25 cents.) Six sizes, 34 to 44 bust. No. 7908—Ladies' Two-piece Tunic Skirt (25 cents). Five sizes, 24 to 32 waist. Width at lower edge about 1½ yard. The costume in medium size requires 4 yards 36-inch Pussy Willow taffeta—1¼ yard 36-inch plaid taffeta—1 yard 40-inch Georgette crepe. Braiding No. 12469, blue or yellow transfer, 20 cents. The surplice blouse draped around to form the girdle and fitting the figure snugly, is a new fashion feature.

7932—Ladies' Evening Blouse (25 cents). Seven sizes, 34 to 46 bust. No. 7702—Ladies' One-piece Draped Skirt (25 cents). Five sizes, 24 to 32 waist. Width at lower edge about 2⅛ yards. The costume in medium size requires 3⅝ yards 40-inch Georgette crepe—1⅛ yard 10-inch lace—3¾ yards 36 inch satin—1⅝ yard fringe. Beading No. 12319, blue or yellow transfer, 15 cents. A charming feature of the new fashions are the apron panels attached to blouses front and back. These are particularly attractive in sheer material like chiffon, Georgette crepe, and voile. The blouse closes at the back, and may have round or V neck, and the underblouse sections close on the left shoulder. Soft plaits give a draped effect to the skirt which closes at the left side-back under a plait.

(*Continued from page* 34.)

7921—Ladies' Dress (25 cents). Six sizes, 34 to 44 bust. Size 36 requires 3 yards 44-inch Poiret twill—4⅜ yards 36-inch black satin—⅜ yard organdy for collar. Width at lower edge about 1½ yard. Braiding No. 12425, blue or yellow transfer, 50 cents. To make this model a redingote closing on the left

The Ghost Widow

(*Continued from page* 13.)

"men" and "rides" and, among the married women, of pensions and separation allowances, and our fraudulent Government which seemed to them compounded chiefly of those knavish tricks which we so deeply deplore in our enemies. These matters were *terra incognita* to the newcomer. In fact, she heard more about self-protection and "getting it out of them" in one of these lonely, ostracised twenty minute "lunches" than she ever had before in her life.

"And everyone seems to get what she is fighting for," she thought as Mary somebody told Belle somebody else how she just ordered Lucy to "leave go where No. 782 was concerned. 'Hands off,' says I, an' she quit her foolin'."

Contrasted with this robust life in the raw, Edith felt herself a colorless and middle-aged person. They were either young and free, or young and married, with a husband in the trenches, and a baby or two, and a gramophone, and a bank account.

"Do you mind leaving your family most of the time like this?" Edith asked the lively wife of a warrior one day, and her "I should worry! It's grandma's job," was prompt and cheerful.

To an ardent wayfarer into life this was not exactly progression. Then one day she seemed to reach her goal at a bound.

She had finished her cup of tea and was looking out of the wide window where the dawn lay white as snow on the ground; the strange, mysterious dawn that threw its unearthly arabesques of early light in vain before the eyes of these chattering women. She rose to return her cup to the tray, and said to her neighbor as she did so, "Look at the star in my cup! Isn't it perfect?"

"Say! I knew a girl once could read teacups," vouchsafed the neighbor.

"I know several," returned Edith. "I myself once studied the meaning of most of the signs that tea leaves form, and it was great fun."

"You don't say!" exclaimed the neighbor raptly. "Say, girls, Miss Morse can tell fortunes out of teacups! Gee, I wish time wasn't up. Will you read mine to-morrow? There's something I want awful to know."

And that was the beginning of fame, not to speak of popularity. It was the beginning also of a strange friendship with Sadie. Behold, then, the well-known Edith Morse—have I told you that she used to be the belle of the county?—eagerly working her entrance to the heart of her compatriots for twenty minutes at the hour of four a.m. each morning in an annex of her father's foundry.

Refreshments were bolted by the seer and the lady whose fortune was to be told, the crowd eating and drinking languorously while they listened to little stories from a far-away country. Only one girl's cup was done each night. Let us come to the fortune of Sadie.

Sadie was short and stocky and Scotch, and vulgar a little, and witty a good deal. Edith had discovered that it was she who had darted out of the cottage below her garden gate on that first night. The yellow silk sweater, first fruits of a separation allowance, identified her, that and a certain good nature and friendliness, and a story about a neighbor's child that she "kept," so that the neighbor might work out all day. Edith had seen it once in the garden, this neighbor's child, with the identical, rosy, crinkly hair of Sadie herself. She had asked if it were a little niece, and Sadie answered her "No." Anything else she knew was that her husband, "Andy," was at the war.

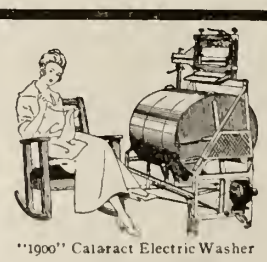
Sadie bolted her tea and handed the coarse cup to Edith with a sigh. "It's a smudge of leaves—that. I shouldna hav' drunk it so fast, maybe," she lamented.

All eyes were fixed upon the seer, who was now on the highest pinnacle of that lusty wave, Success. Moreover, there was a certain curiosity about the amiable but enigmatic Sadie.

Edith began to decipher slowly, but with the same power of concentration that had helped her to inspect shells after ten days.

"An uneven line away at the side of a cup; mountains, Sadie—I don't know—Highlands, I think. I went there once to the Highlands. The long purple twilights, do you remember? Is it the Highlands, Sadie? Am I right?"

"Richt you are, wuman. Go on—as fast as you can," said Sadie, with a rigid arm about the speaker's waist. Admiration, unlike familiarity, does not breed contempt.



"Well, that jerky mass of leaves is just the Highlands where you once spent a summer, before you came out here to Canada. I think it was a perfectly wonderful summer, because I see two tiny bits of leaves fluttering along just under the hills here, so tiny and alone under those hills. Fast together. Close together."

She felt the rigid arm relax.

"And then, below that, you see quite a straight line of leaves. That generally stands for a lonely path. It almost seems as if the two little leaves had parted. And here, below, is the parallel line, also straight. A little wiggly, perhaps. That space between them might be anything—just sheer, clear, emptiness, or the sea, or time, or distance, anything you like. And on and on go the two lines. But see, Sadie, see, just at the end, here, they falter—they meet, then they go wide again."

"I didna hae ma postcard last week," broke in Sadie, trembling in every fibre of her being. "I hadna a letter since June. But the cards come. There's

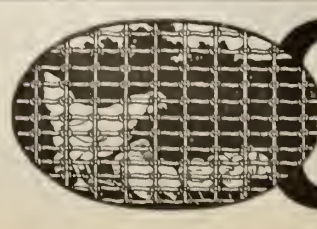
(*Continued on following page.*)

"1900" Cataract Electric Washer

Wash by Electricity

IN many homes where help is employed, the maids who refused to do the washing the old way, are willing to look after it the "1900" Electric way. In other homes where a laundress was formerly employed, or where the clothes were sent outside to be washed, the housewife is now doing her own washing—so easily operated is the "1900" Cataract Washer.

The "1900" Cataract Washer was awarded the gold medal at the Panama Pacific Exposition, in competition with all the well-known washers. The frame is made of steel, with heavy iron base—the tub of heavy copper, plated on the inside and polished and lacquered. The most scientific of all washers in construction, the "1900" Washer keeps all the clothes in all the water all the time. The swing wringer permits of wringing and washing at the same time.



It costs just two cents a week to do the washing for an ordinary sized family, with the "1900" Cataract Washer. This Washer will pay for itself in a very few months—just think what it will save you.

Write for full particulars of our trial plan.

The "1900" line includes washers operated by Hand, Engine Power, Water or Electric Motor. State which style interests you.

Address me personally—O. G. MORRIS, "1900" Washer Company
357 Yonge Street, Toronto

We will be glad to have you visit us at Toronto Exhibition—Manufacturers' Annex No. 2, under the Grand Stand—or at London or Ottawa Fall Fairs.

PEERLESS POULTRY FENCE
A Real Fence—Not Netting
Strongly made and closely spaced—making it a complete barrier against large animals as well as small poultry. Top and bottom wires No. 9—intermediates No. 12 wire—made by the Open Hearth process which time and other tests have proven to be the best. Send for catalog. Ask about our farm and ornamental fencing. Agencies nearly everywhere. Agents wanted in unassigned territory.

Winnipeg, Man., Hamilton, Ont.

The Ghost Widow

(Continued from preceding page.)

none since a fortnight past. What aboot that? There's a wee leaf, do you see? Do you no' see, just above yon line? Can that be the card I'm no' getting?"

"Look with me," said Edith gently, so gently, indeed, that no most eager, crowding listener could hear.

She took a thin little hairpin and made it into a pointer, and touched the companion leaves and then the "wee" one that Sadie was watching.

"You see," she said, "here it is, that tiny little leaf! The answer to time and distance and the sea! Something always yours. A postcard? Yes, if you like. An answer, anyway. Will you walk home with me this morning?"

To the others she added: "That's what I see in Sadie's cup! The Highlands and two roads below. Of course, everybody has to read a lot into their own fortune. Wasn't yours wonderful, Miss Turner? Did you get the gloves? You saw for yourself how plainly they were to be seen, so I'm really expecting that they have arrived."

"Bet your life they did, after he got my letter," replied Miss Turner. "I told him all about my cup. Him forgetting my birthday like that!"

III.

Through the radiance of a heavenly September morning Edith Morse and Sadie of the cottage walked slowly home. You know not the Scotch if you think her emotion was still trembling on the surface. It had been sent away back where it belonged, out of Sadie's way.

"No one," observed Edith rather wistfully, as they began their walk through the silent, sleeping streets, "no one would ever think of reading my cup for me."

"Because they havna the sicht for it!" declared Sadie. "You're 'fey.' You could do mony a thing if you tried," she continued darkly. "I kenned when I laid my eyes on you that you were no fine body buttin' in on us girls. You came to work, and you came to learn. So did I. I've a muckle of money to make. You see, Andy, ma lad, he's not a bad chap if once he comes through this—and to tell ye the truth, I've had ma doots since there's been no card. But he couldna make a living for twa before. He's a Highland lad, a sheep boy. I had the siller, and he knew it. Not that he didna care for me. He did, wuman. But you see"—and her astounding statement was really made very naturally—"you see, I couldna tell him aboot the bairn. We were marrit all richt, and I get my separation allowance from hame, but I just came away to work for mysel'. The war came that summer, and he went with the Colonel's men from Aberfairlie, where we was marrit, but if he once kenned he had the two of us to support, he'd never take a look at me again! And it's nabody's business here whether the bairn is mine or no, I'm only here for the munitions. I'll be awa' again. News travels awful fast, and they micht tell him in the trenches. Noo, what have ye got to say aboot the wee leaf?"

They had almost reached the cottage door, and there, blazing in the sunlight like any autumn marigold, shone the small head of crinkly, rosy red bending over a toy on the doorsill. With ill-disguised complacence, Sadie gave the small child a little proprietary shake and set her on her two fat feet. Edith, following, held out a bright bag, which the baby instantly appropriated.

"The little leaf! Does she want my money bag?" she smiled, and looked at Sadie with rueful eyes. "You see, she has already an eye for what you call 'the siller.' Well, here's a proposition. My sister and I live alone with my father in that big house on the hill. My mother died long ago. I shall not marry. Sell me this little leaf to be my very own, and then write and tell your Andy all about it! You say he won't care!"

The baby, who had found a tiny mirror within the green bag, looked from its delights to Edith with a heavenly light in her eye, and made a faltering step towards her. Edith held out her arms, and the child went instantly to her embrace.

"You see!" she nodded gayly to the mother. "She's mine."

"Dinna talk nonsense, ma lass," said Sadie imperatively. "I maun to the breakfast!"

Thus dismissed, the lady rather wearily began the long ascent of the winding path that led up the hill to the broad lawns on which slept "Stonehurst," vine-clad, awning-gay, charming as the autumn morning itself.

Seven o'clock was such an unearthly hour that bed usually seemed a natural refuge after the breakfast that old Margaret had ready for her. But today the call of the garden was too strong. She was just going out when the telephone rang, and she turned to the usual telegraphic conversation with McAinsh, to whom she reported the episodes of the night, before he went on duty shortly after she left. They had met once or twice in the course of a month. This morning he asked her to sum up a list of suggestions as to certain matters about which they had exchanged ideas.

"As a matter of fact, Mr McAinsh, I wrote that out days ago," she replied, "and failed to bring it down."

"May I send for it, or come for it?" he asked. "It's important to get it soon."

She assented, and went out into the garden. The loveliness of cool lawns and late flowers refreshed her. The smell of red apples in the orchard lured her. In the most beautiful time of the year she had been away from the garden, drugged with weariness by day, abnormally alert all night. This morning she would deliberately keep awake and enjoy herself. The nasturtiums were growing wild, and there was a deal of small weeding that the ancient gardener overlooked.

Weariness forgotten, she was working very industriously when she heard a step on the gravel behind her, and turning, saw, instead of a messenger, McAinsh himself.

"Heavens! I can't get up!" she exclaimed. "I'm firmly rooted in mother earth, and my hands are hands of clay."

She smiled up at him, and in spite of fatigue, she looked at that moment as fresh as the hour itself.

His assistance was immediate, and it was what might be called a "hearty" assistance. Miss Morse had turned out to be an unqualified success. And until this moment he had not known that she was beautiful.

To be muscularly gripped and literally set on your feet by a powerful masculine person had the same effect on Edith as her mother's possessive shake had on Sadie's baby—it wakened her up and set in motion what kindergarten teachers annoyingly call "the play sense." She was, in fact, distinctly amused that a worthy person should set her on her feet, very much, indeed, as her father might have done. She encouraged the person to further exploits by what is femininely known as "drawing him out"; in other words, she became consciously interested. She showed him lawns and flower beds, sundial and arbor, but only as a background, mere scenic effect, to the relation of his own plans and hopes and achievements in regard to munitions and munition work. Edith smiled and nodded and agreed and disagreed. And especially he enjoyed her disagreements, for they were practical and, on the whole, decidedly usable.

"And while we are talking about it, I would keep the foreman out of the way as much as possible," she said, "and I would look for more suggestion from your women Inspectors—or else get a different type of foreman. I feel that this one retards the work. The girls are too conscious of him."

He looked at her with amazement.

"My dear lady," he said, "you've certainly hit the nail on the head. This man is a recent importation, as you know. He understands munitions, but he's half-mesmerist, half-brute."

"Well," she replied, "I can't do a thing with them for half an hour after he's been in. The work goes on, of course, apparently the same as ever, but it's not the same. If I have any discards, that half hour is the time they occur. You see, they're very self-conscious, these girls; they're not merely pieces of machinery yet."

"There's something in all this," he replied thoughtfully, "and we've got to look into it together. To tell the truth, you've made me forget that I myself am a machine. I should be at the works this minute. But I wanted that paper. Look here! May I come again?"

"Yes," she answered, "if you'll talk munitions. I'm getting very much interested. Not altogether so much in

(Continued on page 52.)

Tired of Giving?

You don't know what it means to be tired. Think of these unfortunates

weary with the struggle of living in a devastated land—exhausted by privation and want—broken-hearted through loss of husband, father, sons and brothers—left without a means of support—left to starve.

1,500,000 Belgian children are starving! Will you help to save them?

Belgian Children's Health Fund

Each $10.00 you send enables the Belgian Relief to move one child from Belgium to Switzerland or Holland and support it for a month. Ten colonies have been established in Holland, where the children are cared for, fed, and medically treated.

Belgian Orphans' Fund

The number of war orphans in Belgium is increasing steadily. Much has been done already to relieve their sad condition, but still more serious steps must be taken to assist and educate these poor little souls, the children of ignored heroes who have given their lives for the triumph of democracy and for the liberty of the world.

The cost of maintaining an orphan is $3.70 a month and a number of people, either individually or in groups of two or three,—also organizations,—have become responsible for that amount monthly. Any others willing to undertake this patriotic work should write to the Belgian Relief Fund, 95 King Street West, Toronto.

Canal Boat Fund

Don't forget Mrs. Agar Adamson's Canal Boat Fund for work among Belgian refugees behind the allied lines in Flanders.

Ambassador Gerard says:

> "The German armies were held only a few days, yet the delay of those few days changed the fortunes of the whole world."

Help us to help the Belgian orphans.

Home Made Pottery

(Continued from page 46.)

cents. And after the first imperfect specimen is fired you will be astonished at the satisfactory beauty of your maiden effort.

You will then be eager for more ambitious attempts, and will be surprised at the feasibility of lamps, candlesticks, trays, side-dishes and Grecian vases. And a little ingenuity, careful patience, normal good taste and a few coppers will furnish you with a hobby and an art that will do wonders in training your faculties, and will enrich both your leisure hours and your Art collection.

Now let anyone who has any finger skill at all, and every woman has—it is her birthright— try her luck. If you were good at making mud pies in childhood, you ought to make a good Pottery Artist. Don't degrade the qualities of your flesh and blood beneath the worth of gold. Surely every individual talent you possess is a priceless possession to yourself. If you accomplish anything without lessons you will be infinitely better for the effort, to say nothing about the peacock strut you will develop, and the dignity you will acquire. One of the very best amateur organists I ever heard was entirely self-taught having begun on a wooden board marked to represent piano keys. The loveliest piece of chip-carving I ever saw was done by a mechanic, who never had a lesson, and just copied an elaborate design from a book by means of his skill with the chisel. I have seen some excellent relief carving done by a novice who got a piece of wood, bought a couple of chisels, drew his own design, and worked out the method by himself. Everybody should have a hobby. It is such pursuits that distinguish us from the beasts of the field. No teacher in the world can do more than direct your practice. You must furnish your own deftness of touch, your own intelligence, and your own perseverance. Nobody does anything well simply because they have had expensive lessons. And the true expression of your own individualism in your work is the very essence of all Art. Get rid of the idea that nothing worth while can be yours without money. The most beautiful, the most essential, the most glorious appurtenances of human power and happiness are absolutely beyond the price of money—as witness, fame, genius, personality, health, beauty, sunshine, rain and Nature.

After The War—What?

(Continued from page 14.)

are considered. Oil is produced in large quantities from the seeds, and for salads this oil compares favorably with olive oil, having an agreeable taste, delightful odor, rich color and delicate flavor. Millions of gallons of this sunflower oil are exported annually by Russia to Great Britain, France, Sweden, Denmark and the United States. The residuum of the oil makes excellent cattle-food, and thousands of tons of "sunflower cake" come from Russia annually. Then the sunflower stalks are used as fuel, being decidedly superior to pine wood; they blaze brightly with great heat, on account of the oily contents, give forth a pleasant odor while burning, and, strangely, produce little smoke. It is estimated that an acre of sunflowers will yield over a ton of fuel. The seed shells are also used for fuel in cooking stoves. As food the seeds of the sunflower have a richness and appetizing taste equalling most varieties of nuts. The seeds are eaten raw or roasted, and with proper development should rival the peanut. The fibre of the stalks, being soft and silky, is used for numerous purposes, the weaving of beautiful fabrics from this material being one of the industries in China. The ashes of the sunflower are particularly valuable as a fertilizer, being rich in potassium; and the sunflower has the great advantage that it does not exhaust the soil, but rather enriches that in which it is grown. This greatly increases the sunflower's value as a product for the crowded garden or suburban farm. By proper investigation and development the sunflower should become one of the most valuable plants for supplying food and fuel.

Malted Milk for Invalids
A nourishing and digestible diet. Contains rich milk and malted grain extract. A powder soluble in water.

Music During The Great War

(*Continued from page* 12.)

That this is not a mere generalization but an actual statement of fact could be supported at great length by concrete instances. The policy of most of the European countries engaged in the war has been to encourage music as a war measure. It has been used not merely to stimulate military activity, and to maintain the morale of non-combatants, but for propaganda purposes also.

Let us first deal with the enemy nations. The most casual observer is probably aware that for years preceding the war, the German Empire encouraged musical industry and musical art on a tremendous scale, not merely with a view to spreading contentment among the people burdened with militarism, but to advertise their much vaunted "kultur." They rightly assumed that their system of developing their national musical impulses would be the feature of their "kultur" most acceptable to other peoples. It was so far successful that a great deal of the sentiment-support which Germany received in the United States and other neutral countries during the early stages of the war was based on Germany's supposed musical supremacy.

When the war broke out, the Imperial Government, in organizing Germany for what it foresaw would be a long war, so soon as Britain made her decision, at once determined to make use of music as a stimulus to morale, not merely by ordering the singing of songs relating to the war in the schools, but by ordering a decrease in prices for concerts and other state-aided entertainments. The German people were encouraged by direct admonition to patronize musical events, in the belief that music would strengthen them to bear the griefs and burdens of the war. This is a matter of record.

Significant of the value Germany attaches to music, not merely as a military influence, but as a useful means of propaganda, was a proposal she made to Norway two years ago. As is generally known, the sympathies of Norway have been pro-Ally, and to combat this sentiment, the Kaiser proposed to send the Royal Orchestra of Berlin through Norway to give free concerts, and thus disprove the theory that Prussians were savages. The offer was declined by the Norwegian Government, but the point involved is this—that Germany recognizes music as a potential force for reaching the hearts and minds of humanity, even when prejudiced. Moreover, at a time when she was obliged to resort to rigid measures of economy, she classified subsidies to music as a necessary and essential expenditure.

The facts with regard to Austria are not so clear, but until quite recently, at any rate, the musical activities of Vienna, which are largely government-supported, were in full swing; and Austria has shown her view of the question by giving special privileges to men of musical talent, not only in her own armies, but who had been interned as prisoners of war. The case of Louis Rothenberg, a young Toronto violin student, who has been interned at Prague, but has been permitted to continue taking lessons, illustrates the Austrian belief that music should be encouraged at all times, no matter what the nationality of the artist.

Only among the Turks is the view of some persons on this continent, that music is non-essential and negligible, to be found.

Among our chief Allies, the country which has suffered most is France. It is unnecessary to dilate on the tremendous economic problems she has had to face and the sacrifices she has endured. Since music in France is state-aided, it might have been expected that under the strain of war, these expenditures would have been abandoned, were music to be dismissed as a non-essential. But France *does* regard music as essential to the morale of her people, and has maintained her opera houses and her great Conservatoire, where instruction is provided free for talented beginners, so far as possible, at the same high level of efficiency as prevailed before the war.

Quite recently the German Government issued a canard that the people of Paris had been completely terrorized by the new long-range gun which shelled the French Capital, and had been kept indoors throughout a certain Sunday. The response of the French Government, as shown by cable despatches, was to publish the receipts of four subventioned theatres of Paris, "The Grand Opera," "The Opera Comique," "The Comedie Francaise," and "The Odeon." These showed that the attendance and receipts on the day in question were, if anything, above normal. The point to be taken under consideration is that, even under pressure of the greatest of German offensives, France is maintaining her musical expenditures, and encouraging the musical enthusiasm of her people.

This year the French Government announced that, despite the war, special efforts would be made by the Ministry of Fine Arts to maintain the Grand Opera on a high level as a demonstration that France was not beaten to the ground. France kept her promise. The February number of the well-known English monthly, *The Musical Times,* in publishing a schedule of events for the first two weeks of January, 1918, said, "It is worth while to note how Paris is faring musically after three years of terrible war. Certainly our Allies appear to display great activity." The schedule shows fourteen productions of opera in twelve days, which, it must be remembered, were assisted from the public revenues, and in addition, a great number of concerts under private and governmental auspices. Here we have the most convincing proof that, despite the pressure of war, France treats music, and the expenditures it involves, as essential.

The view point of France is also to be found in the fact that its Government is about to send the Paris Orchestra in great strength on tour in the United States. This is known as the "Societe des Concerts du Conservatoire," the French National Institution, usually referred to as the Paris Orchestra, and to show the importance the American Government attaches to it, the Executive Committee nominated here include such names as: Frederick G. Bourne, James Byrne, Andre de Coppet, Henry P. Davidson, Henry C. Frick, Robert Goelet, Augustus D. Juillard, Otto H. Hahn, Clarence H. Mackay, John D. Rockefeller, Jr., Charles H. Sabin, William K. Vanderbilt, Henry Walters and George W. Wickershaw. The purpose of this tour is to demonstrate to the Americans that the French people hold equal rank with the Germans in the realm of music. In other words, it is propagandist work of a high order intended to further cement friendship between France and America.

The Moth And The Footlights

(*Continued from page* 9.)

go on the stage, and worked and saved my money for it, ever since I saw my first play, when I was a mere child—only fourteen!"

"How many years ago?"

"Four."

"Oh! Well, I'll see what I can do by introducing you to the managers. It might do some good. The silly creatures think that I can act!"

"You're awfully kind to me," said Patsy: "Why are you so kind?"

"Because you're just what I was, and where I was,—when I was—well, what you are and where you are—see, Honey? I often think that if some older girl had taken me under her wing, there would have been fewer sleepless nights and lonesome weeps."

But the reference to loneliness passed Patsy by. Her heart was thumping with excitement. How wonderful to be an actress, she thought; and have actress friends—the beautiful, mystic people she had always thought so wonderful and faraway when she saw them on the stage. She looked at Anne and laughed aloud, rather to that curious girl's astonishment.

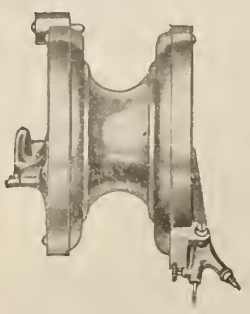
for you and your children

The Brunswick

ALL PHONOGRAPHS IN ONE

At last a phonograph has been developed which takes away all restrictions that have heretofore limited the choice of the music-lover. The Brunswick is the ALL-RECORD phonograph which breaks away all the barriers that have been standing between you and the music you desire.

Do you realize what this can mean to you? Think of your favorite vocalist—your favorite instrumentalist—your favorite band. They are *all* at your command on the Brunswick, for the Brunswick Phonograph plays *every* make of record. And it plays them as they *should* be played—with full, pure tone, without scratching or metallic harshness.



This is due to the determination of the Brunswick-Balke-Collender Company, an organization having a fifty million dollar capital and a reputation extending over nearly 80 years—to develop the FINAL phonograph.

Among other distinctive features of this wonderful instrument is the ULTONA—an invention which, by the mere turn of a hand, adapts itself perfectly to all makes of records, playing each one according to its exact requirements.

Then there is the Brunswick tone chamber. It is "built like a violin," entirely of choice, seasoned woods. It eliminates all harshness, all metallic and nasal sounds, delivering to your waiting ears the full, clear tones of the record just like you would get if hearing the living artist under the most ideal acoustic conditions.

Be sure to hear The Brunswick Record on The Brunswick Phonograph

While the Brunswick Phonograph plays every make of record *properly*, remember there are also Brunswick Records. And Brunswick Records lead the way. They are what is technically known as "hill and dale" records. This indicates a process of manufacture that, by admitting air into the wax of the master-record while it is being made, gives a rounder, more mellow tone which produces the lifelike voice and true musical sounds.

The wonderful Ultona, which plays ALL records CORRECTLY

The Moth And The Footlights

(Continued from preceding page.)

"I'm not crazy," sang Patsy; "only happy—happy! I'm going to make good—with your help. I feel it; I know it! You are a darling, and I love you!"

The door opened and Margaret came in. She wore a pretty blue turban and tailored sult, and looked so ladylike and charming that Patsy was prepared to love her, too; without any introduction.

But Anne saw only the old familiar look of heart-sick disappointment. She said quietly: "Been the rounds! How are things?"

Margaret sat down on the edge of the bed, gave Patsy a smile and a hand-shake of good-comradeship; then turned to Anne.

"I had a part in view," she said. "I kept it under my hat—thought it might fall through. Dandy part on Broadway. Saw the author the other day. He said I was the type. Star had seen my work two years ago. Went at two this afternoon to sign my contract. Meant to bring it home to you girls, and celebrate. Well—the usual thing—there's no use discussing it, I supose. The part is to be played by a friend of a moneyed friend of the manager. We can't blame the manager, I suppose, if his friend will take the financial risk of the production for the satisfaction of seeing 'some little drug store blonde' acting on Broadway, instead of—to quote once more, 'making beds, where she belongs.'"

"Margaret, my dear," said Anne, "this state of things can't last forever, you know. The managers will realize in time that these untrained young beauties unfitted for the work, playing ingenue parts in good companies, are the cause of half the failures. The public just won't have 'em—that's all. They won't put up with the graft!"

"Well," said Margaret wearily, "perhaps if we give 'em time, the dear public

(Continued on following page.)

The Ghost Widow

(Continued from page 49.)

munitions as in workers. Shells are fiercely interesting, but I have some odd little seances over tea-cups at lunch time. Some day I must tell you about it."

As he went sharply down the beautiful, winding garden path, something elusive and extraordinary seemed to be happening in the commonplace world all about him. But it was only that he was discerning his fate—in the woman he barely knew, up there in that old-world garden. Also he recognized, because his heart was as sensitive to immediate impression as was his finely balanced brain, that she was like a sleep-walker suddenly aroused to the fact that during the short night of youth the world had changed. How the new conditions would mould her, he did not know. Of one thing only he seemed to be sure in this early-morning moment, and that was that, whether or not she was for him, he was eternally hers.

IV.

And Edith made her way to the hammock deep in the orchard, where the early apples shone in the sun and she could stare through the leaves, already golden, up into the bright, bright sky.

To her shortly came her little sister, Fan, knitting bag under her arm, on patriotic purpose bent.

"Just to say that you should be in bed, dear, and I'm off to the Red Cross. Who on earth was the man you were stalking about with at all hours this morning?"

"McAinsh, the manager down there. Quite a nice person, and I *am* sleepy, Fan. Suppose I sleep out here? I seem to be lazy and happy. Munitions agree with me. And guess what I do at four in the morning? Read their tea-cups. Do you remember how they used to hang on the fortunes I read that winter in Boston? Well, my dear, these girls exhibit the same glorious faith in my powers. It's exciting, because one has to draw on that dream quality—what is it?—letting go of one's self? Anyway, it's the only key I have to unlock these people to me. And I find that I care about that, Fan—getting to know life as other people do. We've been so shut in here. The house, the garden, our friends. All the time we were waiting for this awful war, which has torn down our little enclosures. Do you know what the whole world means to

(Continued on following page.)

The Moth And The Footlights

(Continued from preceding page.)

who pay their good money at the box office, will expostulate more publicly—perhaps through the press. As things are now, they are content with telling their friends that it's a 'rotten show,' and that's all. The managers haven't been made to realize yet, that, through these dissatisfied patrons, the play is damned—more so than through the critics, who are generally satisfied with making fun of the poor, pitiful little attempts at acting."

"Perhaps, by the time this child has had five years' experience and is ready to play a good part, she will get it because she can act, and not because she has one of the many kinds of pull that go to make opportunity nowadays. This is certainly a rotten business!" And Margaret's tone was bitter indeed.

Patsy's eyes blazed. To her the stage was a thing of dreams, and almost as sacred as her religion. She only half-grasped the girls' arguments. They were vague and outside her experience.

"If it's such a 'rotten business,'" she demanded, "why do you stick to it? You certainly don't have to—do you?" Her indignation made her forget her shyness. To little Patsy, Margaret's bitterness was the disloyalty of a quitter in a losing game.

"I make my living on the stage, my dear," said Margaret, with a twinkle in her eye. "It's the only work for which I have had training. Then, too, my work is the only life I have, you see. In spite of the hardships, there is a joy in the work itself that it is hard to relinquish—the joy that exists in any creative work. You will know what I mean some day, when you feel that you simply can't stand the disappointments and the loneliness any more, and yet it will be harder to go than to stay. If only I could persuade you not to *begin*, my dear! But I won't try. I have tried before this to teach common sense to stage-struck girls—and to girls in love—they are equally-thankless tasks!"

"What's the use," said Margaret, "of saying 'it's a rotten business' to a girl who refuses to see anything but the artistic side of the work? By-the-way, Patsy, Anne sticks to it, because she's an artist, and the quality of her work justifies her doing so. I am a rather clever mechanic; you are an amateur; so perhaps you and I can't quite understand."

"It's a great art—acting—" she went on. "But that doesn't keep it from being a 'rotten business.' You'll realize it when you've spent a winter or two out of work. The great painters in their garrets were happy in the joy of creation. They worked on, and their work grew in artistic merit. How would

The Ghost Widow

(Continued from preceding page.)

the sort of women I am working with? It means expression. Utterly selfish expression mostly, but certainly not a 'community' feeling. Do you remember Dick Stratford saying once that we girls in Brockton reminded him of a lot of old-fashioned little hens all cooped up together? These women, who have always had to work, are making shells to confound our enemies, but every one of them is vindicating herself, her man, her freedom. I nearly bought a baby to-day—a pet with red hair. Her mother preferred freedom—at least, she thinks she does. In the end, of course, she'll win back her man, if he gets through, by dint of the child. I suppose one could hardly hope to do more than borrow such a wonderful thing as a baby. In the meantime," she smiled at Fanny's reproachful face, "I know you think I'm quite mad, darling, and I suppose I'm making you late for your meeting."

Fanny nodded her agreement to both charges and made a hasty exit.

"Tea-cups or shells? I wonder which sort of woman I really am," she murmured, and looking up at the bright sky of morning, felt her eyes suddenly grow heavy with sleep.

And for the first time in all the years of her dreamy tryst with love, she slept in that hammock without a ghostly kiss upon her lips.

THE END.

Corn Frowns Vanish in a Moment

HERE is a fact which millions know. It is so clear, so simple that it makes a corn ridiculous. You can stop any corn pain in a jiffy, and stop it for good.

You can end any corn quickly and end it completely. You can do this without any bother, without any soreness, without any muss.

So corns are utterly unnecessary. And folks who have them nowadays do themselves a wrong.

You can prove these facts on any corn by applying a Blue-jay plaster. The pain will stop instantly.

Then a bit of red wax, centered on the corn, will gently undermine it. In two days, usually, the whole corn disappears. An occasional corn needs a second application.

This is a scientific method, invented by a famous chemist.

It is simple and gentle, yet sure.

The whole effect is centered on the corn, so it doesn't lead to soreness.

To pare a corn—for brief relief—takes ten times longer than to apply a Blue-jay.

Try Blue-jay on one corn. See how promptly you forget it—see how soon it ends. Then remember that every corn—right at the start—can be ended in like way. You should never for a moment suffer corns.

Prove this to-night.

"*Help Yourself!*"—

There are times in the warmer season when you don't feel like drinking cocoa. At such times learn to make the most of your cocoa, bring it down from the shelf and make it pay for itself by icing your cakes with it.

Perfection Cocoa is the best and most easily adapted to such purposes. These warmer days, try your hand at it.

COWAN'S COCOA "Perfection Brand"

Ballantyne Knitted Wear

FASHION has done her share this season to bring knitted garments into a position of unprecedented popularity. Her influence has turned the old-time "sweater coat" into a garment that possesses smart style characteristics developed in enhancing color combinations, without sacrificing a single feature of warmth or comfort.

This month the retail stores throughout Canada will be showing the new BALLANTYNE creations for this Fall and Winter season. We illustrate a few of the many attractive lines on this page. Ask your dealer to show you the knitted coats, pullovers, muffler sets, children's suits, mitts, gloves, hosiery, etc., from the BALLANTYNE mills. Make your selections early while the assortment of styles and colors is complete.

Fashion Favors Knitted Goods for Fall Wear

Knitted Garments, Simple But Not Commonplace are Popular For Autumn Wear

Every Age Finds in the New Knitted Sweaters, Comfort, Style and Utility

Small boys and girls may be comfortably and attractively clothed in knitted garments.

A practical coat and cap which will be popular with those who do not favor the slip on.

All kinds of people and all ages seem to be buying sweater coats this season; if they are not buying one kind, they are buying another. In the stores during the rush hours of the day, at the tables on which are displayed the cheaper lines—as cheap lines go—there is always a bevy of customers diving into the heaps and heaps of different colors and styles, to find what they consider the best value or the thing they like best. At the quieter hours of the day, the more exclusive customer does her shopping in the vicinity of the showcases and the wardrobes where hand-made goods are to be found. And the collection is as varied as the people who come to buy. All the mills seem to have been trying to excel all previous efforts to produce sweater coats that cannot fail to captivate the customer.

The vogue of pull-over sweaters, both with and without sleeves is becoming very pronounced, contrary to the expectation of many of the most prominent buyers. The sleeveless tuxedo is also finding a place in the smart woman's wardrobe.

Contrary to what one might expect, the larger sizes in sleeveless are the most popular. At first sizes from thirty-two to thirty-six were largely used, now they are thirty-eight to forty-four, for when a garment is to be put on over the head it must be loose enough to do so without causing undue strain on the threads. Both styles are featured, the fitted and the straight, and where they are straight, the basket weave is proving a popular pattern for the skirt section. On others there is a purled section around the waist or from above the waist line to the bottom of the garment.

The pull-over sweater has proved so useful that few consider a wardrobe complete without at least one of these attractive garments. To the sportswoman they give the extra warmth so often needed without in any way hampering her movements.

A Brushed Wool coat, cap and mittens are ideal for out-of-door sports.

There is much talk at the present time regarding the patriotism of using wool yarn for the knitting of the gay colored sweater coats so dear to the heart of the school girl and her older sisters, but the fact remains that if the Government required this wool it could easily be taken before it reached the shelves of the merchant. Women are using yarn for this work because it is for sale, temptingly displayed in all stores. The hand-made sweaters are soft, pretty and attractive, but there is not a Canadian woman who would not stop using wool for this purpose at once if she believed it was needed for war purposes.

There is no pronounced prevailing color for the autumn sweaters. Almost any shade or tone which pleases may be purchased. No department is more alluring than that in which knitted garments are displayed, and until there is a more pressing need for wool, anyone may purchase these pretty new fall garments without qualms of conscience.

The supply of English-made goods is becoming smaller, due to the fact that the mills which make sweater coats are also engaged in the manufacture of hosiery, and at the present time are bending their energies more in the production of the latter. This condition will probably remain until after the war; therefore we must look elsewhere for our supply of sweater coats.

The American-made garments are exceedingly smart and prettily colored, but lack the wearing quality of the British goods. Novelties of all kinds are being shown, and many charming effects arrived at by the combination of colors. Fashion seems to be favoring the darker shades for the cooler days, and heather mixtures, etc., are receiving attention.

The tag on good alarm clocks

THERE are two sure ways to identify a good alarm clock: the name *Westclox* on the dial, and the orange and buff *Westclox* tag attached to the ring.

When you find these quality marks you know your new alarm clock is a good time-keeper, the kind you need in times like these.

All *Westclox* alarms have the patented *Westclox* construction. They all run on time and ring on time.

A Woodland Sketch

(Continued from page 15.)

In the house to-day anyway." Thus boy-like they paid their tribute to the year's awakening.

By the edge of the lake stood a large white cottage, known to the adult world as "The Cunninghams' Summer Home," but to the more juvenile members of society as "Fat Cunningham's Shack." Toward the white house they wended their way. The house itself was ignored as being there. They were supposed to be in the wilds of America, so the orders to "open up the cottage and air well the bedding" went unheeded.

Beside the lake they prepared for supper, and a royal supper it was. Each scout had his individual fire, his individual utensils, and cooked only enough food for himself. This living unto themselves alone had brought forth many remarks from their elders, concerning the impracticability of such a method, and how much better it would be to take turn about as chef instead of all four, three times a day, fixing their own meals. To these remarks the captain had replied, "You just try it, and you'll see how it works out. None of the fellows want to eat the other fellow's grub, and we all get quarrelling. Gosh, I can't explain about it, but you just try it."

Thus they discarded the would-be wisdom of older heads, to profit by the experience of the ages. The cave man hunted his own food, his mate cooked it, and they, with their offspring, shared it alone. When clans began to share their common mess, trouble began to ensue. In the childhood of the race it was each one for himself. In the childhood of man in the concrete, the same law holds sway. Harmony among children, being a rare quality, is, when found, a sign of advancement and adolescence.

A ten mile hike either produces an over weariness wherein appetite takes wings, or else it is a sauce, giving rare flavor to every dish, and if you are a boy with a growing appetite such added sauces double, yes treble, that appetite. Discretion was flung to the winds. In the hope that the morrow would see them less hungry they each ate two chops and two potatoes. The milk, obtained from Farmer Bairnes, they fairly gobbled down, and the pancakes, following the rule of beginners' luck, were of the finest.

Fat Cunningham had almost forfeited his right to the primitive life by wanting to fill his pockets with milk chocolates. Finally, as Archie didn't own any kit, and therefore had to stoop to the ignominious depth of bringing sandwiches, they allowed Fat to take sufficient chocolates for the crowd. In their secret hearts thankful they were for it, for in a short time the four days' supply had melted within their mouths; but of course, as they reflected, it was only natural that they should be extra hungry after a tramp—the next day they would settle down to fishing and less strenuous occupations.

There were few dishes to be washed. Each boy had a knife, a fork and a spoon, an enamelled plate and mug. A large leaf and a few pebbles answered for dish cloth and soap, while the glorious rays of the sun and the breeze of the lake fulfilled the office of drying towel.

As night drew down the blind over the sinking sun, four young hearts began to beat faster, and four imaginations began to run riot. The woods took on a mysterious air—quite unthought of in the day time. What was that? Pshaw! It was only an old stump. The trees no longer had branches—they had arms—long snaky arms, ready to reach down and catch a fellow. The little squirrels made as much noise as a whole menagerie of bears let loose. Night, like a pickpocket, had glided upon them and was stealing their courage; but would a scout acknowledge it? Never!

"Tell you what!" said the ever resourceful captain, "let's get those cots aired out.—suppose if we don't do it our mothers will ask us about it first thing."

There was no contradicting the order. They jumped with alacrity to fulfil their mothers' wish. To air the cots meant opening up the cottage, turning on electric lights, and forgetting the spookiness of the enveloping woods.

"Heave her ho there; a little more to starboard," sang out Bill, while Archie and he, each holding an end of a mattress, swung it lustily back and forward over the verandah railing.

(To be continued.)

Murray-Kay's Catalogue No. 24G

This cut reproduces on a small scale the illustrations on a page of our new Fall and Winter Catalogue No. 24G, which will be ready for mailing early in September.

We have delayed publication in order that we may include in this book pictures of the very latest new styles in Suits, Coats, Dresses, Waists, Furs, Millinery, Footwear, etc.

The prices quoted are most reasonable, and we prepay charges to your post office or station on every garment illustrated.

The Moth And The Footlights

(*Continued from page* 53.)

it have been with them had they had no brushes and paints, no canvases upon which to express the creations of their genius?"

"Don't you see," said Anne, "that therein lies the tragedy of our art—it's such a 'rotten business?'"

"But don't the heartaches teach us humanity? Doesn't it make an actress a greater artist in the long run?"

"Yes, little Patsy, if it doesn't break her spirit first—if it doesn't destroy her faith in herself and the world. Oh, I've seen it so often! Yet, perhaps, you're right in a way, and acting might not be so greatly human if it were not such a 'rotten business.' But the tragedy of the artistic genius is not so much the sacrifice which causes so much mental and physical suffering. It is the inability to create when the conception is there; and the expression, hopelessly impossible. That is the tragedy that threatens the very soul of genius!"

"And she knows what she's saying, Patsy, my dear," put in Anne. "She's made of the real stuff—is our Margaret. If there was such a thing as justice in our profession; such a thing as opportunity for the deserving of opportunity, Margaret wouldn't be—half-the-time—working for a tiny salary; and, the other half, beseeching managers for a job. And when she gets 'em: ye gods! What parts for a real actor-woman to play!"

"But why doesn't she play parts that suit her?"

"I have, my dear," said Margaret. "I have played wonderful parts in stock companies, where it's a new play every week, and a nervous breakdown at the end of each season, unless you are as strong as a horse. Of course 'success' means success-on-Broadway, and I've tried, time and again, to hold out for a good part in New York, but it did no good. I just found myself 'jobless and broke'; and incidentally, still 'holding out' at Christmas. We're at the mercy of the managers, my dear, because there are so many, so very many of us capable of playing good parts, and so very few to be played. Our art is unique in that for our artistic development, we depend upon the whim of the moneyed men who control the business end of it. Some of them are very artistic, I grant you—but others are inartistic to a degree. They are batty on the subject of types."

Patsy giggled. "Suppose," she said, "that a painter with a great talent for portrait painting, was forced to paint fences all his life—little green picket fences—because once in his youth, he painted the fence around the family back yard, and did it rather well!"

"That's the idea," said Anne. "But the artist can paint a portrait, and say, 'See: I can paint something besides fences.' He can prove it. But the actress must go to the manager and say, 'I know I can play tragedy—please let me try.' And the manager's reply will invariably be, 'No—you think you can—but you can't; not with that pug nose and those blonde curls. If you don't believe that only dark and beautiful ladies feel deep human emotions, why go to the theatre and see for yourself! Fifteen years ago, you played Tirzah Anne, in 'The Old Farmyard,' and Tirzah Annes you will play to the end of the chapter! Tragedy? You're not the type!' Burst of managerial mirth!"

"'You're not the type!'" chimed in Margaret. "That's the cry of the manager of to-day; and, incidentally, it is the death cry of individual dramatic ambition, and artistic development. You have no idea, my dear, just how insistent a manager will be about having the exact type for the part, as to eyes, nose, and general anatomy. If a woman looks the part—the manager's idea of the part—she gets it—all other things being equal—be she ever so unfitted, mentally, emotionally, and artistically for it!"

"Yes," said Nell, who entered without knocking. "Ever hear the story of the man with the wooden leg? Draw near, my chee-ild; listen, mark, and learn!—A certain playwright once wrote a great play. He took it to a manager, who said, 'This is a great and thrilling drama, and I would produce it, but for one thing. Your hero, my friend, is a tall, fair man with a wooden leg, and I don't know an actor in the country who is the type."

"'But, my good friend,' urged the playwright, 'it is quite unnecessary that the man should really have a wooden leg—'

"'What!' roared the manager. 'I may be a business man, Sir: I may have left the collar-button business to become a theatrical manager; but I am an artist at heart! I insist upon the type!' And so they parted.

"One day the playwright was quietly sitting in his club, reading the paper, when a paragraph in an obscure corner of the sheet, caught his eye. He dashed to his office, and wired to a Western hospital: 'Wire immediately, is John Wakeman, actor, injured in train accident, a tall, fair man? Reply prepaid!' And the answer came back at once: 'Yes, leg amputated this morning; patient doing well.'

"The playwright rushed off to the manager's office. A company was engaged at once, and contracts mailed to the sufferer. When he was able to come East, the first rehearsal was called. The manager was all pleasurable excitement; the company was assembled in the theatre; a taxicab was heard to stop at the stage door. The manager went forth to meet his leading man. A pause; then a cry of anguish and despair: 'You fool! You fool!' he was heard to cry to, and at, his playwright friend. 'You—the author of the play—never knew that it was the wrong leg!'—Also girls, it's time for dinner. Come on now, or we won't get one of Lizzie's tables, and she's the only one of the waitresses who loves me enough to bring me both pie and pudding!'"

Under the stars that same evening, Patsy and Nell were swinging in a hammock on the roof, and Patsy retailed to Nell the afternoon's conversation.

"If stage conditions are so bad, why do all the girls stick to it?" she asked.

"Because we're crazy!" grinned Nell. "We think we're great!—With the possible exception of Anne. We have seen others struggle as we are doing; and then, out of clear skies have come wonderful opportunities, and they have made good. So we keep on, hoping and struggling, and hoping some more. Being women, we all know that we have great emotional possibilities. Do you want to play emotional parts? But why do I ask? Of course you do."

"Not for a year or two," said Patsy modestly; "I want to learn to act before I attempt a real part. You see while my people objected strenuously to my going on the stage, I know that they expect a lot of me, and I've got to make good. I mean to play everything that comes along, and gain experience *galore;* and then, when my big opportunity comes, I'll 'know my business' as you girls say; and won't fall down hard!"

"So you'll learn to act by acting?" said Nell. "My dear, you'll learn the technique that way—and it's an important factor in your art. But it's nothing without the greater things;

(Continued on following page.)

Music And The Rural Community

(*Continued from page* 46.)

way would be to form a little singing society to give entertainments and take advantage of the musical interest already roused in the neighborhood by the phonograph. The school teacher soon found that his particular community contained an abundance of latent musical talent, which was merely awaiting development, and he was delighted with the eagerness shown by young and old in helping the movement along. He prophesies that by the end of the present year he will have in existence a very commendable community organization. An important outcome which he also anticipates is a decline of denominational prejudice in that particular community since the effect of the mingling of the young people from the various churches had been to make them know and like each other better and to give them a common interest of an illuminating kind.

As has been said, the development of reproducing instruments and other aids to the cultivation of a knowledge of music makes the task easier than it has ever been in the past. The person who gives the matter thought will soon realize that music has its practical benefits and that the direct application of the art to certain social conditions may become fruitful of good results. At the first glance, it might seem paradoxical for one to baldly assert that music can have a direct bearing on farm labor and agricultural production, yet in essence there is nothing fantastic in the proposition. On examination, it is obviously true.

Be Prepared!

BOY SCOUTS

THE importance of the Boy Scout movement was never so strongly realized as it is to-day, when "National Service" is on everyone's lips. The Boy Scouts' motto—"Be Prepared!" has made every Scout especially fit to render true "National Service" is any emergency.

If your boy is not yet a Scout, get him interested now. Neither you nor your boy will ever regret it.

More than 95 per cent. of the Boy Scouts in Canada wear the

Miller Official Boy Scout Uniform

If you want to be correctly equipped, then order a

Learn to Play the UKULELE

The National Instrument of Hawaii

Costs Little Very Easy to Play

There's a world of fun and amusement wrapped up in this delightful little entertainer from the fair, sunny isles of Hawaii. Its music is entirely unlike that of any other instrument—carefree, happy, frolicsome or tenderly impassioned just according to the way you feel or the music you prefer.

Have no fear about not being able to play the Ukulele. Hundreds of people, not specially musical, are taking it up and mastering it without difficulty. With the book of complete instructions on method of playing, which accompanies each instrument, you should find it quite easy to learn.

Get One of These Fine Ukulele Outfits

No. 110—Genuine Koa Wood Ukulele, nicely made, dull finish, three rings of inlay around soundhole, white celluloid pegs, together with flannel-lined canvas case, leather bound, leather handle, and book of complete instructions $14.25

No. 121—Genuine Koa Wood Ukulele, made by Jonah Kumalae, Honolulu; finely made, polished finish, three rows of inlay around soundhole, koa wood pegs, together with flannel-lined canvas case, leather bound and leather handle, and book of complete instructions, $15.75

No. 123—Genuine Koa Wood Ukulele, made by Jonah Kumalae, Honolulu; fine quality, polished finish, top edge bound with different colored wood, three rows of inlay around soundhole, koa wood pegs, together with flannel-lined canvas case, leather bound, leather handle, and book of complete instructions $26.25

(Continued from preceding page.)

above all, human understanding—what Balzac called 'the life of art.' Dear Kiddie, you must learn to act by living! Look at Margaret—the only one of us who is a real actress; she has known all the sorrows and the pain—and the joys. So if you would be an artist, *live* with all the human that is in you!"

"Is it really true?" questioned Patsy, as if she were half-afraid to hear the answer, "what the girls say—that opportunity can be *bought?*"

"Yes, Honey—it is—but, Anne and Margaret to the contrary, notwithstanding, I hold to my belief that it may be bought with other things than money—with talent, with hard work, with untiring patience. Why, we have only to look at some of our beloved stars to-day, to know that they achieved their success fairly and squarely."

"Thank you a thousand times for saying that, Nell. I won't mind learning by suffering—really I won't 'blubber'—but I couldn't earn my opportunity—"

"Unfairly? Neither could I, dear. Bless you, I know its faults, but my ideal of the stage is a high one! I feel that I'm rather a quitter, in that I'm going to leave it. Yet, I am doing no good to others or to myself in acting my little parts. I'm not great enough. I'm not big enough mentally to everlastingly rise above the disappointments, the humiliations, without being desperately hurt. Margaret 'sticks,' because she is an artist, and the love of her work is the big thing in her life that makes it worth living—when there's nothing much else to live for. Anne 'sticks' because she can support herself and her mother out of what she makes—she's the money-making kind. I have 'stuck' up to the present because I never quite lost my first stage-struck love of the dear old dusty behind-the-scenes. But something bigger has come into my life, and changed its course. I'm going to be married, you see."

An hour later Patsy knelt by her bed. She had knelt to say her prayers; but she was thinking—thinking excitedly of the morning and all the other mornings—and what they would bring forth. "Obstacles? Of course! What game easily won, was ever worth the winning?" She clasped her hands and whispered: "O God—I want to be a great and a good artist—and true—above all, I want to be true"

Then she crept into bed and fell asleep. And again she dreamed of the footlights and the clouds; and the fall from Heaven! And she woke up, crying, "Mother."

And somewhere in a little town in Canada, a little gray-haired mother was lying in the darkness, pouring out her heart in tenderest love: "Into Thy Hands, O God—into Thy Hands," her heart prayed.

THE END.

SEGIS FAYNE JOHANNA, CHAMPION COW OF THE WORLD, OWNED BY THE LIQUID VENEER PEOPLE

Read About This $150,000.00 Cow and

LIQUID VENEER

Both are World Champions

READ THE WONDERFUL STORY—a story which we will send you, ENTIRELY FREE, telling about the Liquid Veneer Cow, the Champion Cow of the World over all ages and breeds and valued at $150,000, and her connection with that other World Champion, the great home beautifier, Liquid Veneer.

The story tells how the simple idea of using Liquid Veneer on a cloth for ordinary household dusting revolutionized dusting methods, the new method proving so wonderfully effective that it relegated the feather duster to oblivion and made it possible for the president of the Liquid Veneer concern to acquire the greatest herd of pure bred, registered Holstein cattle in the world, including the Champion Liquid Veneer Cow.

Study this ad and write us, telling us what you think is its strongest feature, and we will send you, ENTIRELY FREE, a photo-gravure reproduction of a beautiful painting, by Professor Keller, of this World Champion Cow, and a copy of the story.

JUST THINK OF IT! This great cow has produced 7¾ pounds of butter and 52 quarts of milk in a single day, while the ordinary cow produces as a yearly average about ½ pound of butter and 5 quarts of milk daily.

When studying this ad don't forget that good old Liquid Veneer is dear to the hearts of millions of housewives all over the world, because of its wonderful help in keeping their homes beautiful and sanitary and almost entirely eliminating the great expense of refinishing.

Don't forget that you can make YOUR piano, victrola, furniture, woodwork, picture frames, interior woodwork, hardwood floors, linoleum, white enamel and tile all look like new and keep them so with Liquid Veneer.

You get the same high quality at the same old prices, 25c, 50c, $1.00. If you have never used Liquid Veneer, try it today, for dusting. You will be delighted.

Williams'

Talc Powder

A more generous quantity-quality considered, than any other powder

A slight push of the thumb opens the handy, patented hinged cover

The fragrance of your favorite flower

You do not care how large the can is until you know how good the powder is. When you have tried Williams' Talc and learned how fine and smooth it is, how delicate and pleasing the delightful perfumes are, then the fact that there is so much more of this worth-while powder in the can becomes important to you. So also does the hinged top, which makes it so easy to use the powder.

Thus Williams' Talc Powder appeals to your taste, your economy and your convenience.

More comfort in the powder; more powder in the can. Your choice of delightful perfumes—Violet, Carnation, English Lilac, Rose and Baby Talc.

THE J. B. WILLIAMS COMPANY
Canadian Depot, 655 Drolet St., Montreal.

Volume Fifteen — WILLIAM G. ROOK, President, Toronto — Number Six

Copyright, October, 1918, in Canada by The Canadian Women's Magazine Publishing Company, Limited, Toronto.

November Will Be The Big Victory Loan Number

Special articles in this issue will bring the thought of our readers to the importance of the second Victory Loan. The columns of "Canadian Home Journal" will be loaned to the interests of this great movement, and the strongest appeal possible made to our readers at this vital period in our national history.

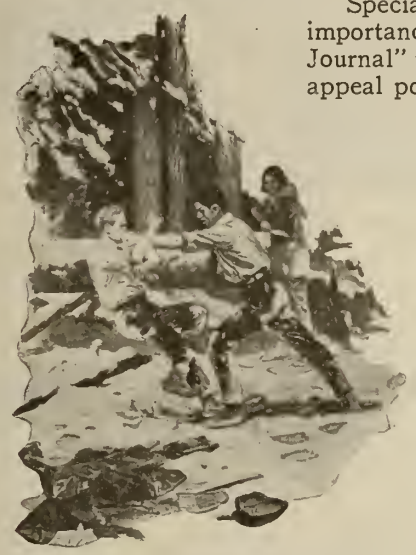

Illustration for "The Younger Brother" drawn by Norman Price

FICTION

"The Younger Brother," by Mazo de la Roche, will be published in the November number. Illustrated by Norman Price.

Theodocia Pearce has written a charming story, "The Peacemaking Perambulator," in which we follow the fortunes of a little Italian miss with the old family heirloom—a hurdy-gurdy. Mary Essex illustrates this story.

"The Trust of Shelley Carman," by Blanche G. Robbins, one of the best of this gifted young writer's stories, will appear in the November number. The life story of a certain promising young surgeon, his failure, disappointment, disgrace, but ultimate victory form the basis of this thrilling narrative. Against the advice of the whole world Shelley Carman believes in him—was it that faith which worked the miracle?

Mazo de la Roche who wrote "The Younger Brother."

WAR SKETCHES

An interesting page of sketches has come from Estelle Kerr, who is in Paris doing war work. These show Belgian refugees, quaint figures, men, women and children, gathered about a table; soldiers of several branches of the service; aviators with caps at rakish angles, and a picture of refugee mothers. This collection will be reproduced in the November number.

FOR THE BOYS AND GIRLS

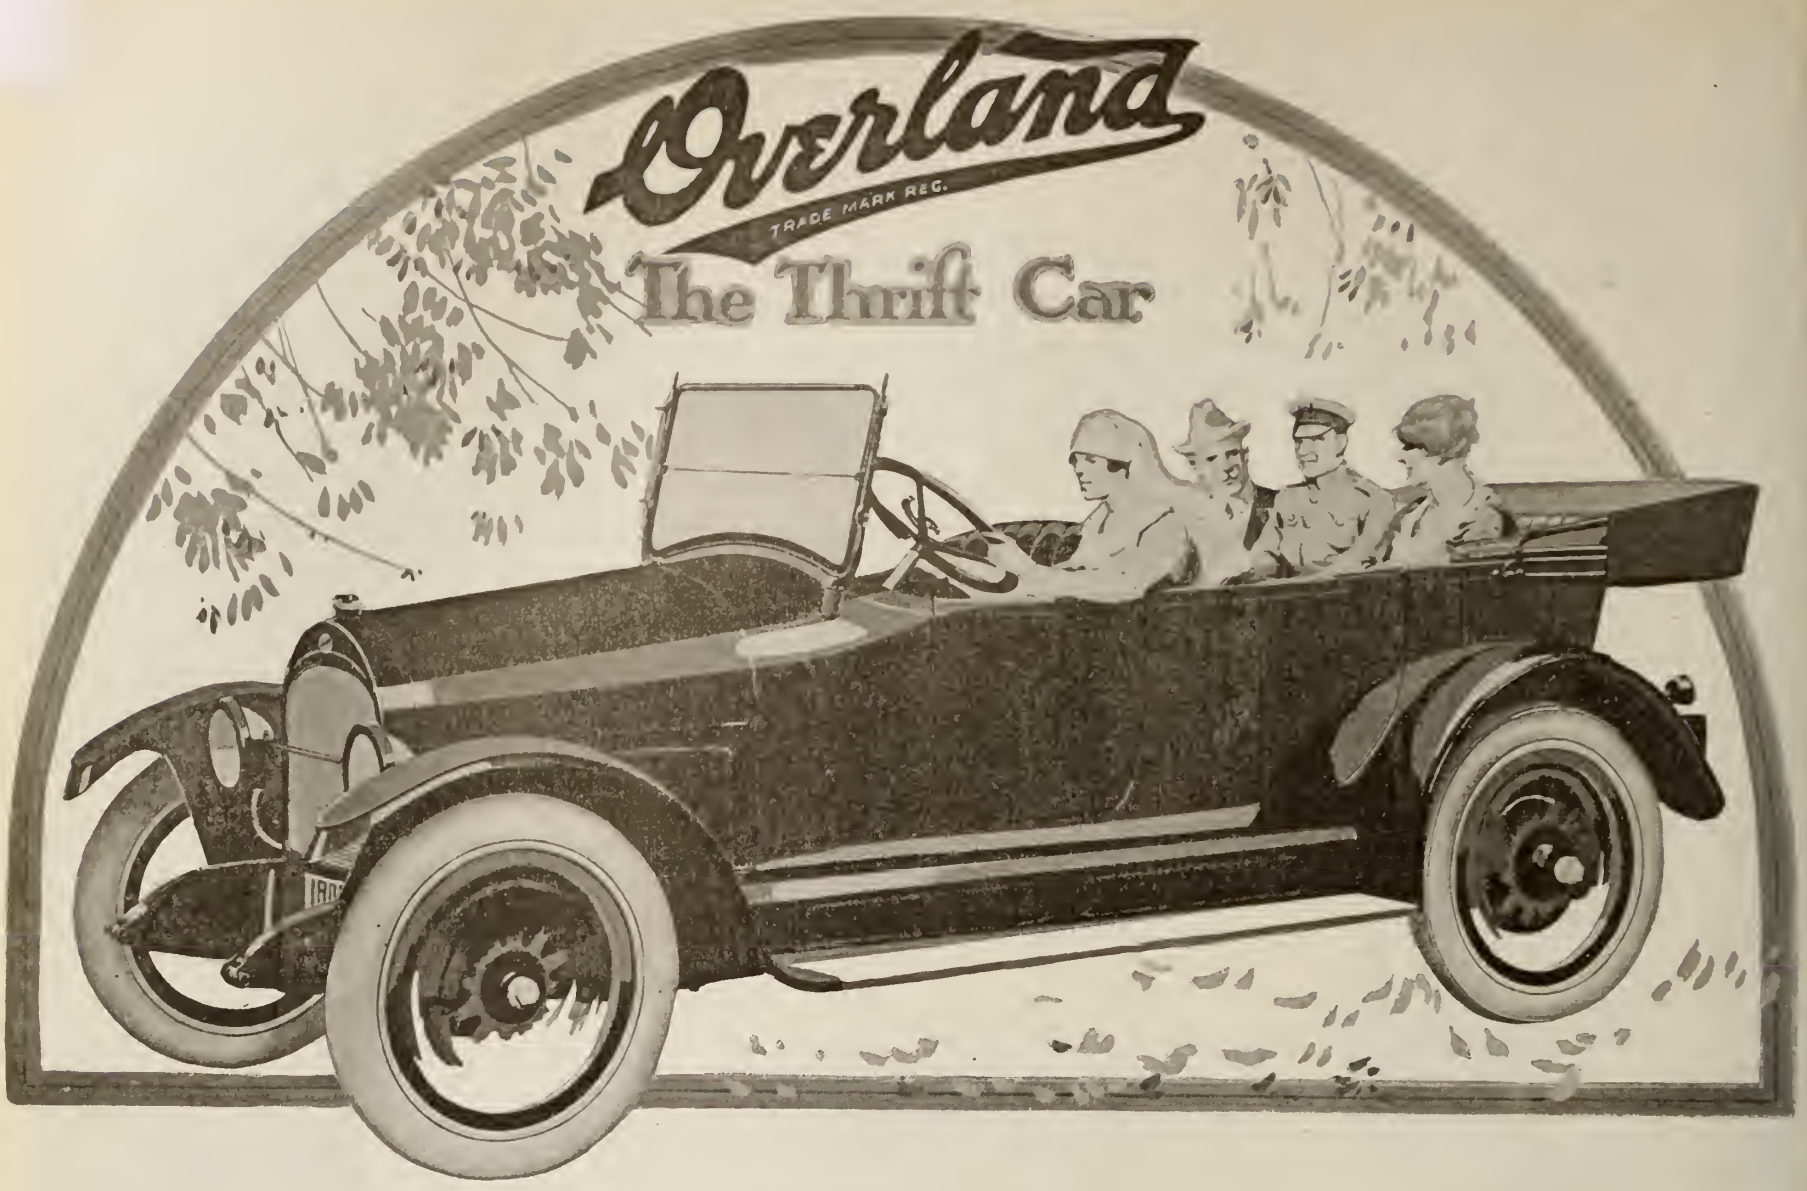
"Give us more stories!" clamor the young people. In the November number a big surprise awaits them. Watch for it.

The cover design on the November issue is drawn by Frank Downey, a Canadian artist, whose work will continue to appear in "Canadian Home Journal."

COOKERY

"The Many Uses of the Lemon" and "Try Steaming Your Food" are the two Cookery articles by Marion Harris Neil to appear in November.

"My Best Idea" page will contain twelve of the best housekeeping suggestions our thirty thousand readers have to offer.



WOMEN'S INSTITUTES

In this issue of "Canadian Home Journal" there is a report of the splendid work accomplished by the Brampton Institute. In the November number there will be a complete account of the community work done by the Galt Institute. The community idea has been carefully studied by this society, and the work accomplished along this line should interest every Club woman in Canada.

Do not miss the Prize offer on page 64 of this number. Your suggestions mean dollars to you. Turn at once to page 64 and read about these prizes.

For War-Time Saving and Serving

Canadian soldiers overseas are willing to give their all. Here in the Dominion there are men and women with the same feeling.

There *is* a way to make the most of your life; a way to *multiply yourself* as it were; a way to save time, gain time, and to do the increased work per day that is so mandatory for victory.

Others are making themselves more useful with the help of their efficient Overland Model 90 cars. Their days are fuller of good works accomplished, their energy not wasted, their time not dissipated.

And to drive a Model 90 Overland is to stamp you as a person of thrift; a person who knows the true value of quality goods; a person of good taste, and of sound business judgment who gets the most for his money.

Then there is the Canadian service and protection in which every Overland owner is a beneficiary. Behind your car is an institution with the ability and reliability to take care of your service needs now—and later.

An Overland is a safe investment.

EDITORIAL

OUR AIM

TO publish a magazine which will be worthy of Canadian womanhood.

To at all times keep both editorial and advertising columns clean, wholesome, and truthful.

To be a leader in thought, and a fearless speaker in all vital questions.

To, as far as possible, publish and reproduce the work of Canadians that our readers may become familiar with their own people, their own literature, and their own country, with its wonderful possibilities and glorious history.

Thrift—A Policy for Canadians. The war is teaching Canadians the need of thrift. The desirability of this quality has always been generally admitted, the wise of all ages having enjoined it. But in the years immediately preceding the war too many had forgotten this, as they had forgotten much other sound teaching. To this get-rich-quick age thrift had become a rather old-fashioned method of accumulating money.

This great struggle, which has upset so many pre-war notions, has demonstrated that, in money matters, the public is not quite as progressive as it used to think it was. It is now being realized that it is not sufficient to make money, but that expenditure must be so regulated as to produce a surplus. In other words, to save is the matter of chief importance. By this means only can we, in a pinch, help either ourselves or the State. Saving is necessary for a protection against old age, failing health, or other adverse conditions; it is necessary also as a means of assisting the nation in times of national peril such as the present. Thus Sir Thomas White and other public men, to whom the country looks for leadership in national finance, are exhorting the people to save. From one end of the Dominion to the other the cry goes up, Save! Save! Save!

⌘ ⌘ ⌘

The "Rainy Day" Will Come. Some say, "Save, in order to prepare for the rainy day." This is good advice, for assuredly this kind of weather will come again. Canada, for a young country, has had her full share of rainy days, nor does one have to be old to know this. It cannot be denied that the war has made the Dominion prosperous, and, unless some effective method is devised of letting down gradually our at present highly keyed up and abnormally developed war industries, a serious depression may result. If the huge plants that are now producing prodigious quantities of war supplies can be set at work producing things for ordinary consumption the rainy days may not be numerous. But the thought to be kept in mind is that no one knows what may actually happen after the war, so that there is but one policy to adopt—prepare for a few rainy days. In other words, save what you can. Even if, in an industrial sense, things go fairly well, you will be so much ahead. The money saved will be earning you something and you will feel the better for having reduced your expenditure.

"What can I save?" someone may ask. "My earnings are small and, even if I did save something, it would hardly be worth while when hundreds of millions are wanted." In the first place, there is hardly any person working for wages in Canada to-day who can honestly say, "I can't save anything." Wages were never as high as they are now. True, the cost of living has increased; but, for most persons, there is still a considerable margin for saving. Indeed, if you can't save to-day you never will do so. If you have the will to save you can save. Over $1,000,000,000 has been spent on war munitions alone in Canada. Think of what this has meant in wages. Consider also the high prices paid for grain and farm products generally. Surely the farmer can save! Surely the manufacturer and his workmen can do so! Never before were the dwellers in the cities, the towns and the country so equally benefited.

The work of reconstruction will need a great deal of capital, and Canada can provide this only by the hearty co-operation of her people.

Saving is Popular. Saving to-day is easy because the conditions of life favor it. Not only is it considered the right, but the popular, thing to do. Indeed not to do so is to run contrary to that which is expected of every good citizen. The person who wastes is denounced on every hand, while the person who saves is commended.

To save at all times is good business, because, while money is earned with less effort than formerly, its earning power is much greater. A dollar invested to-day usually brings a much higher rate of interest than it did before the war, for money is in greater demand and the prevailing high rate of interest will continue while the war lasts, and indeed may go higher. There is thus every inducement to save. So it is good policy to save and invest every dollar one can in first class securities. The advantages of such investments will be more apparent after the war than they are to-day; for while the rate of interest which these investments carry will be maintained as long as they last, the purchasing power of this money will be increased as prices fall. That is, after the abnormal demands caused by the war cease, a dollar will buy more.

Save now, for in doing so you are capable of rendering Canada and the Allies a greater service than ever before. Money, and plenty of it, is needed to carry on the war. There is no likelihood of there being too much of it; if anything, the supply will not be equal to the demand. In proportion as the magnitude of the offensives assumed by the Allies increase the stronger will be the demand for money. Nothing less than a complete victory will satisfy the Allies, so that it may confidently be expected that Canadians, with the people of the other allied countries, will be called upon to a greater extent than they have been in the past. No cause could be nobler. Money now saved will go to defend both Canada and the cause of civilization as we know it.

From the standpoint of the Allies this is not a war of conquest. The revelations that have been made since the outbreak of hostilities in July, 1914, have demonstrated beyond question that, in declaring war, Germany deliberately plotted against mankind. On her part it is a war for the extension of her dominions, for the increase of her wealth, power and influence. To launch it she had not only to break the most solemn treaties, but had also to violate many of those conventions which, by means of international law, the nations had, in the course of centuries, laboriously built up, and which, by restraining barbarism, had, through numerous wars, preserved civilization. It is to defeat this monster of organized brutality in the form of Prussianism that the Allies fight. And it is to help sustain them that Canadians are, in a measure, called upon to save. Was ever money consecrated to a better cause?

⌘ ⌘ ⌘

"Serve by Saving." Considerations of humanity and self-interest, regard for the nation and the individual, should induce all to exercise thrift, to save. Whether they are at the battle front or not, all must serve, and those who remain at home may serve through saving. They must do so, for Canadians have to bear their own financial burdens. In no other way can our war industries be kept going, or the surplus of our farm products, over those required for home consumption, be disposed of unless Canadians themselves through their savings provide the money for the purchase of the same. The Allies are prepared to take them, but only on credit.

Columbia Grafonola

For the Best Music of the Greatest Military Bands

Ratta — tat — tat!

Sharply the leader's baton raps out its signal for silence. Faint and far, unreal as a dream, the silvery voices of elfin bugles call. Purer, sweeter, nearer and clearer they come, and the flutes join now in full-throated chorus. Enter the drums with a distant trample that grows to a menacing snarl, then a roll and a roar with the blaring brass in crashing fortissimo.

Columbia Grafonolas Standard models up to $325—Period models up to $3000.

Truly, the Columbia Grafonola is at its musical best when it plays these glorious fanfares of military music. And Columbia Records give you all the most inspiring numbers of the greatest military bands.

No bandmaster in all the world plays for so many enthusiastic admirers as this big, jovial, clear-voiced Grafonola. Every night he gives patriotic concerts in hundreds of thousands of loyal Canadian homes. *Over there* his martial music is playing our boys into action. *Over here* his steadfast cheer brings inspiration to those who serve and wait at home.

To make a good record great, play it on the Columbia Grafonola.

COLUMBIA GRAPHOPHONE COMPANY, TORONTO

The Bird In The Bush

By
CAMERON NELLES WILSON.

Illustrated by E. J. DINSMORE.

A French Canadian Story by the Author of "When Beggars Ride," "Bachelors' Wives," "The Turning of The Lane."

"He had almost proposed again on this occasion."

FOR ten long empty years, Annette Boileau had been true to an ideal. For over half that length of time Rodolphe Savard had pledged himself to a lost cause. At least, Annette forbade him to hope, and his patience was almost animal in its pathetic devotion. They were the best of friends, a relationship accepted by Annette as the most natural thing in the world.

Rodolphe proposed at irregular intervals, and these outbursts were accepted by her with a due regard for Rodolphe's feelings and a certain vague stirring of her own.

"I tell you, Rodolphe, I lak you very moche. But I love only jus' wan man. Hees nam' it is Armand Collette. I t'ank you de sam', Rodolphe, but some day I mak' de mariee wit' heem an' he mak' me Madame Collette." Her reply was always the same, and she would clasp his big brown hand in her smaller one and smile upon him ravishingly but without coquetry.

"But, cherie, Collette he's gone long tam—he's dead, mebbe. I don't lak see you t'row you'seff lak dat—I love you very moche—I wait long tam. De bird in de han' heem wort' two in de bush." Rodolphe's fine dark eyes would hold her own compellingly but always was her answer the same.

"Ah, ma frien', but I see only de bird in de bush—it is hees song dat I hear—an' so I wait—till Armand come back."

For ten weary years Annette had waited and now Armand had come home. He was back on his father's farm at Jacquet River, and to-night there was to be a dance at the Collettes' in honor of his return. Early in the morning Lucien Dussault had passed through Rabbit Town extending invitations on behalf of his father-in-law, Rene Collette.

Annette could not have analyzed her feelings had she dared. At first her heart had stopped beating for a brief moment and then the blood rushed through her body in burning waves, suffusing her face and ending at her finger tips in tingling arrows of flame. She had not questioned Lucien, and he had passed on his way with a cheery "Fait beau!" She stood at the gate and watched his rickety cart as it disappeared among the pines. Far below, the Restigouche shone in the morning light. The distant murmur of the pulp-mill came to her in sounds strangely unfamiliar. On the far side of the river rolled the blue Laurentians, with Tracadie Gasch in deceptive nearness. It was the same outlook that had greeted her eyes for years, and yet it was different. Suddenly it had changed. No longer commonplace, it was like some wondrous dream-world come true. The houses in the village below seemed transmuted to gold in the bright November sunshine.

Her own face, too, had undergone a change. In her eyes shone a gladness that for years had been supplanted by an appealing wistfulness. She had waited so long. Only seventeen at the time of his departure, she had consecrated her youth to a memory. She never doubted but that he would return to her, and although he had never written she did not question his loyalty. From a slender girl she had developed into a very beautiful woman. Her admirers were numberless, but no matter how eligible or how attractive, she regarded then only as stop-gaps in her pursuit of happiness While the remembrance of Armand Collette filled her heart she had eyes for no other. She recalled every feature of his handsome face—his full red lips with their winsome smile, his curly hair that seemed so dark against the whiteness of his brow. She remembered the dancing lights in his black eyes, the boyish toss of his well-poised head. His words lingered in her heart like flowers which, brushed against, hold one in thrall by their clinging sweetness.

For Annette there never could be any other. She was intensely fond of Rololphe in a quiet, unimpassioned way. She liked to have him near her. It was a keen joy to go sleighing with him in the cold winter moonlight, well-wrapped in buffalo-robes, the jingling bells making music in their hearts. It was a pleasure to watch him smoking his pipe on bitter nights when the wind howled down the chimney and the box-stove roared a pæan of cheerfulness. Rodolphe was good to look upon, and with her great love for beauty, she would study his mobile face, the slender curves of his fine chin, the oval cheeks with their glow of youth and health. Once or twice as she passed behind him she had smoothed his brown hair, and once she had printed a light kiss upon his forehead. It was all done with the carelessness of a child, but it had set Rodolphe's heart beating with a wildness that could have been heard had the stove been less boisterous. He had almost proposed again on this occasion, but Gran'moder Boileau had come into the room at the moment and taken her chair by the fire.

Redolphe was the catch of the town. In fact, he was sought after as far as Charlo and Eel River Perfectly at home upon the water, his lithe grace as he leaped from log to log, pole in hand, attracted the envy of the youths and the adoration of the girls. He could play the fiddle better than old Simon Larocque, and wiggled his concertina with an abandon derived, first-hand from a Swede on one of the tramp schooners.

Most of her friends deemed Annette a fool for refusing Rodolphe. To them Armand was but a myth, or the faintest of memories. None dreamed that he would ever return to claim Annette and make good the promise given to a mere child.

But he had returned at last, and the years of waiting were at an end. Annette found it hard to go back into the house, to take up the common duties of the day—a Monday especially. A smell of suds filled the tiny kitchen, and Gran'moder Boileau was bending over one of the tubs. The other awaited Annette's strong young arms. She did not sing as usual, but a crimson fire burned in each of her beautiful olive cheeks. Visions of Armand danced before her eyes. Already she could feel the warmth of his kisses, the tender security of his strong embrace. After his sojourn in the great outside world he would be more wonderful than ever. Her worship, her surrender would be intensified in proportion. At a knock upon the door she trembled with gladness, but the swift beating of her heart was stilled by the frowsy head of Emilie Martel, which appeared at the kitchen door.

During the day other neighbors came and went. Few had heard more than the fact that Armand had returned; they were anxious to glean further particulars, but Annette could tell them nothing. All day she expected him, but it never entered her heart to resent his tardiness. He had some good reason—of that she was sure. In good time he would come to claim her, and how glad would be her surrender! Only now did she begin to realize how long had been the waiting, how weary the loneliness.

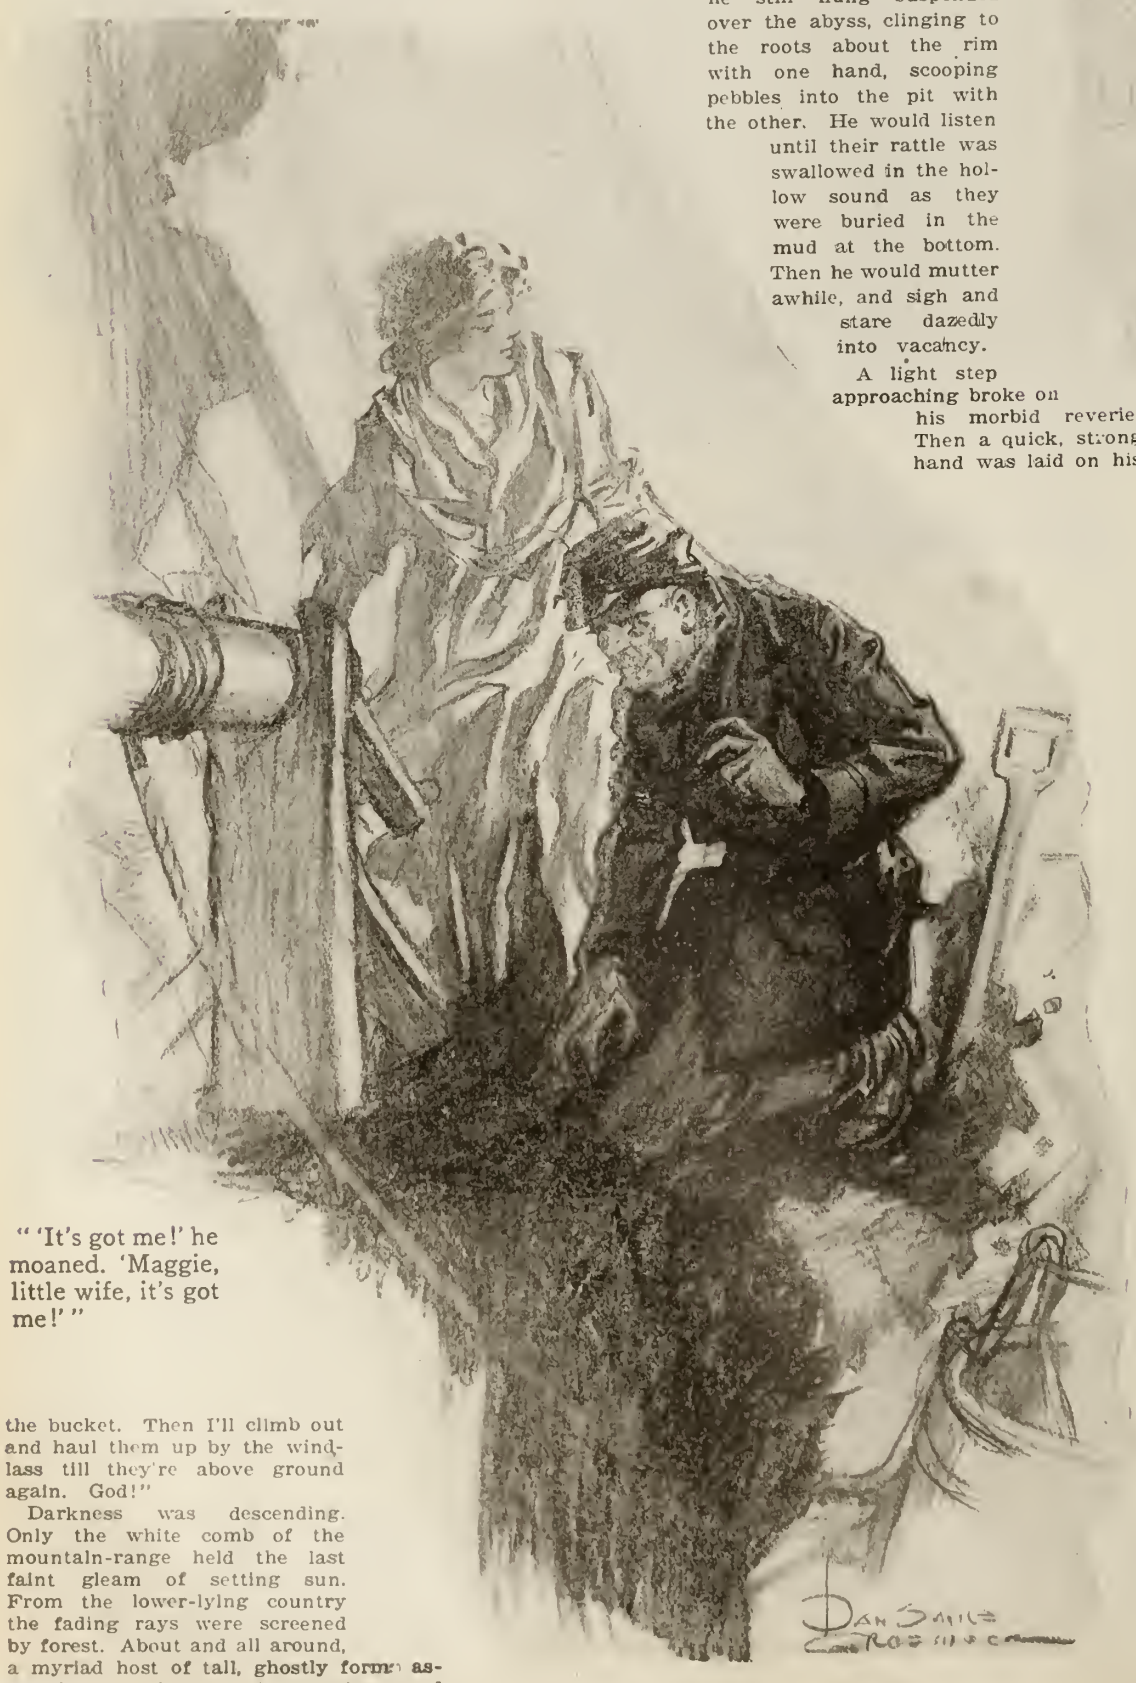
Late in the afternoon she went into her little room and looked over the treasures she had put aside for her wedding and her home. They were trivial and of little consequence, but to the girl they were the outward and visible signs of an inward and truly spiritual grace. So unselfish had been her love, so unwavering her patience, so altogether beautiful her sore-tried loyalty. She knew

(*Continued on page 35.*)

On The Kootenay Trail

By ERIC A. DARLING.

Illustrated by Dan Sayre Groesbeck.



Why Two Men Did Not Fail. The Story of A Woman's Heroic Endurance in The Gold Regions of The North

THOUGHTFULLY, the man turned the pebble over and over in his hand. His hand trembled slightly. Then he shook from head to foot, as with a sudden aversion, and cast the stone from him. It curved in a wide arc and vanished noiselessly in the gaping gullet of a shaft in the mountain-side.

Looking, the man shuddered again and soliloquized mutteringly: "God! Is there anything a hole in the ground can't swallow!"

It would seem that the little grey stone was attached to him by some invisible cord; it tugged at his heart with irresistible power, even though vanished. It possessed for him something of the weird fascination an image of insensate metal holds for the heathen, who set it up and worship, calling it a god. Presently, he dropped forward on his knees and crawled slowly to the rim of the shaft, clinging to the salal roots about the edge, head and shoulders thrust out and downward into the blackness of the yawning depth.

"And to-morrow," he went on, musingly, "to-morrow, I'll go down there and shovel them into the bucket. Then I'll climb out and haul them up by the windlass till they're above ground again. God!"

"'It's got me!' he moaned. 'Maggie, little wife, it's got me!'"

Darkness was descending. Only the white comb of the mountain-range held the last faint gleam of setting sun. From the lower-lying country the fading rays were screened by forest. About and all around, a myriad host of tall, ghostly forms assembled slowly, growing whiter and more ghostly as the daylight passed, marking indelibly the pathway of some ancient forest fire. Slowly, slowly the dye of the vine maple deepened until it splotched the landscape like clotted blood. From some sylvan depth a bird trilled with low, liquid notes, calling to its mate. Far up the mountain a boulder suddenly loosed and crashed its way down. The resulting roar came to the man's ear in a faint, yet vaguely-disturbing echo. He started, rousing, and looked to where its progress was marked by a grey dust-cloud.

The sun dipped and was lost behind the far-off peaks, over which a grey gloom descended. Immediately the thin air of the foothills sprang up in a chill little breeze. It breathed icily about, sifting through the man's clothing and touching his flesh with a thousand needle points, tipped with the frost-barb. Unheeding, he still hung suspended over the abyss, clinging to the roots about the rim with one hand, scooping pebbles into the pit with the other. He would listen until their rattle was swallowed in the hollow sound as they were buried in the mud at the bottom. Then he would mutter awhile, and sigh and stare dazedly into vacancy.

A light step approaching broke on his morbid reverie. Then a quick, strong hand was laid on his shoulder. He shrank under its touch, crouching back on his knees away from the shaft, plunging his face into the palms of his trembling hands.

"It's got me!" he moaned. "Maggie, little wife, it's got me!"

The woman glanced once at the hollow shaft, then dropped on her knees beside him. She dragged his hands down from his face and stared into the depths of his eyes.

"What's got you, Jerry? What are you talking about, boy?"

"The country — the working all day alone in a black hole, month in and month out, the terrible monotony of it, and then—failure! —It's got me!"

"Looking, the man shuddered. 'God, is there anything a hole in the ground can't swallow!'"

He shivered, and she pressed his cold hands to the warmth of her cheek.

"You know, then," she said, gently, "that the mine's no good? You've satisfied yourself about that? You're willing to give it up at last?"

He turned his head away and let it hang despondingly, as though there was an unbearable sting in the very mercy of her eyes.

"I've known it for months," he faltered. "Yes—months and months. But I can't break away from it. I can't let go. I hoped with the hope of a fool for ages, but that went from me long ago. And still I keep on shovelling gravel into a bucket and hoisting it to the top. It seems as though there was nothing else in the world to do. As if I could make it pan out by keeping at it and thinking —thinking gold—gold—gold! I always think of it while I'm shovelling broken quartz—think until little wriggling stringers like brass nerves dance before my eyes, wherever I look. And all that ever came of it was a splitting head. There's nothing in the mine. Ha! Nothing in it? Everything's in it. Every cent—yours and mine. All the things you and the kids might have had, should have had—a real home and clothes and school—they're all in it —in that black, cursed hole. And I can't let it alone. It's got me by the throat. It drags me back every day. It won't let go."

He drew long shuddering breaths and made as if to rise. The woman placed a hand on his shoulder and drew him down beside her again.

"The children are at supper in the cabin. We can't talk before them—and we must talk." There was an odd tenseness in her voice; it rose to a tone that was almost shrill with some powerful inner emotion. "It's not much of a shock to me to learn the mine's no good," she went on. "I've known it from the first. I begged you to stay out of it, but your mind was made up, Jerry, and I gave in to you against my better judgment. Now, I'm not throwing that up to you, not a bit of it; we all make mistakes, and some bigger ones than others. I'm just reminding you of it so's you can see what it's up to you to do. I gave up everything I had a right to; staked my little all on a gamble I didn't believe in. Now the showdown's come, and there's nothing left—but you. So it's up to you to make good, to turn yourself to account. You've got your hands and trade and the brains God gave you. Use them! Make up to us for what we've lost. You can't afford to let your mind and body go to pieces, sitting on a rock-pile and chucking pebbles into a hole in the ground. And you can't put gold into quartz if it isn't there. The Almighty reserved that pleasure for Himself. You took our chances in life and gambled them away in a game of pick and shovel. Now you get busy and straighten up and earn us some new chances.

"You say the country's got you! Bah! That's worn to a frazzle—that excuse. Every tramp that's too lazy to work drifts to the woods and says he's 'following the road,' or 'the country's got him.' If it's got you—how about me? It hasn't got ME, simply because I wouldn't let it, wouldn't give it that satisfaction. Don't you know the institutions for the insane are full of women who heard nothing

(*Continued on following page.*)

ON THE KOOTENAY TRAIL

(*Continued from preceding page.*)

but the wind moaning in the trees, always that, like lost souls wailing, until their poor minds broke? I fight the country and its loneliness, fight, fight, fight! I owe it to the children not to let the country get me. And you can't let it get you—because you don't belong to yourself alone, you are ours, all we've got, and you owe us—yourself. What you've got to do, and at once, is get out of here and earn us a decent place to come to."

He was staring at her with wide-opened, startled eyes.

"What do you mean—get out of here?" he asked, stupidly. Then, thoughtfully: "How can I? There's no market that I ever heard tell of for stones and dead timber. And that's all we've got to sell. You don't seem to understand that the last cent we had is buried forever in that hole. There isn't even the price of fare for you and the kids to get back to town."

"I'm not talking about us just now," she answered. "I'm talking about you. You can get out, can't you? You can walk to Franz, and from there you can sign on with a section gang, if there's no other way."

"And you and the kids—"

"Will stay here and wait."

"Alone?"

"There's no other way, Jerry."

There was something ineffably tender in her shrewishness now it had passed. The man rose to his feet and drew her gently to him. She was small-proportioned, but even in the descended darkness something resolute and capable seemed to radiate from her, in the way her black hair crinkled back from her high white brow, in the lift of her lithe body, in the quick play of her hands.

"If you had only scolded me out of it before, Maggie, when I first wanted the mine; if you only had!"

"Your heart seemed set on it. It's the first time I ever held my tongue, and I promise it'll be the last. And I'm scolding you now, Jerry."

He took her face between his hands and held it there, looking long into her eyes.

"Very well, little woman, I'll go," he said at length. "And I'll be back by mid-winter for you and the kiddies. It won't take me very long to make good, with you waiting and expecting and counting the days. No, it won't take me long to get on my feet."

"Dear, if I wouldn't let the country get myself—do you think I'd let it get you?" she whispered, as he kissed her.

Together they made their way slowly towards the speck of light that marked the distant cabin.

. . . . . .

The south wind shifted north, and the soft rains of autumn chilled first, then froze to cutting sleet. Gradually the snow from the peaks crept down over the foothills, filling the hollows, levelling the hills till the landscape was but an even blur of white. The silver forest shook out an icy garment, that caught and held trembling the light in shimmering penumbra against the sun. Behind the little cabin near the mine, the mountains magnified themselves in the crystal of the air, merging with heaven, glacial, magnetic and bitterly superb. In the canyon, the river, sheathed and muffled in its bed, snored grumblingly, like some hibernating demon. Silence, so profound as to rival the very solemnity of the unceasing pageant of day and night, permeated the frigid ether, sat on the frosty fastnesses, spinning at the web of eternity. It was winter—in the mountains—winter, with the mink and the marten leaving queer trails across the sheeted earth—the lynx screaming from the rocky caves and the wolves howling dismally.

In the cabin, the woman's face was whiter now, and on it rested the seal of isolation, of a loneliness that was of the soul and mind and heart, and of a fear that comes from the quiet of far-off places. Unbidden it had come, unbidden it rested there, the stamp of the silence.

"It's one thing to send the man you love away," she whispered with trembling lips into the soft sweet neck of her baby, "and it's quite another to have him gone, and have to live without."

At times a hunter or trapper would come out of the forest depths, on snowshoes or skis, and glimpse the smoke of her cabin. Then there would be a little flurry of cooking, and an exchange of venison or bear meat for coffee and cookies. Occasionally, Old Man Warder, a pocket miner from across the ridge, tramped over to replenish her woodpile. During his visits the children herded noisily about him. And when he left they hung shrieking to his boot-straps until their mother called them off. Then he would be gone. And Silence would take up the thread again, and resume her spinning at the web of eternity.

It was on a night in mid-winter; the woman sat by her kitchen-stove, on the floor beside her the tub in which the weekly ablutions to her brood had just been administered. She was weary, and welcomed rather the physical fatigue that tugged at her back. It meant instant sleep on retiring, and a blessed release from the haunting fears that tormented her waking hours. She rose, and emptied the soapy water at the door. As a child recoils at the dark, so she shrank from the dead quiet that met her, and slammed and bolted the door, hurriedly. Then she leaned against it, breathing hard, listening. There was no sound. She returned to the chair by the stove and held shaking hands out gratefully to the warmth.

Then from the door sounded a low tapping.

She sat rigidly erect, her hands still stiffly extended toward the stove. And the low tapping came again. The shot-gun stood behind the door; she reached quickly for it and locked her fingers about the breech. Again the insistent tapping came. It would scarcely be Old Man Warder. He had visited them only a few days before. Moreover, he always came in early morning, and heralded his coming from afar by a tuneless whistle. It might be a hunter or trapper, come to ask direction. But why this panic, this nameless terror that chilled her blood and raced the beat of her heart?

She threw the bolt back and flung open the door. A man staggered into the room and dropped into the chair she had just vacated. He seemed not to notice the gun. He seemed scarce to note her presence. Some inner emotion gripped him, and rendered him oblivious to all other things. He sat there, eyes rolling horribly, jaw sagging as if already dead. The hands he twisted together about his knee were blue with cold, but he did not hold them to the fire. Under his thick clothing his frame appeared to have shrunken rib to rib, chest against spine.

He coughed hollowly. "I'm Cole McCrew," he mumbled, absently, then stopped, searching his mind for missing details. Presently he went on: "I live up the canyon—fourteen miles. I come to tell you—something."

The woman kept her eyes on him as she backed into the room where her children slept. She groped for a chair, found and dragged it into the kitchen, closing the door between. She placed the chair before the door and seated herself, facing the visitor.

"I come to tell you something," he reiterated. Then he turned to her a face that twitched like a grimacing shadow.

"I want to tell you, so you'll see to the—remains."

She felt the nerves at the roots of her hair coil and creep like snakes; her fingers about the gun tightened their clasp. The man sat in a huddled heap by the stove, his body slacked together like a crumbling ruin, his hands clasping and unclasping his knee He did not look the man to have done murder—and yet, the atmosphere of some sickening deed seemed to emanate from him.

The woman nerved herself and leaning forward threw her whole strength into the gaze she levelled upon him. "Remains—what remains—whose, and where?" He shrank back, his collapsed body tumbling away from her. Only his eyes ceased rolling in their sockets and the twitching face grew still.

"There ain't any remains—yet," he whined petulantly. "I come to tell you—and now you won't listen."

He subsided again into himself.

"Yes—I'll listen. Tell me quick—whatever you came to tell." The insistence and impatience of the shrew was in her tone, and under it the man squirmed uneasily.

"Well, I'm a-goin' to, ain't I?" he whimpered. "Goin' to tell you about Nellie. Listen! Nellie"—he turned and peered suddenly into the dark corner behind him, and lowered his voice to a whisper—"Nellie's been dead—ten years. I was goin' to marry her." He stopped, listening to something that the woman heard naught of. Presently he went on with an odd abstraction: "'Course we loved each other—mighty. I used to be a sailor—promised to give it up for her—went on a last cruise, we was goin' to be married when I came back—and when I came back she was dead. She'd had her clothes all ready, an' she left a note a-sayin' she was sorry. Didn't seem nothin' mattered after that, so I come to the woods. Couldn't bear the sea no more—anyhow, I'd promised her to give it up. An' Nellie knew. The first anniversary of the day she died, she came to my cabin door and smiled at me. Most folks would a-thought it was a deer nibbling my pot-tops, but I knew it was Nellie, and she thanked me and loved me with her eyes. Then, next year, 'twas a partridge-hen—and one time like a cotton-tail—and once like a she-bear. I caught a trout once—and when I went to pull the hook outer its mouth—I seen Nellie lookin' out of its eyes. After that, got so's I was afraid to shoot anything, for fear I'd harm Nellie. I took to livin' on bacon from the store—couldn't be comfortable eatin' the wood-critters.

"She comes once a year, regular—in winter, always—when it's cold and still-like. She come today—that's why I'm here.

"I was readin' an old newspaper, an' I had the kettle on the stove, singin' so's to break the silence. I'd read the newspaper every day for a month—but old readin' 's better sometimes than new thinkin'. Well—I was readin' when I heard a funny sound—an' it worn't the kettle boilin' but something that buzzed an' hummed close around my head. I starts to read mighty fast and turned the paper a lot, rattlin' of it an' pretendin' I didn't hear. Pretty soon along comes a fly an' lights on the paper. An' I was scared 'cause it ain't the right time o' year fer flies—with the world froze stiff to the rim. It h'ists itself in the air an' circles about my head, buzzin' in a familiar sort o' hum. I knew that hum—so—when it come back to the paper, I just holds it still an' listens and looks at it crawling 'round. For then I knowed it was Nellie—flusterin' and a-fussin' with the cold. I talks to her—but she don't answer none, and when I reaches out my hand to touch her she flies away and don't come back till I'm quiet.

"I begs her to talk—just a little—tell me how's

Plain Living Gives a Nation Strength—Save.

A Rose Enchanted

A Fairy Story For All Ages

By VIRNA SHEARD,
Author of "The King's Opal," "The Queen's Tear-Bottle," etc.

ILLUSTRATED BY NORMAN PRICE.

IT was old Betty of the flower market who told me this story—old Betty with her crinkly white hair, and her winter-apple face; her red Connemara cloak and cap with the flappidy white ruffles.

Betty said it was her grannie she got the story from; and her grannie got it from her grannie, and so on back and back to the very King and rose it is all about. He was an Irish King Betty said. For there were kings in Ireland in those days and fairies and grey elves and little people who had no name, but lived under the black thorn bushes, mostly.

I asked Betty if the King in the story was Brian Boru. This seemed to worry her a little, so I hastily withdrew the question, and said it did not matter. But she said, "Sure, and it does matther mavourneen, an' it might have been Brian—I dunno. It was just one of them ennyway that lived in them ould foreign days whin there was fairies around thick as daisies in the grass—fer those that had eyes to see them.—Ay, fairies, an' warlocks an' little green min an' the rest av thim! An' the things happened as I'm telling ye—though it ain't jest aisy to give names an' dates.—So kape whist an' listen—or I'll be tellin' ye no more!"

And this is the story, though I couldn't write into it the beautiful brogue of old Betty, nor her "nods and becks and wreathed smiles" as the tale unwound bit by bit—business allowing—there under her big umbrella beside her flower stall in the market.

Part I.

Now there are three kinds of fairies—according to old Betty—just as there are three kinds of people.

Firstly—those who are almost perfectly good. Secondly—those who are almost quite bad; and thirdly—those who are like "the little girl who had the little curl," and possess characters composed of a fascinating mixture of good and bad.

The fairy princess, Jewelette, of Betty's story, was like that little girl. Sometimes she was good and sometimes she was horrid.

The fairy king, her father, and the fairy queen, her mother, never admitted that she had been spoiled by their own over-indulgence to her whims and their doting admiration; they simply said that she was made that way.

But in their hearts they were often troubled over the princess, for they themselves were in the almost perfect class, and would fain have had her there also.

To them a sense of duty was not as O. Henry says, "that dull, leaden, soul-depressing sensation it is to so many of us." Far from it. To this fairy king and queen it was an uplifting and exhilarating feeling, and they always joyously hastened to perform whatever it dictated—unless it happened to suggest that they correct the princess.

With their little daughter, however, a sense of duty did not seem to count at all.

While she did the things she liked to do with delightful zest and eagerness—no matter how difficult they might be, the things she did not like to do she simply didn't do, to the consternation of all and sundry.

Yet even fairies have to learn to do the thousand and one things that fairies alone can do. They do not arrive in fairy-land a finished product of knowledge and attainment. Even there, there is no royal road to learning. The royal roads are all left to the bees and butterflies and beetles and their like, whom God has gifted in some mysterious way, so they are able to perform the tasks set them just as well the day they come as the day they go. But the bees make honey now as they made it in the days of Job. They apparently have added nothing to their knowledge; and the butterflies and beetles and their brethren the ants do the very same things over and over in the very same old way they did them in the Garden of Eden. It is as if they had attained perfection too soon, and too easily. So, all things considered, both fairies and people should be content to leave the royal roads to them, and continue to struggle happily along the upward paths that lead to the new and beautiful.

One way and another the princess Jewelette managed to learn a good many things, yet she grew up at her father's court like a wild rose "set round with wilful little thorns."

She was so lovely to look at, and so merry withal —(when things went right)—that the fairies of every rank and age were attracted to her as flowers to the sun. But her moods were variable as the wind—her temper set aflame with a word, and to be near her was like being out in April weather,—one hour might be sunny, and on the next none could say where the lightning would strike or the rain fall.

The fairy folk far and near gossiped about the future of the Princess Jewelette and agreed that the king and queen were to blame for having spoiled her originally sweet nature.

With her to wish for, was to have, and that is the best receipt in the universe, the fairies said, to create a selfish spirit.

And the little princess was selfish, horribly selfish, as well as imperious and haughty at times.

She desired the best of everything for hers ", first and last. As a rule this was conceded to her naturally, and then all was merry as a May-day. But on those occasions when she was expected to take a second-best—whatever form that second-best happened to take—she would turn suddenly into a little fury, and vent her rage on the unoffending fairies nearest at hand.

These deplorable outbursts of temper, roused often by some trivial cause, such as gaining only second prize in a game—or having to give up her place near the throne to s me royal visitor—and things of that kind, were most upsetting to the peace-loving courtiers, and they made way more and more for her, and tried to smooth out all the crumpled rose-leaves that lay in her path.

Now, when they all played games in the fairy ring the little princess was always proclaimed winner. No one's rose-berry ball ever came through the last bent grass hoop and hit the tall mullein stalk, in their games of croquet, before her rose-berry ball. No fairy ever swam round the moon-lit lily pond and caught the tame silver-fish until she had accomplished this feat. No one ever found the green and gold elf—who was so like in color to the green and gold mustard plants he could hide among them for hours—until the princess had found him, though all held that the elf helped her, by joggling the plant he was under.

No, it was not in a few things the Princess Jewelette wanted to come first; it was in everything.

It is not easy to be the most alluring, the most clever, the most accomplished, the most beautiful and the most all-round successful person at any court, but little by little all these advantages were conceded to the princess as by general consent, and therefore things ran smoothly except on rare occasions when some fairy, whose spirit was not equal to the strain, ventured a protest.

For in the hearts of them all resentment burned hotly. They longed to occasionally beat the princess at some of their games. They desired greatly to sometimes say something brighter than she did, or to out-distance her in one or another of their sports. But they put out these inward fires as best they could. In the case of the fairy maids-of-honor they were extinguished usually with floods of tears shed in private.

Still their policy did not change, for it brought the greatest good to the greatest number. So they outwardly maintained that no one in all the world could at any time or at any place, or in any way surpass their own Princess Jewelette. This she perfectly agreed to and everything was lovely.

But the King and Queen were no longer happy. With keen insight, they saw that while all the court and the fairies throughout their kingdom gave every homage to their child, in their hearts they did not give her love.

And so, though she got all else out of life that seemed worth having, she missed its very essence of joy.

It was not hard to catch the fleeting expression in the eyes of the little maids-of-honor, when the princess was particularly selfish; nor the half-concealed smiles on the lips of the courtiers when she was unbearably imperious. None of these things escaped the King and Queen any longer, and they were amply grieved by them.

Now in this country lived a very old fairy who was godmother to the Princess Jewelette. Wise was this old fairy, and of vast experience in the ways of her own folk, and also of mortals.

Indeed, she had almost reached the age when she would be made over into something new, for that is what happens to fairies as well as people, old Betty said. As this fairy had been kind and good during her length of sunny days and moonlit nights, she hoped she would be made over into a mortal; but even if she were only to be a perfectly new fairy again, with shining wings and a strong light little body, and a rose-tinted radiant face, she felt she would be content. But to be a fairy and to be old, does not seem consistent—and the Princess Jewelette's godmother was growing tired of it.

So she sent her messenger, a grey elf, to the court of the King and Queen, and he told them she was coming to see them and divide between them (and some odds and ends of friends and relations), the jewels she had gathered together in her long life. For even fairies cannot take jewels across the border of one life and into another.

The royal pair listened to the grey elf with sorrowful faces, for they loved the ancient fairy and were not anxious to have her changed or made over in any way.

The little princess listened to the grey elf also, but her face was not sorrowful. It was only gravely attentive.

"Are you not grieved, my daughter," said His Majesty, "that your noble godmother feels the time is near when she will depart from us, only to return in some form we perchance may not recognize?"

The Princess Jewelette looked up with unshadowed eyes.

"Indeed, my father," she replied, softly. "I think she is very old and tired. She does not care to dance in the rings, and it is a long time since she floated across the lily pond. Now she only dips in the water at the edge, and then her attendants wrap her about closely and carry her away. I do not think she flies any more over the golden mustard fields,—they dazzle her eyes. All the color and strength has gone from her wings, and they are no longer lovely to look at. I think she is very old and tired, my father."

"That is true," said the King. "But what then? Are there not many to wait upon her and do her bidding? Where is there another with her wisdom and knowledge both of our land and the land of mortals? Where another so patient and gentle withal? The older she grows, the sweeter she becomes to my mind, and in her lovely eyes is the light that time cannot dim. There is much that you might learn of her, my little daughter, before you wed some gallant prince and leave us."

"She is very old," repeated the princess again. "What is there left for her to enjoy? I can think of nothing."

The King turned to the Queen with a swift glance. Their eyes met and she answered his look.

"There is Love," he said. The princess smiled absently, as not noticing any rebuke.

"To me it only seems wondrous sad to be so ancient," she remarked with a little sigh.

"Peradventure it would be, my dear, if one remained forever so," said her mother. "But with the God-of-All-Things there is no old age. There is only change. It is so great a mystery, this law of change; but it is a law for all alike. Yet in our own hearts is the power to make all change beautiful."

The little princess threw out her hands in protest.

"I do not understand a word you say, mother mine," she exclaimed. "Nor do I want to change in face or form or heart! If you loved me, you would not speak of such things." Running to the Queen she lifted her lovely face to be kissed, though she frowned as might a spoiled child.

The Queen caressed her and sighed.

"You are too young, methinks, to understand, sweetheart," she murmured. "Indeed, we would not desire you otherwise in face or form—only—only—"

(Continued on following page.)

A Rose Enchanted

(*Continued from preceding page.*)

"Only what?" questioned the princess, quite radiant again.

"Only sometimes we would have you a trifle kinder, sweetheart, or more thoughtful of others," her mother answered. 'But look! Look! Yonder comes your godmother and her attendants! Truly she is very feeble—so hasten to meet her my child! Hasten!"

The princess clapped her hands. "See mother mine!" she cried. "O see the dear grey elves bearing the jewel-box! I know it well. I think my godmother will divide her jewels to-day or the grey elves would not have brought them. I long to see them—the wonderful, wonderful jewels!"

Fluttering her silvery wings, the little princess fled across the garden.

Her godmother walked totteringly and by the aid of a tall ebony cane. Now and again she paused and leaned on it and then her little court of attendants awaited her pleasure.

They were all afoot, having left their coaches harnessed to green grass-hoppers, without the garden wall.

The ancient fairy wore a short quilted petticoat and scarlet cloak, beneath which were folded her weary wings. Upon her head was a white ruffled cap, and upon that a high black steeple hat.

Most of her following were grey elves, and they, too, looked old as grey warped twigs or the lichen on weather-beaten trees.

Six of them carried a black box studded with silver nails, and the weight of it bore them down.

The little princess alighted beside her godmother and caught her face that was like old carven ivory, between her two soft young hands.

"Dear Godmother," she exclaimed. "Now this is kind! But you are very tired—you should not have made this effort to come and see us! We could have gone to you so easily."

"True," said the ancient one, shaking her head. "But you do not often come, my dear, and I could not wait longer. I near my end. The end of all this,—" she finished vaguely, lifting her ebony cane and sweeping it around with a trembling arm. "So at last I said I would come myself and see you, and also divide my jewels among those here who are dear to me."

The grey elves tugged at the black box and the little princess helped the ancient fairy onward. The King and Queen came now to meet them, and all stopped beneath the shadow of a great tree.

Queer green twisted chairs were scattered about. A sun dial stood near pointing its finger eternally to the hours, and a fountain sent its rainbow spray high into the blue air. Below the terraced garden a lake sparkled as sharply as beaten silver in the late afternoon sun, and three black swans swam slowly around it, and then slowly around again.

The ancient one was given the seat of honor beneath the shadowy tree, and the King and Queen, the Princess Jewelette and all the fairies of the court, gathered near her, while the grey elves sat cross-legged on the grass and watched,—which is what the grey elves always do when there is anything to watch.

After all had been served with nectar and ambrosia and honey and little white rolls, and when all the pleasant gossip of the court had been talked over, the ancient one lifted her ebony stick and beckoned to the grey elves who guarded the black box.

"Bring hither my treasure-chest!" she commanded in her quavering voice. "Bring it hither, and undo the lock. Prithee—be nimble!"

The grey elves did her bidding swiftly and the black cover of the silver-studded box was lifted.

All the fairies, even the King and Queen and Princess Jewelette, gave little cries of wonder and delight, for it was as if the sunbeams and moonbeams and dew-drops of a thousand years had been imprisoned in the black box and crystallized there into jems of flawless beauty.

And there were pearls that only fairies of the sea can find—pearls tinted like the white mist of dawn when the sun first shines through it,—and there were opals iridescent and mysterious—the wonder stones of the world. But strangest of all the jewels was a string of moonstones that wound in and out among the others, gleaming softly as moonlight on snow. For well they all knew that this string of moonstones held a magic none of the other jewels possessed, and brought to its wearer a charm which drew all hearts to them. Otherwise the necklace was of little value, for moonstones may be picked up on the tropical seashore on any quiet night. The ancient one lifted the jewels out, each lovely ornament by itself, and placed them upon a low table by her side. At last only the string of moonstones remained in the bottom of the box alone. There it shone faintly as though it were overlooked and forgotten.

The little princess gave one swift glance at the jewel-laden table, then turned and gazed down into the black box, the pink coming and going in her bewitching face, and her blue eyes growing dark as purple pansies.

After that one swift glance, she did not look at the table again,—though none seemed to notice this.

With trembling hands her godmother arranged the jewels to her liking, while all the court watched in silence.

"Then, I implore you, give me the moonstones."

"My dear ones," she said at last, "the time has come for me to set my affairs in order, for soon—very soon—I depart. Only the God-of-All-Things knows whither I go or how I shall return. These," her old hands fluttering towards the gems, "I will need no more. Therefore, it is my pleasure to divide them among those I love.

"First, O blessed Queen—take what you desire from those here beside me. Then His Royal Highness is to choose—then my god-daughter. All the maids-of-honor are my friends, they are to choose next. Ay! All are to choose what they will except the Lady Mayblossom, whose grandmother was my dearest friend. For her I have chosen my own gift."

The Lady Mayblossom, who was sweet as her name, crossed the lawn and stood beside the ancient one. Her eyes were misty with tears, for she dearly loved the fairy godmother.

A little tremor of expectancy now ran through the waiting group, and the grey elves who sat cross-legged on the grass and watched, bent forward, pricked up their pointed ears and listened also. But they made no sound, for the grey elves are dumb.

"Approach, dear Queen!" quavered the ancient one, "and take what you will from among my jewels!"

The Queen stepped softly forward, bent her head and kissed the faded face of the old fairy.

"Why," she said, "an you desire to have it, I will, dear godmother—though it hurts my heart to do so. Indeed, and truly I will love whatever you give me, in that it has belonged to you—and I will guard it well." Then lightly, and as though the choice were of small moment, she chose a collar of pearls, and bowing again, withdrew.

The King then came forward smiling as though he would humor the fairy godmother in her whim.

From the table he took a ring of chased gold. It was heavy and unlovely—but it was a wishing-ring, and the King remembered hearing that one wish still remained within its magic power.

The ancient one smiled back at him, then slipped the ring on his finger herself.

"Wish wisely, dear friend!" she counselled. "Seven wishes had the ring to give, and six are gone. Not one has brought joy. Look you! I also still wear upon this palsied hand a wishing-ring given me long ago. He who gave it bade me not to part with it. Three wishes has it had to give. Two have I used, and they have brought me naught but grief. The third remains, but alas! I fear to use it. Therefore, with the ring you have chosen, wish wisely, dear friend. Wish wisely!"

The fairy king laughed and bent to kiss her hand.

"Peradventure I, too, shall fear to wish," he said. "But should I brave it out, I will remember your words, O kind one!"

Then the little princess drew near, her starry eyes shining and her face dimpling with smiles.

"Choose, my love!" said her godmother. "The most beautiful of my jewels are still here."

The princess caught her breath quickly and clasped her hands together. She glanced once again at the glittering array on the table, then turned to the open black box at the ancient one's feet, and without hesitation pointed into it with one rosy finger.

"I would have the string of moonstones, dear godmother," she said.

The old fairy rose from her chair slowly and steadied herself by the ebony cane. Her face changed from its tender serenity to a sternness that became terrifying.

"Perchance I did not hear aright," she answered, after a moment's silence. "But if so, then hark ye! The moonstones are not for you, my child. Choose from the gems upon the table!"

The little princess opened her pansy dark eyes in wide astonishment, and drew herself up to her full height, with a certain gesture of disdain the fairy people of the court knew well.

"Not for me, dear godmother?" she replied with cold gentleness. "Then this being so, I decline your other jewels. But I pray you answer me of your graciousness—do you yourself wear the necklace of moonstones into that new country of change whither you journey soon?"

"Nay, verily!" returned the ancient one. "To fairy-land we come without jewels, and we leave it without them."

The princess nodded assent, and her face lost its color and grew white as snow.

"Then I implore you—give me the moonstones," she requested softly.

Her godmother leaned towards her, her hands folded on the crotch of the ebony cane.

"Little princess," she said, "of all my gems, I love the moonstones best, though they are of small worth save for the charm they bear. Also, of all my friends, I loved best the grandmother of the Lady Mayblossom. For this reason—and others I care not to explain—I give the string of moonstones to the Lady Mayblossom."

Bending down, she lifted the necklace from the black box, and turning to the maid-of-honor who stood beside her, frightened, and as though ready to fly, the old fairy reached up and clasped the

The Husking Bee At Maxwellton

Which Decided The Location of A Church and Caused Two Old Fashioned Courtships.

By JEAN BLEWETT.

Illustrated by E. J. DINSMORE.

"It's all over," says Amy, giving me a vicious hug. "The church goes just where the old one did in the valley, and Drusilla marries the man who loves her."

AUNT ATHOL has told us so much about her beloved Maxwellton neighborhood that we begin to fear she has come to the end of her chronicles. But not so. The night the wood fire for the first time this autumn, crackles gleefully in the wide old fashioned grate she draws forward her rocking chair, takes up her knitting—the last of the two hundred and fiftieth pair her hands have turned out for the boys at the front—and there is that in her face which tells us she has a story ready. All she needs is the coaxing we are quite willing to supply.

"How would you like to hear about a husking bee?" she asks, and searches our faces with her shrewd eyes.

"It hasn't a romantic sound," comes in dubious tones from sweet sixteen on the hearth rug.

"This particular husking bee settled a church quarrel, and, incidentally, the love affairs of four persons!

. . . . . .

It seems only yesterday that Tracey came, stalking in as Drusilla was getting supper—an extra good supper on account of young Widow Darling being with us.

"The visitor has come," says he, addressing himself to Drusilla, and giving the rest of us a careless nod.

"You mean the man who belongs," speaks up Amy Darling, who is so pretty nobody minds her pert ways—unless it is Tracey, She surely seems to have the faculty of ruffling his feathers. Tracey, mind you, is nice-mannered as you'll find, country born and bred, but well educated. Poor, like all the Traceys and lately so touchy of temper I hate to see him heading for our house. He answers Amy Darling without taking his eyes off Drusilla, which is the most aggravating rudeness a woman can endure.

"I said visitor," he persists—"spell it with a capital if you like."

"Jealous old thing!" her laugh is so soft and merry it makes you forget she's grown up, and accountable for the outlandish things she says. "You're afraid the first thing that handsome cousin of yours will do after his long absence is to fall in love with Drusilla."

When I see a big man angry with a little woman, especially a blue eyed little woman, I'm always sorry for him. He is bound to get the worst of it.

"You say too much," he tells her, glaring at her.

"See too much, you mean," she flings back at him quick as a flash.

"Dear me! Didn't we have enough of war without you two fighting continually?" Drusilla wants to know. "I wish you wouldn't flare up at nothing at all, Tracey," she goes on, buttering one toasted muffin after another and putting them on the table. "Every time Amy comes for a nice little time with us you drop in and make yourself disagreeable. Ask her pardon like a good boy—and draw the chairs up."

"I don't want her pardon," he fumes; "all I—"

"He has it anyway," laughs Amy. "He can't help his temper; it was wished on him."

"Kiss and make up like good children," goes on Drusilla in that nice drawly voice of hers, and with that Tracey looks at Amy, Amy looks out of the window, and both their faces get red. Properly ashamed of their bad manners, I suppose.

"I'm to blame," when Amy pretends to be meek I always scent mischief. "I've an evil disposition and can't help twitting on facts—when there are facts to twit on." Tracey says a bad word under his breath, but not so far under that I do not catch it. And that boy had as good a mother as ever lived! When I tell Drusilla about it later she only laughs and says: "Oh, it's just their fun! They don't mean anything!" I let it go at that. Being the little old maid of the house, with nothing much to do but knit and look on, I see heaps more than busy Drusilla does.

While Tracey is still glaring at Amy, and the girl at the grate toasting the very last muffin, who comes sauntering up the path and in at the side door—side door, mind you—but the Visitor. He shakes hands with me first, telling me I haven't changed an atom in dear knows how long.

"Neither have you, Amy Rohan—I beg pardon, Mrs. Darling—unless to grow prettier." Then he walks on to the fireplace.. "Hello, neighbor!" says he, laughing down at Drusilla. "You're the changeling. Where's the braid that hung down your back, the braid you decked with bows? Now that I get a good look at you, I don't believe you're you at all."

"You haven't set eyes on me for ten years," she reminds him, and puts on an extra plate and cup in her slow, quiet fashion; "that's a long time."

"I was home before starting for South America, six years ago," he argues.

"But I wasn't," says she. "I was studying music in Toronto, a good fifty miles away."

"Do you mean to tell me I was fool enough to go off without hunting you up? I was so full of business—at thirty a chap is sure there's nothing under heaven so important as making a fortune. Here's Tracey so full of work he refuses point blank to go shooting to-morrow. He'll be older and wiser some day. I'm going to sit by Auntie. Serve us first, Drusilla. Age should be respected—what?"

It is pleasant to have him round again. He is a good talker—a good looker, too, in spite of the fact that his bushy hair is white as wool. Drusilla reminds me later that all the Murrays turn white under thirty. He doesn't exactly make eyes at Drusilla, but he looks at her often enough and long enough to make poor Tracey scowl, and Amy Darling smile. You never saw two people with so much to talk about. She's read volumes on South America, and he—well, when a man has been five years in a strange country, he can tell lots of queer yarns without any danger of being contradicted. Like the poet's Travelled Parson, he sets sail for other shores, toting Drusilla along, or rather towing her behind, leaving the rest all gaping after them. I never notice how put out Tracey is till Amy begins to wave her handkerchief and call: "Good-bye friends! Bon voyage! Let us know when you land!"

Everyone laughs at her sauciness, that is, everyone but Tracey, who looks as if his supper disagreed with him. By and by he goes off home, hardly saying a civil good-night to any of us.

This is the beginning of lively times at our house. With Tracey as good as engaged to Drusilla, it is only natural he should be around a lot, though I must say he doesn't get much ahead of Bob Murray. We're expecting the latter to return to Montreal, where he's the head of a big grain business, but he seems in no hurry; says he wants to see a country autumn once more, when the chestnut burrs are opening and the maples on parade.

"I believe Tracey's jealous," I tell Drusilla, who only smiles. I tell the same thing to Amy, who doesn't smile—no, indeed—but flies off in a way that takes my breath.

"Of course, he is," she flames. "Any man proud as Lucifer and poor as he is, and always will be on that worn-out old hundred acres the Traceys have held for three generations, can't help being jealous. Drusilla is a catch—money to burn, and a lovely dear besides," she ends up with a sob.

"You don't think he'd marry for money, do you?" I ask, quite scared. "It seems such a low-down thing to—"

"And Druse with a complexion of peaches and cream! Oh, don't be silly, Aunt Athol!" she breaks in as cranky as you please. But right off kisses me and begs my pardon. She's a lovable little thing, in spite of her tantrums. She seems to sympathize with Tracey, but listen as I may—and I do listen—I never hear her give him a decent word.

However, I've not much time or thought to give to lovers' quarrels, jealousies and such foolishness these days. Maxwellton has a row on, a positive feud. The cause, I blush to say it—at least, I would blush only that I know I'm on the right side—is the new church. The old one was so badly damaged by lightning last summer it had to be torn down. Had served its day, anyway. The question is, shall the new one stand on Hardy's hill or in the hollow where the old one stood?

On the hill, declares the Hardy faction, which is composed principally of young folks. Naturally, we older and wiser folk aren't going to be dictated to by these hot-headed youngsters. In the valley the old church stood, and the old spot is full of tender associations, besides having the advantage in point of beauty.

The excitement of the Hardy crowd grows higher, and the rest of us are feeling like the Covenanters and martyrs of old, being harried and driven from the spot we love to worship in. You know how it is in a country neighborhood, where the church is about all people have to quarrel over. Every last one takes sides in the matter. The trustees call a meeting of the men, and the minister calls a meeting of the women—at least, he calls a prayer-meeting, which is the same thing. Also, he preaches a lovely sermon on peace and kindness, which those who need pass along to the rest of us. If anyone told me that friends of a lifetime would act like they do, I wouldn't credit it. And over a church!

A committee, made up of three men from each party, meets to talk the matter over calmly, by way of arriving at a peaceful solution of things. Peaceful! The meeting ends with the dear old minister feeling obliged to call a trustee "a stumbling block," and young Hardy telling the valley men he would fight them singly or all at once, if they weren't so blamed old and childish. Think of it!

Tracey is head man with the hill people, and has more to say than becomes him. He and I are none too friendly these days, though he still continues to court Drusilla in his moody way. Mostly I absent myself when he comes to the house.

Things get worse instead of better. Mr. Harper threatens to withdraw his subscription if the new church is built on the hill. So does Richard Hoidge; so do the Letson brothers and several more. This is at a public gathering, and Lawyer Sayers stands up and reminds them that nothing was said about hill or valley in the "promise to pay" notes when they affixed their signatures, and they'll have to pay. "We'll go to law," they threaten, and we

(Continued on following page.)

The Husking Bee At Maxwellton

(Continued from preceding page.)

feel there is trouble ahead, the others being so stubborn, and we so determined to uphold our principles.

"It'll end up with us not having a church at all," whimpers Miss Reid. "For land's sake, let 'em put it on the hill—anywhere at all, so long as we're not left heathens."

Right here a lull occurs, and, gazing 'round to find the reason, I see it is the Visitor. He is a beautiful speaker, and like most quiet men, not a bit bashful once he gets started. There were those among us (Maxwellton has a few Pharisees as well as other places) who had a lot to say about this last one of the Murrays, hinting he was next door to an infidel, but when he is through, they know better. He begins by telling how near the old home and the old church keep to the heart of a fellow who's out in the world, and goes on to remind them of the neighborliness which has prevailed ever since the first log house went up on the Squire farm in the valley, and the mate to it on the Maxwell farm up the hill, and how this same neighborliness has been left as a sort of sacred trust to us, along with the good name of the place.

Most of the folks are looking softened and a few 'shamed, but Tracey faces his cousin, spiteful as you please, and flings at him:

"We don't need any stranger's interference. You 'tend to your affairs, Bob Murray, and we'll 'tend to ours."

"Listen to me," says I to Amy Darling, on my left. "I cast that evil-tempered Tracey out of my heart, and—"

"Oh, what's the use of doing that," she interrupts with a queer break in her voice, "when he will be back in before you know it?"

Without letting on to hear the interruption, Bob Murray draws a picture of Maxwellton's first church meeting; of himself, a little lad between his father's knees, listening to the planning and praying (we've clean overlooked the praying at this gathering, the minister being absent, and nobody else in the humor); the sayings and doings of men and of women related to a lot of us, and loved by all of us; things—tender, heavenly things—said; worth-while things done; and how they fought the good fight and kept the faith. Then his big, earnest voice breaks in the lines:

"And with the morn those angel faces smile
Which I have loved long since and lost awhile."

Women are crying openly, and men on the sly. Young Hardy doesn't lift his head for awhile. His father was at that first meeting, and—

"There was a row that time," calls out Tracey, who seems possessed. "Half the people wanted the church to be built on the hill instead of—"

"So they did," breaks in his cousin gently, "and I'm going to ask a man we all look up to and love to tell us how they settled the matter in the good old days—Richard Maxwell."

Richard gets to his feet with difficulty, being in his eightieth year, and everybody begins to clap like mad. The emotion kind of sweeps us away from the fact that a quarrel is in progress. He turns his gentle old face on us, and we see there's grief in it and love in it.

"When I hear our people talk of going to law, I feel I have lived too long," he begins, and Miss Reid's whimper grows to a bleat. "We pioneers had our differences of opinion on this same matter, but we were honest men, and settled it in honest fashion. It was in the fall of the year, just such a fall as this.. Over on the Laidlaw place a ten-acre field of corn stood in shock, and the hill people and valley people agreed to hold a husking match, the side winning out to have the deciding voice. The valley people beat us fair and square, and both sides shook hands and went to work. We had no time for bickering and bitterness; we had a church to build before winter, and we built it. This has been a peaceful spot, with the blessing of God resting on it." He held up a trembling hand. "May we have that blessing still!" he ended up, as though pronouncing a benediction.

"I notice that the Laidlaw corn is in shock," one of the women remarks meaningly, and in a minute the young people are crying: "Husking match! Husking match!" Our folks catch the fever, too, and "Husking match!" is all we can hear for awhile. Finally it is settled that each faction shall be represented by one man, the winner to name the site of the new church.

"Tracey!" yell the hill people. "We choose Tracey. He's the one to wake you up!" Whereupon ensues a halt in affairs, nobody seeming to care to face the champion corn-husker of Maxwellton.

"Well, I've about forgotten how to work on a farm," speaks up Bob Murray, "and am not so young as I used to be, but," with a grin, "I'll champion the valley side—at least, I'll give Tracey a try."

We're a little dubious. Bob looks too big and easy-going to be much of a hustler—all but Richard Maxwell. "You've a foeman worthy of your steel, Tracey," he exclaims, laughing to himself. "I remember a thing or two about Bob Murray."

The afternoon of the great match arrives, a fair one, with a breeze full to the brim of dried berry bushes, golden rod and all the pungent, pleasant autumn smells which make one's nose smart and eyes water. I'll never forget the yellowness of that day; between the sky, the corn, and the Balm of Gilead trees, the whole world is golden. The committee appointed to run the match is reinforced by the whole neighborhood. The principals are to husk the length of the long field and back. When they are half through the first row our man is behind, but he gains, and by the time they pull down their first shocks on the second row we all realize he hasn't forgotten his early training. My! how he rustles those long ears of yellow Dent out!

"He looks like a boy to-day," I remark to Amy.

"What else is he but a boy?" she snaps, looking at Tracey instead of Bob. "Poor chap!"

When they are half way down the second row Tracey is leading. "Wait," cries Richard Maxwell, "he will show you what he can do."

He does. All at once he gathers speed. There is a perfect whirlwind of corn about him. And he keeps it up, keeps it up! There is no staying with him. He comes up to Tracey, passes, leaves him farther and farther behind. Oh, how excited everyone is! It is too much for me. I slip off home, and shut myself in the back garden with the frosted morning glory vines and wizened asters.

At sundown the gate clicks, and Amy Darling comes in. "It's all over," says she, giving me a real vicious hug. "The church goes just where the old one did in the valley, and Drusilla marries the man who loves her."

"Which of 'em?" I says grimly.

"There's only one, you blind old dear!" she laughs, and makes to hug me again, but I ward her off. "There was another who, thinking money meant more than happiness, tried to make himself believe he loved her, but couldn't, because his heart belonged to somebody else, somebody not half so dear and lovely as our Drusilla."

"Why, you've never used him decent!" I scold.

"I know it," she returns shamefacedly. "You see, I thought so much of him, and he—he—" She breaks off, for the gate clicks again, and enter Drusilla, looking perfectly happy and perfectly lovely, and exclaiming:

"Bob wants your cream biscuits for supper, so please come and get the bake-board out, Aunt Athol. Don't go, Amy."

"I must," she answers with a laugh so sweet the brown sparrows stop quarreling and cock their heads to listen to it; "the vanquished one is coming around to my place for a cup of tea—and condolences."

THE END.

Sparks From The Food Board's Anvil

By ISHBEL M. ROSS,
Educational Division, Canada Food Board.

THE harvest is over. The call for increased production has been answered in right royal fashion by the people of Canada and the hard-working farmer and his wife, as well as the city dwellers who have helped them, can now survey with satisfaction the results of the strenuous days and weeks they put in earlier in the year when they could scarcely see their way clear to the end of the season, with labor short and a greatly increased acreage to handle.

However, their toil has not been in vain. The Canadian harvest is a just matter of pride, and credit is due to all the men, the women and the boys who have had a share in wresting the riches from the soil. It has been the first year of farmerettes for Canada, and they have undoubtedly proved their worth and given their novel occupation a definite status in the Dominion. The farmer regards a farmerette with less suspicion now than he did at the beginning of the year. He knows her to be "all right," tried, tested and not found wanting. Next year she will get a welcome both from the farmer and his wife. But she will get the warmest kind of a welcome if she knows how to milk cows and make butter and cheese. Experience has proved that the farmers, in seeking feminine assistance, ask first of all: "Can she milk cows?"

. . . . . .

Too many mothers look upon milk as a drink, without realizing that it is essentially a food. While down in New Hampshire recently, where the food organization is so excellent that it is renowned throughout the States, Mrs. Jean Muldrew, domestic science expert of the Canada Food Board, came across an interesting experiment which went to prove just how valuable milk is as a food for children.

FOUNDER OF EMPIRE DAY.

Mrs. Clementina Fessenden, founder of Empire Day, a patriotic movement that became nation-wide, died at her home in Hamilton on September 14th.

She was visiting the food centre in one of the larger cities in New Hampshire. On restricted premises a young woman was daily demonstrating the food value of milk and converting it into cottage cheese and cream cheese. In addition, she was distributing literature pertaining to war foods and helping those who went to her for advice. Walking along the street Mrs. Muldrew was suddenly arrested in her progress to speak to Paul, a small child of about eight years.

"I purposely paused to let you see Paul," said her companion. "He is one of our interesting cases. Some time ago I found him late at night on the street, his face all broken out with malnutrition sores. It was easy to place him, as he was a pupil in one of the grades of the school where I teach. I spoke to him, asking him why he was out so late, and finally got him to tell me what food he ate. He was then about seven years old. His breakfast was a cup of strong coffee and a piece of bread, his dinner a cup of tea and some boiled cabbage and at night he ate anything he could find—usually a piece of bread. This was his diet throughout the year. I got him to go home and next morning we took up his case. He was a Russian. We decided he must have milk. One of the teachers offered to supply a pint a day, and the grade teacher offered to see that he drank it.

"In less than a week that child's weight began to increase, and the sores disappeared from his face. He gained one and a half pounds a week and his mental capacity improved. Before long something occurred to take him from school and when he returned to us he had lost in weight six pounds."

Religion In China

By

ALBERT E. S. SMYTHE.

KNOWING that one half of the world is always interested in what the other half believes, the editors of "Canadian Home Journal" have arranged a series of articles descriptive of various religions and beliefs with which Canadians generally are unfamiliar. It is to be distinctly understood that we in no way advocate or endorse any of these—the articles are published for information, not controversy.

RELIGION means such different things to different people that when religion in China is spoken of it is necessary to have some simple definition in mind. Let us say that religion is the way to God and we shall be able to understand it in the Chinese sense and perhaps in the Christian sense also.

For many people religion is a question of names, and this is the difficulty that causes so much separation. In different languages there is naturally a difference of names, but we know that bread does not change its nature by being called *pain* in French, *brod* in German, *pan* in Spanish or *pane* in Italian. The food remains the same. In religion many people have come to think differently and believe that God known by a Hindu or a Chinese or an Objibway name is a different Being, although we know that there is only one God and one Lord. It is true that the ideas of God differ in different ages and nations, but because the idea of God is different in one man's mind from that in another man's mind, it does not follow that there are as many Gods as there are ideas about Him. The Calvinistic idea of God differs considerably from the Arminian idea of God, but students of theology do not consider that there are two different Protestant Christian Gods on that account. Then when it is remembered that God is infinite and man's mind is finite, it will not be wondered at that many different ideas of God have gained recognition in the course of human history. Students of comparative religion are coming to the conclusion that only the ideas upon which men agree about God are of real importance. What is there, then, in the Chinese ideas about God and religion, with which we can agree?

At the Parliament of Religion held at Chicago during the great World's Fair of 1893, Hon Pung Kwang Yu was appointed by the Chinese Imperial Government to represent China. In his statement he said: "One may infer that the laws of nature and the laws of the spiritual world lie beyond the comprehension of all men but those endowed by nature with the spirit of wisdom, and can be understood only by those men whose intellectual gifts are far above the average. Under such circumstances," he went on to say, "any attempt to present before the people questions and problems that are incomprehensible and incapable of demonstration, serv s only to delude them by a crowd of misleading lights and lead them to error and confusion. On the other hand, everybody can understand what is said concerning the duties of life. Even men of the lowest intelligence do not find it difficult to know and to do them. As long as one fulfils the duties of life conscientiously, one has, in fact, followed the path of virtue, holding in his hands the means of securing happiness and keeping back misfortune. What harm is there if such a one has never heard of the laws of nature, or of the laws of the spiritual world, and does not know anything about prayer?"

This is a teaching common to all religions, and often enunciated in both the Old and New Testaments. Confucius, the great sage of China taught, in a note in the "Book of Changes," that "the Master Minds that ruled in ancient times instructed the people how to live in conformity with the laws of nature, and thus won their respect and confidence." The idea is that if one lives right and acts rightly, one shall presently come into possession of the truth. It is the idea set out in the parable of the sheep and the goats (Matthew xxv. 31-46).

"What are the duties of life?" asked the Chinese delegate and answered: "They consist of nothing else than that sovereigns should be humane; subjects loyal; parents loving; children obedient; husbands faithful; wives devoted; elder brothers respectful; friends true to each other. The three superior claims and the five social relations are grounded upon the necessities of nature and fully recognized by all men. The wise and the foolish, the high and the low, are equally bound by these ties. For this reason the intelligent portion of the Chinese people have always ranged themselves among the followers of Confucius, who may be said to have succeeded to the privileges of the ancient priesthood without adopting the practice of the great Teachers of the West in making religious worship the basis of their system of education."

This is a practical philosophy of life, rather than a religion in the ordinary sense, which Confucius propounded, and should not be difficult to understand. It particularly appeals to such an eminently practical people as the Chinese. It does not displace religion in the ceremonial, the devotional, or the mystical sense for those disposed in these directions, and the ancient faith is always available whether in the mystical guidance of Lao-Tze, in the ceremonial and ritual observances of Buddhism, or in the occult knowledge and wisdom that only the few aspire to have or to win.

Are there three religions in China, then?—it may be asked. Not any more than when in Canada, for example, one says a man is a Protestant, an Episcopalian, and an Evolutionist. In some respects these three classifications appear to contradict each other, but many people find no difficulty in reconciling them all in their own experiences, and would be amused if charged with having three religions.

What do the Chinese have to say about God?—will be the next question, and it can only be said that the average Chinaman knows no more about God than the average man one might stop in a street in Canada. One must go to the churches, the colleges, the universities for intellectual discourse on such matters; for the true knowledge and faith in spiritual things it is the few, pious, humble and devout, whether here or in China, who can speak of what they know. The theology of China is very ancient and very elaborate, and its philosophy is no more intelligible to the masses than that of Kant, Spencer, or Bergson.

Correctly to estimate the religion or religions of China it is necessary to understand first of all that the Chinese civilization is the most ancient on earth, and undoubtedly as many students knew it, an offshoot of the great Atlantean civilization which came to an end in the catastrophe of 9564 B.C., subsequent to which China appears to have become a shut-in nation, closed against intercourse with the rest of the world. Poseidonis, as the last remnant of the Atlantean continent is called by Plato which was destroyed at that time, was the source of the civilization of Egypt which also had no period of evolution or development, but sprang into existence as perfect in its beginning as at any later period. The same might be said of the civilization of Yucatan, of Mexico and other central American archaic nations. There was no evolution of those or of China in the modern sense. They were transplanted as the American is a transplantation from Europe. Their religion came along with them and nothing can be or has been added to their most ancient doctrines.

Prof. E. H. Parker declares that the Chinese people had no conception of "revealed religion" at all, and no word for religion; no "regular system of conscience, sin, absolution and so on." The only word for religion that is in use means "teaching" or "doctrine," and the word is applied to the "three teachings," Taoism, Confucianism, Buddhism. It must be evident, however, that if the only work for religion is "teaching," there must have been teachers, and the ancient tradition is very strong on this point. Both Confucius and Lao-Tze declare that they are indebted to what had been taught to their fathers in the old time before them. Prof. Parker says that both these authorities "borrowed almost all their distinctive politico-religious ideas from Kwan-tzs, or from the same source as Kwan-tzs did," a statement which sufficiently covers the ground. These "same sources" are the general sources of all religious tradition, the primeval revelation, or "Secret Doctrine," as it is called, thought by some to belong to central Asia; by others to have been known first in lands that now lie beneath the Pacific or Atlantic Oceans.

In one of the stanzas of the very ancient Book of Dzyan, translated by Madame Blavatsky in her book, "The Secret Doctrine," there occurs this passage: "Behold, oh Lanao! (student) the radiant child of the two, the unparalleled refulgent Glory, Bright Space, Son of Dark Space, who emerges from the depths of the great dark waters. It is Oeaohoo, the Younger . . . (whom thou knowest as Kwan-Shai-Yin). He shines forth as the Sun. He is the blazing Divine Dragon of Wisdom."

Kwan-Shai-Yin is the same that we know as the Christ, whose sign was the serpent or dragon, lifted up in the wilderness. It is stated as a commentary on the text quoted, by Madame Blavatsky, that "Kwan-Shai-Yin is identical with and an equivalent of the Sanscrit Avalokiteshwara." This is the universal Christ, "the Lamb slain from the foundation of the world," of the Book of Revelation, or what is still more familiarly known as The Word of Logos, of the Gospel of St. John. It is only by some sects in China that he is anthropomorphized, or given human form and attributes. In one of these the feminine principle, he became Wwan-Yin, goddess of mercy, called the "Divine Voice." As the "Mother of Mercy and Knowledge" she is called "the triple" of Kwan-Shai-Yin, because in her correlations, metaphysical and cosmical, she is the "Mother, the Wife and the Daughter" of the Logos, just as in the later theological traditions she became "the Father, Son and (the feminine) Holy Ghost." It was only in China and Egypt that Kwan-Yin and Isis were placed on a par with the masculine gods. Perhaps it is necessary to say that these relationships and personalities were regarded by the ancient teachers as great and pure symbols by which to convey the knowledge of the Divine attributes, and so the motherhood of God was recognized in Kwan-Yin by the Chinese as fatherhood was in Kwan-Shai-Yin. "Esotericism," it may be added, "ignores both sexes. Its highest Deity is sexless as it is formless, neither Father nor Mother."

Without a knowledge of this background of the ancient Chinese religion it is impossible to understand the ramifications of later exoteric and ceremonial worship. Avalokiteshwara, which is the Sanscrit name of Him known to the west as The Christ is identical with the Chinese Kwan-Shai-Yin, "the Son who is one with his Father." The first of the thirty-nine articles of the Church of England suggests the "highest Deity" of the Secret Chinese and other teachings, "a Being without body, parts or passions." Kwan-Shai-Yin as the Word is the Maker, fashioner, or modeller of all things, and the Alpha and Omega of manifested Nature. One scripture says of Him, "the great Dragon of Wisdom is born of Fire and Water, and into Fire and Water will be all reabsorbed with Him."

His special birthday or memorial day is celebrated in the second month on the nineteenth day, and that of Maitreya Buddha on the first day of the first month, but the two are one. The explanation is that Kwan-Shai-Yin is expected to come again on earth. "He is expected universally throughout the East to appear as Maitreya Buddha, the last of the Avatars, in the Seventh Race." It is not so difficult to understand all this if we get rid of the idea that different names mean different things. In one of the temples his statue, which would probably be called an idol by some, is crowned with seven dragons, and above there is the inscription Pu-Tsi-K'iun-ling, "the universal Saviour of all living beings."

A joss-house is simply a church or, as the Chinese say, a God house. The word joss is an adaptation of the Portuguese Deos, God, it is said. The ceremonies of the Buddhist temple differ from those of the joss house, just as the Episcopalian and Presbyterian ceremonies differ, but the object is the same. The Confucians frequent the Shinto worship of the joss house where offerings to the "Star of Salvation" and the "Saviour of all living Beings" both in devotion and material gifts are made, and communion is held with the ancestral spirits. This means to some, the inner spiritual or ancestral self of the worshipper, the individual ego that incarnates on earth life after life until its experience and development are complete; by others the spirits of the dead who are attracted to the place of peace by the worship, the incense, the quiet it offers.

"Good fortune," says Yu of the Hsia dynasty, "attends a life ordered according to nature; evil fortune a life ordered against nature, as the shadow attends the body, or the echo the sound." The interference of spirits or other powers of Nature with men is only possible as such interference represents Nature's behests, and is the result of man's own disturbance of the natural equilibrium. A knowledge of Nature and of Nature's laws is only to be had by living in harmony with Nature.

"The Traditions of Tsoh" record that "in ancient times there were persons who were known by their singleness of heart, who were dignified in bearing and upright in life; whose understandings were such as to enable them to get at the inner meaning of things above and things below, whose wisdom shed light far and wide; whose sight was so clear that things appeared to them as if illumined by a strong light, and whose hearing was so acute that they could detect the faintest sound. Upon such the Divine Spirit often descended." Inspired persons of this character were called Chih, if men; Wu, if

DOUGLAS FAIRBANKS LEADS IN CANADAS VICTORY LOAN PICTURE

Story of the Filming of "The Maple Leaf Forever"

Motion pictures have proven to be of such educational value and their uses so unlimited, that one cannot fail to recognize their power and assistance when an educational movement is undertaken.

Is it any wonder that the support of the moving picture industry has been enlisted to help out the next Canadian Victory Loan drive, and to that end Douglas Fairbanks, who is possibly the most popular moving picture star, has been asked to lend his assistance, and is now busy filming a new play entitled "The Maple Leaf Forever."

Douglas Fairbanks, Mary Pickford, Marguerite Clark and many others of equal importance in moving pictures, rendered wonderful assistance to the United States during the last Liberty Loan drive, and it can safely be said that millions of dollars were contributed through their influences, not only from a personal standpoint, speaking to large audiences in various cities throughout the United States, but in films made to show every person the necessity of buying bonds.

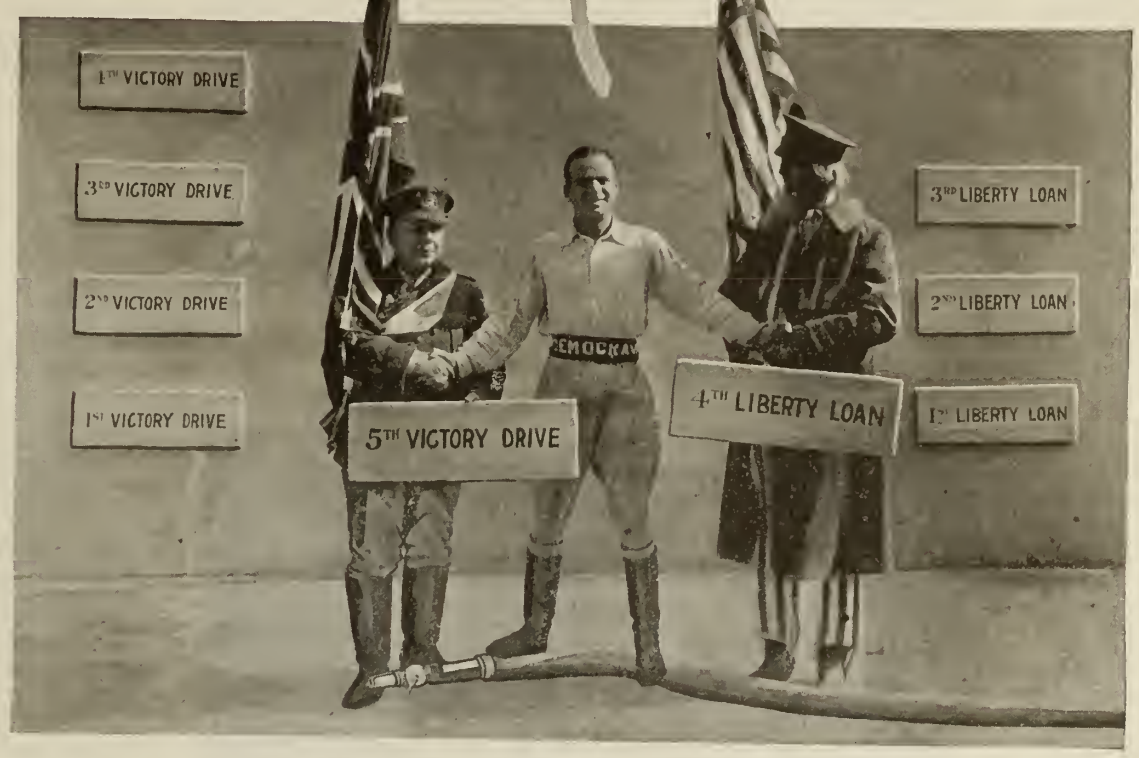
Douglas Fairbanks has always had the kindest of feelings toward Canada, and the Allies, and several times has stated that he was willing to do his bit no matter what it was or when he would be called upon. He has admired the wonderful work that has been done by the Canadian forces at the front and feels that it is as little as he can do to assist through his own line of business or calling to the fullest extent.

The new picture, "The Maple Leaf Forever," is now being filmed at Hollywood, California, the home of Fairbanks, and the moving picture industry. Douglas is also working hard on a new film for use in connection with the next Liberty Loan drive in the United States, and if one could look in upon him at his studio one might see him one minute conversing with John Bull and the next shaking hands with Uncle Sam. It is only another evidence of the wonderful co-operation between Canada and the United States and the length to which American citizens are willing to go to not only assist in matters of interest to the Allies, but directly to Canada and Canadians.

In the "Maple Leaf Forever," as in most moving picture stories much is left to be revealed when the play is seen. The outline of the story is as follows:

Once upon a time when all peoples dwelt in fancied security, Prussianism decided the day had come to destroy National Liberty. The world was too small to hold them both, and either he must fall, or she must die.

Assured by his servant, Propaganda, that the time had come to strike, Prussianism broke into National Liberty's home, plotting murder and arson, while Propaganda watched outside.



Prussianism ran rapidly through the house, and burst into the bedchamber of National Liberty. Stifling her cries for help he strangled and bound her, and then set about burning her home. But Liberty's champion, Democracy, was still to be reckoned with, and as her cry of "help," rang out he heard her, faintly, and although assured by Propaganda that there was nothing the matter, he ran to her assistance.

From the lower hall Democracy saw the smoke and flames upstairs, and rushing to the telephone, called the free peoples of the world to come to the aid of National Liberty. Springing up the stairs, he dashed through flames and smoke to save her from destruction. Prussianism, spreading the flames, saw him enter her room, and knowing his purposes would be defeated unless Democracy were killed, locked the doors of the bedchamber to get them both.

Democracy's call to the rest of the world was answered first by Belgium, then France, and soon these countries were fighting the roaring conflagration. Then Great Britain, Italy, Japan, and the other forces of Democracy arrived and were straining their utmost to quench the mounting flames.

Democracy gathered National Liberty in his arms and ran through the burning rooms to the doors. They were locked. Hurling his weight against them, he smashed them from their hinges. Prussianism seeing this, dragged forth from beneath his cloak a bomb of tremendous power, "Submarine Atrocities," and hurled it upon the stairs, down which Democracy had just started with National Liberty, Prussianism ran from the house as the bomb exploded, seeking a place of safety. Democracy and National Liberty retreated into an alcove, only to find the flames roaring at the windows.

(*Continued on page* 68.)

Fairbanks works impartially for the Victory Drive and the Liberty Loan.

The Allies unite in exterminating Prussianism.

Douglas and his "Pal."

Democracy overcomes Prussianism.

In Democracy is safety.

Plain Living Gives a Nation Strength—Save.

The Care of The Eyes

By DR. LAURA S. M. HAMILTON.

If You Value Your Sight, Give The Eyes Reasonable Attention

Intelligent care of the eyes is much more rare than one would suppose in a community of well-informed people such as the average Canadian community generally is expected to be.

Complete or partial blindness, or even defective sight, is such a handicap in practically every walk and occupation of life, that one cannot understand anyone caring to take even a slight risk on the matter.

Yet the most extraordinary risks *are* taken, first with the eyes of babies and children by those who care for them; and later by people themselves, not only by improper use of the eyes, but by the most extraordinary temerity in the buying of glasses, etc., from irresponsible and avaricious dealers.

The eyesight of little children in their helplessness is so frequently irreparably injured by the wanton carelessness, not to say cruelty, of those who are supposed to love and guard them, that one is divided between amazement and indignation at the wicked stupidity of what, as I said before, is supposed to be an intelligent society.

Only a short time ago I entered the house of an acquaintance in the city at a fairly late hour in the evening, to see the electric light in the hall—and it was a strong one—turned on, and beneath it, sleeping in its carriage, an unfortunate baby of less than a year old. The young parents were spending the evening with their friends, and I could hear the mother's careless laughter above me. To the lady whom I had come to visit I said: "So this accounts for the inflamed condition of that poor little soul's eyes, which I have so often noticed!" "Yes," she answered with a little sigh, drawing the hood of the carriage forward to shelter the child, "I have spoken about it often, but it is no use and only makes trouble. She does not think anyone knows anything about babies but herself." Even so, that is the spirit one meets continually, and when the good advice is taken, it is often too late to profit by it.

The fashion of taking babies and little children out visiting in the evenings is far too common, and the idea that because the child can sleep in a brightly lighted room it is therefore all right is quite erroneous. Think how restfully you would sleep if, during those hours when Nature mercifully sends us the soothing darkness, someone were to insist on filling your apartment with a glaring light. There are some of us who would treat such an intruder with short shrift were he thus to encroach on our sleeping hours.

And how frequently one meets with a baby in a carriage, generally so young a babe that it cannot turn itself or make its wants known, lying, possibly carefully tucked up, beneath a very pretty fancy coverlet, on its back, with its poor little eyes turned up to the brilliant blue of the sky or even the pitiless glare of the sun. Now, I ask you to try such a position yourself on a bright spring day, for example, before the sheltering green of the foliage is thick, and see how comfortable it is.

It is generally supposed that myopia, or "short sight," is an inherited malformation of the ball of the eye. Some of the latest authorities, however, contend that this is not the case, but that only the *tendency* to this wrong formation is present in the new-born babe or little child; that, therefore, children of short-sighted parents need not necessarily become short-sighted, unless they are placed in such environment as to cause the eyes to adopt that malformation towards which they have a tendency. On the contrary, if parents bore the fact in mind, such children might be safely carried through the period of growth, and educated to avoid the occupations and amusements that would induce this deformity. For instance, no child of short-sighted parents (or parent) should be allowed to use pencil or pen or in any similar way apply himself to close work before the age of seven years, and such work should be done moderately and under proper conditions only, after that age.

Injury is often caused to the eyes of older babies, from the time they begin noticing things, by the frequent pressing on their attention of pictures, etc., requiring concentration of vision that the eye at that stage of growth is incapable of giving.

Again, the keeping of children up late and having them for lengthened periods of time use their eyes with artificial light is most injurious.

Possibly the very worst form of this last is the "movies." Apart from any consideration of morals whatever, the detrimental effect of the lights, the moving picture, the crowd, and the nervous tension, not only on children's eyes, but on their whole physique, should effectually bar out "movies" from the indulgences (?) of the well-cared-for child.

Children in the country are less likely to suffer from short sight than those of the city, if we take into consideration only that they continually have to use their eyes for long distances, while the city child's range of vision is curtailed by walls and near objects. Also, the city child spends more time indoors at sedentary occupations.

All this on the one hand, while on the other, the schools of the city are well built and the lighting arrangements regulated with the utmost care according to the latest findings of science. Also, he is provided with good artificial light for his evening work or play, and in most cities to-day school nurses carefully report on the condition of the pupils. Contagious diseases, many of which have evil after-results to the eyes, are watched for and isolated with vigilance.

In the country, on the contrary, consideration for the children's eyesight, in putting in the windows of the funny little red brick schoolhouse that, in many cases, was built years ago, has been completely unheard of. The seating, the situation of the blackboard, the lights, the heating, all show as much intelligence in the mind of the builder and architect as the interior arrangements of most kitchens that are not strictly modern.

A woman physician, who examined the children of certain rural communities, told me not six months ago that in a particular hilly district she found scarcely a child of school age that had normal vision. She blamed it on the fact that the light slanted down over the hills, and some particular arrangement should have been made in the windows of the schoolhouses to allow for this. Can you imagine the average country school trustee, as you are acquainted with him, taking any such thing into his consideration?

This same district is one of the most exquisitely beautiful places, not only in the province in which it is situated, but comparing favorably with any similar scenery on the continent—a district where poets and dreamers might find birth, where not only mental but physical health might reach perfection, yet it is poor and unknown, and the majority of its inhabitants have felt only the narrowing effect of its glorious hills. Their eyes, by long custom, have never been opened to the beauty that surrounds and should stimulate them. So much might have been done by the schools of such a district, that has been left undone.

I cannot pass on from this phase of the subject without drawing attention to the fact that teachers and professors in our schools and colleges do not, as a rule, impress their students with the ordinary laws of health, possibly because they themselves are ignorant of them, and among these the care of the eyes should have a prominent place.

Nearly fifty per cent. of actual blindness, according to the latest findings of experts, is caused by the sins of the parents being visited on the children. A large amount of what is called in popular language "sore eyes" comes from the same cause. This also is avoidable, as I tried to show in my last two papers. The Provincial Health Department lately issued a bulletin anent this very subject, giving specific directions as to the care of the eyes of the babe from birth, in order to avoid this infection.

However, one must not put every case of inflamed eyes in the class of venereal infection, for muscular strain or a run-down condition of the general health will also cause reddened, inflamed lids, or even pus on the eyelids.

Any strain of the eyes from any cause whatever is apt to produce symptoms of illness to the lay mind too far removed from the eyes themselves to have any connection with them.

Headaches, almost beyond endurance in their violence, and unaccountable in their origin, accompanied frequently by a nausea that is completely misleading, may be wholly caused by eye strain.

Such a headache is usually worse at night, or after sightseeing or some similar occupation, and the seat of the pain is generally, though not always, across the forehead over the eyes.

The nervous conditions resulting from these headaches and the effects of the remedies used are often harder to combat than the trouble itself.

Such patients frequently have suffered from what they are pleased to term these "sick headaches" for years, and their digestion is spoiled and the general nutriment of their body inhibited by drugs prescribed for symptoms, without taking into consideration the cause of the pain.

Another very serious pitfall for such people is that of becoming "dope fiends" by using remedies for deadening pain, which, owing to their dangerous content, are all the time forging chains about their victim which will hold him in a prison worse than the pain he is seeking to escape.

For this reason, if for no other, if a condition of headache persists, one should never take remedies for that symptom prescribed by officious friends or greedy drug vendors, but should rather consult a good physician at once, and if he or she fail to at once diagnose the cause of the headache, consult a reliable oculist.

Yes, certainly, the latter will charge you five, possibly ten, dollars "for just looking at your eyes" and perhaps giving you a prescription for glasses that will cost ten or fifteen dollars more. And yet, oh, my penurious or perhaps just careful and narrow friend, won't you stop and calculate a moment just what your sight is worth to you? Does twenty-five dollars seem very much compared with the loss of sight?

And just here let me warn you with all the emphasis that I can to go to a regular oculist for that examination, and thence to the optician he recommends.

By a regular oculist I mean a practicing physician of good standing who has made a specialty of eye work, and by optician the man who makes up glasses from the doctor's prescription.

Ignorance regarding these things is so widespread that I want to make myself perfectly clear. People are curiously fearless about tampering with their bodies, and injury to the eyes may be fraught with such dire consequences that one cannot be too specific in warning against quacks.

I could give instances without number illustrating this point. A few will suffice.

A young woman came under my care medically. She was a delicate girl at all times, but, in addition to all her other troubles, had of late had headaches of a severity to completely lay her up for a couple of days at a time, when she would be so ill with all the symptoms of violent poisoning that she would require careful nursing night and day, and be a wreck when the pain and vomiting finally subsided. No remedy did more than alleviate matters. The attacks became more and more frequent. She was dependent on her own exertions for her livelihood, and, of course, could retain no position of any sort under such distressing circumstances.

At her first visit to me I had inquired about her glasses. She always wore them, and then she assured me she had just had them changed, had been to her own oculist, and had paid well for them, and they were quite comfortable! All of which, in politeness and ordinary courtesy, I was forced to give a certain amount of belief to. After watching a couple of her attacks, I became convinced that her eyes were accountable for at least some of the trouble. I told her so, and inquired where she had obtained the glasses she was wearing, to be told the name of a certain *optician,* not *oculist,* who had parlors in connection with a general store, which advertised optical goods at popular prices. I sent her at once to a reliable specialist, a personal friend of my own, who had done much work for me for years. Imagine the poor girl's chagrin when he told her that her glasses were entirely wrong, and of course worse than useless! The store optician was visited, and allowed her something like half the value of the glasses, but that was only because he feared there would be trouble made for him. After wearing the new glasses, the headaches subsided.

Later, I visited my friend the oculist, and in talking the matter over, I asked him how many cases of wrong-fitting glasses of the kind we had just righted he thought he personally had handled. To my horror, he answered promptly, "Oh, about two hundred." and then proceeded to add some details. He said, however, with that fairness which characterizes him, "Of course, sometimes they strike it right, and do good work, but they frequently don't."

The truth of this is that no optician, be he working privately or in connection with some other firm, can handle every case, for the simple reason that he does not know how, and so many cases are complicated that it is not safe to risk his work for a first examination. The difference between an honest man and a fake is that the former will say frankly, "This is out of my province; you must consult a doctor," while the latter will keep on experimenting, or if you are foolish enough to accept them, fit you with glasses at a higher cost for each trial, and let you go away to suffer, providing he has your money in his pocket.

Oddly enough, on the same day as the eye specialist and myself had had our conversation, when I left his house and took a street car, I met thereon a gentleman, an old friend. He belonged to one of the oldest families of Canada, cultured and wealthy. Being filled with indignation at the stories of wrong treatment I had just been listening to, I proceeded to tell him something of this fraud. He listened interestedly, and presently said in a slightly puzzled tone, "Why, my wife has been troubled with her eyes lately, and was going to ———. Where would you advise her to go?" I relate this little incident to show how widespread is the ignorance regarding these things.

Of the people who are so utterly stupid as to send for glasses by mail, or to buy them at bargain counters or cheap sales, there is little to say. Of the same category are those who lend their glasses or wear other people's. They always make me think of the woman for whom I prescribed a medicine for certain pelvic trouble, that helped her, as I had intended it should. Therefore, when her husband got himself wet in digging a drain, she, like Eve, "gave him to taste" of her remedy, and he sent me the message that my medicine was no good. Such fools must needs reap the rewards of their folly.

In all cases where the eyes seem to be in trouble, the one and only remedy available for the ordinary person is bathing them with a solution of boracic acid (not borax), one teaspoonful to a pint of boiled water. This solution should be kept carefully corked in a clean bottle, and a little poured into a saucer when it is needed, and the eyes bathed by means of a little piece of cotton, each one of which is thrown away, and not dipped back into the solution. If this treatment, repeated several times a day and at bedtime and on rising, together with plenty of sleep and absence of strain (as poor light to work with, etc.), does not almost immediately relieve the trouble, and presently cure it, there is but one other course open to the individual who values his sight and believes in "safety first," and that is, as I said before, to consult, first, his family doctor, and then, if the trouble proves not systemic, to go to a good oculist, and thence, not till then, *to the optician he recommends.*

Plain Living Gives a Nation Strength—Save.

Training Boys and Girls For War Time And After

Vacation Schools In Toronto---"Experiment Stations" In Education---Pathfinders to Public and Sunday Schools---Some Interesting Experiments and Developments---An Ideal Democratic School.

"He who helps the child helps humanity with a distinctness, with an immediateness, which no other help given to human creatures in any other stage of their human life can possibly give again."

This was the mastering thought which impelled nearly seventy-five men and women to give to the Toronto Vacation Schools their time, energy and skill for six weeks during July and August, when the mercury soars towards the nineties, and when all Nature calls to the city-dweller to get out into the country.

What to do in vacation time is no problem to the average man or woman; but what about the city child, especially in the poorer districts, where tenements are crowded and hot, where trees do not exist, where backyards are cluttered with junk, and smell to heaven? All these things are sharp warnings for the children to "Keep out!" Where, then, are the children to go, and what are they to do? Nature urges them to play, and while many go to the city playgrounds, most of the poorer children play on sidewalks and streets near their homes, under threats from tired mothers not to wander too far out of sight. But even the streets are to be banned, if the verdict of a recent coroner's jury in a motor accident is complied with. The problem is full of difficulties, for while the child ought to play—indeed, that is the chief function of a child—yet street play is beset with perils not only to the body and brain, but to the soul of the child.

In this goodly city, Toronto, more than 75,000 children are turned loose from school discipline from Dominion Day until Labor Day—practically two months in the heart of summer. Of these, at least two-thirds, or 50,000, cannot afford to leave the city for a vacation. There are free bathing places at the Island, to which some thousands of boys and girls are taken without charge; there are country outings for ten days or a fortnight, which relieve a few thousands more, and there are the supervised playgrounds and recreation centres, managed by the Parks Department, but even, after all these grand agencies exhaust their resources, the problem is still large and insistent.

Mr. J. J. Kelso, Superintendent of Neglected Children for Ontario, in quoting a report of a Children's Aid officer that "there have been an unusual number of boys brought into the Police Court for petty thieving during the month of August," remarks:

"Nothing more natural in the world than this! At the end of June the public schools close, leaving a large number of boys and girls with absolutely nothing to do. If the parents are comfortably off, they may send their children to the country for a time, but in the great majority of cases the children will be left to roam around, seeking their own amusement and recreation. The growing boy is possessed of a spirit of adventure and requires a certain amount of excitement to give interest to life. Therefore, the principles of the Fresh Air Fund should be applied to every child of school age. Our social programme does not provide as it should for these children during the vacation period, and so we must expect a certain amount of petty thieving and other delinquencies. The pity of it is that we should class this activity as crime and call in the police and the lockup as the solution. Thousands of confirmed, dangerous and expensive criminals have received their introduction to chronic wrongdoing in just this way."

Hitching Up the Idle Forces for Training.

The Daily Vacation Bible School movement set out with a definite aim—to put these idle children into idle churches and other idle buildings, and have them taught useful arts, helpful handicrafts, inspiring songs and games, instructive and interesting Bible stories. The children are restless from the heat and their sudden release from school restraint and discipline; the church buildings are restful and cool; and (in normal times) young men and women students would be having their long vacation, and would be available as teachers, receiving nominal payment for their services as teachers to these children, and thus being enabled partly to meet their college expenses. The war has changed some of the elements of the problem, particularly in relation to teachers, for students, if not called to the colors, have gone into munition or other war work, or have become land-workers or farmerettes. Hence it has become increasingly difficult to get teachers for these schools.

The picnic, showing the types of children reached by the Vacation Schools.

Hammock-making develops patience and perseverance as well as the commercial sense.

Girls' sewing and model class.

Even boys become successful rug-makers.

Still, 73 teachers were secured, ranging in degree and value all the way from mothers and maidens who could sew, and mechanics who could saw, and little "teaching sisters" who could smile, up to the skilled school principal, the expert neighborhood worker, and the mission leader and minister—any who are willing to become all things to all children in order that they may save some.

The churches are slowly waking up and beginning to rub their ecclesiastical optics, and wonder what this movement really means. A few more were really awake this year, and there were eleven schools in Toronto, instead of five, as in 1917. When church members and officers, and especially Sunday school workers, thoroughly understand, they will see that these Vacation Schools have come in the nick of time to keep the regular Sunday school instruction from oozing away during the hot summer months. True conservation calls on us to keep busy in happy, useful work the idle hands for which otherwise Satan would "find some mischief still." And how about the idle brains? I think Satan's work would be completed in the lives of the majority of children if he could only keep them idle during July and August.

Play, Work and Study Combined.

I tried hard for weeks to arrange with Hon. Dr. Cody, Ontario's new Minister of Education, to see for himself the working of these Vacation Schools from the inside; to talk to the teachers and workers; to ask questions of the boys and girls in relation to their handiwork, and hear their ready, enthusiastic answers. But the Minister was busy with meetings and organization work for his election, polling-day having been fixed for August 19th. If he had attended any one of these schools, I could have said to him:

"Here, Dr. Cody, is the ideal school for all Ontario children. It is based on the solid, concrete idea that labor is the basis of life; that, just as grains and vegetables, fruits and flowers, minerals and chemical substances, grow in the common soil, so all the substantial attainments of human nature, by which men and women grow wise and clever, rich and joyous, healthful and happy, and nations prosper and become powerful, have their basis in work.

"Give boys and girls a love for handiwork by showing them how to make hammocks, baseballs, birdhouses, dresses, aprons, dolls, etc., and show them the elementary processes in pottery, tile-laying, iron-bending, designing and various industries, and set them in the way of learning all the arts and crafts that make life useful, prosperous and happy.

"A boy or girl who has the work-habit can master any subject he or she tackles. Work vitalizes and makes interesting all studies. Work can be and should be used as the basis for language lessons, compositions, literature, artithmetic, drawing, and indeed all the studies in the school course. Schools would never be the dry, dull places they usually are if they were made busy centres of work, hives of industry, experimental shops, laboratories for trying out the theories learned from school-books. Indeed, if there were more handwork, there would be less need for textbooks; pupils would be getting the real thing in the shops, and then using the books in the most interesting way, to guide them in their thinking and planning."

But, though Dr. Cody did not see the Vacation Schools at work and play and study, I am hopeful that the methods of these schools will permeate our educational system until more and more our public schools become work-centres, play-centres, throbbing with industrial, commercial and social ideas, and in touch with real life.

New Features Being Added Constantly.

These Vacation Schools are allowed

(*Continued on following page.*)

Training Boys and Girls For War Time and After

(Continued from preceding page.)

to develop a thoroughly democratic spirit, and each school works out its own problem in its own way, suited to the class of children to be trained, and the nature of the neighborhood in which the school works. Each school is a little world in itself; the children largely dictate its character, and the conductor responds to the stimulus. For example, the activity of the boys at Parliament street neighborhood suggested to Mr. Gunton a "yell" which would work off surplus energy, and enable the children to settle down to work. This idea caught on, and did its work so well that all the schools adopted yells, and there was such excellence and variety in them that they were awarded honors in the general round-up at the joint picnic at Centre Island.

Another sample of how the "curriculum" of these schools is developed: Rev. Mr. McLean, of Memorial Institute, struck on the idea of making fly-swatters, and worked it out with the help of his boys and girls. It was a happy thought, as the material cost little, and yet the article involved a great variety of helpful hand movements for both boys and girls. A swatter was shown at the weekly luncheon of the teachers from all the schools, and several others adopted it at once.

Clay modelling had proved a striking and helpful feature for two years, but the scarcity of teachers of this art limited it this year, at the start, to one school, College street. Later on, however, another teacher was secured, and Victor School did well with clay modelling. Victor introduced work in Venetian iron that was very attractive, and in many respects ideal; it consisted of bending into artistic form narrow strips of thin, soft iron, such as is used in ornamental grill work on bank counters, etc.

Mosaic tile-laying was a new feature this year, and Memorial Institute showed some fine specimens of designing in colored squares. This work will be extended next year, as it is so helpful in teaching design, so easily manipulated by the very young children, and so attractive in its effects, besides teaching color in a striking way.

Unique Luncheon—Cooked and Served by Boys.

One of the unique features of school work this year was a dainty luncheon prepared by the boys of Parliament Street School, under the direction of Rev. Mr. Gunton. Eight boys acted as waiters, and certainly looked the part, in their white paper aprons and caps, made by themselves; the menu card had been printed by some of the boys, after instruction during the school term; and the mystic initials, D.V.B.S., had been printed on the dainty paper napkins, which were found at the plates, rolled in napkin rings made of birch bark and embellished by the boys.

Before the substantial menu had been disposed of, one of the boy-waiters, Hugh MacMahon, read the following:

"Mr. Gunton has asked me to tell you how this meal was prepared. Well, eight of us boys agreed to help Mr. Gunton, and to do as he told us. We took a long time to learn it all. First, we had to make up a bill of fare. Then we had to learn what went into each dish. We had to write down each one on a card. We started by making salad dressing. But before we could do any work, we had to brush up and wash our hands and faces, and clean our nails. We had to do this even before we peeled the 'murphys.' We divided up in some things. Some learned to print, so we could make the napkin rings and menu cards, also the napkins. Two of us helped to make the napkin rings; several helped to make the aprons and caps, but we all helped in the cooking, and all of us are helping to serve it. You needn't be scared, for it is all clean and cooked right, and we are going to eat some—if there is any left. Some day, when mother is not well, and dad comes home hungry, we can let mother lie on the couch and we can get supper. Girls aren't the whole thing! The soup was cooked yesterday and kept in a fireless cooker made by the boys. No woman has had anything to do with this meal."

This school had the good fortune of having a printing office, which is used by the young Macedonian missionary connected with the Jarvis Street Baptist Church, and Rev. Mr. Carew, who has charge of the mission work, being a practical printer, gave the boys lessons in typesetting and presswork.

A Bold Experiment.

Spadina Avenue School tried a new and bold experiment this summer, to see how far ordinary children below the 'teen age could understand the problems of work, wages, co-operation, rent, etc.—in short, political economy. I wanted to see how the ideas of Mr. C. V. Corless, which were fully summarized in one of my articles in the Journal some months ago, could be worked out in the public schools. I was more than pleased with the result, which I may give under a title more popular and catchy than that of political economy, so I'll call it by the name I used in talking to the children—"The Story of a Pin."

I must depend on my readers to imagine and visualize the line of talk, and fill in the gaps, from this bare outline. I showed a pin, and got the children to tell me its parts—head, body, point; also its uses, its price in stores, and how many they could get for a cent (a puzzling question). I then drew out, by questions—several of which I was forced to answer myself—how the material of which the pin was made came from the iron mine; how it was dug or blasted out, brought to the surface, sent to the smelter, melted into pig iron, made into steel, rolled into wire, then in factory made into pins by machinery; then packed, shipped by steamer and rail, carted to wholesale, delivered to retail, and there sold in package or pyramid. The answers were classified on a blackboard. The next talk would take up another phase of the subject—the wages question, where wages came from, how and why paid, etc.; then, in another talk, the co-operation among all classes of workers employed in making, shipping and selling the pin; in still another, the kind of training each class of worker needed—miner, smelter, foundryman, machinist, packer, bookkeeper, financier, manager, sailor, railway man, carter, wholesale and retail merchant, etc. The amount of detail covered by such talks is astonishing, and the animated discussion by question and answer, comment and blackboard writing or drawing, with diagrams of the mine, etc., proved intensely interesting to the children, and opened out many lines of helpful thought—in short, educated them in a most delightful way.

I offered prizes for compositions on "The Pin"—first prize, 50 cents; second, 25 cents. What was my surprise to find that the boys did not compete at all, though they had followed the "story" with great interest when unfolded in the school. But imagine my astonishment to find that my simple, serious, somewhat solemn and systematic lessons—which I had camouflaged as a "story"—in going through the brain of Helen Soupcoff, aged 11, had been dramatized, sublimated, etherealized and "made over" into "literature"—a real "fairy story," indeed! Here is my prosaic iron pin, as seen by the poetic Helen:—

The Story of a Pin.

There was once a pin very fond of iron, and wherever he saw iron he felt very jealous. He had a neighbor near by who was very fond of pins, so one day they both went to find somebody to tell them how the pin could change to iron, because the pin was so very fond of iron, and how the iron could change to a pin, because the iron was so fond of a pin.

Pretty soon they saw a tent with a man in it; so they went in and asked him his advice, and he said: "Go near a hill and say, 'I want to be iron!' three times; then you will change to iron."

So the iron said: "What am I to do?" And he said: "You say, 'I want to be a pin!' three times."

Then they both said together: "Who is to say it first?" Then he said: "The pin is to say it first."

So they started out on their journey. Just as soon as they came to the hill, the pin said, three times: "I want to be iron!" So he changed to iron.

When he went home he was very proud of himself, and was always outside.

Next day, before he could get up, he changed to a pig. Now he was ashamed of himself again. He was in the house all the time. At noon time, when he was making dinner, he was standing near the stove, and he melted!

Helen's story is such a delicate piece of poetic imagery that I shrink from touching it, much less criticising it;

(Continued on page 55.)

A Real Thanksgiving

Necessities and Luxuries Have Become Strangely Confused In Our Complex Lives —Let Us Return To A Simpler Manner of Living and Thought.

The story goes that a man holding dollars before his eyes shut out the sunshine, the world of beauty,—even friends were lost to him because of this obstacle of his own making. To him the world was dark, people were all strangers, and eventually he grew to believe that there was but one real thing existing—dollars. Yet all the time this man had the power to see, the world was all the while very beautiful, and his friends near at hand, but he did not believe this because he would not see.

We called him foolish—but have we yet learned the true secret of living happily, enjoying the real, the beautiful and the ultimately satisfying things?

I had occasion recently to pass through a very beautiful bit of country, through which wound a river. Its banks were covered with magnificent trees, and as it twisted and turned, the waters now dashed and splashed in the sunshine, then quietly mirrored the blue of sky and the flaming crimson and gold of foliage. It seemed a veritable Fairyland — but strangely there were no houses among all this beauty. Four crumbling stone walls evinced that at one time someone had loved and lived among these trees, but all the modern dwellings were clustered some distance over the bank close to the noisy, dusty highway. The people said that was the place to enjoy "life," and there they built their homes, never once turning longingly toward the beauty and grandeur which, if they had but wished, they might daily have feasted upon. They were absorbed in the little everyday occurrences—just this way to make a seam, or that to tie a knot, Mrs. Brown's new dish, or where the new neighbor came from and who her relations were, and they quite forgot that for the claiming they might have been enjoying a world of interest and delight unknown to them.

GLEANERS OF THE GLEN.

From the Roof of the World in the heart of Central Asia the old-time industry of sheep raising has descended and spread all over the world. Canada's standing in this line is very high indeed. And now the Rosedale Golf Club has come forward with a unique venture. With an eye to labor-saving and production, they have placed a flock on the course, and their one hundred and fifty velvet acres make an ideal sheep run. A shepherd guards the flock by day, and at night they return to a corral on the grounds. It may come to pass that at all golf clubs the ancient game and industry will be combined, and members returning homeward from the royal game will carry with them not only the memory of a good day's sport, but the pleasant picture of rolling meadows, green pastures and sheep grazing on the hillside.

Why cannot we as women be content to go quietly apart, build about us homes, real and lasting, where rivalry, strife and superficiality have no place? How much more reasonable and worth while would seem our lives when, in more mature years, we looked back upon them placed in their proper perspective.

Thanksgiving is again with us. For what shall we be thankful? The new toys, the silk gown, the pretty jewel, or shall we take from our eyes those things which darken, and see the world of beauty, friendship, freedom, music, love and life itself.

The Girls' "Carry-On" Column

By BETTY O'HARA

The Royal Air Force Is The First To Take Women Into Its Ranks

That women can take their place and relieve men for the army, and even enter the army themselves, is a fact that up till a few months ago has not been recognized by the Canadian Government. In spite of all the work that the W.A.A.C.'s of England have done, and the women of France, and the chance the girls of America have had to join the army and don the uniform, Canada has stood alone, and insisted that the only military duty that the woman of Canada could perform was hospital work, as a nurse or with the V.A.D.'s. If, however, she wishes to go overseas in some other capacity, she must join some Imperial order, and perhaps, if fate is kind, she may drive an ambulance or go canteening, or do any of the numberless interesting things that it has been and is the privilege of the French, English and American girls to do.

Uniform worn by the girls of the R. A. F.

Owing to the scarcity of men, however, the Royal Air Force was the first division of the army to make the break and take girls into the force, and a tremendous success they have made of it, too.

In the early working hours, when my lady of leisure is yawningly having her tea and toast in her boudoir and reading her morning mail, these girls of the R.A.F. are at the aviation camps, at the headquarters or any one of the numerous training depots of that division, smartly attired in khaki and ready for action.

The uniform itself is very attractive. It consists of a khaki dust coat belted in, an aviator's cap of khaki, which is something the shape of a Scotch cap, and gloves; a smart rain coat and a cloth driving coat, complete her uniform which the R.A.F. provides, and which it is compulsory to wear, the remainder of the uniform being left to the girl's own choosing.

The girls are attached to the Motor Transport section of the Royal Engineers Corps, which has charge of the transportation of men and supplies to the different camps and supply bases in Toronto. The motors, which the girls drive, consist of trucks and touring cars, and are for the purpose of transferring men from one place to another. A sergeant is generally in charge of each tender and from him the girls take their orders and to him they are responsible for the work accomplished. Sometimes the seats on the sides of these tenders are turned up, and the car is used to carry supplies. Trucks also have a place in the R.A.F., and these also the girls have charge of. They are something of the construction of the tenders, but have no tops, and are not quite so impressive, I must admit. The staff officers, however, are provided with touring cars, and these the girls to a great extent drive. The officers are taken to their duties, and from one place to another on military matters, in these cars. The R.A.F. mail car is an example of the most splendid punctuality it is possible to achieve. The car starts from a certain camp, its time is scheduled to the minute. It stops at certain corners and stays a certain length of time. Any officer who must be on duty, has the schedule on which these mail cars run, and he can be taken as a passenger. The one law that ever governs the R.A.F. mail car, is that it must arrive and leave the given points on the instant, not sooner or later, and officers are supposed to report any driver who fails to keep up with the schedule. One girl is at the wheel, another is the mail clerk and sits behind guarding all the queer little pigeons holes. It reminds me very much of a country post office in the back of a baker's wagon. The clerk takes any letters which are to be carried from one branch of the service to an other, signs for them, and delivers them to their destination, where they are again signed for by the officer in charge.

The working hours for all girls on duty are from eight in the morning until about five-thirty, with every third Sunday off. On other Saturdays and Sundays it is necessary to work half a day. The R.A.F. are now going to introduce break-down parties for Saturday and Sunday duty. These girls are to be on duty Sundays as spare drivers, and if an order comes into the garage for a car, one of the spare girls is immediately detailed for the work and is on duty till dismissed by the officer in charge.

Every morning at eight o'clock sharp, forty cars move out of the R.A.F. garage ready for duty, with girls at the wheels. It is a wonderful sight to see. If the officer of the day is a little late there is a frantic scramble for dust cloths, and a screwing up of grease cups. The engine gets a rub up here, and the body a shine there, not to mention the fact that the girls must have the mudguards underneath just as spotless as they are on top. For every car is inspected, the engine as well as the body, and the eagle eyes of the officer never fail to detect the smallest speck of dirt or dust that might have inconsiderately lodged in the most unheard of places. And he never fails to remark about it either.

The evening, after work, is reserved for filling the cars with gas and oil, also an account of the day's procedure with all its duties must be written down in black and white and handed to the officer in charge. "Rather strict discipline that," I hear some of you say. Well, yes, it is, but it is discipline that makes the most efficient army. And when you see the boys drill day after day, marching by the hour when the thermometer registers 90, when you pass them every morning as they stand at attention waiting for inspection, you just thank the kind hand of fate which has enabled you to become part of that great band of khaki clad heroes which is marching on to a sure victory. I do every day of my life.

What if you do lose a holiday once in a while and come home tired at night? It's worth it. And when we know that the boys "over there" in the hospitals, the front line trenches and in the training camps, are working harder than they ever did before and under a discipline they never knew even existed, to save our country from the fate of Belgium and Serbia, it isn't much to ask of us, is it? And then when you think of it, it is

ESTABLISH W.A.D.'s HERE

New Women's Department for Work In Soldiers' Hospitals Throughout the Dominion.

The Department of Militia and Defence has, in co-operation with the St. John Ambulance Brigade, made arrangements for the establishment of a women's aid department (W.A.D.) for work in the several military hospitals and convalescent hospitals throughout the Dominion. This department will be organized in three divisions:

1. V. A. D. Division:
(a) V. A. D. Nursing Service.
(b) V. A. D. Trainers.
2. Special Service Division:
Masseuses.
3. General Service Division:
Housekeepers, clerks, stenographers, typists, telephone operators, head cooks, cooks, etc.

Each hospital will have a general service superintendent and larger ones an assistant superintendent.

All questions regarding this new war work for women in the Canadian Military Hospitals will be answered by Betty O'Hara either through the column or by mail, as preferred.

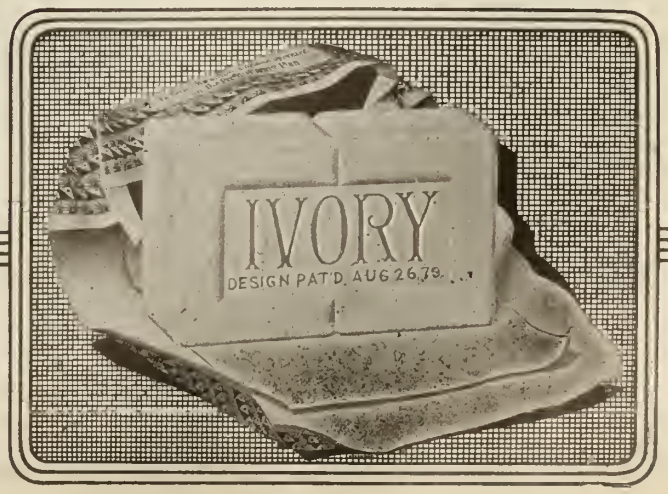
Safety First

IN the bathtub Ivory Soap means not only convenience, but freedom from possible injury because Ivory Soap floats at hand and in sight instead of sinking to the bottom of the tub where it may be stepped upon. You will find the floating Ivory an improvement in every way.



IVORY SOAP

IT FLOATS

99 44/100 % PURE

Made in the Procter & Gamble factories at Hamilton, Canada

How Soaps affect your skin

THE sensible, modern woman wants a soft, clear skin—for that is the skin Nature intended her to have.

Nature tries to keep your skin soft by supplying it with natural oil. The less you interfere with the natural oiliness of your skin the softer it will be. The cleansing must be thorough and refreshing, but must not disturb these natural oils.

You know from experience that some excellent soaps tend to roughen the skin. They simply have too drying an effect on the natural oils. The skin relies upon these natural oils to keep it soft and clear and flexible.

The very most you can ask of a toilet or bath soap is this:

It should be made of pure materials which cleanse perfectly without disturbing the skin's own natural oiliness. Fortunately, the choicest materials are not costly. It is in a proper balancing of these materials that the soap maker's real art comes.

You will find that art wonderfully expressed in Fairy Soap.

We are quite sure if we sold Fairy Soap for 50 cents a cake, we could tell you a truthful story about its value as a toilet soap which would make you feel that that price was warranted.

But we prefer to talk to you along common-sense lines and to give you Fairy Soap at a common-sense price—a few cents a cake.

If your general health is good and if you use Fairy Soap in any sensible manner, you may be sure that in time you will have a skin as soft and pliable as Nature endowed you with.

No matter where you live or where you make your home you can buy Fairy Soap.

THE N. K. FAIRBANK CO.
Limited, Montreal

. . . Make no mistake about it—no matter to what new field she turns, she will always be the woman at heart, greeting her new responsibilities with a smiling face . . . Frankly glad of her natural womanly charms—caring for them always with a high order of common sense.

"Have you a little Fairy in your home?"

FAIRY SOAP

White oval cake — Fits the hand

The Waltham Watch

A GOOD case often holds a watch movement entirely devoid of merit. But this shouldn't be, because a good movement is the prime essential of a timepiece. The Waltham 19 and 23 jewel movements, cased in gold-filled or solid gold of various weights, form the ideal combination of beauty in exterior and complete reliability of mechanism. Buy your watch on the reputation of the maker—that's the safe way. And remember, the Waltham reputation was established more than sixty years ago, since which time Waltham movements have earned the confidence of several succeeding generations of exacting watch buyers.

Ask your jeweler to show you his range of high-grade Waltham Watches.

The Home Garden

By GEO. BALDWIN, F.R.H.S.

Prepare Now for Spring, and Carefully Store all Vegetables for Winter.

Has our garden this year given satisfaction? Fairly good.

Could it have given us more joy, had we given more attention at the proper time? Yes.

Can we improve on it? Yes, by starting in at once. Next year's garden must have its foundations laid now. Of course, everyone knows that bulbs (tulips, hyacinths, narcissus, crocuses, etc.) must be planted in the Fall to get flowers next Spring, but do not let us stop at that, let us have a continuity of bloom the whole season. You have often gone into a neighbour's garden, and it has looked remarkably well, and you have visited it again in six weeks time, and it appeared to be a veritable wilderness. So what we want to do, to avoid this, is to plan, to do all the gardening we can in the Fall, and thus raise our hopes to the height of enjoyment of well filled summer borders.

If one does not grapple with it at once, and send off the resultant orders early, two evils are sure to follow—someone who is more prompt in ordering gets the best bulbs or plants, and even the fairly good ones we do get later on are not improved by having been kept out of the ground. Yet however much we realize that, it is not easy to bring on an attack of bulb planting fever, when one's borders look so full, and it is hard to think out space for planting.

I have tried to make a stern rule for myself, that I will not order any plants I have not fixed a suitable site for; but I break it when I see something I feel I cannot live longer without. How can I resist a Darwin tulip that is new to me, and described as glowing salmon, or tender lilac? It is enough to make one hope something will die and leave a gap to be filled. Now if you have made up your mind to have such a garden, with a continuity of bloom from frost to frost, the following personal notes will, I am sure, help the amateur.

First of all, your borders should be not less than 5 feet 6 inches in width, to allow of 4 rows of plants and bulbs. The first row should consist of border or edging plants, such as Sweet Alyssum, Lobelia, Pyrethrum, Forget-me-nots, Pansies and Arabis, planted alternately, and interspersed with Crocuses of different colors, and Snowdrops. In the second row, plant alternately Roses, Aquilegia, Garden Carnations, Lilies, Statice, Dwarf Lychnis, Iris, Rudbeckia, Funkia, Gaillardias and Sedum Spectabilis, to be interspersed for spring bloom with Hyacinths, Narcissus, and Cottage Tulips. In the third row the following may be planted alternately, Paeonies, Delphiniums, Phlox-Perennial, Tall Rudbecklas, such as Golden Glow and Echinacea Purpureum, Helianthus, Heleniums, Boltonias, Chrysanthea Uliginosum, Eryngium Alpinum, Lychnis Chalcedonica, Physostegia Virginiana (pink and white), Hollyhocks, Standard Hydrangeas, Standard Roses, Garden Chrysanthemums, and the newer varieties of Sun-flowers, and to wind up with, a Shrub in each corner of your border, such as a Spirea Van Houttei, Philadelphus, Deutzia Lemoine, Lilac Charles X, or Hydrangea Paniculata, and this row to be interspersed with Darwin Tulips, tall growing lilies, and Gladioli (to be planted in the Spring). And as cover for the fence, or fourth row, may be trained the beautiful Tamarix, Grape vines, Tomatoes, Clematis, Cucumbers, Squash, or Climbing Roses, etc.

To follow out this idea of making a new border, care and judgment should be given to the blending of colors, and the different periods of blooming of the different flowers and shrubs. Nothing has been said of annuals, for the reason that if you give your plants lots of room, space can be found to transplant here and there some of the best of the annual family, such as Asters, Antirrhinum, Stock, Verbena, Phloxdrummondi, Salpiglossis, Zinnias, etc., to suit taste and fancy, putting the dwarfs in the front rows, and the taller growing ones at the back.

The foregoing will give a continuity of bloom, but the beginner will say, What about varieties?—so we will give a little space to that, and start off with the Spring Bulbs, and edging plants. Like bedtime, when one is reading a good story, or you are called for dinner, the bulb lists catch one unready; however, there is not much choice in Crocuses and Snowdrops. They are all good on account of their earliness. Get the Little Gem Alyssum, drawf Pyrethrum, and keep it clipped. Taking the second row, we need more assistance in the selection.

Take Roses for instance. They are like what the Englishman said about the beer, there is none bad but some better than others; but there being such a long list to choose from, one is apt to get bewildered, and give up in despair, so I will give a partial list with which I have had good success, both for quantity of bloom, color and shape.

The hybrid Teas are the most satisfactory with very few exceptions, so will recommend for Crimsons, George Dickson, National Emblem, Lieut. Chaure, Hoosier Beauty, and Hadley. For Whites, Frau Karl Druschki, renamed Snow Queen, Mrs. Andrew Carnegie, Mrs. Herbert Stevens, and Molly Sharman Crawford. For Pinks, Mrs. Chas. Pearson, Killarney, Mrs. John Laing, Paul Neyron, and Caroline Testout. For Copper and Yellow, Lyon Rose, Catherine Louise Breslau (should be renamed), Duchess of Wellington, Rayon D'Or, Marquise de Sinety, and W. A. Richardson, but be sure to get a couple of bushes of the new Rose Los Angeles, a rose in a class by itself on account of its fragrance, color, hardiness, and it being such a strong grower. It is a cross between Mrs. C. E. Pearson and the Lyon Rose. For Aquilegia get the long spurred varieties.

The Lilies are of so many varieties, that the blooming period is from mid June to late September, starting off in June with Lilium Tenuifolium, the beautiful little scarlet Turkscap, followed by Lilium Croceum, which is the real Belfast Orange Lily, then comes the splendid Candidum, together with the new Lily Golden Gleam (yellow), which is a rare color among lilies, and is of the Turkscap type; next to follow is the old reliable, Tigrinum or Tiger Lily, and the Fortunei or double Tiger, and we now come to the hardiest of all garden lilies, known as Lilium Henryi, of a magnificent lemon yellow color, which is followed closely by the early Speciosums and Testatium, and to wind up the season we have the Auratums Platyphylum and Vitatum, and the late Speciosums, such as Rubrum, Roseum, and Album and interspersed with these Lilies are the Hemerocallis or Day Lilies, which are very showy.

The biggest trouble with the Lilies is that we do not give the bulbs a proper start, for it should be remembered that Lilies, like Roses, do not like wet feet, consequently they should be planted deeply, according to size (the largest at least 10 inches deep), and two inches of sand below and above them, filling in the top of the hole with ordinary garden soil, and pressing the whole down very firmly. By doing this you will prolong their life, especially the Auratum's. For Statice I would recommend four varieties as being very good, Tartarica, Gymlini, Limonium Alba, and Latifolia Macrophylla. And for Iris, the following will be found to give excellent results: Pallida Dalmatica, Amas, Purple King, Sir Walter Scott, Jacquisiana, Florentine, Madame Chereau, and Wyomissing. For Rudbecklas, Newmanii, Nitida, Herta, Maxima, and Echinacea Purpureum will be found to be the best selection. There are two of the Lychnis family that will give a good account of themselves, and are the Lychnis Haageana (dwarf), and the Chalcedonica or Tower of London (tall). For Sedum, Acre (dwarf) for edging or growing in rockeries, and Sedum Spectabilis or Live-for-ever, the bloom of which forms a bouquet of itself.

Hyacinths are in various colors, and can be had to suit the individual taste. But for Narcissus I would recommend to those who want some new ones to get Ethelbert, Florence Pearson, The Doctor, Utopia, and Dream, and they

(*Continued on page* 55.)

The Garden God—The Sun-Dial

By MARY A. PEASE.

This Ancient Method of Telling The Time of Day Is Still The Most Accurate Keeper of Sun Time That Has Been Discovered By Man.

There is no country in the world which does not, even at the present time, employ some form of sun-dial. The Bible gives the first historical record of one in Isaiah XXXVIII. 8, as follows:

"Behold I will bring again the shadow of the degrees which is gone down in the sun-dial of Ahaz, ten degrees backwards. So the sun returned ten degrees by which degrees it was gone down."

This was the sun-dial erected in Jerusalem by Ahaz, the eleventh King of Judah, who ruled in the eighth century B.C.

The simple but painful boil is responsible for many remarkable chapters in the Bible. It will be remembered that in the above mentioned chapter of Isaiah, we are told that King Hezekiah, son of Ahaz, lay sick unto death as a result of too great a visitation of boils. The prophet Isaiah who was the vehicle of communication between Hezekiah and God was asked to make an appeal unto the Almighty to prolong the King's days in the land. As a result of the prophet's appeal Hezekiah was granted an extended leave of fifteen years, and Isaiah told him that the miracle of bringing back the shadow on the sun-dial would be performed as a sign that his days would be prolonged in the land, and that he would be delivered from his enemies. Incidentally, the prophet prescribed a plaster of figs for the boils!

In Philadelphia, there is preserved a unique relic of the Rosicrucians which is called the Horologium Achaz—the sun-dial of Ahaz. This instrument (see illustration) consists of two finely wrought plates, one of which is divided into panels. One panel represents the King sick in bed, while the prophet points to a vertical sun-dial. Another shows the King thrusting out his aching leg for the fig poultice. On the central panel is an inscription which has been translated as follows:

"The semi-circular shell explains the miracle of the thirty-eighth chapter of Isaiah, for if it is filled to the brim with water, the shadow of the sun is borne backwards ten or twenty degrees." Thus was the "miracle" accomplished, and Hezekiah was, doubtless, filled with wonder and amaze.

Angel with sun-dial. Cathedral Chartres.

The sun-dial in its most primitive form is seen by visitors to Stonehenge, England. It consists of enormous vertical monoliths of gray stone arranged in the form of concentric circles in the centre of which is a stone claimed to be the altar used in Druidical worship common to the ancient Celts. At some distance from the outer circle at the north-east upon the open plain, still stands the solitary stone which on the summer solstice (June 21st) projects its shadow at sunrise so that it falls just upon the altar of the ancient sanctuary. This seems to be one of the initial steps in primitive astronomy, the circles of stone used by the ancient builders of Stonehenge being superseded by the circles of brass in our observatories.

In Great Britain and in France at one time, the hour of noon was announced by a cannon which was fired by the rays of the sun being concentrated on a magnifying glass so placed that the powder in the touch stone was ignited when the sun reached its meridian height. The platform upon which the cannon was placed was marked as a sun dial and the gnomen or pin cast its shadow on the figure XII. at the instant of the firing of the cannon.

As the sun-dial could not be read on cloudy days' it was the practice in those far-off times, to use in connection with it the Clepsydra (water-clock) which had for its principle the measured percolation of water through an hour glass. It is difficult to determine which of these chronometric modes can lay claim to priority. In one of his dialogues, Plato says that philosophers are much more fortunate than orators because the former were at liberty to make their discourses as long as they pleased, whereas the orators were the slaves of a miserable time clock. In those days, it was the practice to measure the time allotted for speech in the courts of justice. Three equal portions of water were put into the water clock, one for the defendant, one for the prosecutor and one for the judge. Surely an admirable arrangement and one that we can hardly be said to have improved upon!

Brass Universal Sun-dial set for use.

The Sun-dial of Ahaz.

There is a remarkable natural sun-dial on the shores of the Ægean Sea where the shadow of a mountain touches certain islands each in their turn, thereby marking different periods of the day.

The difference between sun-dial time and clock time is due partly to the irregular motion of the earth travelling in its path around the sun—sometimes slower, sometimes faster, and partly to the fact that what we call Greenwich mean time, by which we set our clocks, is purely artificial and imaginary, not agreeing with natural time, but nevertheless most necessary for commercial purposes. There are only four days in the year on which the sun casts a shadow exactly along a north and south line on a sun-dial at precisely noon of local mean time.

In erecting a sun-dial, it must be remembered that the stilus or gnomen must point to the pole of the heavens and not to the pole star, which latter is somewhat more than one degree distant from the true pole, and, of course, describes a circle about it. If the stilus is correctly pointed and a plumb bob suspended from its upper end, the shadow of the stilus will meet the bob at the instant of the sun being on the meridian, and the difference between this time and local mean time noon may be ascertained from the column "equation of time," which is given in the Nautical Almanac. When the dial is correctly graduated in hours, the shadow will have the same error for the other hour marks as for the noon mark on any given day. The error will be found for every day in the year in the Nautical Almanac.

The practice of inscribing mottoes on the sun-dials seems to have gone hand in hand with the art of making them. The simple altar-like structure with its passing shadow is more suggestive and poetical than the sound of a pendulum which marks all hours, sunny or otherwise. In either verse or motto, one thing is most noticeable, the endeavor to teach human beings to dwell on that unpleasant subject—the brevity of life. The idea evidently was that although there was light on the dial, darkness was man's portion.

There are, however, a few cheerful mottoes, and those few are charming. Here are some of them:

"Lead Kindly Light."

"Let the Mind Know no Twilight."

"I Register Only the Happy Hours."

"I Give the Hour if the Sun Does."

Sun-dial mottoes may be said to have been used for advertising purposes by Inns in the long ago. For example, on an old English Inn is one which advises, "As well drink here as anywhere" and on another, "The present hour and this world's cheer are in a moment gone from here."

On an old schoolhouse sun-dial is the following: "Teach or learn or out you turn."

Biblical texts offer an almost inexhaustible field for what the English term the God-help-us mottoes. These are to be found on sun-dials which adorn the walls of Saxon and Norman churches and ancient upright gravestones in Ireland. There are really too

Best for Baby

After many years' use by parents of all classes, in Royal Nurseries and humble homes, Savory and Moore's Food has the reputation of being a thoroughly reliable food for infants.

The experience of parents, nurses, and medical men all goes to show that babies *do* thrive remarkably well on this famous food, that its use prevents infant ailments, and that it builds up a strong constitution, so important in later life. You may therefore bring up baby on Savory & Moore's Food with the assurance that you are doing the best you can for your child.

MOTHER'S GUIDE FREE

Savory & Moore's little Book, "The Baby," is full of useful information on Infant Management, and contains hints on such subjects as Feeding, Teething, the Toilet, Exercise, Weight, Infant Ailments, and many others. It is just what a young mother requires, and will prove invaluable in the home. A Free Copy may be obtained on application to Savory & Moore, P.O. Box 1601, Montreal.

Costing 35 and 15c Contains 2490 Calories

It Looks Big

When You Figure Its Food Value

Meat Costs 8 Times as Much per Calory

The small package of Quaker Oats contains 2490 calories of food. It costs 35 and 15 cents.

The calory is the energy unit used to measure food.

Quaker Oats equals in food value—approximately—the following amounts of other staple foods:

Measured by Calories

One 15c Package Quaker Oats Equals

3 lbs. Round Steak	3½ qts. Milk
3 lbs. Leg of Lamb	2 lbs. White Bread
5 lbs. Young Chicken	7 lbs. Potatoes

Figure what you pay for these foods. You will find that meat foods—for the same calories—cost 8 to 14 times as much as Quaker Oats. Then compare them.

Calories Per Pound

Round Steak	890	Eggs	720
Young Chicken	505	Quaker Oats	1810

Thus Quaker Oats—the food of foods—has from 2 to 3 times the calory value. Yet all are good foods, and some are indispensable.

Use Quaker Oats to bring down the food-cost average. Make it your breakfast. Serve it fried. Mix it with your flour foods to add flavor and save wheat. Each dollar's worth used to displace meat saves you about $8, measured by the calories supplied.

Quaker Oats

The Extra-Flavory Flakes

The reason for Quaker Oats is super flavor. They are flaked from queen grains only—just the rich, plump oats. We get but ten pounds from a bushel.

When such a grade sells at no extra price, it is due to yourself that you get it.

35 and 15c Per Package

Except in Far West

Quaker Oats Muffins

Two-thirds cup uncooked Quaker Oats, 1½ cups flour, 1 cup scalded milk, 1 egg, 4 level teaspoons baking powder, 2 tablespoons melted butter, ½ teaspoon salt, 3 tablespoons sugar.

Turn scalded milk on Quaker Oats, let stand five minutes; add sugar, salt and melted butter; sift in flour and baking powder; mix thoroughly and add egg well beaten. Bake in buttered gem pans.

Quaker Oats Pancakes

2 cups Quaker Oats (uncooked), 1½ cup flour, 1 teaspoon salt, 1 teaspoon soda dissolved in 2 tablespoons hot water, 1 teaspoon baking powder (mix in the flour), 2½ cups sour milk or buttermilk, 2 eggs beaten lightly, 1 tablespoon sugar, 1 or 2 tablespoons melted butter (according to the richness of the milk).

Process: Soak Quaker Oats over night in milk. In the morning mix and sift flour, soda, sugar and salt—add this to Quaker Oats mixture—add melted butter; add eggs beaten lightly—beat thoroughly and cook as griddle cakes.

Quaker Oats Bread

1½ cups Quaker Oats (uncooked).
2 teaspoons salt.
½ cup sugar.
2 cups boiling water.
1 cake yeast.
¼ cup lukewarm water.
5 cups flour.

Mix together Quaker Oats, salt and sugar. Pour over two cups of boiling water. Let stand until lukewarm. Then add yeast which has been dissolved in ¼ cup lukewarm water, then add 5 cups of flour.

Knead slightly, set in a warm place, let rise until light (about 2 hours). Knead thoroughly, form into two loaves and put in pans. Let rise again and bake about 50 minutes. If dry yeast is used, a sponge should be made at night with the liquid, the yeast, and a part of the white flour.

This recipe makes two loaves.

The Pianoforte Record

By HECTOR CHARLESWORTH.

Recent Progress in this Branch of Musical Reproduction Opens a New Field of Enjoyment.

Some months ago, in the course of a series of articles on sound-reproducing instruments, I stated that I had yet to hear a good pianoforte record—measured, of course, according to the standards attained in reproducing the human voice and the violin. I, however, ventured on the prophecy that the difficulties involved in making such records would not prove insuperable, and would shortly be overcome. The statement was challenged in certain quarters where it was assumed that it was my purpose to disparage the piano record. This was very far from my intention; for I was merely voicing the general experience of those who had had much more to do with the making and selling of reproducing instruments than I. It is the more gratifying, therefore, to be able to state that the little prophecy I uttered has been fulfilled; that improvements in methods of manufacture and in the mechanism of the reproducing machines themselves, have within the past six months raised the piano record to a much higher artistic position than it previously held.

The importance of this advancement, in musical and educational results, could hardly be over-estimated. Many of the very greatest living interpreters and composers are pianists; and it would have been a pity had these men been destined to go to their graves without leaving for the delight of future generations, those permanent memorials which had been already secured in the case of singers and violinists. For the education of the living generation the really good piano record must hold a paramount place, because piano study is the most widely popular form of musical education; and the mere possession of records which preserve the phrasing, accentuation and special qualities of touch which characterize the great pianists, must prove an immense aid to serious students of the pianoforte. For instance, we will take the young student who is face to face with an intricate passage in one of the works of the great composers for that instrument. Here at hand is a demonstration of how Paderewski or Josef Hofmann unfolds its mysteries and traces its outlines.

In the larger realm of general appeal the development of a piano record that can really be enjoyed, as a piano solo by a competent performer is enjoyed, and which is not merely an interesting mechanical curiosity, is of great importance. A few readers may recall the enthusiasm of music-lovers when the "Svelte Mignon" machine, a player-pianoforte which automatically reproduced on the keyboard the touch and phrasing of the noted virtuosi, was first manufactured. But that machine was so expensive that its enjoyment was limited to an infinitely small minority of music lovers. The perfected piano record will bring Paderewski and his rivals into the home in the same sense that singers like Galli-Curci and violinists like Jascha Heifetz are already in the home.

The piano record has already reached the point where, upon a reproducing machine of the higher standard, it can deceive the senses and convince a hearer in the next room that a soloist is actually present. A few weeks ago I heard certain records on a highly perfected machine that in fullness of tone and entire absence of any foreign or disturbing sounds would carry conviction that the performer was bodily present, did not the eyes prove the contrary. Several instances where individuals had been actually deceived were cited.

The building where I heard these records is a large musical warehouse in Toronto, devoted to many branches of the trade, which are allotted to different floors. A visitor, well acquainted with the layout of the premises, happened to be going up on the elevator with a member of the firm. As they passed the floor on which a piano record was being tried, he remarked: "Oh, you have moved your pianos up a storey or two." His companion smiled and said, "Yes." Noting the beauty of the tones, the visitor said: "That's some pianist, too; who is it?" "Oh! just one of the girls showing off," said the other laughingly, and then revealed to him the joke. The visitor would not believe that his ears had hoaxed him until he was taken down and given a demonstration.

Yet another incident of the kind occurred this summer in Northern Ontario, where a prominent business man has a summer home, in which he has installed an excellent phonograph. His wife was very fond of putting on the newly perfected piano records in her possession, and one day received a visit from a journeyman piano-tuner, who had visited the town in search of business. He asked if she desired to have her piano tuned, and when she stated that she had none, turned away with a look of satirical disgust on his face. It was evident that his confidence in human nature had received a shock, but he evidently decided to give her another trial. Two days later he came back and said: "Lady, you'd better let me tune your piano; I'm going away to-morrow and you may not get another chance this year." Again he was told that there was no piano in the house. "What's the use of telling me that?" he retorted angrily, "I've been past this place half a dozen times this week and heard you playing it." Then he was invited indoors, and furnished with proof to the contrary. "Well," he said, "I thought you couldn't fool me about a piano, but I was mistaken."

Now a very short while back such a delusion would have been impossible, for it must be admitted that in the past the average piano record had a banjo-like quality of tone and was deficient in volume of sound. Now it is quite clear that the piano record has definitely arrived. In its perfected form it represents a patient triumph over difficulties which do not prevail in connection with the recording of vocal or violin tones. The manufacturers of records could justly claim that the fault lay rather with the peculiar quality of the modern pianoforte rather than with the recording process. In truth, the defects of the piano record were actually a proof of the fidelity with which sounds are recorded.

In defining certain peculiarities which were popularly regarded as defects, I am indebted to an article published some months ago by an American expert, William Braid White, who admitted that though wonderful progress had been made in making piano records, much technical refinement had yet to be brought about before the marvellous fidelity and power of vocal records was approached. This drawback, he pointed out, was due to the fact that the record picks up and fixes permanently a certain varying number of fugitive incidental sounds that accompany all playing of the piano and reproduces these with complete fidelity.

The average listener, maintains Mr. White, hears selectively, and in listening to an ordinary piano solo his ear instinctively rejects or ignores these fugitive sounds. For instance, a piano in a small room produces a multitude of reverberations or echoes, which do not touch the consciousness of the listener. The record, in the process of making, takes up these additional sounds and produces at times a blurred effect, and at any rate a modification of tone that does not make for improvement. It is plain, therefore, that the pianoforte, while it has certain paramount advantages over all other instruments in making the production of music easy for the actual performer, is not an ideal instrument for the recording of sound.

The defects of the piano for the men who first tried to make records of its tones were numerous. It is a complex mechanism, and the sounds which proceed from it are very widely diffused over the field of sound-wave activity. Again, the sounds which proceed from struck strings begin with a great intensity and rapidly subside, and so tend to reflection from the walls of a small room, producing the extra tones as above described that interfere with the clarity of the reproduction. The bass tones especially are subject to this infirmity. In addition there is the vibration of the case and metal framing, which send forth fugitive sounds of their own that interfere with clarity.

(Continued on following page.)

Plain Living Gives a Nation Strength—Save.

The Pianoforte Record

(*Continued from preceding page.*)

As I understand it, the recent efforts of manufacturers, which have undoubtedly been crowned with a great measure of success, have been in the direction of devising a chamber in which the drawback of fugitive and confusing sounds would be minimized—a sort of immense horn into which both piano and pianist enter, and from which the sounds flow directly upon the matrix that is to become the permanent record. Much must have been accomplished by the artists themselves in adapting themselves to these conditions. The great men speedily found out that they could not sit down and make a record with the same ease that they could go out on the platform and play a selection. For instance, a pianist like Paderewski, who is liable under stress of emotion to force the tone on the concert platform, must carefully modify his methods when playing for record purposes. In listening to the records made by several of the noted contemporary pianists, I was struck by the fact that the best records come from men like Leopold Godowsky, who make a cult of pure "pianism"—that is to say, men who try to preserve the gentle harmonies of pianoforte music and do not aim at heavy and grandiose effects. Perhaps the finest records yet made are those of Andre Benoist, a young Frenchman with no very wide celebrity, but who has mastered the art of playing for record purposes, just as Mary Pickford has mastered that of making dramatic films.

In addition to the improvements achieved in the making of records by a better adaptability of methods to the effect to be attained, there has also been an improvement of devices for absorbing the metallic quality of the tone when the record is actually in utterance. Of the piano record more than in that of any other class of music, it is emphatically true that the better the instrument, the better the effect produced.

A Rose Enchanted

(*Continued from page* 11.)

moonstones around her soft young throat.

The princess gazed as one not believing the evidence of her own senses.

The king and queen waited in tense silence. The fairies of the court stood poised as for flight; the grey elves sat cross-legged, all eyes, and ears, and eagerness.

Even the very birds stopped singing, and the leaves of the great tree overhead hung motionless.

Then, as in a flash, the princess caught the necklace of moonstones from the Lady Mayblossom's throat, threw it on the grass, and stamped her foot upon it, once! twice! thrice! The jewels crumbled or were crushed into the earth. Seeing them so, the princess laughed softly, but defiantly, and in the silence that followed, her words fell on the air without a tremor:

"So! So!" she said. "It is so I shall do to those who cross my will!"

The fairy queen covered her eyes with her hands. The king stood in silence, his face hardening. The little court fairies still were poised for flight, yet did not fly; and the grey elves sat cross-legged and watched, their goggle eyes staring wildly; and as they watched and listened, they shook like autumn leaves in the wind.

The Lady Mayblossom alone turned and fled.

The princess still stood, her foot upon the jewels, and the ancient fairy, leaning on the ebony cane, gazed at her fixedly.

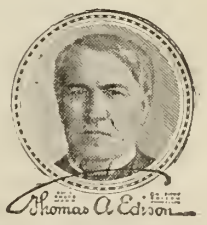
Then she spoke, and her voice had lost its quavering tone and sounded young and strong again, while her eyes, that had never grown old, shone bright in her old, old face. Slowly she lifted the ebony cane.

"Move not!" she commanded. "Move not, anyone, except my grey elves! Go you, O grey elves, and bring hence a rose-plant that grows in a golden pot by the south gate of this garden. Bring it hither with care. Go! Be nimble!"

The six grey elves departed swiftly, and as swiftly returned. They bore a golden pot, from which grew one tall rose-plant. They placed the pot at the ancient one's feet. Green was the rose bush, with many leaves, but no rose or bud grew upon it.

(*Continued on page* 56.)

I wish I could tell you what entire contentment there is in owning a New Edison.



We put on a piano selection by the celebrated Andre Benoist. It is Godard's "Second Mazurka." What we hear—those mighty chords, those runs of stirring crescendo, those soothing modulated passages—ah! what we hear is not a mere resemblance, not an *imitation* of piano tone. It is as much *Benoist* and his marvelous playing as though the great French virtuoso was sitting there at our own piano. Only *this* is *Music*. There is nothing more in music to wish for. There is nothing more to be obtained.

Hear the New Edison yourself. Its "Re-creation" of an instrument or the human voice is really marvelous. Has permanent diamond point, no needles to change. Plays all makes of records. Easy terms if you wish.

She's gone!

If war work has summoned daughter from the home, or the maid to the munition factory, there are busier times than ever ahead—for women who stay at home. You need all the time-saving helps you can get hold of. See how Gold Dust helps out day by day:

Monday

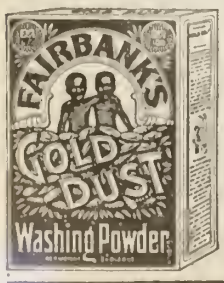
Besides being laundry day, means 'picking up' and freshening the house after Sunday. Gold Dust takes care of the 'wiping up' of kitchen and bathroom, removes finger prints from woodwork and windows because it quickly and gently dissolves all oil and grease. A tablespoonful to half a pail of water.

Tuesday

After the ironing is out of the way there is time for such little odd jobs as cleaning cut glass and bric-a-brac, mirrors, windows, glass globes, lamp shades. They all sparkle like diamonds after an easy application of Gold Dust and hot water.

Wednesday

After baking there must always be a general clean-up of utensils. Gold Dust dissolves the grease quicker than soap—important to remember after shortening has been used. No soapy taste left behind.



Thursday

—is Gold Dust day for bathrooms. Gold Dust smoothly—without scratching, gently dissolves all oil and grease and quickly removes dark circles and stained rims from bath-tubs and bowls. Remember, too, to flush out the pipes with hot water in which you have dissolved a tablespoonful of Gold Dust.

Friday On sweeping day a cloth dipped in Gold Dust water freshens and purifies door sills and window sills, dark nooks and crannies, and corners of rooms and other places hard to reach where 'oily dust' sticks. A tablespoonful of Gold Dust to half a pail of hot water performs sanitary wonders, for dirt simply can't stick after Gold Dust gets rid of every particle of oil or grease.

Saturday

means extra cooking for over Sunday and the final clean-up of kitchen and kitchen utensils as well. Gold Dust freshens the ice box to receive Sunday's supplies with no danger of soap left behind. A tablespoonful to a dishpan or half a pail of water accomplishes a wonderful amount of sweet cleansing.

Going South

A Nature Story For The Girls and Boys

By ETHEL BAIN.

"No Tickets, No Luggage! Isn't that a Splendid Way to Travel!"

"Honk, honk, honk," cried the flock of ducks as they flew overhead.

Bushy, the Red Squirrel, scampered up to the topmost branch of his home tree. There swaying in the wind he watched the migrators as they soared over his head in V formation. "Good-bye," he called, but they were too high up to hear him. Bushy did not mind, for all day long he had been saying farewell to his friends. "Hello, Chickadee," he cried, as his little black capped friend perched beside him. "Thank goodness, you're not going too," he went on. "I'm so tired of saying good-bye to-day, that I really wish I was going south myself."

"It does make one sad for a time," replied Chickadee, "but cheer up, Bushy. The months will soon pass, and you know it always pays to keep a smiling face."

"You're right," chattered the Red Squirrel, "and you're the brightest of us all, Chickadee, for you keep so cheerful, even during the most dreary days of winter."

"It pays," replied Chickadee, wisely. "Well, I'm off now. See you later, Bushy."

Left alone, the Red Squirrel continued to watch the sky for more of his friends, but none appeared, so down the tree he ran, and sadly wandered along the woodland path. Notice boards met him every way he turned; quaint little notices they were, as the Red Squirrel saw when he stopped to read them. Most of them read, "Going South? Join our party leaving in October." One stated, "No baggage allowed on this trip."

"Wish I could go," chattered Bushy. "Must be nice down there. No snow or cold winds. Wonder how long it would take to get there," he pondered.

"Get where?" asked a merry voice. Startled, he turned to see two Scarlet Tanager birds. "Saw you as you came along, Bushy, so thought we would run down and say good-bye."

"But," stammered the Red Squirrel. "Which is which, for you look exactly alike, yet your voices are different." Both birds laughed merrily as they saw how bewildered their friend was.

"Allow me to present you to Mrs. Scarlet Tanager," cried the Tanager Bird. "As for myself, well, you see, Bushy, I've got my winter suit on."

"Your what?"

"My winter suit."

"Oh, but I like your bright coat much the best."

"So do I, but it's better to follow the 'Safety First' rule. That is why Mother Nature provides me with this dull brown coat, for then I don't attract the same attention I would if I kept my gay red coat on when travelling. There is always someone ready to take a shot at the birds when they're migrating. True, we fly mostly by night, but in the early hours of daylight we get caught, and when resting. You see every person is not a bird lover, and sometimes what seems a most inviting feast spread out for us is only a trap after all."

"Well, I think that sort of people are just horrid to go and set traps for such useful workers as you all are."

"So do we, Bushy," replied Scarlet Tanager. "It shows how little they know about Mother Nature's children. Well, we must be going now. Look out for us next May, won't you?"

"Sure, and I'll be glad to see you back again."

He watched them until they had disappeared. "Oh, it's getting lonely," he cried as the silence deepened in the wood. Away he sped; then as he reached the end of the path he stopped to listen, for he heard a lot of chattering. Following the voices, he scampered out into the open and down to the brook. There he spied all kinds of birds flying about and bathing in the silvery water that laughed as it danced its way over the white pebbles. "Hello, everybody," cried Bushy, as with twitterings and chirping they greeted him. "I thought you'd all left."

"Not yet," replied a Bluebird. "We are just having a little change after housekeeping all summer. Our babies are able to look ater themselves now, and this week we have taught them their last lessons, how to take care of themselves when flying south, and always to remember to obey the leader. Oh, we're having a lovely time, a real holiday."

"I wish you didn't have to go south," said the Red Squirrel.

"But," protested the Bluebird, "we would die if we stayed here during the winter months, for where should we find enough to eat? The insects are nearly all dead, and it's getting cold at night."

"You'll all come back?"

"Surely we will, if we survive the dangers of our journey. Two thousand miles is a long way, and there are many dangers, but our leader is always the oldest and wisest of the flock, and he knows the best resting places for us."

"You fly mostly by night?"

"Oh, yes. That is the safest time for us; then we can rest during the daytime, for if we flew in the hot sunshine for hours at a time we would get so very tired."

"You're right," said the Red Squirrel. "When do you leave?"

"I really can't tell you. Maybe to-night, perhaps not for a few days, but we are all ready; just as soon as our leader thinks the weather favorable off we shall go. Until then we can rest and enjoy ourselves."

"Bon voyage," he cried as he turned away to go home to his tree house. Up to the top of it he scampered, and there settling himself, he waited.

The day waned, and night took charge of the sleeping earth. Still Bushy, the Red Squirrel, remained in the tree top. As an owl swept silently by, he crouched low, so that the sharp eyes of the night hunter should not see him. Once a shadowy thing brushed his face, and he felt, oh so frightened, but it was only one of those curious half mouse, half bird animals—a bat—that was out looking for its supper. The moon rose and still he watched. Suddenly he heard a faint cry far away, and now eagerly he scanned the sky. There they were, the dark cloud passing high over his head, and he could hear the metallic voices of the Bobolinks, the chirping of the Warblers, and the soft whistle of the Thrushes. They were off on their wonderful journey, those feathered travellers, off to face the unknown dangers, off through the darkness to the sunny lands of the South.

. . . . . .

The Bird Lover watched the sky with anxious eyes. "Surely they have not gone another way," he said to himself, but the fairies of Hope whispered to him that his wish would soon be realised. Day after day he had been out in his garden as the first streak of dawn crept across the sky, filling afresh the bird baths and renewing the drinking water for the coming guests. When his tasks of love were finished he always went up to the rose arbor on the hill and there he watched for some sign of the travellers.

At last, one morning in early October he was rewarded, for there, coming from the north was a black cloud. Nearer and nearer it came until he could clearly see the birds themselves and hear the sound of their whirring wings.

Still flying high, they swept over his head, across the garden and beyond. Disappointed he watched them, for surely he knew the leader. Sadly he rose to leave the arbor, when, flying lower this time, the flock returned and circled over the trees. Breathlessly he waited, then to his delight the birds came to earth, tired as he could see, but happy to find a sheltered resting place. Glad twitterings and chirpings broke the calm silence of the October morning as the king of day rose in golden splendor, but gladder than all was the heart of the Bird Lover to know that those he loved had not forgotten him in their hour of need.

The Art of Making Good Apple Sauce.

Apple sauce, like everything else, can be very well or very poorly made. Here is a plan that is economical on both sugar and time, and most appetizing. Do not pare or core the apples, but wash them thoroughly, removing just the bad parts. Put on to cook with as much water as required and cook *quickly*. Then put through a colander or strainer, and while still hot, sweeten to taste.

By this method one is assured of delicious apple sauce, with no raw pieces or bits of core in it. You are not sweetening any part of the apple that is not used. You are saved the time of paring the apples, and besides, the beautiful red skin of some apples makes the apple sauce a lovely color. Try this method and you'll never go back to the old way.

OBSERVER.

To Fill Cracks.

House cleaning will soon be with us again, and fore-warned is fore-armed. Fill all those unsightly cracks in your floor, before you paint or stain it, with this simple preparation, which will prove, I am sure, the best you have ever used.

Buy some of the cheapest varnish you can buy, and mix it with cornstarch to the consistency of a thick paste, and apply evenly in the cracks.

OBSERVER.

Grease and Grass Stains.

Do not despair if your child comes in with his dress ruined, as you think, by grease off an automobile or his waggon. Rub the greasy spots well with lard, roll the article up and set it away for an hour or so. Then apply coal oil before you wash it, and after the wash the stains will have disappeared.

I have also found if grass stains are soaked in coal oil, and allowed to remain a little while before the wash, that the grass stain disappears after the wash.

OBSERVER.

Nice Hands—But Busy.

I always have great trouble with my hands when there is so much fruit, and so many vegetables to be done. But this year I just use pumice stone on my hands, and a little lemon, and I have no trouble at all. It is so easy that I am glad to tell others. It is pumice stone that does the trick.

Dip your finger nails in a little peroxide of hydrogen and it will keep under the nails clean.

OBSERVER.
Grand Valley.

Corn Starch Saves Wheat.

Corn starch is as good for boiled starch as the laundry variety and saves wheat, as the laundry starch is made from wheat. In using corn starch use a little bluing.

A. G. C.,
Oxbow, Sask.

Delicious Sherbet.

Last year when we were canning peaches. we had a lot of juice left which would not go into the jars. I filled the can of the ice-cream freezer about half full of the juice, and when it was almost frozen I put in the beaten whites of four eggs. When frozen, the sherbet is a delicate pink color. I use four eggs for a six-quart freezer.

Milliner's Combs.

Who has not experienced the unpleasant sensation, after trying on several hats, of having the hair most untidy? If milliners would keep a supply at hand of tiny washable combs, it would be a decided drawing card for their parlors. Until such time it will be found an advantage to carry a small comb in one's bag when going to the milliner's.

E. G. G.,
Brampton.

Oilcloth Paper.

Oilcloth, covered with a coat of paint, makes splendid kitchen wall-covering and will wear indefinitely.

Your Kitchen Sink.

If you are building a new kitchen, measure the woman of the house and not the plumber to determine the height of the sink, tables, and so on. Thirty-two inches is a good average. If your sink was built for some one else, use a stool; shorten its legs if necessary for greater convenience.

Knitting Remarks.

Mark on one of your knitting needles the length you make your sock and it will save you constantly measuring.

Wind your wool in this manner, and your ball will not run away from you. Leave a piece about 15 inches long before beginning to wind, then wind as usual, fastening the end when finished. Use from the end that was left hanging out, and if you have wound your wool *loosely*, as you surely do, the yarn will pull out easily and your ball will stay where it is placed.

OBSERVER.

A $10,000 Discovery.

Grate raw potatoes to a pulp and add a pint of water to a pint of pulp; pass this liquid through a sieve and allow it to settle. Pour off the clear liquid, which is to be used for cleaning. Dip a sponge in the liquid and apply to the fabric till spots are removed. Rinse in tepid water and press with a warm iron on the wrong side.

The Paris Art Institute offered $10,000 for a preparation that would clean delicate fabrics without injury to color or goods, and this simple recipe won the prize.

A New Place to Sprinkle Salt.

Scatter a little salt from the salt-shaker along the whole length of the window-sills right under the sash when cold weather comes. A fine, even coating of salt at this line will prevent snow or moisture getting between the bottom of the sash and the sill, and freezing, thus making it impossible to open the window.

C. N. R. TOURIST CARS THE REAL THING.

Comfortable and Economical Berths Between Toronto and the West.

Canadian Northern Tourist Cars serve those who, demanding efficiency, do not cavil at simplicity in appointments.

There is the same wide berth, the same scrupulous cleanliness, the same privacy and perfect ventilation and electric lighting as met with on the C. N. R. Standard Sleeping Cars—and they offer opportunities for economy, of potent appeal, these waste-not stressful days.

A kitchen and ready-to-use range is at the disposal of the tourist car passenger desiring to cook meals en route, and the cookery of "back home" can be enjoyed all the way; or a capable cook will be found in the porter who stokes the range and looks after the kitchen, but unless called into service keeps discreetly out of the way.

And it is not necessary to purchase first-class transportation to secure accommodation on C. N. R. tourist cars! Holders of second-class and home-seekers' tickets may book what berths they need from the fourteen comfortable roomy sections—at exactly half the rates prevailing for similar sized space in the Standard Sleepers.

These cars are of solid construction throughout, built on steel underframe, and the conventional, Canadian Northern, highly polished, dark green finish of the exterior, and the mahogany furnishings of the interior, present a very pleasing appearance to the eye.

Plain Living Gives a Nation Strength—Save.

Time and Money

We want and we will liberally pay one energetic lady in each community to represent the "Canadian Home Journal."

We already have scores of local representatives in our big Home Journal Club, and some are making as high as $100.00 per month.

There are still many towns and villages in Canada in which we have not a representative and if you have any spare time that you desire to turn into money, write us to-day.

The remuneration of a "Canadian Home Journal" representative is according to the time and activity devoted to the work.

If you have plenty of time and energy there is practically no limit to your income or territory, for we make special provision for the live ones.

The women of Canada require more money to-day than at any time in the history of the nation. The "Home Journal" will supply that money in exchange for your time.

Write us to-day.

Alma College

The Money Value of an Education

"Girls' Schools," said our practical friend, "are all very well for the daughters of the wealthy, but there are too many frills in them for the ordinary young woman who must earn her own livelihood afterward," which proves that he never heard about Mary Jones in particular, and the thousands of Marys in general who have been trained at Alma College.

This Mary Jones lived in a small town with her parents. When she had completed her Collegiate education she went into an office and was earning twelve dollars a week. But Mary was not satisfied. She longed for further education along musical lines, so she set to work to plan.

She found that for five hundred dollars a year she could study music and several other subjects as well at Alma College, so she borrowed the money at once, and at the end of the first year an equal amount from a friend with interest at six per cent. Mary graduated at the end of the second year because of her faithful application and went home to form a class of pupils. Twenty-five were interested and paid seventy-five cents a lesson. To this income was also added five dollars weekly for playing the organ at her church each Sunday. This gave Mary a weekly income of $23.75 instead of $12.00, and at the end of two years she was able to pay back the money borrowed with the interest. Was this a practical course for her to follow? I believe even the hardest-headed business man must agree that it was a paying proposition.

The Queen's Tear-Bottle

By VIRNA SHEARD

(Continued from the September Number.)

"'Bless me, my fathers, and send thy blessing to the King of Egypt, for, having conquered, he returns.'

"With uplifted hands they blessed her, and she departed. But not knowing the King was dead, the priests wondered at the whiteness of her face and the glory of her robes—which were ceremonial robes and heavy with much gold.

"The litter-bearers bore the Queen onward until they met the triumphant legions of Egypt.

"At their head was carried the body of the King upon the linked shields of his guard, and beside the litter walked the greatest of the tame war-lions. They lowered the shields at the Queen's approach, and she stepped from her litter and knelt in the sand beside it. The mighty warriors of the guard wondered at her that she did not weep.

"'So you return to me—in triumph, O My Lord!' she said, as though he heard. "'Tis joy to meet thee. Thy people have been sore beset and very pitiful. But all I could do, O most dear, I have done. It was but little, and I forgot to lay my sacrifice of tears upon the altar of Amen-Ra. Quite forgot, until word came of thy victory. Now it must serve but for a thank-offering. The priests have promised to offer it thus with incantations and praise—that the gods may be content and not angry with us any more. Perchance we were too happy—and thereby forgot them in our hearts.'

"Gently she stooped and laid her lips against his face, that had still the dust of battle upon it. As she did not rise, and the moments passed, the guards looked into each other's eyes, and were troubled, thinking she had fainted. Then one, bolder than the rest, lifted her up. And they saw her spirit was no longer in her body, but had hastened on to overtake that of her Lord the King of Egypt, so that it might journey with him into the land of Peace.

"The High Priests laid the tear-bottle on the altar at the feet of Amen-Ra, as they had promised. There it lay, O, my little ones, amid the daily offerings of fresh flowers, for many, many, many years.

"When the city, long afterwards, was burned and sacked, and the temples destroyed, an aged priest took the token from the desecrated altar of the Sun-God, to bear it away. And, behold! The tears within the crystal had, by some miracle, turned into a jewel, the wonder of which no tongue can tell.

"There it shone with serene rays of light, that all might see and marvel. Moreover, that time-worn priest secreted the token, and at his death gave it to another, and though the temples were laid waste, yet has the Queen's Tear-Bottle been passed down from one to another of that priestly line unto this very day."

In the fire-lit room there was silence, and one boy after another roused as from a spell. The Egyptian rose and stepped to the floor with the light spring of youth. He, too, was as one who had come out of a dream.

"Thanks, Abydos Khon!" the boys called. "That was a good story! Some story, Abydos Khon!" One after another, they registered their approval by word of mouth, and so scattered in different directions, shaking from them rather gladly, perhaps, the mystic impression of his words, and making for the world they belonged to. So youth can escape quickly from one condition to another. But age is not so.

The Man-Who-Was-Rich rose stiffly from his chair beside the hearth, and approaching the hooded figure of Abydos Khon, as he was about to depart, touched him on the arm.

The Egyptian turned and looked into the cynical eyes of John Mayor.

"Who are you, Abydos Khon?" he asked.

"Why should I think you would believe me if I told?" he questioned with a smile.

"Why not?" said the other.

"Because you do not easily believe," returned the Egyptian.

"Are you, then, so extraordinary a man one could not give credit to your identity?" Mayor asked with cold politeness.

"That is as it may be," said Abydos Khon. "But I will try your faith. I am of the old line of the Pharaohs!"

The Man-Who-Was-Rich gazed at the strong young figure before him, at the beautiful face that might have been cast in bronze; the eyes, from which shone out the flame of the soul within; the thick, white hair, white as a thing grief-stricken; the patrician hands of such vast repose.

No, it was not difficult to believe that he came of a race of kings. But the Pharaohs!

"What proof have you of what you claim to be?" questioned the Man-Who-Was-Rich.

Abydos Khon smiled—and the smile was like a light.

"Ah!" he returned "I was right. You have no faith. Well, what does it matter? Yet this much I will say. My people of Egypt do not aver their line of birth unless they have proof thereof. The birth records are sacred—but not for every idle and curious eye to see." He waved his hands lightly, as though dismissing the subject. Then, bowing, turned to the door.

But the Man touched him on the arm again.

"Wait!" he said in his clear-cut voice. "Wait, Abydos Khon! I am not done with my questions—though, of course, you may not answer. Yet, I desire to know a thing or two regarding your statements in the little story. A strange story, Abydos Khon, and akin to those of the Bible we were bidden to believe in our childhood. No whit stranger than those most true stories, and very beautiful. Therefore, tell me—what of the Queen's Tear-Bottle you assured your credulous audience had come down to this day? Was that truth or polite fiction? What of the jewel it held—a jewel compounded of tears, as you told us? Why go so far into particulars? Why drag in miracles or enchantments? It did not seem necessary."

Abydos Khon regarded him steadily. Beneath the brown hood, that was like a friar's hood, his eyes were as stars. About him clung the calm of the East. It enfolded him as an intangible garment. For a moment he stood so; then bowed again.

"I admit your right to question," he said, "and it is my pleasure to answer. The story, as I told it, is true—if we may believe any story so handed down. It has come with little variation through the priests of the temples that belong to days that are very far off. Some stories are so wondrous, so lovely, they carry the power of conviction. Nothing can be added to them or taken away that would not mar their perfection. This, every man that hears them acknowledges. Therefore, in the chronicles and repetitions they remain unchanged, and they seem to need no proof. Yet, of this story, I alone, of all the living, *have a proof*." From the inner folds of his cloak, above his heart, he drew a crystal vial. In the dim room it shone with a soft radiance. He held it out.

"Look!" he said in his bell-like voice. "Look! It is the Queen's Tear-Bottle!"

The Man-Who-Was-Rich started, his eyes fixed on the shining thing, then he reached out and took it with his own hand, but with an incredulous smile.

"Oh, come!" he exclaimed. "O, come now! You can hardly expect one to credit *this*—to accept it as genuine, you know, or connect it with your very wonderfully recited story?"

The Egyptian shook his silvery head. "One does not look for credence in the hard-to-believe. Not, at least, here, in the City-of-Money. It may be the boys believed while they listened. Perhaps they still believe. But you—you are different—a product of your time and city. Still, at the least, I will leave with you food for thought. Hold the bottle to the fire-light."

The other did so, and looked long. It was a lovely thing he held, and made of a transparent crystal, luminous in places, as though flecked with phosphorus. The mouth of the bottle was wide and flaring, but the neck slender and long. Below it was delicately curved, and at the base so rounded it could not be set upright.

The stopper seemed made of a single opal, and was cut and threaded as a screw is threaded, so only by turning could it be fitted to its place. When once fitted, it held perfectly, and nothing could escape, not even vapor.

GOSSARD CORSETS

The Original Front-Lacing Corsets

are, and always will be indispensable.

World conditions, demanding the unusual of all patriotic women, have emphasized the superiority of the genuine Gossards. They have become a part of the patriotic war uniform for women.

Only in a Gossard can every woman attain the ideal proportions of her type, an inimitable style and a hygienic support that safeguards her health and assures a priceless all-day comfort.

The perfect Gossard back, with its delightfully flat lines that never have been and never will be attained by those attempting imitations, perfectly supports the spine and back muscles in every position.

The perfect Gossard front eliminates all appearance of fat or thickness and gives a hygienically correct abdominal support that means perfect comfort standing, sitting or bending.

The perfect corset, the original front-lacing corset, and the only correct expression of front-lacing principles, minimizes fatigue, assures added efficiency and the economy of a wearing service that alone is worth the price you pay, whether it be $2.00, $2.50, $2.75, $3.00, $3.50, $4.00, $5.50 or more.

The name **Gossard** on the inside of the corset is your guarantee of the genuine. Insist upon it. Avoid imitations.

There is at least one store—and without exception the best stores—in every city selling the genuine Gossard Corsets. You can identify them by the Gossard signs displayed in their windows and by their advertising of Gossards.

For Those Who Would Write

By KATHERINE HALE.

To A Poet

This article is the inauguration of a new department in "Canadian Home Journal"—a department of literature and journalism where questions relating to the needs and perplexities of writers, especially young writers, may be sent and will be answered by Katherine Hale. Henceforth, only one column will be used for the purpose of questions and answers, the remainder of the page to be devoted to monthly articles on Canadian literary haunts, beginning next month with "Some Literary Traditions of Toronto."

When the announcement was made in July that letters relating to questions about literature and journalism would be answered in the CANADIAN HOME JOURNAL a new department was created, and this at mid-summer, the season when the minds of most writers are presumably concerned with relaxation rather than with research. Yet the invitation was promptly accepted, and the first letters were answered personally In the future, while a private reply may be necessary and will be sent on request, answers to correspondents will, whenever it is possible, be shared by all readers of the Journal.

Out of the very first letter of the first correspondent of this new department there dropped a poem. This was to be expected, for nowadays the amateur poet is everywhere. To write to a poet is to write to almost everyone. I believe that there are more men, women and children in the world, trying to write poetry to-day than there are men, women and children trying to do any other one thing. These people may not confess their efforts, the world may never see the result, but there they are, singing away in a thousand minds: vague verses, trite hymns that the critics would undoubtedly call "crude"; some of them, perhaps, never even written out, but all making for a something necessary and musical in life, a something that otherwise would have been formless. Sometimes I think they are like the little never-born children of love and loneliness—these poems—these endless poems that ring through your imagination and mine, and through the imagination of the flippant looking saleslady who pretends to be interested in the pan you are buying, and the street car conductor who is so rude and careless, and the maiden lady who talks thrift, and the over-tired mother of many, and the endless other people that we meet for a moment every day of our lives and who seem pre-occupied. Catch them off-guard and then you know that Alfred Noyes spoke the truth and there are moments, chance moments, perhaps, when

They're all of them returning to the
heavens they have known,
In the land where the dead dreams go.

In Italy, indeed in nearly all the southern lands, the whole country seems to resound with song. The peasants sing as they work and they sing more spontaneously than they speak. But as one comes north the song seems to die upon the lips and the music of life (for there must be music—music is just vibratory sound and is a part of the very fabric of our being) the music turns inward, so to speak. In such countries as Great Britain and North America people seem to be writing instead of singing the song.

This great war, which has in some way entered every home in Canada, has proved this. You will remember that there were no songs resounding through the silent streets as our soldiers marched away, even the wonderful Community Singing has not reached Canada yet. But the strange and awful new thing in life had to be expressed in some form of rhythm and the outlet has been verse. Oh, the thousands of poor, pathetic, desperate verses about this war! We have glanced at them from day to day in every newspaper from one end of the continent to the other—and quickly glanced away. Most of them are pretty bad. Some of them I should say are frankly "invented"—that is, thought out and built up and crudely rhymed for the sake of effect. They seem almost like an egotistical comment on the greatest of tragedies. But for the most part these verses are, I believe, sincere. They represent the pent-up emotion of hearts torn by grief, strained by anxiety, over-taut with the pictures of vague happenings, terrible in their nature to those nearest to them,—*lines that had to be expressed.*

In most cases it would have been better for the writer, more honest, too, on the part of the editor had most of the verse remained in the writer's private possession, for often they are merely depressing in form—little gray rags of grief. And yet the bright red of courage has often shone through. There has been quite a handful of lovely lyrics among the thousands of drab ones, and a few splendid and powerful appeals. Also, the fact remains that the spirit of self-expression is abroad in the land, one of the healthiest of signs.

And so, to the poem that slipped out of the envelope of the first correspondent of this department. It came to me as a sign and a symbol of that effort which has blossomed out into a great flower and is distinguishing Canada among other countries to-day. I mean her school of poets, the few who have through experience and labor been able to perfect their art in a manner singularly characteristic of this country.

Our novel writers of real distinction are so few that you could count them on the fingers of one hand. Our real short story writers are even fewer. But the work of a group of our verse writers has carried all over the world. Such names as those of Charles G. D. Roberts, Bliss Carman, Wilfred Campbell, Arthur Stringer, the Scotts, Isabella Valancy Crawford, Marjorie Pickthall—these names, and others, are known and perhaps will be known in the far future as makers of purer poetry.

And now about the thousands that are trying. Shall I tell you something of what I wrote to our first correspondent? He enclosed a poem about a sparrow, and in it there were some very good lines, only he had made his verses a little more essay-like than song-like. He had obtained information about the sparrow and he put a good deal of it into his verses with a rather heavy hand. Now a sparrow is a small affair at best. To put it politely, a sparrow is a study in miniature. The aim of the poet in dealing with the theme should, therefore, be to make the verse characteristic of the subject. There were two or three lines that showed what the writer could do. His task, therefore, is obviously to get the thought of the whole thing as characteristic, as simple, and yet charming as the lines that were good lines. In other words, to suggest the sparrow without explaining him. Then, too, a poet is always more or less of a colorist and sometimes he is obliged to use his thought material very much as an artist does his paints. Water colors, with their bright, thin, translucent glow, are much more appropriate for some subjects than the heavier oils. You couldn't imagine an oil painting of a sparrow.

Some poets instinctively think in color. Usually their work is the more effective for this. Masefield, the Englishman, is a fine example of a true colorist. In his sea verse especially, you can almost smell the paint. Marjorie Pickthall also uses color, but her palette is subdued, she works in pastilles.

There is so much more in poetry than the fact that one can successfully rhyme a thought. In fact, rhyme has much less to do with poetry than rhythm. Some of the greatest poetry is unrhymed. The blank verse of Shakespeare, the prose cadence of Walt Whitman, some of the *vers libre* of Amy Lowell, an American writer, is true poetry, because there is perfect fidelity between the form and the thought.

And so, to put it very simply, there are surely a few rules necessary for the guidance of all of us who are writing or trying to write verse to-day.

In the first place, don't "try." If a subject does not come to you with its keen beauty, or its deep suggestion, or its overwhelming force, don't make one up and elaborate it. If you really want to write, and your heart is open to the actualities of this very actual world, one day your topic, the thing you were meant to interpret for others, will present itself to you. It will come with no apparent effort. You will think "Why this is the one thing I can write about. This has entered into my experience. I have seen or felt or known this. How could I have missed it?"

And then, having thus mysteriously found the subject, the trouble begins. Because if the subject really is big enough and beautiful enough to write about in poetry then no words of your will seem adequate, or fitting, or simple enough, or suggestive enough to give everlasting form and color and significance to your theme. It is not that the words must be unusual or poetic, or sublime. Oh, not at all. That, perhaps, is just what they must not be. If, instead, you can find words that are hauntingly simple, exquisitely sincere, clear in color, clean in expression—if you can put into the lines all the passion of the subject and also the restraint which accompanies greatest passion, which generals it, so to speak, then you will begin to get something of the wonder that comes to the writer, as well as to the reader in real poetry.

But the deep yet fresh thought, the beautiful reticence in expression, what someone has called "the mood of singing rapture," comes out of much discipline and long, long practice. It is Ezra Pound, a modern American poet, who has recently said: "Don't imagine that the art of poetry is any simpler than the art of music or that you can please the expert before you have spent at least as much effort as the average piano teacher spends on the art of music."

Have you stopped to think why those brief immortal lines of that Canadian soldier, John McCrae, "In Flanders Fields," have girdled the globe and touched men's hearts more deeply than any other verses that have come out of the war? Re-read them and you will realize their utter simplicity, sincerity, restraint. But a restraint which leashes, one of the deepest, purest passions of being—the passion for justice. No wonder that Americans by the score answered that appeal and that it has been echoed around the world. Yet, the same thought uttered with less perfection of form could not possibly have had the same effect.

Take up our quarrel with the foe!
To you from falling hands we throw
The torch. Be yours to hold it high.
If you break faith with us who die
We shall not sleep though poppies blow
In Flanders fields.

No,—it was the perfect line, the exact rightness of it that has made it too beautiful to lose.

And the beauty of exact rightness is, after all, the shining mark of the poet.

Obvious.

One day, as Murphy halted at the top of the river bank, a man famous for his inquisitive mind stopped and asked:

"How long have you hauled water for the village, my good man?"

"Tin years, sor."

"Ah, how many loads do you take in a day?"

"From tin to fifteen, sor."

"Ah, yes! Now, I have a problem for you. How much water at this rate have you hauled in all?"

The driver of the watering-cart jerked his thumb backward toward the river, and replied:

"All the water yez don't see there now, sor!"

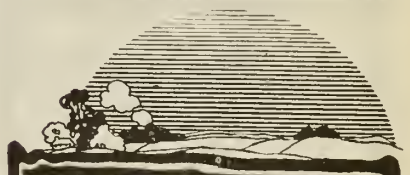
Plain Living Gives a Nation Strength—Save.

Woman's Charms Cannot Survive Old-Way Sweeping

THE fatigue of sweeping slowly but surely leaves its mark. Fair faces and shapely figures succumb to this unnecessary drudgery. Wasted time also takes its toll.

But these wasters are easily avoided. There is an easy way to sweep—a way more thorough and more sanitary, a way that saves time and aids, not hinders, home pleasures. That way is the Bissell way.

BISSELL'S



Easy Emptying **Vacuum Sweeper** — Cyco Ball-Bearing **Carpet Sweeper**

You and a Bissell can do in half the time, sweeping that now takes twice as long to do and saps your vitality. It is in daily use in millions of homes.

Sweeper prices $4.25 to $6.00. Vacuum Sweepers (Powerful suction) at $8.50 to $13.00—depending on style and locality. At dealers everywhere. Booklet "The Care of Rugs and Carpets" on request.

Music During The Great War

By H. G. STANTON

In Collaboration with Hector Charlesworth.

PART II.

(Continued from September Number.)

When we turn to Italy, we find the same insistence on music as an important factor in the life of the community, which must be maintained as an essential, despite the fact that in that country the strain has been much more cruel than we have had to endure on this continent. This was to be expected, for music has been highly organized, both from an artistic and commercial standpoint, and the city of Milan, especially, reaps large financial rewards from the fact that it is one of the recognized musical centres of the world. In Italy, opera and musical education are assisted by governmental and municipal grants, and as soon as Italy entered the war, efforts were made to use music to stimulate patriotic and martial impulses, not in the crude way in which it has been used on this continent, but by the presentation of complete works and excerpts from operas which were patriotic in their inception. A perusal of Italian newspapers shows tremendous musical activity, which, under the Italian system, must have been stimulated by governmental encouragement. In fact, did the Italian Government attempt to treat music as a non-essential, its action would be regarded by the people as an expression of what has been aptly termed "defeatism."

The Italian Government also, with a view to furthering closer relations between Italy and her Allies has, since the disastrous offensive of last autumn, encouraged French, British and American musicians to give concerts in Italy and dissipate one of the most prevalent of German propagandists' arguments that the inferiority of other nations is shown by their lack of musical aspiration.

The Italian view of the importance of music in war time was very aptly expressed a few weeks ago by the President of the Accademia de St. Cecilia of Rome, in these words:

"The institution of our concerts, so far from being a useless distraction, is a centre of culture and a fount of noble emotions no less than an honor to the capital and a vigorous affirmation of art. For this reason, the Academy has considered it a moral obligation to organize the usual series of concerts . . . so that Rome will continue its normal musical life, and the artistic class, so gravely hit by the war, will not be deprived at least of this notable resource."

Less is known of Russia than of any of the other great nations engaged in the war; but we do know that, prior to the conflict, the Russian Government maintained, through its territorial administrations, a very advanced system of musical education even in its remotest district, a fact which accounts for the remarkable diffusion of musical talent among the Russian people. Russia's musical conservatories were maintained in full activity, despite her prevalent disorganization, until after the Bolsheviki seized the reins of power, and it is said that in certain districts they are still being maintained on a communal basis. The late Count Tolstoi was a very strong advocate of musical culture for the whole community, and his views were shared by many who disagreed with his political opinions.

It may be said that music has been regarded as an essential factor in civilization which should receive the support and attention of the Government, by all the western people except the Anglo-Saxon nations. It has been the policy of Great Britain and the various dominions, and of the United States also, to encourage music by letting it alone. This is not the occasion on which to argue the merits or demerits of this attitude. But it is clear to those who have followed the course of events in connection with music, that since the beginning of the war—and as a consequence of the war—there has been a widespread awakening in Great Britain to the importance of music in national life, which is likely to bear fruit. This has been partly due to the fact that, among peoples with whom she was desirous of cultivating friendly relations, the reproach has been constantly hurled at her that she is a nation of shopkeepers, and citing her inferiority in the matter of music as a proof thereof.

"This war has shown how great a part music does play in our human life."

A very strong movement for the encouragement of British composition is now in its inception, supported by those who desire Britain to attain an eminence equal to that of Germany, in all respects, in years to come. From the purely military standpoint, Sir Douglas Haig has taken an active interest in encouraging the presentation of music of the higher order to soldiers in the trenches, while many writers have urged the importance of music as a solace in helping to keep up the morale of the people at home.

Certainly the theory that music is a non-essential finds no support from the more eminent members of the British Government. Any proposal of the kind would meet with the strongest disapprobation of Right Hon. Arthur Balfour, who is strongly convinced of the moral value of music to civilization. It is probable also that Right Hon. Lloyd George holds similar views, as evidenced by speeches he has made at Welsh National Festivals on two or three occasions since the war began.

The point is brought to mind most forcibly upon reading the speech of Right Hon. Lloyd George at Edinburgh, on May 24th, during which he said:

"This is not the time to organize campaigns, to harass men in charge of the destinies of the nation. There ought to be a truce from all those manoeuvres, at any rate until this great offensive is over. Everything must be done to keep up the spirits and the morale, determination and unity of the people as long as this struggle continues."

It may be claimed by many that it is quite unnecessary to pay any attention to the spirit or morale of the people at home, but I think we can all accept the authority of Lloyd George and realize that his remarks, just quoted, are worthy of every organization's co-operation.

I venture to predict that if the war is going to continue for a still further great length of time, those members of the Government and many organizations who now look upon music as a non-essential, will feel the need of the Government encouraging and supporting music, both in the home and in public concerts, despite the fact that there now seems to be a tendency on the part of some to hamper this development.

Within the present year, the British Government has shown that it realizes the value of music as a propagandist influence. Its activities in this respect have met with little or no attention on this side of the Atlantic. Nevertheless, the British Government decided in February last to use music to effect closer relations between the British and Italian peoples. The Italians are devotees of band music, and the British bandsmen are known to be unexcelled anywhere. Consequently, the Government decided to send to Italy the famous conductor, Major Mackenzie Rogan, with 250 picked musicians from the bands of the Household Brigade — the Grenadier, Coldstream, Scots, Irish and Welsh Guards. This spring this superb organization has given concerts of British music in all the leading cities of Italy, and has been received with the wildest enthusiasm.

It shows the trend of opinion with regard to music in Great Britain, that the Government should have adopted this means of promoting a more intimate feeling of friendship among the Italians, and of combating pro-German influences, notoriously insidious.

Another evidence is that shortly after war broke out, the English war Office issued orders against the use of bands excepting only drum and bugle corps. Within six months, that order was not only rescinded, but since then every possible encouragement has been given to music among the soldiers, and I learned only a few days ago that they have now established in England, "The Music In War-Time Committee," under the leadership of no less a person than Sir Hubert Parry, and that this committee have given 3,000 concerts in England, including those in the hospitals. They also entertained weekly 4,000 people at the luncheon-hour concerts for munition workers.

It is quite evident from the above facts that any measure in the direction of treating music as non-essential would be regarded as a retrograde step by those nations which are included in the actual theatre of war. It may, of course, be argued that, while music does play an indispensable

(Continued on following page.)

Music During The Great War

(*Continued from preceding page.*)

role among the French, Italian and German peoples, it is an art foreign to the genius of the Anglo-Saxon race, and that therefore expenditures in connection therewith by us come under the category of waste. It is this opinion, so widely entertained by other nations, that the friends of Great Britain have been most anxious to combat. That it is false, the large expenditures on music and musical instruments are sufficient proof. To say that the people who make these expenditures are recklessly extravagant, and ruining themselves by useless expenditure, like the man who wastes his substance in drink and gambling, or the woman who is carried away by a passion for dress, would be ridiculous.

In support of the argument that the Anglo-Saxon people are not less musical than those of other nations, it has been pointed out that they have more music in their homes than other peoples. While other peoples have more public recognition of music, the art as a dramatic institution and a source of private enjoyment, is probably more firmly established among the English-speaking peoples than any other. It is this fact that makes the music trades so important a factor in the social and industrial life of Anglo-Saxon countries. For this reason, music touches the morale of our communities in time of war quite as nearly as it does that of the European countries which give official recognition to the art.

As has been said, the proposal to treat music as non-essential originates in the United States. It was one of those floating ideas which were born of the bewilderment of the American people when they at last found themselves actual participants in the war and when any suggestion calculated to show that America was putting her shoulder to the wheel, obtained the thoughtless acceptance of certain coteries. But it was so thoroughly opposed to the best currents of opinion in the United States, where a great movement to make music a more definite factor in American civilization has been for some time in progress, that it gained little headway.

In this movement, no class of American has been more potentially active than the members of the banking and financial class. One may cite the instance of the veteran banker, Henry D. Higginson of Boston, who has spent at least two million dollars in the support of symphonic music in his own city, and has had a wonderful influence in promoting similar expenditures by wealthy men in other parts of the United States. Less well known are the expenditures of the famous New York banker, Otto H. Kahn, whose German birth has not prevented his being one of the staunchest friends of the Allies. Mr. Kahn's musical expenditures have probably exceeded those of Mr. Higginson, in an endeavor to make the better class of music accessible to all sections of the American people.

One may also mention the names of Andrew Carnegie, John D. Rockefeller, the late Joseph Pulitzer, and the late H. H. Flagler, as those of men who have made contributions on a vast scale to the support of music. Those hard-headed business men are not, and were not men to throw away money on a useless luxury. They believed the development and diffusion of good music to be of essential value to the welfare of the American people. For that reason, their views, backed up by lavish expenditure of money, have distinct bearing on the point at issue. There is no reason to believe that their views have been altered in the slightest degree by the incidence of the war.

It is also worth noting that during the month of May, the great captain of industry, Charles M. Schwab, has not allowed his preoccupation with the task of increasing the output of American shipping, to interfere with his active and generous assistance to the great Bach Choral Festival annually held at Bethlehem, Pa.

It may be added that, from the military standpoint, General Pershing, after he went to France, became convinced of the moral value of music, and made an appeal to the United States War Department for a betterment of the standards, both in quality of performance, and of work performed by army bands.

Very significant also were the words of Major-General Leonard Wood after his return from a visit to the American army in France. General Wood, when in France, noted that the forces of the United States were alluded to as the "silent army." He went so far as to say: "It is just as essential that the soldiers know how to sing as it is that they carry rifles and know how to shoot well."

Coincident with the interest of the wealthy bankers and financiers of the United States, there has been in progress a great movement for what is called the democratization of music, and the development of community music, whereby the better order of compositions may be made accessible to all classes of the community. It may, without exaggeration, be said that the success of this movement, which has been great in many American cities, has been in a large measure due to the development of reproducing instruments, like the player piano and the phonograph, which in the space of ten years has greatly extended the knowledge and influence of music in communities where it formerly received little attention.

It has been pointed out by numerous writers on sociology that if the beneficence of such men is to be really fruitful of good results, the musical movement must begin at the bottom, by the development of the musical instincts which are latent in nearly everyone; which are apparent in the little children who follow a hand organ from corner to corner; and the washwoman who sings over her tubs. Fortunately, that movement is already under way in the United States, and has also spread to Canada, where at isolated points experiments in community music are now in progress. It is a matter in which Canada has been backward, and therefore, any step which could be construed as designed to place music in the non-essential class, would be deplored as a retrograde step.

Already this movement has taken a concrete form in the organization of the Musical Alliance of America, which was effected at Baltimore about a year ago. The first clause of its statement of purpose reads:

"To demand full recognition for music and for all workers in the musical field and musical industries as vital factors in the national, civic and home life."

It is an organization founded on such actual requirement, that during the first twelve months of its existence, it was able to render most valuable service. Last autumn, when an endeavor was made to persuade the American Government that music should be classified among the non-essentials, the Alliance succeeded in placing its views before President Wilson personally, and the leading members of the Senate and Congress, so effectively, that the project was abandoned. Among the representations made by the organizer of the Alliance may be quoted the following passage:

"The war has shown us how great a part music does play in our human life. It helps the soldier in the trench. It soothes the wounded soldier lying on his cot in the hospital. It inspires the marching regiment. It assists the recruiting officer. It consoles those saddened with the loss of dear ones. It unites in a chorus those on the hospital ship that has been torpedoed by the ruthless U-boat.

It Brings a Lifetime of Happiness

HER new piano is a Gerhard Heintzman—her choice has been approved by thousands of families who have brought Music's joy into their homes.

In Vancouver the Gerhard Heintzman Piano is held in highest esteem. In Halifax it has been the favorite piano for generations. Throughout Canada, from coast to coast, it has won a warm place in the nation's affections.

Gerhard Heintzman Pianos to-day are representative of the old ideals of honesty, integrity and craftsmanship that are responsible for the world's masterpieces.

They are built with all the skill and tone-producing ideas that come of our half-century's experience.

Yet they cost no more than you naturally expect to pay for a good piano—for a piano that is to yield a lifetime of happiness—that is to pass on to your children's children.

Hear Canada's Greatest Piano to-day. Hear it because it will convince you that it is worthy to occupy a big place in your hours at home—a lifetime possession you will be proud to own.

Wholesome Foods At Reasonable Cost

By MARION HARRIS NEIL,
Author of "Economical Cookery."

Economy Does Not Mean That One Should Starve

Foods to be wholesome and nourishing, must be properly cooked, therefore much depends upon the ability of the cook, whether she is the owner of the kitchen or the woman hired to fill the position.

Foods may be wholesome when purchased, but under the manipulation of an ignorant cook may be made unfit for the human stomach. It is time well expended to enlighten one's self on the proper methods of preparing meals if one wishes the family to keep wholesome in mind and body. An over-abundance of starch or fats at meals for several months will have its effect in an unhealthy and ailing family.

October offers an abundance of nutritious food which, if properly cooked and served, will form material by which the body may be kept repaired and its muscular power and tissues rebuilt. To keep the body well nourished should be the object of the housekeeper, and for such reasons she should combine her foods to produce the greatest benefits for the family.

The five principles of food are protein or nitrogenous compounds, carbohydrates, fats, mineral matter and water. The food receives the first principle from white of egg, curd of milk, lean meats, gluten of grains, and other vegetable proteid, usually called legumen, all of which are instrumental in building the tissue of the body.

Carbohydrates are sugar, starch, fats and oils of meats, grains and vegetables. Sugar and starch are transformed into fat after eating, and the others are stored as fat in the body, but all serve as fuel to yield heat and muscular power. The mineral matter is received from fruits, vegetables, meats and nuts, and aids digestion, also forming bone.

The cheapest and most healthful food is that which gives the greatest amount of nutriment for the least cost. It will be seen without much effort that the best food is that which combines the most healthful and cheapest materials and is best suited to the needs of the consumer.

As conditions and habits of individuals differ, their food should be adapted to their particular requirements. Each person must learn by experience what kinds of food give him nourishment with the least discomfort. The real value of food materials is determined by the proportions which can be digested and utilized by the body, as well as the amount of nutritive ingredients which a food contains. The reason that foods should be pleasing to the eye and palate is that they then stimulate the flow of the digestive juices.

Economy does not mean that one must starve, but that waste should be avoided either in purchasing or cooking the food. This may be possible by careful planning and buying those foods that have the least waste, avoiding expensive cuts of meats, and fruits and vegetables out of season.

Steamed Hominy.—For each person allow two tablespoonfuls of dry hominy, which place in a double boiler, adding boiling water, while stirring, sufficient to cover. Fill the lower part of the boiler with boiling water and set it where it will continue to boil. Watch the hominy, and when it absorbs the water add more, if needed, to thin it and cook the grains until very tender. When done, it should be thick enough to retain its shape when spooned into the serving dishes, but not so thick that it will be difficult to eat. The amount of salt which must be added during the cooking depends upon the taste of the family.

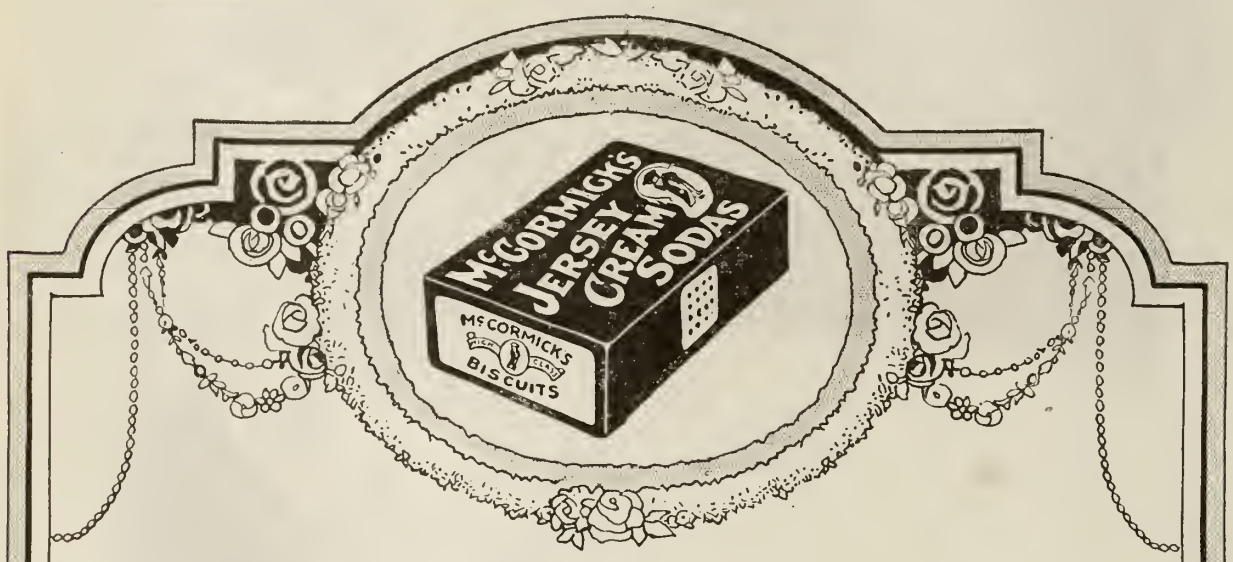
Salmon Pie.—One can of salmon, two cupfuls of bread or cracker crumbs, four cupfuls of white sauce, and plain pastry. Remove the liquid, skin and bones from the salmon and flake it into pieces. Line a deep fireproof dish with pastry rolled thin, then fill it with alternate layers of crumbs, salmon and sauce. Cover the top with pastry and bake in a moderate oven until browned on the top. Have the sauce well seasoned with salt, pepper and paprika.

Vegetable Cutlets and Cold Meat.—Any left-over cooked vegetables may be used for these, and a combination of two or three of these flavors which will combine nicely, such as carrots, peas, and potatoes, or turnips, and potatoes, oyster plant and potatoes and carrots, cauliflower, cheese and wax beans. Place three tablespoonfuls of butter substitute in a saucepan, and when melted stir in four tablespoonfuls of corn flour or barley flour, then add one and one-fourth cupfuls of hot milk or water, stirring until well blended, season with salt and pepper and add enough vegetables to make the sauce thick, then spread on a platter to cool. When cold form into neat cutlet shapes, and cover with bread crumbs or corn meal, then brush over with beaten egg or milk, then dip into crumbs or corn meal again and bake in a hot oven or fry in smoking hot fat until a delicate brown. Insert a beverage "straw" in each end and serve hot surrounding cold sliced meat, or creamed meat.

Onions In Batter.—Peel medium-sized onions and steam until tender, but unbroken; remove carefully to a dish and dust with pepper, then dip in batter, dropping carefully into smoking hot fat to cook until brown. Serve as an accompaniment to roasted meats or fowl. Another method is to wrap the cooked onions in cooked rice, seasoned with salt and pepper and binding them with one yolk of egg. Set each onion in a greased baking pan and bake in a hot oven, basting with melted drippings. The onions in this case do not require to be quite tender.

To make the batter:—Sieve one cupful of flour and one-eighth teaspoonful of salt into a bowl, and make a well in the centre. Add one-half cupful of tepid water by degrees, and beat well with a wooden spoon to make a smooth paste free from lumps. Then add one tablespoonful of melted butter substitute and beat again for five minutes, then add one well beaten egg, and the stiffly beaten white of one egg. This batter may be used for all kinds of fritters. It is better if allowed to stand for one hour before using, and before the eggs are added. The batter should be thick, and of the consistency to coat completely the article it is intended to cover.

Scalloped Oysters.—Rinse, drain and dry good sized oysters (allow six or eight to each person). Dip each in slightly beaten egg and roll in fine bread crumbs or corn meal, with each cupful of which there has been well mixed two tablespoonfuls of melted butter substitute. Arrange in layers in shallow greased baking dishes, dusting each layer with salt, pepper and a little chopped celery or parsley, then adding two tablespoonfuls of cream. Bake in a quick oven from twenty-five to forty minutes, according to the depth of the dish.



Curried Chestnuts.—Shell and blanch one pound of chestnuts, then cook in stock or water until tender. Melt two tablespoonfuls of butter substitute in a saucepan, fry in it one small sliced onion, one small sliced sour apple, one tablespoonful of curry powder or paste, one teaspoonful of chopped chutney, one tablespoonful of rice flour and when smooth add one cupful of stock or gravy. Cook until the apple is soft, then strain, add one teaspoonful of lemon juice, one-half teaspoonful of syrup or honey, and simmer the chestnuts in this until they have absorbed the flavor. Serve hot with plenty of plain boiled rice.

Bread Griddle Cakes.—Pour one and one-half cupfuls of hot milk over one cupful of bread crumbs; add two tablespoonfuls of butter substitute, two well beaten eggs, one-half cupful of flour sifted with one-fourth teaspoonful of salt and three teaspoonfuls of baking powder. Mix and bake on a hot griddle, and serve with honey, syrup or preserves. Cooked cereal may be substituted for the bread crumbs.

Scrambled Rice.—Blend together one tablespoonful each of butter substitute and flour in a saucepan over the fire, when bubbling add one cupful of milk and cook until smooth and thick, stirring all the time. Now add one cupful of cold cooked rice, two well beaten eggs and one-half teaspoonful of salt. Pour into a greased frying or omelet pan and cook like an omelet. When set, fold and serve with hot tomato sauce.

Mock Duck.—This is a Welsh dish, and very delicious. Put enough drippings into a saucepan to just prevent

The Usefulness of Salt

By MARION HARRIS NEIL,
Author of "Salads, Sandwiches, and Chafing Dish Recipes."

It Is Only Common Salt, Yet Absolutely Indispensable

There is a natural craving for salt in all animal creation. Animals will travel long distances to get it, and in countries where it is scarce men will give gold for it, or anything else they possess. African explorers tell us that the children in some districts of Africa will suck a lump of salt in preference to candies.

Although salt is used ordinarily to make our food more palatable, the natural craving for it shows that it must perform some far more important function than this. It purifies the blood and assists in the processes of the digestion of the food. The true value of salt in food is best realized by its absence, when almost everything we eat is without flavor. Since its introduction salt has steadily increased in value, until it has become an absolute necessity.

The story of the young princess who told her sisters that she loved her father "more than salt," is well known, and the cook who overheard her, showed the king, who had also been a listener, that the youngest daughter was cleverer than the other two, who had chosen wine and bread as symbols to show their love for him.

It was not in food alone that salt was valued by the ancients. Among them a salt spring was regarded as a gift from the gods, and any salt found in the soil lent it a peculiar sanctity and made it known as a spot where prayers were most readily heard. Every meal that included salt had a certain sacred character creating a bond of piety and friendship between host and guest, hence the expression, "there is salt between us," meaning friendship, and to be "untrue to salt" means to be disloyal or ungrateful.

The numerous references in the Bible to salt indicates that the sacred writers attached much importance to it as a symbol of something that was of great value: "Ye are the salt of the earth."

In the middle ages, when all classes and degrees of men sat at the same table, the salt cellar which occupied a position in the middle, was used to denote the position or rank of the guests. "Above the salt" meant of high degree. Below the salt sat the yeomen, serfs and vassals of the feudal days.

The value of the article as well as the significance which attaches to the word is still retained, showing it has "lost none of its savor." To take anything with a pinch of salt means to excuse or make allowance for it. A pinch of salt is always considered lucky in cooking. To "salt" one's conversation means to make it sparkle. To "salt" a ship is to fill with salt between the timbers and planks for the preservation of the timbers.

When we wish to season or preserve meat we sprinkle salt on it, as our forefathers from the earlier ages have done. The quantity used for curing fish is almost incredible. For cooking purposes it is indispensable, and it is well to remember that salt brings out other flavors. Even sweet puddings are improved when a pinch is added. Its antiseptic and preserving qualities are well known, and by destroying the organisms that promote decomposition it is invaluable for keeping fish, meat and other foods.

When mixed with crushed ice it lowers the temperature to 32 degrees below freezing point, and advantage is taken of this property in making ice cream and ices. Apart from these qualities there are many other ways in which it can be used. When our teacups or pots and pans are discolored we rub damp salt on them to remove discoloration. It will also remove egg stains from silver spoons.

It brightens as well as extinguishes fire, as a teaspoonful of salt put into the paraffin oil of a lamp makes it give a brighter light, and salt in a bucketful of water helps to extinguish a fire.

Then, when broiling a chop or steak, a little salt thrown on the fire lowers the flame and makes a more suitable fire for the purpose. A little strewn on the lid of a saucepan will prevent the contents from being smoked. If the housewife has the misfortune to spill milk or fat on the kitchen range a little salt thrown on it will keep down the smell, and if grease is spilt on the table, salt will keep it from sinking into the wood. A little salt put into the washing-up water brightens crystal and also removes discoloration from water bottles. It should be used plentifully in cleansing sinks, baths and lavatories. It will likewise save labor in cleansing mirrors, window panes and lamp glasses. Salt cleans and strengthens basket-work, chairs and tables, and if new brooms are soaked in brine they will wear longer. Salt dissolved in oil will help to remove stains from furniture, and mixed with vinegar it will remove stains from articles of brass and copper. They must be brightened afterwards with some polishing liquid or paste.

Cut flowers will keep longer if a pinch of salt is added to the water in which they are kept. The stains that sometimes discolor doorsteps may be removed by its means, and a liberal sprinkling of coarse salt in the spring and fall will destroy the plants of grass and weeds that so often disfigure a garden walk.

If the carpet is dull looking the colors may be renewed by rubbing it over with a flannel cloth wrung from soapy water and afterwards from water in which a little salt has been dissolved. Common sense will tell the housewife that using too much will leave the carpet damp.

If any one has the misfortune to upset an ink bottle, a little salt and milk sprinkled on the stains while they are fresh will do much to remove them. A little salt in the ink bottle, moreover, keeps the ink from getting moldy.

Salt is good for the stings of bees and wasps, and a thick plaster of wet salt put on a sting will take the pain out of it. To clean stains from the hands after paring peaches or apples, rub the hands with lemon juice, then sprinkle on salt and rub together. Wash in clean water and dry thoroughly.

Salt placed under baking tins will prevent their contents from scorching on the bottom. In the laundry a handful of salt put in the washing-up water will prevent the colors from running in prints and woollen articles, a small pinch in the starch will prevent it from sticking to the iron, and a rough iron may be smoothed by rubbing it on fine dry salt; if new prints are soaked in salted water before washing they will keep the color better.

As a kitchen disinfectant, salt is invaluable. A lump of it should be kept in the kitchen sink, where it will dissolve slowly and keep the drain pipe pure and wholesome. Where it is desirable to cleanse a waste pipe that has been neglected, flush it freely with a strong solution of boiling hot salt water.

A pinch of salt added to the whites of eggs will cause them to whip in half the time usually required.

A pinch of salt added to ground coffee just before cooking accentuates the natural flavor of the berry and gives "body" to the drink.

Insects, flies and fleas have a dislike to salt, and a little sprinkled about will help to keep these down.

Salt may be used to strengthen a sprained limb, and for those who cannot enjoy sea bathing a bath of salt water occasionally is very refreshing

Milk As A Meat and Wheat Substitute

Recipes for the Use of Evaporated Milk.

Milk is the most essential food product in your kitchen.

It is safe to say that you have never prepared or served a meal that did not include milk or milk products in some one of the dishes.

You usually have butter for your bread and cream for your coffee. If there are little folks at your table the mug of milk at each place is as familiar and important as the bib and the high-chair.

But we must not let the idea of fresh milk being turned into canned milk alarm or prejudice us. Nor must we associate any preservatives with evaporated milk. There are no preservatives in evaporated, unsweetened milk. The milk stays sweet because it is air-tight. The milk is pure because it has been sterilized. The machinery that does this work is clean and modern. A few hours after the cows have been milked and the milk brought to the condensery, it is sealed in the containers and ready for use.

Part of the water in the milk is evaporated and this leaves it rich and smooth. It looks not unlike heavy cream and is of about the same consistency. When you dilute the evaporated milk with an equal quantity of water you bring it back to its original state, although still it is better than most ordinary milk because reliable brands of evaporated milk, even after being diluted, contain a greater proportion of butter fat than regular bottle milk.

It is economical because there is no waste. You open the container when you need milk, and every drop of it can be used. It stays sweet for several days after the container is opened, and does not have to be kept on ice, merely in a cool, dry place.

Evaporated milk is convenient because the wise housekeeper who has it on her shelves is always prepared for any recipe requiring milk; she can serve luncheon or afternoon tea to any number of extra guests, and always have the cup of milk for the unexpected little visitor who has accompanied her mother.

As it is nothing but pure milk to begin with, evaporated milk can be used the same as the bottled product. In cooking it is usually diluted to make it the consistency of ordinary milk. If you use it just as it comes from the container, you save on butter and other shortening, as evaporated milk is very rich.

On the table you chill evaporated milk and use it just as it comes from the container. It will improve any cup of coffee, and over cereals and fresh fruits it is delicious. It can be whipped with satisfactory results.

Most of us know that right now it is important to consume as much milk as possible. There is plenty of milk in Canada, and it is a valuable substitute for wheat and meat. Butter and cheese and all milk products are health-building and strength-sustaining foods.

Dishes prepared with cream sauces, foods cooked in milk, creamed soups and vegetables, and custards of all kinds, should be on the table of every patriotic Canadian household. For your country's sake—because we must substitute on wheat and meat, and for your family's sake—because they are entitled to appetizing as well as nourishing food, begin now to use more milk; and for your own sake—because it will prove safe, convenient, and economical, try evaporated milk in your cooking and on your table.

Cheese Bisque.

One and a half cups evaporated milk, one and a half cups water, one tablespoonful cornstarch, one cup grated cheese. Thicken the milk with the cornstarch, cooking thoroughly. This is best done in a double boiler. When ready to serve, add the cheese, salt, paprika, and a little Worcestershire sauce.

The most popular soup from October to March, when the weather is cold and appetites keen, is oyster stew. If you have never tasted an oyster cream stew made with evaporated milk you have yet to learn how truly delicious this dish can be. It has a piquant flavor entirely different from oyster stews made with ordinary milk, and is very rich and smooth. Here is the recipe for making it:

Oyster Cream Stew.

Melt two tablespoonfuls butter; add two tablespoonfuls flour, one-half teaspoonful salt, dash of pepper, and mix well. Add a cup of water and a cup of evaporated milk and cook until it thickens, stirring constantly. Add a pint of oysters and heat until oysters are thoroughly warmed through.

For the substantial part of the meal, evaporated milk may be used in making meat souffles, gravies and sauces, ham and tenderloin baked in milk, and many kinds of meat substitutes. We give below two recipes for substantial dishes.

Veal Baked in Milk.

This dish is as tender and delicious as chicken if cooked long and at low temperature. Cut a veal steak into six or eight pieces and place in a shallow casserole boat. Pour over a mixture of one-half cup evaporated milk and one-half cup water with one-half tablespoonful of cornstarch and one tablespoonful butter. Season with salt and pepper, and bake until the meat is tender, basting, if necessary, with a mixture of equal parts of evaporated milk and water.

Nut Bake.

This is a splendid meat substitute, as it contains fully as much nutriment. One cup ground peanuts mixed with one cup bread crumbs, one cup grated cheese, one tablespoonful tomato ketchup, salt and pepper. Moisten the above with one-quarter cup evaporated milk, add one small onion sliced thin and browned in butter, mold into a loaf and bake slowly for thirty minutes. Serve with tomato sauce.

Evaporated milk is especially good for making nut and vegetable, as well as meat loaves, as it holds them together compactly.

For luncheon you will find this cheese custard particularly delicious. It is a new recipe, and when the platter of golden brown slices is garnished with parsley or celery tops, it is quite festive enough for company luncheon.

Cheese Custard.

This is not a dessert, but another splendid meat substitute. Take eight slices of bread, not over one-half inch thick, one-half pound of cheese, three-quarters cup evaporated milk, three-quarters cup water, one egg and one scant teaspoon salt. Make eight sandwiches of the bread and cheese. To the milk and water add salt and egg and beat. Saturate the sandwiches thoroughly and place in shallow pan, not touching each other, in which are five tablespoonfuls melted fat. Place in a slow oven until cheese is melted, then remove to top of stove and brown, turning only once. Serve immediately.

Evaporated milk gives a new flavor to vegetables. The inevitable canned corn and canned peas of the long winter taste differently, and very much better, when the rich evaporated milk is added. Of the few fresh vegetables that can be obtained reasonably, celery is probably the most popular, and the tough, outside branches that cannot be served as a relish may be prepared for the table in this manner:

Celery Au Gratin.

Cut the stalks into inch pieces and boil in salted water. Remove and drain, and add to a thick white sauce made with evaporated milk. Pour into a baking dish and cover with a layer of grated cheese, then a layer of browned bread crumbs. Sprinkle with pepper and place in the oven until cheese is melted.

When salad greens cannot be obtained, vegetables that have been canned or dried in the summer must be substituted, together with the half dozen fruits that can be used for a salad. Under these circumstances a great deal depends on an appetizing dressing.

The Bird In The Bush

(*Continued from page 7.*)

nothing of his plans, but if he wished her to go to the world's end she was ready to cut all ties and fare with him into the unknown.

It would be hard to say good-bye to her friends. It would be a genuine heart-ache to give up Rodolphe and the happy comradeship of years. At the thought of Rodolphe her face grew very serious. He was to escort her to the soiree and then leave her—to Armand. The simple fact seemed suddenly full of moment to her and to him. Rodolphe would miss her. There was no vanity in the admission—merely a deep and pitying tenderness. She would miss him, too—how much she was afraid to think. He had been such a good friend, so unwavering in his devotion. If it had not been for Armand she might have cared enough,—but, that was a thought crushed in its birth by the stupendous fact of Armand's return.

In spite of its many duties the day dragged slowly to an end. The early November night closed in with a crispness that breathed of coming snow. A stiff breeze swept in from the Baie de Chaleur and the blue Laurentides were wrapped in a steely haze.

The simple supper was eaten as a matter of custom, but Annette was too excited to enjoy the homely fare. Gran'moder Boileau had much the better appetite and old Paul, Annette's father, sipped his tea with a gusto born of a day's hard labor.

Annette was already dressed in her blue party-dress, her wonderful hair braided in glistening coils upon her head.

At half past seven Rodolphe drove up in his light buggy. His face was very serious as he stood in the lamp-light, his fine eyes fixed with a look of abject renunciation upon the girl at his side. He spoke but few words to Paul or his mother and silently helped Annette into the ouggy. He tried to be natural, but his laugh failed to deceive Annette. She, too, felt the tension of the moment, and something of her joy faded before Rodolphe's evident misery. Neither mentioned Armand.

In silence they drove along the shore and down the side-road that led to Collettes'. The lights shone from the farm as they drew up before the door. Germaine Collette and his sister, Elise, met them in the broad beam of hospitable light. Already Isaie Valinquette was tuning up his fiddle and several couples were shuffling their feet, anxiously waiting for the dance to begin.

Her heart was throbbing painfully as Annette stepped within the roomy kitchen with its yellow-painted floor, its ears of corn and strings of red pepper hanging from the rafters. Bunches of feathery asparagus decorated the walls and festoons of dried apples swayed in the draught, casting weird shadows upon the ceiling.

Her eyes took in the room at a glance. Absently she answered the voices that greeted her. In a dream she went into the small bedroom to remove her coat and scarf. She wished that Rodolphe would soon come in from the barn where he had gone to put his horse.

As yet Armand had not appeared. She dreaded meeting him before this crowd of watchers, and breathed a sigh of relief as Rodolphe entered and came quickly to her side. He felt that she was under his care until Armand appeared. The musiclan drew his bow inspiringly across the strings. One couple started off to a lively waltz tune; others followed, and soon Rodolphe and Annette stood alone in a corner. He held out his arms and in a moment they, too, were lost in the gaily twirling throng. Annette was glad of the action, for her mind was distraught with expectancy.

The waltz died away in a screech and a wail that usually announced the end of each dance. Annette sank into a chair with flushed cheeks while her partner sat beside her.

"Ah—dere is Armand Collette heemself," ejaculated Camille Primeau, as she adjusted the artificial rose in her hair. Annette turned at the same moment as Rodolphe, and together they watched Armand shaking hands with one group nearest the door.

Annette caught her breath. She would have risen to her feet had not a sudden faintness driven the red from her cheeks.

Armand Collette! The stout, flashily dressed man was smiling a greeting as he tried to recall amidst much merriment the faces of old friends. Annette gazed as if turned to stone, watching each movement with painful incredulity. There was little to remind her of the old Armand. He had become very fat. Although in his early thirties he was exceedingly bald, his scalp resembling moth-eaten patches. A front tooth was missing and a blue scar trailed across one cheek. Gone were the beauty and the youth that had held Annette through the long years of waiting. He evidently did not see her and suddenly she found herself wishing that she were away in Rabbit Town, lost in the dream from which she had been so rudely awakened.

Then something of the humor of it all came over her. She felt a wild desire to laugh. Gradually Armand was drawing nearer to her and she leaned heavily towards Rodolphe for support.

At last the moment had come. She rose unsteadily to her feet as the lover of her dreams stood before her with extended hands. She placed her cold fingers in his fat palm, but as quickly as possible drew them away. Physical contact was absolute pain. All the yearning, the slumbering passion, the romance and devotion of years, seemed suddenly to die. Over her came a great fear that he would claim her as he had promised. The hope of years had become a tragic menace. She scarcely heard his greetings.

"Well, this is little Annette! You haven't changed very much since you used to let me kiss you good-night in Rabbit Town!" The fact that he could thus openly refer to moments that to her had been infinitely sacred, grated rudely upon her sensibilities. She crimsoned at his laugh and dared not look at Rodolphe. Here was humiliation refined into exquisite torture, cruelty unlike anything she had ever before experienced. Her pride, her womanhood, were dragged in the mire, and she was made to appear like some light o' love. She stood silently awaiting further indignities, abased, scorned, her shame flaunted before the faces of her friends.

It was as if her world had been swept from beneath her, leaving her spinning through space in a febrile isolation. The warmth of the room, the odor of cheap perfumes nauseated her; she grew faint and giddy.

Then she became conscious of many eyes fixed on her in friendly curiosity. Armand was smiling before her as he mopped his bald forehead with a heavily scented silk handkerchief. Rodolphe shifted helplessly from one foot to the other.

"Let me see—you were seventeen when I went away—as pretty a little girl as ever I see. Do you remember how I used to say I was coming home to marry you some day?" He laughed boisterously and Annette cringed. He was going to exact his pound of flesh. He had lost the caressing accent of his own people and spoke with a harshness of unfamiliar speech picked up in his travels. For some moments he rambled on in a flood of reminiscence, each recalled event spelling torture to Annette. She was brought to herself by his next question, as he turned his attention to Rodolphe.

"And is this your husband?" With bold eyes he surveyed the handsome young lumberman.

His indifference, his ignorance of her life, real or feigned, cut her to the quick. It was, however, the one thing needed to restore her self-possession. A sudden anger took the place of despairing chagrin. No longer was she a tortured thing at bay. Laughing lightly, she turned towards Rodolphe and with a pretty gesture of ownership placed her hand upon his arm. With an archness heightened by the charm of her beauty she answered slowly, "He's not ma husban' yet—but soon, M'sieu Collette. Some tam before de New Year. You will be here to dance at de wedding, mebbe? Rodolphe was only a child too w'en you went away—how long ago, M'sieu?" She matched her indifference with his own as she smiled into his face. Her color had returned and she stood before him in all the pride of her youthful beauty. With her defiance there was a strange gladness in her heart, a wondrous sense of peace, as that of a homing bird which has come again to its own.

Rodolphe stood as one in a dream. Scarcely could he interpret as tragedy or comedy the little scene into which he had been drawn as a chief actor. It all seemed too wonderful to be true. He felt that Annette must be joking, but he always found her so tender, so fearful of wounding, that he could scarcely reconcile the thought to fact. She was not a woman of whims and had always possessed a supreme regard for the truth. He shifted again from one leg to the other, brushed his hand nervously through his soft brown hair, and waited for the outcome of the scene unfolding before him. He had never seen Annette more beautiful, more desirable. Her eyes were glowing, her cheeks were a beautiful pink, and her air of careless abandon was regal in its quiet dignity.

Rodolphe was disappointed in Armand Collette and the old feeling of jealousy changed to one of disgust as he studied the man's worn features and flamboyant attire. He had come to town after Armand's departure, and this was his first glimpse of Annette's idol.

"Have you met the Madame yet, cherie? She is anxious to meet my old sweetheart. She's a little jealous, but she won't mind so much now that you are going to be married too." Collette laughed roughly and gave Annette a playful dig in the side. Resentment shone in Rodolphe's eyes. "You're a lucky fellow, Savard. If I wasn't a married man I'd give you a close run." His facetiousness evoked merely a forced smile.

"Ah, M'sieu Collette, it would do no good. Rodolphe he's already won de race. De music it is fine—shall we not dance, Rodolphe?" With a pleasant smile of dismissal she turned her back on Armand and in a moment was lost with her partner among the other dancers. Rodolphe's face had gone white and he held Annette very close as they kept time to the wailing fiddle.

"Annette—you mak' de joke?" he asked, as they glided slightly away from the others.

"I mak' de joke of Armand Collette, cher ami. He's ver' fonny. I know now dat I love bes' de bird in de han'. Will you marry me, Rodolphe?"

Her eyes were raised to his, her warm breath played upon his cheek. He drew her closer and whispered very softly, "I tell you dat w'en we on de way home, cherie."

To both, the music of Isaie Valinquette was that of a choir unseen.

THE END.

The Usefulness Of Salt

(*Continued from page 33.*)

For unbroken chilblains rubbing with damp salt is one of the best remedies known.

We all know, more or less, the agony of toothache, and other pains, and how comforting a bag of hot salt is, often giving immediate relief, while a weak solution, used as a gargle, is good for sore throats, not forgetting it is also beneficial as a dentifrice.

No application is better for lusterless hair than salt. Rub well into the roots of the hair at night, and cover the head with a nightcap. Brush out the salt in the morning. Several applications will show a marked improvement in the appearance of the hair.

In severe attacks of colic a teaspoonful of salt dissolved in one-half cupful of cold water has been known to give immediate relief. The same dose will revive a person who has been stunned by a heavy fall, if he can be forced to swallow it.

When salt is dried for the table it should be allowed to grow cold before being put into the salt cellars. When this is not done the salt is apt to cake together in lumps.

If the feet are tired or painful after long standing, great relief can be had by bathing them in salt water. A handful of salt to a gallon of water is the right proportion. Have the water as hot as can be comfortably borne. Immerse the feet and throw the water over the legs as far as the knees with the hands. When the water becomes too cold, rub briskly with a towel. This method, if used night and morning, will prove most beneficial for the feet.

Plain Living Gives a Nation Strength—Save.

Segis Fayne Johanna, the Liquid Veneer Cow

What has this $150,000 Cow to do with

LIQUID VENEER

Read the Wonderful Story—a story which tells how Liquid Veneer made it possible for the President of the Liquid Veneer concern to acquire the greatest herd of pure-bred Holsteins in the world, including this $150,000 Liquid Veneer Cow, champion of the world over all ages and breeds.

This story tells how Liquid Veneer revolutionized dusting methods, how it became so dear to the hearts of millions of housewives, and why it is

Champion of the World

To illustrate the greatness of this cow, remember that she has produced as high as 7¾ lbs. of butter and 52 quarts of milk in a single day, more than ten times the production of the average cow.

To prove the value of Liquid Veneer, use it the next time you dust, and you will be delightfully surprised at the ease with which it cleans, renews and brightens. You get the same high quality at the same old prices, 25c, 50c and $1.00 a bottle. To obtain the story, write us, telling us what you think is the most striking feature of this ad. That's all. The story will be sent free!

When Our Friends Drop In

By MARION HARRIS NEIL,
Author of "How to Cook in Casserole Dishes."

"There is an emanation from the heart in genuine hospitality which cannot be described, but is immediately felt, and puts the stranger at once at his ease."

Maple Cocoanut Cookies.

Company Dishes Which Are Easily Made.

Raisin and Orange Salad.

Fruit Cup.

Apple and Nut Roll.

Rice Salad and Cold Meat.

THE cordial hostess welcomes the unexpected with the same sincerity as the expected guest and sets to work to arrange the most appetizing menu she can with the supplies at her command. It is well to keep in an emergency closet a few goods for just such occasions, then one will never be at a loss to know what to serve when company drops in at the most unlikely moment. This closet or shelf should contain such articles as crackers, tea, coffee, cocoa, canned lobster, tuna fish, shrimp, sardines, salmon, peas, tomatoes, peaches, a few tumblers of mixed jams and jellies, a bottle of Worcestershire sauce, a box of gelatine, canned soups, a jar of beef extract or a few bouillon cubes, canned milk, a jar of grated cheese and a jar of boiled salad dressing.

The housewife who would have no fear when the unexpected guest drops in for a meal, should take time by the forelock and make a few preliminary preparations. First, she should learn the art of saving odds and ends of food. Bits of bread should never be thrown away, but dried, run through a food chopper or rolled with a rolling pin and placed in glass jars. These crumbs are most valuable in the making of forcemeats, croquettes, and the scalloped or *au gratin* dishes. Stale cake should not be thrown out. Slices of this spread with jelly or marmalade, covered with a thin custard and topped with whipped evaporated milk make a delicious sweet. Fruit juices, left-over preserves, cold meats and vegetables may all be utilized if one has thrift and ingenuity.

The housewife whose friends feel at liberty to make unexpected calls, should master the making of sweet and savory sauces.

Slices of cold beef may be heated and covered with a brown sauce to which a few chopped olives have been added. Another way to prepare cold meat is to dice it, fry it in hot butter substitute, then heat it in brown sauce. Serve on squares of toasted bread with a poached egg on top of each piece.

Cold Ham.—Cut thin slices of cold cooked ham, spread a slice with chutney or piccalilli and mustard, cover with another slice, and broil carefully. Serve hot.

Cinnamon Toast.—A friendly cup of tea made with extra nice tea and served with thinly sliced lemon and accompanied by cinnamon toast is delicious to offer an afternoon tea guest. See that the water for the tea is actually boiling, scald the teapot and put in the leaves. Then pour the boiling water over them and let the beverage brew for a few moments.

To make the cinnamon toast:—Cut stale bread in one-fourth inch slices, remove the crusts, and cut the bread in three pieces crosswise. Toast carefully, spread with butter, and sprinkle with sugar mixed with powdered cinnamon, using three tablespoonfuls of sugar to one tablespoonful of cinnamon.

Raisin and Orange Salad.—Line a bowl with crisp lettuce leaves. Peel and slice four oranges, lay the slices on the lettuce, sprinkle over with one cupful of fine chopped celery, add one-half package of seeded raisins, and serve with French or mayonnaise dressing.

Apple and Nut Roll.—Roll out some plain pastry, spread over with cold stewed apples, sprinkle with chopped nut meats, roll up like a roly poly, place on a greased baking tin, brush over with milk and bake in a moderate oven for thirty minutes. Serve hot or cold with sugar and cream.

Rice Salad With Cold Meat.—Line a salad plate with crisp lettuce leaves. Into a bowl put three cupfuls of cold boiled rice, add one tablespoonful of melted butter substitute, one-half tablespoonful of onion juice, and one-half cupful of French dressing. Press into a greased mold, turn out on the lettuce and serve with cold sliced meat and extra dressing.

Maple Cocoanut Cookies.—Cream together one cupful each of butter substitute and grated maple sugar, add two well beaten eggs, one cupful of barley flour, two cupfuls of flour, one teaspoonful of baking powder, and one cupful of chopped cocoanut. Roll out on floured baking board, cut out, lay on greased baking tins and bake in a hot oven. Cool, brush over with maple syrup or honey and sprinkle with cocoanut.

Fruit Cup.—Three-fourths fill glasses with any preserved fruit, add a little fruit juice and serve topped with whipped and sweetened cream or whipped evaporated milk and small cookies.

Curried Meat.—Brown one sliced onion in two tablespoonfuls of hot butter substitute, add one teaspoonful of curry powder or paste and one cupful of soup stock, tomato if possible; or the meat stock could be used, adding one-half cupful of tomato, either canned or fresh. Add one quart of cold cooked meat, cut into small pieces, one tablespoonful of lemon juice, and heat very slowly. Line a hot platter with plain boiled rice which has been seasoned with salt and butter substitute. Make a well in the centre and pour in the curry. Serve hot.

Coffee Ice Cream.—Pour two cupfuls of left-over coffee into a saucepan, add four cupfuls of milk, and bring to boiling point; add one-half cupful of sugar or honey and cool. Then add one teaspoonful of vanilla extract and freeze. Serve with wafers.

Popovers With Banana Sauce.—Into a bowl sift one-half cupful each of flour and corn flour, and one-half teaspoonful each of salt and baking powder. Beat up two eggs, add one cupful of milk, then add these gradually to the flour mixture and divide into hot, well greased popover molds. The molds should be a little more than one-half full. Bake in a moderate oven for thirty-five minutes. The oven door should be kept closed until the mixture has a firm enough crust to keep its shape when the door is opened. Serve hot with the following banana sauce:—Blend two tablespoonfuls each of butter substitute and flour in a saucepan over the fire, add one cupful of hot milk and one-fourth cupful of sugar, honey or syrup, and stir until the mixture thickens; then add yolks of two eggs and cook for three minutes. Add a pinch of salt, two bananas which have been rubbed through a sieve and one cupful of whipped and sweetened cream or whipped evaporated milk.

This banana sauce is excellent with gelatine jellies.

Hash au Gratin.—Slice one small onion and brown it in two tablespoonfuls of melted butter substitute, add two large baked potatoes pared and cut in pieces; then stir in one cupful of cold cooked diced meat; cover and simmer until heated through; add one tablespoonful of butter substitute, salt, pepper and paprika to taste; pile on a greased fireproof dish, cover with grated cheese and brown in a hot oven. Serve hot.

Fish Pudding.—Mix three-fourths cupful of milk with one cupful of fine bread crumbs and heat for a few moments; then add the beaten yolks of three eggs, one-fourth teaspoonful each of salt and white pepper, one cupful of cold cooked or canned fish and the stiffly beaten whites of the eggs. Pour into a greased fireproof dish and bake in a moderate oven until firm in the centre.

Chicken a la Terrapin.—Cut cold cooked chicken into good-sized pieces, and to each pint allow one cupful of sauce made in the following manner:—Melt two tablespoonfuls of butter substitute in a saucepan over the fire, stir in one tablespoonful of flour and add three-fourths cupful of milk and stir until boiling and smooth. Then add the yolks of three hard-cooked eggs, the pieces of chicken, one-half teaspoonful of salt, one-fourth teaspoonful of paprika and a pinch of powdered nutmeg. Cook over hot water until the chicken is hot. Serve very hot on toast.

Omelet With Mixed Vegetables.—Prepare one cupful of neatly cut cooked carrots, turnips, peas and beans. Heat up in a little white sauce, add one tablespoonful of finely chopped parsley and a pinch of sugar. Break four eggs into a bowl, season with salt and white pepper, and beat for ten minutes. Melt two tablespoonfuls of butter substitute in an omelet or small frying-pan, when hot, pour in the egg mixture, and stir until the eggs begin to set. Put the vegetables in the centre, fold over, brown in the oven and serve at once.

Hurry-Up Soup.—Dissolve three bouillon cubes or three teaspoonfuls of beef extract in three cupfuls of boiling water. Moisten one and one-half tablespoonfuls of rice flour with one-half cupful of milk, stir this into the boiling water and stir constantly until the mixture boils; then add one cupful of cream, and salt, pepper and paprika to taste. Serve hot with crackers or small pieces of toasted bread.

Sardine Toast.—Melt four tablespoonfuls of butter substitute in a saucepan over the fire, add one-third of a cupful of soft bread crumbs and one cupful of milk or cream. Bring to the boiling point and add two hard-cooked eggs finely chopped and one small box of sardines. The sardines must be freed from skin and bones. Again bring to boiling point and season to taste with salt and pepper. Serve hot on pieces of buttered toast or buttered crackers.

Scalloped Potatoes.—Wash, scrub, peel and boil fourteen potatoes, drain and rub through a sieve. Melt two tablespoonfuls of butter substitute in a saucepan over the fire, add the potatoes, three tablespoonfuls of hot milk, one tablespoonful of chopped parsley, three yolks of eggs, one-half teaspoonful of salt and one-fourth teaspoonful of pepper. Grease some scallop shells or fireproof dishes, dust them with fine bread or cracker crumbs, fill the dishes with the potato mixture, smooth over the top with a knife, brush over with melted butter substitute, cover with bread crumbs and grated cheese and bake in a hot oven until nicely browned. Serve hot with a good white sauce.

Cheese Sandwiches.—Mix four tablespoonfuls of grated cheese with two tablespoonfuls of milk or cream, one tablespoonful of chopped celery or two tablespoonfuls of finely chopped nut meats and one tablespoonful of chopped gherkins. Cut thin slices of bread, butter them, spread over the cheese mixture, cover with a crisp lettuce leaf and place another slice of bread on the top. Cut them into neat shapes, squares, oblongs or crescents, and serve.

Cold Slaw With Sauce.—Select a nice, white, hard head of cabbage, peel off the loose outer leaves, and cut in half. Half a cabbage is sufficient for a moderate sized family. Shave fine with a cabbage cutter, and sprinkle with salt. Boil one cupful of vinegar. Break in a bowl two yolks of eggs, and stir in gradually one cupful of milk, when mixed stir in the boiling vinegar very slowly, season with salt and pepper, add one tablespoonful of sugar or syrup, one teaspoonful of butter and two teaspoonfuls of cornstarch dissolved in a little cold milk. Put back on the stove, and boil, stirring constantly to prevent curdling, and as soon as thick remove immediately. Mix with the slaw while hot, and serve when very cold.

Cheese Savory.—Melt one tablespoonful of butter substitute in a saucepan over the fire, add three sliced tomatoes, one teaspoonful of salt, one-fourth teaspoonful of paprika, one-half cupful of milk and two cupfuls of grated cheese. Stir continually until the cheese is melted, then add three beaten eggs and cook until it thickens. Serve on crackers or toast.

The Mandarin Blouse and Long Jacket Are Chic Style Notes

7647—Ladies' Blouse (20 cents). Six sizes, 34 to 44 bust. Size 36 requires 2 yards 40-inch dotted organdy—1 yard 40-inch Georgette crêpe for collar—1½ yard filet lace for trimming. A large gathered frill finishes the V neck, and over this may be arranged a shawl collar knotted in front. The blouse is gathered in front on the shoulders.

7650 — Ladies' Blouse (20 cents). Five sizes, 34 to 42 bust. Size 36 requires 1⅞ yard 36-inch plain voile—¾ yard 36-inch embroidered voile—2⅝ yards edging. The sleeves instead of widening out below the elbow, may be gathered to deep cuffs finished with turnback cuff sections.

Blouse 7647 Blouse 7650

7963—Ladies' Coat (25 cents). Seven sizes, 34 to 46 bust. Size 36 requires 3½ yards 54-inch Bolivia cloth—4¾ yards 36-inch Pussy Willow satin for lining. Length at center-back 48 inches. Most of the new utility coats are cut on straight easy lines like this model. For early Autumn the coat fronts may be rolled back to form revers as illustrated with the collar turned down, while for colder weather, the coat may close to the neck with the fronts buttoned over.

Blouse 8000
Skirt 7330
Braiding 12425

Coat 7997
Skirt 7339

8000 — Ladies' Blouse (25 cents). Six sizes, 34 to 44 bust. Size 36 requires 3⅝ yards 36-inch black satin. Braiding border No. 12425, blue or yellow transfer pattern providing three yards of 14-inch border, 50 cents. No. 7330—Ladies' Two-piece Gathered Skirt (20 cents). Seven sizes, 22 to 34 waist. Size 26 requires 5⅜ yards 36-inch satin. Width at lower edge about 2¼ yards. Presented here is the new Mandarin blouse with straight Renaissance neck-line and Mandarin sleeves. It closes at the back, and has a deep border of soutache braiding. The sleeves are sewed into the armholes of the underbody, and instead of the Mandarin sleeves, plain sleeves may be selected. The skirt is a gathered model, but as it is made with straight lower edge, it may be accordion-plaited as illustrated here.

7997—Ladies' Coat (25 cents). Seven sizes, 34 to 46 bust. Size 36 requires 3½ yards 36-inch black velvet. No. 7339—Ladies' One-piece Side-plaited Skirt (20 cents). Five sizes, 24 to 32 waist. Size 26 requires 2⅞ yards 54-inch plaid. Width at lower edge about 2¾ yards. For informal street wear the plaid skirt and black velvet coat is particularly jaunty. This coat buttons in single-breasted style and is finished with a shawl or square collar. Plaited skirts are among the notable fashion features of the season, and this model is distinctly smart, arranged in side plaits and closing at center-back.

Coat 7963

Jacket 7960
Skirt 7830

7960—Ladies' Long Jacket (25 cents). Seven sizes, 34 to 46 bust. Size 36 requires 3¼ yards 54-inch English mixture—⅜ yard 36-inch velvet for collar. Length at center-back 43 inches. No. 7830—Ladies' Two-piece Gathered Skirt (20 cents). Seven sizes, 24 to 36 waist. Size 26 requires 2½ yards 54-inch English mixture. Width at lower edge about 1½ yard. Here is one of the new long jacket suits that are the smartest things for Fall wear. This suit has the straight tailored lines that are so much in vogue for general wear, and may be fashioned of tweed, English mixture, serge, or gabardine. The back is made with the fashionable full-length panel. At the underarm there are applied sections cut in one with the belt that crosses the front of the jacket.

7838—Ladies' Long-waisted Dress (25 cents). Six sizes, 34 to 44 bust. Size 36 requires 2 yards 36-inch check taffeta—2⅛ yards 44-inch serge—¾ yard 44-inch organdy for vest and collar—4 yards wide and 4 yards narrow braid. Width at lower edge 1⅞ yard. Quite new is the combination of check taffeta with serge which may match the dominant tone of the check. This model shows the fashionable long waist-line at which the serge is joined, tho the dress itself is belted at normal waist-line.

Dress 7818

Morning and Home Frocks and Some New Sleeveless Overblouses

Dress 7606

Work Dress 7436

7436—Ladies' Work Dress (25 cents). Five sizes, 34 to 42 bust. Size 36 requires 7¾ yards 36-inch linen—½ yard plaid gingham for collar. Width at lower edge about 2⅜ yards. In these days when women are engaged in so many outdoor activities a dress like this is a perfect boon. It consists of a simple gathered waist cut in one with pantalets and drawn in at the waistline by elastic drawn through a casing, forming overalls. The pantalets are drawn in at the lower edge, and over these is slipped a separate three-piece skirt. A small square collar finishes the open neck, and the sleeves are perforated for shorter length.

7911—Ladies' Morning Dress (25 cents). Nine sizes, 34 to 50 bust. Size 36 requires 4⅝ yards 36-inch percale—½ yard 27-inch white lawn for collar—½ yard 27-inch chambray for trimming. Width at lower edge about 1⅝ yard. Delightful in its simple charm is this morning and home frock of figured percale closing in front, and with square collar of white lawn finishing the open neck. The edges of the collar are rolled back and faced with solid color chambray. One-piece sleeves are provided which are perforated for shorter length, and the four-piece skirt, which is joined to the waist under the belt, is slightly gathered.

Apron 7643
Cross-stitch 12460

Dress 7816

7606—Ladies' One-piece Dress (25 cents). Nine sizes, 34 to 50 bust. Size 36 requires 6 yards 27-inch check chambray—⅝ yard white lawn for collar—1⅞ yard lace edging. Width at lower edge about 2 yards. Easy to make and launder is this simple house frock of check chambray buttoning at center-front. Allowance is made in the pattern for a square collar, and a pointed collar perforated for round outline.

7907—Ladies' Morning Dress (25 cents). Nine sizes, 34 to 50 bust. Size 36 requires 4⅝ yards 36-inch plain gingham—⅜ yard plaid gingham for trimming. Width at lower edge about 1⅝ yard. Embroidery No. 12184, blue or yellow transfer, 15 cents.

Apron 7981

7981—Ladies' Sleeveless Apron and Cap (25 cents). Sizes small, medium, and large, corresponding with 36, 40, and 44 bust. Medium size requires 4⅜ yards 36-inch calico—⅝ yard white lawn for bias trimming-bands. This is an attractive apron for the housewife with comfortable low neck and large armholes. The closing is at the back, and a choice is offered of square and V neck outlines. A cap is provided.

7643—Ladies' Apron (20 cents). Sizes small, medium, and large, corresponding with 36, 40, and 44 bust. Medium size requires for apron with short sleeves, 7 yards 27-inch chambray—½ yard 27-inch white lawn for collar. Cross-stitch No. 12460, blue or yellow transfer pattern, 15 cents. This neat apron is plaited below a square yoke front and back, and may have long or short sleeves.

7592—Ladies' Blouse (25 cents). Nine sizes, 34 to 50 bust. No. 7995 — Ladies' Two - piece Skirt (25 cents). Seven sizes, 24 to 36 waist. Width at lower edge about 1¾ yard. The costume in medium size requires 4½ yards 40-inch satin —1⅛ yard beige satin for vest and drapery facing — ½ yard 27-inch white lace for collar — ¼ yard black lace for trimming-band — ⅞ yard 36-inch lining for underbody. Because one is stout is no reason why one may not dress smartly and in up-to-date style if the proper lines are adhered to in the design of the frock. In this satin afternoon model the long revers of the blouse give length of line in front, and the skirt while simple, has an up-to-date touch in the drapery sections that are inserted in the side seams and are faced with contrasting satin. For a plainer frock these may be omitted.

7599—Ladies' Blouse (25 cents). Nine sizes, 34 to 50 bust. Size 36 requires 1½ yard 40-inch Georgette crêpe—1⅜ yard 36-inch satin—1½ yard passementerie—1⅛ yard 18-inch allover cream lace for collar and vest—⅞ yard 36-inch lining for underbody. The bretelles that extend over the shoulders and down to the waist-line are very becoming to stout figures, and length of line is given by the hanging pockets that depend below the shaped girdle.

7937—Ladies' Blouse (20 cents). Nine sizes, 34 to 50 bust. Size 36 requires 2⅛ yards 36-inch voile. Like most of the new blouses this is very simple in line, but the fulness on the shoulders is very becoming to women of plump figure. For the slender woman the blouse may be high-necked with a high turn-down collar.

7723—Ladies' Blouse (20 cents). Six sizes, 34 to 44 bust. Size 36 requires 2 yards 40-inch Georgette crêpe—3½ yards filet lace for trimming. Embroidery No. 12367, blue or yellow transfer pattern, 15 cents. When developed in soft fabrics like voile and Georgette crêpe draped revers of this style may be worn by the stout woman.

7965—Ladies' Dress (25 cents). Seven sizes, 34 to 46 bust. Size 36 requires 4 yards 36-inch satin—4⅛ yards 40-inch Georgette crêpe—⅞ yard 36-inch lining for underbody. Width at lower edge about 1½ yard. Here is a charming frock for afternoon or informal evening wear for the stout woman. The closing is at the back, and the tucked kimono blouse may be made with high, round, or deep square neck outline. The tunic falls in points in front, and is mounted on a two-piece gathered skirt.

8004—Ladies' Dress (25 cents) Seven sizes, 34 to 46 bust. Size 36 requires 3¾ yards 40-inch satin—2½ yards 40-inch Georgette crêpe—⅞ yard 36-inch white satin for collar and vest. Width at lower edge about 1½ yard. The stout woman who is inclined to be short-waisted will find this an ideal model for giving the effect of a longer waist-line. The surplice blouse is drawn down to form a deep girdle, and buttons at the side, and the skirt may be accordion-plaited or gathered, and is attached to the underbody.

7990—Ladies' Dress (25 cents). Eight sizes, 34 to 48 bust. Size 36 requires 6¼ yards 36-inch black satin—⅝ yard 36-inch white satin—⅞ yard 36-inch lining for underbody. Embroidery No. 12422, blue or yellow transfer pattern, 20 cents. Width at lower edge about 1½ yard. Long rolling revers and a vest that extends below the girdle give the desirable and becoming length to stout figures, and a gathered tunic is mounted on the two-piece skirt.

What One Mother Did With Pictorial Review Patterns

DEAR FASHION EDITOR:

Aren't these the most perfectly adorable kiddie's things you ever saw? No, they didn't come from Paris, nor did I buy them

Pictorial Review Transfer Pattern No. 12081, blue or yellow 15 cents, on dress No. 5797

in a high-priced specialty shop. I made them myself from Pictorial Review Patterns, and I am so delighted with them that I just *had* to send them to you to be photographed for your magazine so that you could tell other mothers of my success. You see it isn't as if I were an expert sewer. I never made any clothes for myself, and I started in buying my little daughter's clothes ready-made, too. But one day I happened to see in Pictorial Review a coat and dress that appealed to me so that after trying vainly to duplicate them in the shops, I made what was to me a most terrifying resolve to try to copy them myself. So I bought the patterns

Back view of Dress No. 5797. ½ to 4 years, 20 cents.

Pictorial Review Transfer No. 11741, blue or yellow, 15 cents.

and before spending any money on materials, I read the directions over carefully, studied the cutting and construction guides, and said, "Well, if I can not follow these simple instructions I must be lots more stupid than I ever thought I was." I bought sheer white batiste for the dress and

Pictorial Review Coat Pattern No. 6873—Sizes, 2 to 8 years 20 cents.

bonnet, and pale blue silk poplin for the coat. Of course I was slow and clumsy at first, for remember this was my very first attempt at dressmaking. But by degrees I found the work simply fascinating, and as the little garments grew under my fingers into things of beauty, I really think I got as much pleasure from them as an artist from painting a lovely picture. And think of the money that I saved. Why clothes one makes oneself cost about one-quarter what they cost ready-made. Long live Pictorial Review Patterns.

Back view of coat No. 6873. Embroidery Transfer No. 12081.

MRS. BLANCHE ANDERSON.

Charming Afternoon and Street Frocks for the Young Girl

7983—Misses' Dress (25 cents). Four sizes, 14 to 20 years. Size 16 requires 5 yards 44-inch plaid serge—½ yard 44-inch white organdy for collar, vest, and cuffs—⅞ yard 36-inch lining for underbody. Width at lower edge edge about 1½ yard. The blouse of this frock of plaid serge is cut down in deep U shaping in front to show a chemisette of white organdy which is applied to the front-closing underbody. Perforations permit of shortening the long sleeves that are gathered to deep cuffs, and the one-piece gathered tunic is attached to the blouse at slightly raised waistline. It is mounted on a two-piece gathered skirt closing at left side-front and joined to the underbody.

7970—Misses' Dress (25 cents). Four sizes, 14 to 20 years. Size 16 requires 4⅝ yards 36-inch velvet—¼ yard satin for collar—1¾ yard narrow—1⅝ yard wide fur banding—⅜ yard fringe—⅞ yard 36-inch lining for underbody. Width at lower edge about 1½ yard. Velvet is the material of the season for handsome afternoon frocks, and it is at its best in a simple model like this which closes at the side. The blouse is mounted on an underbody of lining, and there are two styles of neck outlines and two styles of sleeves provided. Fur and fringe trim the frock attractively, and there are flying panels arranged at the back of the dress, extending from the shoulder seam down almost to the hem of the two-piece gathered skirt. The panels may be worn under or outside the girdle as preferred.

7989—Misses' Dress (25 cents). Three sizes, 16 to 20 years. Size 16 requires 2¾ yards 48-inch serge—1¾ yard 36-inch satin—⅝ yard 36-inch white satin for collar and sleeve facing—22⅞ yards soutache braid for trimming. Width at lower edge about 1¾ yard. Over a front-closing blouse of satin is arranged a jumper section of serge draped to form a girdle. The neck may be high, square, or round, and one-piece sleeves gathered to deep cuffs may be substituted for the Mandarin sleeves illustrated. The jumper closes on the left shoulder. Rows of soutache braid trim the skirt effectively, and the moat collar is a distinctly new feature.

All that Is Newest and Smartest in Fashions for the Miss

7959—Misses' Single-breasted Jacket (25 cents). Four sizes, 14 to 20 years. Size 16 requires 2⅝ yards 54-inch tricotine. No. 7773—Misses' Two-piece Suspender Skirt (25 cents). Three sizes, 16 to 20 years. Size 16 requires 2¼ yards 54-inch tricotine. Width at lower edge about 1½ yard. For young girls as well as their elder sisters and mothers the long jacket is a new style feature. This jacket buttons all the way up the center-front like a tailored dress, and may have a standing collar with small turnover, or the open neck may be finished with a large square collar as illustrated. The two-piece gathered skirt has a suspender or jumper attachment.

7938—Misses' and Juniors' Coat (25 cents). Eight sizes, 13 to 20 years. Size 16 requires 3¼ yards 54-inch Bolivia cloth. Instead of the notched collar and open front, the coat may have square collar and may close high to the neck. An inverted plait is formed at center-back.

7987—Misses' Dress (25 cents). Four sizes, 14 to 20 years. Size 16 requires 1⅞ yard 44-inch serge—4¼ yards 36-inch satin—1⅜ yard fringe—⅞ yard 36-inch lining for underbody. Width at lower edge of accordion-plaited skirt about 2 yards. This jaunty frock of serge and satin shows the new "sandwich" panel effect. The panels are of serge and are loose from the neck at the front and back, tho the front panel may be held in slightly at the waistline by a satin girdle. They are mounted on a foundation dress of satin consisting of a front-closing waist joined to a one-piece accordion-plaited or gathered skirt.

Simple Lines and Little Trimming Mark Children's Styles

7935—Girls' and Juniors' Coat (20 cents). Five sizes, 6 to 14 years. Size 12 requires 2⅜ yards 54-inch covert cloth. Quite military in style is this smart belted coat with inverted plait at center-back. It fastens in double-breasted style, and may have the collar turned down and the fronts rolled back in revers as illustrated, or it may close high to the neck. Large pockets accentuate the jauntiness of the coat.

7503—Child's Coat (20 cents). Three sizes, 2 to 6 years. Size 6 requires 2⅛ yards 54-inch broadcloth—⅜ yard 24-inch velvet for collar. The surplice collar buttoning onto the coat is a charming feature of this model.

7967 — Child's Empire Coat (20 cents). Four sizes, 2 to 8 years. Size 6 requires 2½ yards 36-inch velvet. The richness of velvet needs no trimming, and it is very effective in this model which may have a round or shawl collar. The skirt section is gathered to the body.

7748—Juniors' Dress (25 cents). Three sizes, 13, 15, and 17 years. Size 13 requires 3⅜ yards 44-inch serge—½ yard 48-inch white broadcloth—2⅝ yards braid. Here is a very jaunty school frock of blue serge lightened by a collar of white broadcloth. The waist may be made with or without the deep yoke, and it is joined to a four-piece skirt plaited in front and closing at left side-front. Pockets may be inserted in skirt and yoke.

7789—Girls' and Juniors' Dress (20 cents). Five sizes, 6 to 14 years. Size 8 requires 2⅜ yards 44-inch serge—⅝ yard 36-inch satin. Embroidery No. 12469, blue or yellow transfer, 20 cents. A touch of novelty is given to this serge frock by the extensions on the front of the waist that form a sash effect. The inset vest that fills the deep U-shaped opening is of satin to match the collar and cuffs. The sleeves may be long or short, and the two-piece skirt closes at left side-front. A square collar finishes the neck.

6856—Child's Dress (20 cents). Five sizes, 1 to 5 years. Size 5 requires 2 yards 44-inch serge—6¾ yards soutache braid. The sleeves of this little frock are attached at drooping shoulder-line and the closing is at left side-front.

7866 — Girls' and Juniors' Dress (20 cents). Five sizes, 6 to 14 years. Size 12 requires 4 yards 32-inch check gingham—¼ yard 27-inch piqué for collar —¼ yard plain gingham. The simplicity that is such a feature of school frocks is admirably displayed in this model of pink and white check gingham trimmed with pipings of plain pink gingham and a Peter Pan collar of white piqué. The skirt is a two-piece model with straight lower edge and closing at left side seam.

7849—Juniors' Dress (25 cents). Three sizes, 13 to 17 years. Size 13 requires 2⅜ yards 54-inch wool Jersey. Embroidery No. 12363, blue transfer, 15 cents. A novel belt gives style to this frock of the fashionable wool Jersey which is untrimmed save for a touch of hand embroidery in dark red silk. The closing is at the back, and the sleeves are perforated for shorter length.

October Picture Puzzle

By TOM WOOD

Each of the first six pictures represents the name of a special breed of POULTRY. Can you tell what they are? Numbers 7 and 8 are well known PROVERBS in picture language. Can you interpret them?

Send in your answers before October 31st.

Two prizes will be given, first one dollar and fifty cents, and second one dollar, for the best solutions, judged according to neatness and accuracy.

All are eligible to compete in this contest.

CORRECT SOLUTION OF THE AUGUST PUZZLE.

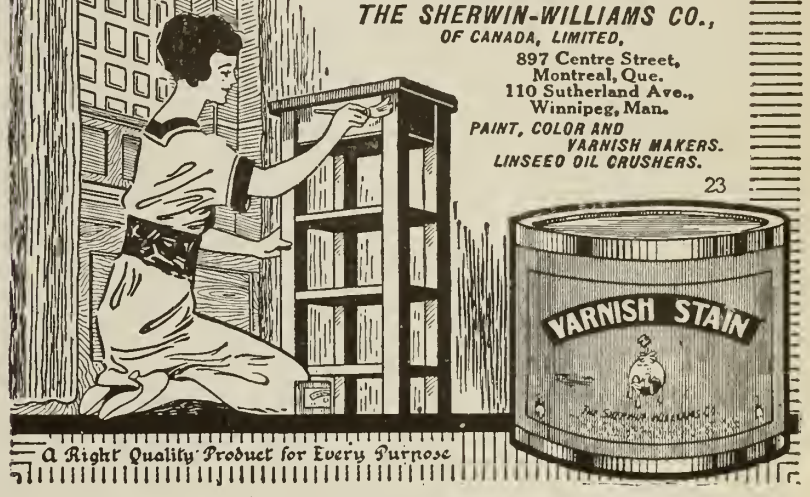
SHERWIN-WILLIAMS
PAINTS & VARNISHES

The Happy Economy of S-W VARNISH STAIN

FURNITURE which has grown shabby can be restored to newness overnight, at the small cost of a can of *S-W* Varnish Stain. The fine range of colors enables you to match any hard-wood effect.

Be sure you use *SHERWIN-WILLIAMS* VARNISH STAINS. This is important, not only because it will insure you the handsomest possible finish, but because *S-W* VARNISH STAINS preserve the woodwork, a most important consideration in these days when everything seems to cost so much more.



Certainly it is an economy to use any of the full range of *S-W* VARNISH STAINS, and a *happy* economy, too, when you consider how cherished articles of household furniture regain their freshness under your hand!

Remember also, the clear *S-W* Varnishes—*MAR-NOT* for Floors; *SCAR-NOT* for varnishing Furniture and Woodwork; *REXPAR* for outdoor woodwork.

Read the booklet "The A. B. C. of Home Painting". Sent free upon request.

Look around for the nearest *S-W* Agent.

A Right Quality Product for Every Purpose

Remember Our Boys At The Front

To them the cigarette is the panacea for all ills. I have seen men die with a cigarette between their lips, the last favor they had requested on earth. If the soldier is in pain, he smokes for comfort, if he is restless he smokes for solace; when he receives good news he smokes for joy; if the news is bad, he smokes for consolation; if he is well he smokes, when he is ill, he smokes. But good news or bad, sick or well, he always smokes.

"The First Canadians in France" by F. McKelvey Bell.

Canadian Magazine, February issue 1917.

SWEET CAPORAL CIGARETTES

The Pandora's Top

Three-quarters of your rangework is done on the top of the range.

So the Pandora Range top has been designed to perform as many duties, simultaneously, as it is possible for a range to do.

The Pandora flue system gives you five holes in the top upon which you can boil. The six-hole top is made with two interchangeable sections.

On wash day this enables you to set the boiler on the far side and cook dinner on three front holes.

There is a reducing cover for smaller sized pots.

Also a check cover to hold the fire in at night.

And then when the work is cleared away, by one gentle rub with a cloth you instantly restore the burnished brilliance of the top—less work by half than even the "lick and a promise" you used to give the old style, rough and rattling cast iron covers that would not shine without black-lead and a backache.

"The Magic of the Pandora"—Booklet Free

This is one of the many features of the Pandora Range described in "The Magic of the Pandora," a little booklet full of information that every woman will want before she buys a range. Write for it to the nearest McClary Branch.

McClary's Pandora Range

HORLICK'S

Malted Milk for the Home

A nourishing food-drink for All Ages. Anywhere at anytime. Delicious, sustaining. No cooking

A Woodland Sketch

By EDITH HALSTED LORWAY.

(Continued from September Number.)

"That isn't any way to air a mattress. You should do it when the sun is shining, and you should—"

"Ah, shut up," interrupted Frank. "Who is the captain around here?" Under such pleasantries do boys usually labor together.

The sleep of the just may be sound, yet sounder is the relaxing sleep of a healthy youngster. All four awoke next morning, refreshed *and* hungry—very hungry.

For breakfast they had porridge, delicious coffee—a rare treat allowed on hikes, and doughy pancakes at which, however, their young appetites did not balk.

During the morning they tramped six miles to another lake. Here on the shore they roasted potatoes and each in the confident hope of catching sufficient fish for supper, ate his remaining chop. This hope came true, for the lake yielded generously of its population, so that four lads tramped joyously back through the woods, with two or three trout each. For supper there were more doughy pancakes, but there was also a large potato each, and trout well cleaned and cooked according to scout directions—what more could a king wish?

The third day was one of those spring days when the busy housewife looks longingly out of doors and is wont to say, just as Farmer Bairnes' wife had said that morning, "Jack, you just hitch up the team and we will spend the day over to Jones' Creek." Thus it happened that when the captain knocked at the Bairnes' door there was no response. The stable was locked, and worst luck of all, the chickens were padlocked in a covered runway — no hope of milk or eggs *that* day.

This annoying incident, however, did not daunt the captain. They still had a little flour with which to make pancakes, and there was still the lake, full to the brim with fish, that was, judging by yesterday's catch; but the fish must have joined the union, for they refused to work for so little an advantage, as being caught on a hook. A few strike breakers nibbled at the worms but were evidently pulled away by more loyal "stand-patters." There was nary a fish caught that morning nor that afternoon.

"Gosh, this is some lake," said Bill.

On coffee and more doughy pancakes they managed to wriggle through another breakfast and nominal dinner, after which their pantry was empty, so to speak. Like Napoleon, the captain strolled off alone to think what could be done, for it was not conceivable to four healthy boys to go to bed without any supper.

They did not sleep well that night. Their little empty stomachs resounded like hollow rooms. It was eleven o'clock when Bill awoke. There were no stars, no moon—just blackness. A dead calm seemed to pervade all things. As on a rainy night in the city when the street lights are reflected from the dark, wet pavement, so the lights of the town across the lake shone into the inky water.

When wider awake Bill became aware of a heavy sobbing—or deep breathing—no, snoring, that is what it was. Bill was in no mood to put up with *that*.

"Say, cut it out," and he gave Fat, peacefully sleeping in the cot next to him, a jerk, and turned him over on his other side.

Then the snoring seemed to come from another cot, so Archie was next flopped over, but still the sound continued. The captain awoke when he received his anti-snoring treatment.

"What do you think you are doing anyway?" he said.

"If you think I am going to lie there and listen to *that* you have got another think," responded Bill. Yet his endeavors to cure his comrades of their nasal habits of the night, apparently met with no success, for the deep breathing continued to punctuate the stillness.

"You are a boob," said the captain. "Don't you know an owl when you hear it?"

Whereupon the luckless bird became the target for several pairs of shoes. As the last boot sailed through the branches of the overhanging pine, the Seeing-one-of-the-Night took flight, and once more the scouts gave themselves up to slumber.

Nature does few things without warning. There had been reason in the stars and moon being hid. Soon from out the dark clouds stray raindrops began to ooze and patter through the pines. Faster, faster they came, until the rush of the wind and rain sounded like a great waterfall.

Fat's bed was the most exposed. He awoke to find himself lying in a miniature lake.

"Gosh," he grumbled, and sprang out upon the wet floor. "We'll have to go indoors."

The others were less wetly situated. Go in doors and desert the primitive life! The idea was preposterous—even suppose the whole fury of the storm beat upon them, there they would stay. It poured all night, and the next morning the rain across the water looked like a grey chiffon veil, dimming the town across the lake and the adjacent shores, but worst of all, their boots lay saturated upon the ground, and to get them they had to wade through the long grass. They put them on wet, trusting to the heat of their bodies to dry them, for as the captain remarked, if they put them by the fire they would never be able to put them on at all.

Breakfast was the first duty of the day, and eagerly looked forward to it was. Bill and Archie were assigned to go up to the farm house for milk and eggs. Secretly they were going to add a little butter. Half an hour they came back, wet, despondent, and minus any dairy products. The Bairnes' had not yet returned and the next nearest dwellings being across the lake were out of consideration, for the old row boat used for fishing was not sufficiently lake-worthy to venture far from shore.

The coffee and oatmeal were about run out, so that a very weak cup of coffee without milk and a milkless tablespoonful of porridge did not make an over appetizing breakfast. Surely, they thought the Bairnes' would return before dinner time, but they did not. Not one scout thought of returning to town before the allotted time. Again the captain wandered off alone to think what could be done. Stumbling through the woods he came upon a pond. Here he became fascinated watching the diving frogs and the little slippery tadpoles. It was not long before he was running back to the others, ladened with an inspiration.

"Hey," he called out, "Got an idea!"

The captain was always having ideas, many of which turned out disastrously. Therefore, the others were not prepared to give strict attention, until it dawned upon them that it meant something to eat.

"Ever had frogs' legs?" he queried.

"Sure," answered Fat, "had 'em lots of times."

"Ever had oysters?" continued Frank.

"Sure," they all responded.

"Then here's my 'hunch.' I've been watching the tadpoles and they're just like oysters only they're brown and have tails, being frogs' children of course they're like frogs. Now, if frogs' legs are good to eat and oysters are good to eat, why aren't tadpoles?"

None of the others could think of a negative sufficiently weighty to cope with such deep logic.

"Say, they'd be swell fried in a little flour and butter, wouldn't they? Archie's imagination already tasted them, crisp and delicious.

"Now," said Bill, "I'm not going to eat any of that rubbish." By which remark he almost took away Archie's enthusiasm, but it was quickly brought back for Fat asked:

"What *are* you going to eat then? Tadpoles are just as good as fish or anything else that you catch and fry." Thus Bill was reluctantly won over. All four went over to the pond without nets and with just their hands; it was not an easy thing to catch the things; for many times they caught one only to have it slip through their fingers. In the mental exhilaration and zest of the catch they temporarily forgot their "stomachtical" wants. Yet with perseverance a seemingly impossible feat often becomes highly successful; thus, it was not long before the boys had a pailful each—a pailful of eel-like pollywogs. In great glee they took their prize back and fed well on these creatures of Nature.

"Gosh, I can't eat any more till breakfast," said the captain.

(*Continued on page* 57.)

Plain Living Gives a Nation Strength—Save.

WHEN NIGHT FROSTS WHITEN THE GRASS

DURING the long, chilly fall evenings, before you start the furnace or stove, a Perfection Oil Heater will keep you cosy and comfortable. And in the dead of winter, when anything happens to the furnace or the gas, a Perfection insures instant, cheery warmth in any room, upstairs or down.

Early and late, in damp or cold weather, the Perfection radiates comfort. And it keeps down fuel bills—saves the nation's coal—runs full blast for ten hours on a gallon of Royalite Coal Oil.

Steady and dependable—a necessity in home and office—wherever people and cold weather get together.

Call at the nearest dealer's and select your heater to-day.

IMPERIAL OIL LIMITED

BRANCHES IN ALL CITIES

WHY YOU SHOULD BUY A PERFECTION HEATER

IT gives instant, clean, odorless, economical heat. One gallon of Royalite Coal Oil is a ten hours' fuel supply

It is easy to fill, light, keep clean, re-wick and carry wherever extra warmth is needed.

It is equipped with automatic wick stop that regulates the flame, an ever-cool handle, hinged top and removable oil front.

It saves doctor's bills by chasing chill from any room—warms the bath room to a healthful temperature for baby's bath or father's shave.

It insures comfortable, early rising — warms northerly-exposed rooms—gives cheer and comfort in the sick room.

Always convenient, durable and reliable, the Perfection Oil Heater is assurance of heat in every heating emergency.

Try the "Carnation" Way
of Creaming Vegetables

EVERYWHERE, the use of vegetables is increasing. The "War Gardens," fostered by local production committees as a means of conserving wheat and meat, have given us all a greater appreciation of the food-value and health-value and goodness of vegetables.

Vegetables, either fresh or the canned variety, can be made most delicious when creamed.

Thousands of housewives have already discovered the "Carnation Way" of creaming vegetables, which not only improves the flavor, but adds to the food value, because Carnation Milk contains all the food value of the original whole milk.

For creaming vegetables, use Carnation Milk as it comes from the can or dilute to richness desired. The creamy consistency and full milk richness of Carnation enhance the natural flavor of all vegetables, including peas, beans, potatoes, carrots, cauliflower, asparagus, etc,

Carnation Milk is just pure, sweet cows' milk, with part of the water evaporated. It is safe, because it is sterilized. Economical because there is no waste. It is most convenient, because it is always ready to use—stays sweet until opened and for several days thereafter.

CARNATION MILK is used for cooking and and makes everything you cook with it taste better. Use it in your coffee, tea, and for making cocoa. Give it to the children to drink, after diluting with pure water as per directions on each can. When used for cooking and baking, dilute its richness as desired.

If you are not already a user of Carnation Milk get acquainted with this pure milk—learn how it is received and handled—how its purity is protected. You will appreciate its convenience in cooking, its safety and real economy. Order a few cans of Carnation Milk from your Grocer. Give it a thorough trial.

FREE Booklet of 100 Recipes

Many fine, TESTED recipes are given in "The Story of Carnation Milk"—a splendid booklet you should have. These recipes will help you combine variety with nourishment in your meatless meals. Write for a Free copy to-day—mention this paper please.

The Queen's Tear-Bottle

(*Continued from page* 26.)

The Man-Who-Was-Rich turned the bottle a little this way and that, against the red fire-light, for, within, something rolled softly from side to side against the crystal.

"By all that is mysterious!" he exclaimed again. "There is a jewel within it! A pearl, perhaps! No, brighter than a pearl! A diamond? Not so brilliant. An opal—possibly an opal! How marvellous! For the jewel, or whatever it is, is far too large to have fallen into the bottle. Like the camel and the needle's eye, there was no possibility of entrance. A curiosity certainly. A puzzle of some sort, no doubt, originally. A puzzle yet, for that matter." He held it out to the Egyptian.

"What is this thing?" he questioned, a note of annoyance in his voice. "I want the truth."

"I have told you," Abydos Khon responded quietly. "It is the Queen's Tear-Bottle — the Queen Aureanta. Within is the jewel—as far as man can see—made of her tears. By what magic or miracle or fairy charm, who can say? Upon the bottle also is engraved the King's sign—but time has almost effaced this. From the priests of Amen-Ra the crystal was handed down. The brothers of the Pharaohs were often times the High Priests, and through many hands it has reached mine," he said, as though stating a fact easy to believe. "But now—"

"Yes?" questioned the other.

"Now the time has come to part with it. The old temples are dust, but the God-of-Yesterday-To-day-and-To-morrow needs them not. As for this token of past sorrow, I must possess it no longer."

"You mean?" again questioned the Man-Who-Was-Rich.

"I mean we have fallen on evil days, I and my people. All is gone that we called our own. My father is old and needs many things. My little sister—who is beautiful—must be cared for. My brothers, who are young, cannot be cast upon the world unprepared. This must be now our country—a gracious country to the friendless—but we cannot come to it as supplicants—as beggars. I have been a translator of books, but one may starve while one works. Also I have a trade of metal-working. But it brings one little. Little, also, have we to part with. Yet there is this one precious thing. I have thought the great Art Museum might take it from me, and give in return what my people need to set their feet firmly upon this new land."

The Man-Who-Was-Rich looked down at the crystal thing. His grey eyes still held their half-sceptical smile, and yet—the story was haunting in its loveliness. The softly rolling unnamed jewel within the bottle held him—even sent a thrill to his heart—his heart—long unused to thrills. If the story should be true—he thought—if it should!

He turned to Abydos Khon.

"As this is for sale, I will buy it," he said. "Come to my office." They went together through the almost deserted building, and entered the cold room. The very air was charged with the business affairs of to-day. No touch of sentiment lay on anything.

Still holding the crystal, Mavor seated himself at his desk, drew out a cheque-book and lifted his pen to write.

"How much?" he asked the Egyptian shortly.

"That I do not know," Abydos Khon said vaguely, shaking his young head. "Enough to bring my people comfort until the winter is past—to help them—a little—that will be enough."

The Man-Who-Was-Rich smiled grimly. "You are no merchantman, Abydos Khon," he said. "Unlike your kindred, you bring your wares to market, yet do not look for the highest bidder, nor set a price upon them. There is something lacking in you, my friend: But perhaps you are right. There is no price set upon tears—even tears that by some alchemy have been turned into a jewel. Also, there can be no established value placed upon the rare—the very old—the perishable that has persisted where all else has passed.

"It may be this antique would be worth a good deal more—or a good deal less to the Museum—but I want it, and will set my own price upon it—with your permission."

He drew the book to him, wrote the cheque, and handed it to Abydos Khon. The Egyptian's hand trembled as he took the piece of paper. For once his calm slipped away, he gave a low cry, and dropped to his knees. Lifting the hand that had written the cheque, he touched it with his lips.

"It is too great a sum!" he said brokenly.

"No," said the Man-Who-Was-Rich. "I think not."

The Egyptian looked up into the strong grey face, and understood that he was satisfied.

"I thank you!" he cried. "O most kind one! The winter has been long—the ways of the land are new, we have known grief, I and my people. There has been little money.—I thank you."

Rising, he took the Queen's Tear-Bottle, bowed before it, and touched it to his forehead solemnly. Then gave it back.

He pulled the cloak about him.

"Farewell," he said. "Farewell.—Abydos Khon will not forget."

The other smiled, but the smile was no longer hard.

"Farewell to you also, O Son of the Pharaohs!" he answered.

The heavy door opened, closed. Then the Man-Who-Was-Rich took the crystal bottle, slipped it into an inner pocket of his great-coat, reached for his hat and cane and went out.

The wind smote him like a whip as he reached the street. The snow drifted and swirled in white hillocks. The traffic was blocked.—No motor, he concluded, could get far.

He struggled against the storm. But he was not thinking of the wind, nor the people who buffeted it beside him. His thoughts were travelling back to an old beleagured city and a woman who wept. He saw her with the tear-bottle against her face. He saw her white mourning robes—her unbound yellow hair. She seemed strangely real. He saw her in the temple bringing her offering of tears. He saw her in her robes of State upon the scarred road whither she went to meet the dead King.

Within his coat he felt the little precious crystal. His lips wore the old cynical expression for a moment. "I am a fool," he said half-aloud. "A fool—a fool—" but his face again changed, softened. "If it should be true—" he whispered. "If it should."

Raising his eyes he saw he was passing a shop of antiquities. A well-known place filled with the gleanings of centuries.

Entering, he sought out an old clerk, as well-known as the place. The snow melted upon his head and shoulders unnoticed. He took the crystal from his coat and handed it to the old clerk.

"Can you tell me what sort of curiosity this is?" he asked.

The clerk turned the crystal bottle about; held it to a strong light. Fastened upon his eye a powerful glass, and turned and returned the crystal before he spoke.

"It is a tear-bottle," he said at last. "An Egyptian tear-bottle. Yes. Genuine. Of the Dynasty of the Rameses II—III—I do not know. The sign is cut upon it—diamond cut—but almost smoothed away by time. They are very rare—these—Oh, very. I have not seen quite such a one. What puzzles me is the jewel within—How did it come there? Oh, you cannot say? Ah! —There is no flaw in the crystal—it could not have passed through that slender throat of glass.—Have you an explanation, sir? No? Strange."

"I thank you for your opinion of the antique," said the Man-Who-Was-Rich,

A King In Babylon

By BURTON E. STEVENSON

CHAPTER XXIX.—(*Continued.*)

WE found the excavation in deepening shadow and descended the steps in silence. None of us had thought to bring a light, and it was very dark inside the tomb, but we could see dimly the rude wall which Davis and Mustafa had built to brace the roof. I confess it looked none too secure to me; but Jimmy passed on into the corridor with scarcely a glance at it, and Creel and I followed. And then I heard, from the inner chamber, the ring of iron on stone which told that Davis was working at the wall. It was Mustafa who was doing the pounding, with Davis holding the torch. He turned quickly at the sound of our footsteps and flashed the torch over us.

"Hello!" he said. "You're just in time. We will have a hole through the wall in another minute." Then he saw the whip in Jimmy's hand. "What is that for?" he demanded, with an acerbity which surprised me.

"To keep that devil inside from coming out!" said Jimmy.

He spoke with a loud bravado, which his pale face and strangely shining eyes belied.

Davis gave him one long, searching look, then turned back to the wall.

"Go ahead, Mustafa," he said, and I saw that one of the stones, about a foot square, was loose. A few more strokes of the heavy crow-bar, and it was ready to come out. "Stand back, now," said Davis, and instinctively Creel and I shrank away against the sarcophagus. Only Jimmy held his ground, his whip-hand poised to strike. "All right, Mustafa!" And while I held my breath, Mustafa threw all his weight on the bar; the stone trembled, slid forward, and fell with a crash upon the floor of the tomb.

I don't know what it was I feared—perhaps some such awful spectre issuing from that hole as greeted the fisherman in the Arabian Nights when he broke the seal on the bottle he had drawn from the sea; but I *do* know that a prickle of terror ran up my spine and off across my scalp as I stared at that square of blackness—as we all stared for a long minute—and nothing happened—nothing.

"Aren't you coming, Tina?" called Jimmy, an ugly snarl in his voice. "I'm here! I'm waiting!"

And just then there was a sort of flicker in that black square, and like a flash Jimmy sent his lash cracking toward it.

"Ah, ha!" he cried. "You didn't know I had the whip! Come out, Tina! I haven't forgotten how to use it! Come out!"

The words conjured before my eyes again that vision of white shoulders streaked with blood, of a merciless hand rising and falling . . .

"Oh, shut up!" snarled Davis, and I guessed that he had seen the vision too. "I've had enough of that nonsense!"

"Didn't you see her?" Jimmy demanded. "She was coming out. . . ."

"No, I didn't see her!" Davis retorted, and with a sublime courage which I shall never cease to admire, he dragged the fallen stone aside, dropped to his knees, torch in hand, and peered into the darkness of the inner tomb.

I heard his deep gasp of astonishment.

"By George, it's there!" he muttered hoarsely.

"Of course she's there!" mocked Jimmy. "Haven't I told you from the first? Didn't you hear her beating to get out last night? Didn't you see her a moment ago?"

He cracked his whip again, and leered around at us; and I swear, if any man was ever mad, Jimmy Allen was mad at that moment—stark, staring mad! I felt as though I were going mad myself . . .

"Rubbish!" said Davis, harshly, still peering through the hole. "She's as dead as door-nails!"

"No, she isn't!" Jimmy cried. "She's fooling you! She's just waiting . . ."

And again he cracked his whip.

But Davis paid no further heed to him. He remained at the hole for some time; then he rose slowly to his feet and handed me the torch.

"Take a look," he said. "It's a mummy, right enough," I heard him saying over my shoulder as I knelt before the hole; "or rather, a body shrivelled up—I haven't a doubt it was walled up alive and left to die. It's a great find—there are only three others like it . . ."

And then his voice faded from my ears, for there, on the floor of the inner tomb, I saw it . . .

It was lying on its side with its face toward me—its knees doubled up, its hands clasped as though in prayer—for all the world just such a ghastly figure as we had brought with us from New York—and dead as doornails—there could be no doubt of that!

And then, quite suddenly, I realized that it was watching me—that its eyes were open—I could see the light from my torch reflected in them—and the features seemed to fill out—the blackened lips parted in a smile—a fiendish smile . . .

I stared fascinated, horror-stricken, till I could endure that gaze no longer.

Davis caught the torch from my hand, as I fell back with a hoarse cry.

"What's the matter, man?" he asked.

"The eyes!" I gasped. "She was looking at me!"

Davis caught me savagely by the arm.

"Get up!" he said harshly. "Don't be a fool! Get up!"

I staggered to my feet.

"But the eyes!" I gasped. "I saw them . . ."

"You saw nothing of the sort. There are two ornaments or jewels on the forehead which reflect the light—that's what you saw!"

But I knew better. It was no ornament that I had seen; it was a pair of living eyes, glittering with malice! And the evil smile upon the lips—and the face, black and distorted, which yet somehow seemed familiar . . .

And I staggered against a pillar and caught myself from falling, as I realized why it seemed familiar.

And then I saw that Creel was looking in. Would he recognize her too; would he . . .

"I don't know what you fellows are talking about," he said, impatiently. "I can see the mummy, right enough—it looks exactly like my papier-mache fake—but its back is toward us . . ."

"Let me see," broke in Davis, and pulled him away and snatched the torch and dropped to his knees.

I pressed my palms against my burning eye-balls. Would I never get that horrid vision out of them—that cruel face—the face of the siren who had lured Jimmy Allen out across the sands . . .

Davis rose to his feet, a line of perplexity between his brows.

"It's strange," he said, "but the body undoubtedly *has* turned over. Perhaps the draft of air through the opening caused it to relax—the change of temperature. The mummy of Rameses II. raised its arm, you know." And he stood staring at the hole, scrabbling his beard with nervous fingers.

"Let me look," said Jimmy, and took the torch from Davis's hand and fell to his knees.

The next instant he had started back with a sharp cry of pain.

"You would, would you!" he cried, and sprang to his feet and brought down his whip against the lower edge of the opening; and I saw, with a spasm of terror, that there was a streak of blood across his cheek. "She nearly got me," he said, with a wry smile, wiping the blood away. "I might have guessed she'd try! Clawing out eyes is one of her favorite diversions—as Digby can tell you!"

And I went faint again at the implication of the words . . .

"There's a spur on that next stone," rapped Davis. "You scratched your cheek on that!"

But he was evidently shaken—and I couldn't see any spur . . .

"Did I?" sneered Jimmy. "Well, have it so! But I would advise you to put that stone back into place for the night—and to wedge it in well!"

And with that he turned and walked out of the tomb.

There was a moment's silence, then Davis handed the torch to Creel.

"Get hold of the stone, Mustafa," he said hoarsely, and they lifted it between them and tried to thrust it back into the hole.

Half-way it stuck.

"Let go," said Davis; "I can push it in," and he knelt before the hole and pushed with all his strength.

I saw the sweat break out across his neck with the effort; and slowly, slowly, as though some weaker arm on the other side found itself overpowered, the stone slid into place.

"There," said Davis, "that's safe, I think," and he rose and mopped his shining face. "Don't think," he added violently, "that I did that because of Allen's insane suggestion. I was going to do it anyway—to protect the body. It will probably fall to pieces at a breath."

Then at something he saw in our faces, he stopped suddenly, and with a gesture of rage and impatience, led the way from the tomb.

CHAPTER XXX.

DARKNESS had come while we lingered in the tomb. The stars were incredibly bright, and along the east a line of light heralded the moon. The air was delightfully fresh and cool, and we drew deep breaths of it as we climbed quickly out of the excavation. We were all more deeply shaken than we cared to admit—even Davis, I am sure, felt his skepticism tottering!—but, under the influence of the perfect night, insensibly our spirits brightened.

Davis was the first to cast off the spell which had fallen upon us. He took off his helmet, and threw back his head, and straightened his shoulders, as though flinging away some burden. Then he looked toward the

It is easy, pleasant & cheaper to buy Hallam's Guaranteed Furs

"FROM TRAPPER TO WEARER" BY MAIL

EASY—because all you have to do is write out your order for the Fur Garment you have selected from HALLAM'S Fashion Book and mail it with the money. Your furs are sent to you at once—if you like them, keep them—if not simply send them back.

PLEASANT—because there is no necessity to go to town—no tiresome trudging through stores—no urging to buy by anxious sales clerks—no annoyance or bother.

CHEAPER—because you save the middlemen's profits and expenses—we buy the skins direct from the Trapper, for cash, make them up into stylish fur garments and sell them direct to you by mail for cash.

The thousands of pleased people from all parts of Canada, who have purchased Hallam's guaranteed furs by mail, bear testimony to the wonderful values given.

Send to-day for your Copy of Hallam's

1919 FUR FASHION BOOK FREE

A beautifully illustrated Book larger and better than ever—showing a wonderfully extensive variety of the newest Furs on real living people, over 300 articles illustrated—all reproductions of genuine photographs—it also gives you a lot of valuable information about Furs and what prominent people will be wearing this season.

We are the only firm in Canada selling Furs exclusively by mail—direct from "Trapper to Wearer" and guaranteeing them.

You must be thoroughly satisfied with Hallam's Furs or send them back and your money will be returned in full at once.

The coat shown here is taken from our Fur Fashion Book and will be sent anywhere in Canada on receipt of money.

Write to day for your copy of Hallam's 1919 Fur Fashion Book—it will save you money. *Address in full as below*

THIS STYLISH NORTHERN MUSKRAT COAT well illustrates the very special offerings from our Fashion Book. It is made full and roomy from the finest, most carefully matched Northern skins, 60 inches long, richly lined with satin Venetian, finished with arm shields, collar ruffle, etc. Deep storm collar and lapels. Sizes 34 to 44. The MUFF to match is in smart melon shape, silk cuff and wrist cord.

(Continued from preceding page.)

East, where the band of light was broadening.

"The moon will be full to-night," he said; and his face lighted suddenly with the old raillery. "It's at the full of the moon, you know," he added, with an ironical glance at us, "that ghosts are especially active. They simply *can't* stay quiet and behave themselves under a full moon!"

"So I have heard," said Creel. "Therefore we'd better keep our eyes open!"

And just then, from the native camp, the sound of that ceaseless chant floated to our ears.

"We might go over and sleep with the fellahin," Davis suggested, "inside their magic circle. Then the ghosts couldn't get us!"

Creel walked on for a moment in silence.

"Just the same," he burst out, "I'll be glad when this night is over! Thank heaven, it's our last night here!"

Davis stopped and stared at him.

"*Is* it our last night?" he asked.

"It is if you can get ready to leave to-morrow. The picture is done—or practically so; I can finish it at Luxor, or even in New York. And I think for all our sakes—but especially for the sake of Jimmy and the Princess—the sooner we get away from here the better."

"I suppose you are right," agreed Davis, and walked on slowly. "Anyway, if you are ready to go, that settles it. It's your expedition."

"Perhaps another day wouldn't make so much difference," Creel began; "I suppose we could stand it . ."

"No," Davis broke in; "I can easily finish things up to-morrow. There is nothing left to do except to get that body out, and examine the tomb it is in—two or three hours' work at most."

"All right," said Creel. "That's settled, then. I confess I'll be glad when I see the last of this place! So will all of us, I think."

A moment later we reached the tents, and found Ma Creel and Mollie anxiously awaiting us. They had an unpleasant bit of news. Mlle. Roland had sunk again into a cataleptic sleep.

"I'm worried about that girl," said Ma Creel, as we sat down to dinner. "She's not well—she ought to have a doctor, or nerve specialist, or something. You oughtn't to keep her out here in the desert, Warrie. It's not right. She isn't fit to work!"

"I know it," said Creel. "Therefore we are going to start back to-morrow."

"Oh, fine!" cried Ma Creel. And then she looked at him, like the good wife and helpmate she was. "Is the picture done?" she asked.

"All but some finishing touches which I can give it anywhere," Creel assured her.

And then Ma Creel's eyes turned to Davis, and I knew she was thinking of him, too. But of course she would! Ma Creel always thought of everybody but herself. Davis caught her glance, and understood.

"I will be ready, too," he said. "I've only got two or three hours' more work over there."

"Then everything's all right," said Ma Creel, with satisfaction. "And I am glad! It will be a good thing for all of us. There's something wrong out here — I don't know what — but we've all felt it." And she looked about the board, and no one said her nay.

"There's a curse on the place!" said Mollie, suddenly.

"Yes—I've felt that, too," agreed Ma Creel. "We're all nervous and overwrought. As for Jimmy Allen, he's quite mad, I think!"

"Where *is* Jimmy?" asked Creel, and looked about as though missing him for the first time—though there was something in his air which told me that he had missed him from the moment of our return.

I certainly had; and I had lost no time in assuring myself that he was not in the tent. I had feared that he, too, was sleeping that terrible sleep, which I somehow dreaded most of all. I had breathed a deep sigh of relief when I found that his bed was empty.

"He isn't in the tent," I said.

"No," said Ma Creel. "He went striding past half an hour ago like a man possessed, cracking a whip he had got somewhere. He's mad, I tell you! Wasn't he over at the ruins with you?"

"Yes; but he left before we did. What did he say?"

"He didn't say anything. He never looked at us. He went right on past, as though we weren't there, and disappeared in that clump of palms over toward the native camp. What does that queer chanting mean?"

"Oh, just some of their superstitious hocus-pocus," answered Creel, carelessly; but he glanced a little toward the native camp, and I knew that he was wondering, as I was, what Jimmy was doing over there. Calling for volunteers to fight the devil, perhaps . . .

I rather expected to hear Jimmy's whip cracking and to see him come striding back, before the meal was over; but there was no sign of him, and as we rose from the table, Creel drew Davis and me to one side.

"What deviltry do you suppose Jimmy is cooking up over there?" he asked.

"I don't suppose he is cooking up any," Davis retorted. "He has probably gone to claim the protection of the chant and the magic circle, as a king of ancient Egypt. We will find him squatting in the midst of the natives, like one of them."

"Well, I am going to see," said Creel; and we two followed him.

As usual, we found that Davis was right, in a way. Jimmy was there. But he wasn't squatting among the natives like one of them. He was sitting on a hummock of sand, with the natives ranged around in a respectful circle, for all the world like a savage king and his court. Directly in front of him knelt the priest, or medicine-man, or whatever his proper name was, with eyes closed, and head thrown back in a sort of ecstasy, bellowing the four or five notes of the chant from a pair of leather lungs. In his right hand, Jimmy held the whip, and he was gazing steadily out across the sand in the direction of the ruins, now clearly outlined against the rising moon.

"Great Scott!" whispered Creel, at last. "If I could only get that on the screen!"

I couldn't help smiling at the way the great passion of his life cropped up, even at such a moment!

"Well, why not?" asked Davis satirically.

"It can't be done," said Creel, with a gesture of despair. "The picture—yes, I might get that—flat black figures on a white ground. But how could I get the atmosphere, the color, the wind through the palms, the desert perfume, the sound of that weird chant? I tell you, Davis, the throwing of flat black images on a screen is merely the first step in the moving picture business—we haven't arrived—we're just getting started; gradually we will learn how to add the rest — color, sound, atmosphere — we'll show people in the round, as they really look—we'll appeal to all the senses . . ."

"I don't see why you can't get atmosphere, now," said Davis, "by the use of perfumes, controlled by fans or by some similar device."

"Perhaps we could," Creel agreed, and fell silent, turning the suggestion over in his mind.

"What are we going to do about Jimmy?" I asked, at last.

"My advice would be to leave him here," said Davis.

Creel shook himself out of his thoughts.

"Yes, that's best," he agreed. "He would probably refuse to go back with us, anyway; and he's safe here."

"He's safe anywhere," Davis put in.

"I know," said Creel; "but being safe isn't the whole thing—*believing* you're safe is just as important. He believes he's safe here, so this is the best place for him. But look how he stares over toward the ruins. He's waiting for something."

"He's waiting for his Tina to work that stone out of place and come after him!" mocked Davis.

But I cast a startled glance out across the sand; undoubtedly that was what Jimmy expected; I almost fancied I could see that dark, terrible, ape-like figure stealing along in the shadow of a ridge . . .

"Let us go back," said Creel, abruptly, and we left Jimmy throned in the midst of his court.

We found Mollie and Ma Creel waiting for us with anxious faces, for they had seen us go away together and had suspected that something was wrong. They listened in silence to Creel's account of Jimmy's eccentricity, told as lightly as Creel could tell it.

"I knew he was crazy," said Ma Creel, when her husband had finished. "I've known it for days! But this is the worst yet!"

"Well, he's doing no harm over there," said Creel, "so we decided to let him alone. Is the Princess still asleep?"

"Yes—if you want to call it that."

"What else would you call it?" Creel demanded, glad to get the talk away from Jimmy.

"She's in a trance—she's not asleep at all. She needs help worse than Jimmy!"

"We can't start before to-morrow, can we?" Creel retorted, for he felt something accusing in his wife's look

It's So Shapely

Mercury Hosiery is fashioned so as to give a narrow ankle, and thus fits without a wrinkle — a delight to the eye.

The Mercury widened top is another big feature. It means greater ease and comfort to thousands of women.

Mercury Hosiery is full fashioned and seamless. In fit, comfort and luxurious finish it is superior to those fine lines of hosiery hitherto imported from abroad before the war.

Seeing is believing. Ask your dealer to show you this beautiful, shapely Mercury Hosiery.

Cashmere in black, white and popular shades of browns and greys.

Cotton, mercerized lisle and pure silk in all shades.

(Continued from preceding page.)

"Come along, Digby; I'll help you get things together."

Davis had already disappeared into our tent, where I could see him, in fancy, bending above the hieroglyphics on the coffin of Sekenyen-Re. I looked at Mollie and then I looked at Ma Creel, and just at that instant she glanced up and caught my eye.

"You two get along out of here," she said. "I don't want you bothering me. I've got some thinking to do."

"If you're sure you don't mind," I began.

"Mind! Of course I don't mind! But I don't see how Mollie endures that pipe!"

"Oh, I rather like it!" said Mollie, to my intense astonishment; and in another moment we were walking away under the palms together, and my heart was beating like a trip-hammer, for I knew that my great moment was at hand. "Let us go out to the edge of the desert," she added. "It will be beautiful under the moon. Have you noticed that the moon is full to-night?"

"Yes," I answered, and couldn't find another word.

So we walked on in silence till we came to the place where we had sat two nights before, right at the edge of the sand; and I spread her cloak on the ground, and she sat down, and I sat down very close to her, and my heart lightened suddenly, for she didn't draw away.

But my voice still stuck in my throat; vanished utterly were all those eloquent periods which I had rehearsed in private, in order to be ready when the moment came. And Mollie, too, was silent. Perhaps it was the awful panorama which stretched away in front of us that rendered speaking difficult—ridge after ridge of drifted sand mounting to the horizon, one behind another like waves of a sea—a sea suddenly arrested and frozen motionless, but ready at any instant to rush down upon us and engulf us. It was suffused with light — the darkness seemed somehow filtered through with rose—and occasionally a wisp of vapor floated up like a sheeted ghost from the dark valleys between the sand-ridges. I felt that anything could happen there—anything . . .

"It is lovely, lovely," said Mollie, at last. "But I'm glad it is our last night—I'm so glad of that!"

"Yes," I agreed; "so am I."

"Do you really believe it is just the heat and worrying about the picture?" Mollie asked, and I knew she was thinking about Jimmy Allen. "Tell me honestly, Billy. Do you?"

"No," I said, "I don't. There have been too many things . . ."

"Things like—like those we saw?"

"Yes, like those. Davis laughs at them—he has an explanation for everything; and at first I thought he was right. But when things you can't understand keep right on happening, you feel that—that something is wrong."

"How would he explain what—we saw?"

"As cloud shadows—or wisps of vapor like those out yonder. And of course they might have been. In fact, I suppose it is silly to think them anything else—and yet . . ."

"Yes," said Mollie, "and yet—that's just it! I am sure, somehow, they were *not* shadows or wisps of vapor . . ."

She fell silent, but she looked so sweet and tender sitting there in the moonlight, that I suddenly found myself taking her hand and drawing her to me.

"Mollie," I began, but my voice was shaking so I had to stop.

And then she looked up at me, and her eyes were full of tears, and she just snuggled against me and laid her head on my shoulder . . .

"I *do* love you, Billy," she said. "I've loved you all along!" . . .

But presently she stirred and sat erect and held me away from her and looked at me.

"You're sure you forgive me, Billy?" she asked. "You're *sure?*"

"Forgive you?" I echoed in amazement. "What for?"

"For — for the uniforms and things."

I managed to pull a serious face.

"Well," I said, "you *did* go the limit, you know, Mollie!"

"I know it—it wasn't nice. I oughtn't to have let him hold my hand . . ."

"Let *who* hold your hand?" I demanded.

"But it made me so angry to see how *she* monopolized you . . ."

"Who monopolized me?"

"That—vampire! And she was laughing at me all the time—and at you. And she was just doing it to annoy me and make trouble . . ."

"Nonsense!" I protested. "And you mustn't call her a vampire—it isn't nice."

"I don't care! It's what she is—I have felt it from the first! And I could see she hated me. That was why she made up to you. I tried to get her away, but she wouldn't even let me introduce anybody else—she said you were enough. It was horrid! No wonder I—I flirted a little."

"Well, *I* didn't," I said severely. "I never held anybody's hand. There was never a hint of flirtation between Mlle. Roland and me. Anybody could have heard every word we uttered."

Mollie snuggled to me again with a little sigh of content.

"I was sure of it," she said; "but I wanted you to tell me. And you forgive me?"

"On one conditon."

"What is it?"

"That you never do it again!"

"You're a goose!" she said. "You ought to have taken a whip to me!"

"I will," I said, "after this!"

And then suddenly I thought of Jimmy's whip, and of him sitting over there in the midst of that circle of crouching blacks . . .

And involuntarily I looked out again across the desert . . .

The rosy glow was fading; the shadows in the folds of the sand seemed deeper, like valleys of blackness between ridges of light . . .

From one of the valleys, a shadow detached itself . . .

It was moving toward us; it came slowly, with deliberation, hugging the shadows wherever possible, seeking to hide itself behind every ridge, skulking low across the ribbons of light; for all the world like one of the natives trying to sneak back to camp unseen—a native who had stripped off his clothes—lean and ugly . . .

And then my heart leaped sickeningly, for I saw what it was . . .

CHAPTER XXXI

I SUPPOSE Mollie felt the convulsive shiver which I was utterly unable to suppress, for she raised her head from my shoulder and looked up into my face; and I tried to smile as I met her eyes, but couldn't. And then she drew away, though I tried to hold her, and slowly turned her head and looked out across the sand . .

I felt her stiffen with horror as she saw the thing, though I knew she couldn't guess . . .

Slowly and stealthily it crept forward, keeping to the shadow wherever possible; but there were instants when there was no cover for it, and it stood revealed in the moonlight—black, terrible, sickening; and then it would melt again into a shadow, and for an instant disappear; and then it would appear again, nearer—always nearer.

"What is it?" Mollie breathed at last.

"It's only one of the natives," I answered hoarsely.

"No, it isn't! It's something else! You know it's something else!"

"What else could it be?" I countered feebly.

"I don't know—something terrible, or you wouldn't be so frightened! It looks like—it looks like—oh, Billy!" and she hid her face on my shoulder, shaking with horror. "It's the mummy!"

"No, no," I protested. "Nonsense! Jimmy tore it to bits this afternoon!"

"Then it has put itself together again—or, or . . ."

She shook convulsively, and buried her face deeper.

"Billy!" she breathed. "It's another one—it's a real one . . ."

"No, no!" I said, and patted her hair and held her close.

But I was shaking, too—for I knew! I knew!

"I can't stand it!" she moaned softly. "It's too awful—I can't stand it! I'm going—I'm going to faint!"

(Continued on following page.)

Plain Living Gives a Nation Strength—Save.

A King In Babylon

(*Continued from preceding page.*)

"No, you're not!" I said, and held her tight and pressed my cheek against her hair . . .

And always, out across the sand, the thing crept nearer.

"Is it—is it still coming?" she whispered, at last.

"Yes."

"Don't stir!" she gasped. "If it—if it should see us!"

"It isn't us it's after!" I said hoarsely.

Her convulsive trembling stopped for a moment.

"How do you know? Who is it after?"

"It's after Jimmy," I answered, in the merest breath. "God help him!"

"Jimmy?"

"He knows," I said. "He's watching for it!"

And then I suddenly realized his danger. If it should spring upon him from behind, before he saw it . . .

I don't know what dreadful thing I feared—withered fingers at his throat—lipless fangs—I didn't dare think of it . . .

"We must warn him," I said. "Come, Mollie, be brave! We're not in any danger!"

"Don't move! Don't move!" she pleaded. "It will see us!"

"No, it won't. We're in the shadow. Even if it did . . ."

"Oh, I should die!" she moaned.

But she managed to totter to her feet, and I led her back among the palms. The last glimpse I had of it, it was quite near: I could see it clearly—it was not to be mistaken . . .

"Come!" I said. "Hurry! There's no danger!"

We stumbled dazedly on—startled by the black trunk of every palm we passed—shaking at the whisper of the breeze in the long fronds overhead—glancing fearfully back . . .

But there ahead was a light—such a warm, friendly light! There were the tents, looking more home-like than I had ever thought they could; there were Ma Creel, and Digby, sitting side by side, chatting placidly . . .

I delivered Mollie, half-fainting, into Ma Creel's arms . . .

"Where's Davis?" I demanded; and then I remembered, and burst into the tent. Yes, there he was, torch in hand, his nose close to the coffin. "It's out there, Davis!" I panted. "It's out there!"

He cast one glance at my working face, then grabbed me by the shoulder and thrust me down upon a cot.

"Pull yourself together!" he commanded.

I did my best—with every nerve and muscle tense, I did my best.

"That's better!" he said. "Now—*what's* out there?"

"That—that thing!" I stammered. "I saw it—Mollie saw it! It was right at our heels! It's coming after Jimmy!"

"Nonsense!" he began, but I stopped him with a savage gesture.

"Don't say that!" I shouted, with sudden fury. "It isn't nonsense! I know—I saw it . . ."

And just then Creel came in, his face very white.

"What's all this?" he demanded. "What's the matter with Mollie—she's in hysterics—jabbering . . ."

"It's out there, Creel!" I gasped. "We saw it! It's after Jimmy!"

Creel's face went whiter still. He, at least, believed!

"Jimmy's ready for it!" he said, and ran trembling fingers through his hair.

"But if he shouldn't see it! If it leaped upon him from behind!"

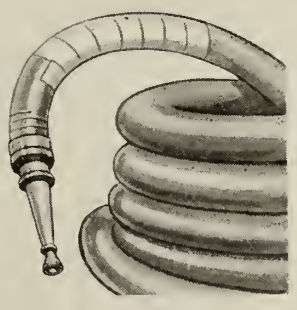
For an instant longer Creel stared at me, then he swung around to Davis, his face hard as flint.

"Didn't I see you wearing a pistol the first day?" he demanded. "Where is it?"

(*Continued on page 58.*)

"You Can Mend Almost Anything With This."

B&B



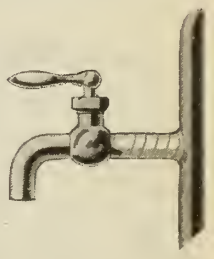
Adhesive Plaster Tape

The Handy Mender

A strong, clinging, rubber-coated tape—almost waterproof. It sticks instantly to anything without wetting, and it stays stuck. It costs but little, and every druggist sells it.

Does These Things

And a Thousand Others



Mends Hose

Patching with B&B Adhesive often doubles the life of lawn hose. Apply when hose is dry.

Even tires and tubes can be patched with it to last at least a while.

It clings to metal, glass, wood, china—anything. So it is used to stop leaks, to seal fruit jars and make labels for them, to mend broken things of any sort.

Stops Leaks

Use it to stop leaks in automobile tops.

Mends Rubber

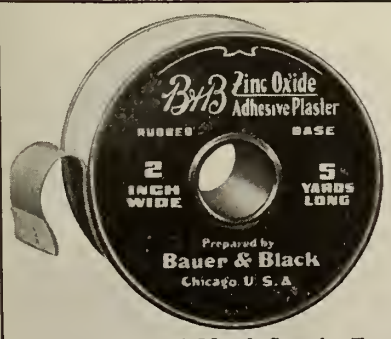
B&B Adhesive has a rubber base. So it clings to rubber, and forms a rubber coated patch on rubber footwear or on raincoats. And cloth tears can be mended by sticking B&B Adhesive on the under side.

Insulates Wire

Being rubber coated, B&B Adhesive is an excellent insulator. Wrap wire connections with it.

Apply it on articles of any material which you want fastened together. Use in mending dolls and toys.

Forms Grips



It makes ideal grips for golf clubs or for tennis rackets, and an excellent mender when they break. Also perfect protection for hands or heels which are chafed or likely to be.

Prevents Chafing

Don't wet it—just apply it. It will stick. Get it to-day. Keep a spool always handy. It may save a hundred times its cost.

But get the right kind—B&B Adhesive. It is largely used by surgeons. But millions of spools are now used in the ways we suggest.

B&B

Adhesive Plaster Tape

Sold by Druggists on Spools of All Sizes

Buy 5-Yard Spools For Economy's Sake
Carry One In Your Car

Other B & B Products

All Double-Sure Products are made by masters under ideal conditions. Every B&B article can be relied on.

Brampton Women's Institute Stands At The Fore

The secret of success has, for a certainty, been discovered by the members of the Brampton Institute. The report of their year's work shows one continuous list of successful ventures. Nothing is too large for this enthusiastic society and no detail too small for their careful attention. They plan equally well for a Peel County Garden Fete with an attendance of over five thousand and a regular monthly meeting about which the men of the town are overheard to remark: "I tell you, the Women's Institute meetings are worth going to."

A Booth at the Navy Military Fete held by the Peel County Institutes.

It will be interesting to the smaller Institutes to know that three years ago the Brampton Institute had a membership of only twenty-five, and to-day there are one hundred and eighteen on their roll. Personal effort has brought about the change. The newcomer to town was called upon, the old members looked up—telephones were kept busy, and nothing was left undone that would interest women in the Institute movement. Definite work was allotted, special speakers were brought to town to address the meeting and give additional inspiration, but perhaps most important of all was the warm welcome which each received at the meetings. Every woman was made to feel that she was a part of the splendid Women's Institute organization, that she was wanted and needed to work through it for "home and country." It has been said that back of every successful movement there can always be found one strong personality, and in this instance, the leading spirit has been the president, Mrs. E. G. Graham.

Brampton Institute did not prepare a programme for the year's meetings, but two of the directors were placed in charge of each meeting. Dr. Margaret Patterson was invited to speak on Medical School Inspection, a subject in which this Institute is particularly interested. When it was decided that an effort should be made on behalf of the blinded soldiers Corporal Viets, who lost his sight in the present war, addressed a meeting which was open to the public, and at which a collection amounting to $91 was taken.

The Sock Fund.

Mrs. Crawford, who is First Vice-President of the Institute, is also President of the Red Cross, and Mrs. Dennison Secretary Treasurer of the Red Cross, is Superintendent of the Sock Club of the Institute. The Sock Fund is raised in a most unique manner, and is so successful that other Institutes should try the same scheme. A house to house canvass of the town is made by the Institute women, and envelopes given out on which is printed, "Sock Fund for Our Boys in the Trenches." Each envelope contains twelve smaller envelopes, each with the same lettering and all numbered alike. The one receiving the envelopes pledges herself to give a certain amount, and her name, number, and the promised amount are listed by the canvasser. The stores co-operate to the extent of keeping in convenient places padlocked boxes in which the ladies can slip these envelopes each month. Over $1,500 was raised in this manner, $1,350 of which was used for wool, and $150 for postage. Current magazines always accompanied the socks to the boys, and the following little printed prayer was slipped in each pair:

Lord Roberts gave the following prayer to the Soldiers during the South African War:

"Almighty Father, I have often sinned against Thee. O, wash me in the precious blood of the Lamb of God.

"Fill me with Thy Holy Spirit, that I may lead a new life. Spare me to see again those whom I love at home, or fit me for Thy Presence in peace.

"Strengthen us to quit ourselves like men in our right and just cause. Keep us faithful unto death, calm in danger, patient in suffering, merciful as well as brave—true to our Queen, our country, and colors.

"If it be Thy will, enable us to win victory for England, but above all, grant us a better victory over temptation and sin, over life and death, that we may be more than conquerors, through Him who loved us and laid down His life for us, Jesus our Saviour, the Captain of the Army of God. Amen."

Peel County has taken up the matter of School Inspection very thoroughly, and several of the country schools have been medically inspected. Brampton Institute has assisted in this work, and so convinced are they that it should be done in the Brampton schools they have interviewed the Board of Trustees and offered to help in every way.

Last autumn a canning demonstration was held, and the fruit and vegetables canned, with a goodly amount solicited at the Fall Fair, amounting to 86 jars in all, went to the Military Hospital at Newmarket. Six large pails of pickles and 360 pounds of marmalade have just been shipped to the convalescent homes in Toronto and vicinity by this energetic Institute; the tomatoes for these pickles being the gift of a greenhouse man, who is taking out his plants to put in others and had several bushels of the green tomatoes which would have been wasted had not the Institute taken immediate action and used them for pickling. A jam factory very kindly made up the marmalade for the ladies, generously supplying the little extras that were needed.

Four hundred dollars was raised for the Belgian Relief by the Brampton Institute in a manner which could well be tried in any town. Small envelopes were given out and the citizens asked to fill them as they sat at their Christmas tables. Who could refuse such a plea? Sitting at a well filled table in comfort and plenty, the heart would be made of stone which would not go out to those who have suffered so nobly in order that we might be secure and happy in our homes, at this festive season.

Military Fete a Great Success.

Brampton and the other Institutes of Peel united in holding a Military Fete which proved the largest affair of its kind ever held in Peel County. Port Credit, where the Fete was held, was gay with flags, banners, and from every quarter motors speeded toward the home of Mrs. A. L. Hobberlin.

At the entrance, so that no one

(*Continued on following page.*)

Mrs. E. G. Graham, President of Brampton Women's Institute.

Five thousand people attended the Garden Fete held at the home of Mrs. A. L. Hobberlin, of Port Credit.

Plain Living Gives a Nation Strength—Save.

Canadian Women's Institutes

(Continued from preceding page.)

could mistake the nature of the fete in progress within, had been arranged groups of life-size sailors, surrounding a grim, grey battleship, the gift of Mrs. R. Y. Eaton. Bunting and flags in attractive arrangement were the background.

Within the grounds a Midway, on the lines of the famous Midway of the National Exhibition, had been arranged. It extended in a horseshoe from the front gates, around the sunken garden, whose fountain had been turned into a fish pond for the kiddies, then to the left back towards the gates.

The attractions of this Midway were most wonderful. From one to another went the crowd, to return for some feature missed on the first inspection. Old and young stood in amazement about Leslie Thatcher, the magician, who took bowls of goldfish from the ether. Near this attraction was the Punch and Judy show, that will draw a crowd as long as the world lasts. The wonderful freaks, the fat woman who weighed 478 lbs., and who poured tea from the tiniest of teapots, and the two-headed boy, in charge of his negro mammy, who sang to the thrumming of her guitar, while the spieler called attention to the show, rivaled anything ever seen at the Exhibition.

As no Midway would be complete without games of chance, opportunity was afforded to "swat the Kaiser," an opportunity used to advantage. By throwing a ring about the neck of the stork, a soap baby might be secured. Then there were the wheels of fortune, with twelve fortune tellers, one of whom was a returned soldier minus a leg, lost in the cause of the Allies.

Among the crowd passed the girls, clad in gay colors, who were selling the balloons to the kiddies. On a platform near the entrance several young ladies danced gracefully to the music of the hurdy-gurdy.

Well in from the entrance was the dancing platform, on which young and old tripped the light fantastic, stepping a fox trot or an old-fashioned waltz, according as they interpreted the music, furnished in the afternoon by the Queen's Own Band, in the evening by Sergt. Bodley's Orchestra from the Base Hospital.

Little Miss Franch, of New York, a visitor in the neighborhood, clad in graceful Grecian draperies, gave classical dances. Miss Duchess Huestis and Miss Helen Barker also gave interpretative dances.

Not by any means the least part of the show was the drill of the Naval Cadets. Clad in their uniforms, and headed by their own Bugle Band, they made a splendid showing. As they marched past, Commodore Jarvis took the salute, and many a heart thrill d at the sight. This exhibition was a very fine one.

When the kiddies had been satisfied with a sight of everything to be seen, had had a ride on the ponies, fished in the pond, and bought one of "Mother Goose's" surprises, they were sent off by the elders on the slides and swings, while the elders took a peep at the more serious side of the fete.

Several booths had been erected. One of these belonged exclusively to the Clarkson ladies, and contained all kinds of things that cater to the tastes of an outing party on a hot summer day. A similar one belonged to the eighteen Institutes of the county, and was under the direction of Mrs. E. G. Graham. From the latter all afternoon the visitors were buying farm produce, cakes, pies, biscuits and the pickles, fruit and relishes that have "that taste." The ladies in charge of the Institute booth were Mrs. E. G. Graham, assisted by Mrs. Quinn, Mrs. (Dr.) Edwards, Mrs. Vanderlip and Mrs. Norfolk, of Brampton; Mrs. Lammy, of Malton; Mrs. Adamson of Erindale; Mrs. Bell and Mrs. Chambers, of Streetsville, and Mrs. Sibbald, of Claude.

Later in the evening, Mr. E. W. Burns, of Port Credit, acted as auctioneer, and it is greatly to his credit and a fine tribute to his ability as an auctioneer, that the booths were cleared out. In one case, Mr. Burns got 65 cents per dozen for eggs.

Meals were served on the cafeteria plan, Mrs. A. R. Clarke being in charge of this branch of the fete, and very up-to-date and thorough was the management. Mrs. J. J. Foy made a very businesslike cashier.

Long before the day of the fete, the ladies of the Institutes, from the north of the county to the south, had been selling tickets for "Malte," the fine little pig, contributed to the fund by the members of the Malton Institute. Anticipation was at its height when the announcement was made that the winner of "Malte" was Mrs. D. Newbold, of Clarkson. Instead of keeping "Malte" for a pet, Mrs. Newbold added still further to the funds by having an auction on that popular animal, receiving a bid of $16 for him.

A booth that delighted the small boys was that in which every kind of water craft was sold. At the close of the day, Col. Williams disposed of the beautiful cruiser that had stood all day at the entrance. The bidders paid over their money as they bid, and the last bidder, Port Credit School, received the boat. One bid of $50 was made, a fair tribute to the willingness to help the Navy League that prevailed all day. The total amount received for the model was $339.

Out in the capacious garage, Miss McIntosh, of the Department of Agriculture, had on view many things that appeal to the modern woman, especially in these conservation times. There was the home-made "fireless cooker," costing only $2.50. There was the "iceless" refrigerator, recommending itself to the flat-dweller; there was a complete canning outfit, and the dozen things that Miss McIntosh has on display to make work easier, more practical and money-saving for women. The placards decorating the walls were noteworthy. One of these read, "Every woman who preserves food places herself in the ranks of those who serve the nation."

Col. Williams made a great hit by calling to his side a splendid specimen of the navy itself, a big, strong, finely built sailor, who had spent many years in the North Sea. Eloquent as was the tribute paid to the heroes of the navy by Col. Williams, this silent witness was far more telling. Col. Williams spoke of the need of more education in matters pertaining to the navy; people are not doing all they can to help, because they are ignorant of the facts. "Education is salvation," he said, in telling of the work the Navy League is doing for the great silent force that will guarantee to the world civilization.

Jutland Veteran Present.

This sailor proved to be H. Searles, A.B., of Brampton, who is home on leave from the British Navy. He received three rousing cheers from the crowd. Searles is a veteran of the famous battle of Jutland, where he fought as a seaman-gunner on the "King George V," which emerged from the fight with a good record of "hits," but without being damaged herself. "We got a few hits," said the seaman. His navy experience goes back to 1912, when he was living in Southampton. In that year he joined the "Impregnable" at Dartmouth, and served continuously up until a few weeks ago, when he was given leave to visit his parents at Brampton. Since the outbreak of war he has been with the Grand Fleet in the North Sea. One brother, Pte. Leonard Searles, made the supreme sacrifice with the 74th Battalion, C.E.F., and another brother, Gilbert, is at present in France with the Canadian Forces. Searles accepted the cheers with a brief "Thank you," and then retired as soon as possible into the crowd.

The evening's events were a huge success. Following a programme given by the farmerettes in costume, a marriage was celebrated among their number, Archibald Clarkson Rhubarb being wedded to Miss Mary Strawberry Blossom. For the description of the affair read any modern marriage notice in the society papers; nothing was lacking; Mary had a page and six attendants. Instead of a sword with which to cut the cake, she used a sickle, and the cake was sold for the Navy League. A monster procession about the

Winnipeg, Man., Hamilton, Ont.

The Plain Truth about Shoe Prices

LEATHER is scarce and is growing scarcer. A large part of the available supply must be used for soldiers' boots. Importations have practically ceased and we are forced to depend upon the limited quantity of materials produced in Canada.

The cost of everything which goes into a pair of shoes is high, and is going higher. Workmen by the thousands have joined the colors, and labor is increasingly hard to get. It is not merely a matter of high prices, but of producing enough good quality shoes to go around.

These conditions are beyond the control of any man, or any group of men. They fall on all alike. No one is exempt—neither the manufacturer, the dealer, nor the consumer.

You must pay more today for shoes of the same quality than you did a year ago. Next Spring, prices will be higher still.

These are hard facts. They will not yield to argument. They cannot be glossed over. We cannot change them, much as we would wish to do so.

But you, as a wearer of shoes, can help to relieve them if you will exercise prudence and good judgment in purchasing. See that you get *real value* for your money. Spend enough to get it, but spend nothing for "frills."

See that the manufacturer's trade-mark is stamped upon the shoes you buy. High prices are a temptation to reduce the quality in order to make the price seem low. But no manufacturer will stamp his trade-mark upon a product which he is ashamed to acknowledge. Remember this, and look for the trade-mark. It is your best assurance of real value for your money.

Canadian Women's Institutes

(*Continued from preceding page.*)

grounds succeeded the marriage as n attraction. That brought to a close a very perfect day from every standpoint.

THE ANNUAL CONVENTION OF THE ONTARIO WOMEN'S INSTITUTES, 1918.

Convention at Ottawa.

The Eastern Convention of the Ontario Women's Institutes, which is announced for October 17th and 18th, will be held at Ottawa, with four sessions, beginning on the morning of the 17th.

The first session will include statements from several Branches which have something of special interest to report. A summarized statement of the patriotic work for the Eastern Institutes for the past year will also be given. An interesting feature of this session will be a message from the Institutes of Western Ontario, to be given by a district officer who is in close touch with Institute work, and has done much to stimulate it in her own district.

At the afternoon session, the address of welcome and the reply to the address of welcome will be given. These will, no doubt, include reference to the place which women are taking in the world as an outcome of the war. The superintendent will give his annual report, outlining the various phases of the work covered during the past year, and offering suggestions for the enlargement of the work in the coming months. The place of the girls in the Institute has been demanding more and more attention, and this subject will be dealt with in a comprehensive way. There will be a general discussion on the various suggestions brought out in the addresses.

At the evening session it is hoped that there will be an address on Food Control, by Mr. H. B. Thompson, the Canadian Food Controller, and the subject of Medical School Inspection will be discussed by Dr. Mary McKenzie-Smith.

The principal address of the morning of the 18th will be one on the Housing Problem. The Nationalization of Institutes will be brought before the delegates, and there will also be a discussion on War Work, Demonstration Lecture Work, and the extension of Institute work. At this session, there will also be a report of the Resolutions Committee. At the close of this morning's session, which will close the Convention, the delegates will have luncheon together, at which there will be several addresses. This will be followed by a visit to the Dominion Experimental Farm.

The various sessions will be presided over by leaders in Institute work.

Convention at London.

The Convention of the Institutes in Western Ontario will be held at London on October 30th and 31st. The first session will include a statement of the activities of the Institutes in Western Ontario for the past year, with discussions on the same, and suggestions as to methods of raising funds for patriotic and other work.

In the afternoon, the address of welcome will be given, followed by the reply to the address of welcome. Under the title of "Future of the Ontario Women's Institutes," the superintendent, Mr. George A. Putnam, will give a brief survey of the growth of Institute work, covering their activities in patriotic work, and will outline the possible enlargement of Institute work in the future, as the result of the broadening of the individual life of each member. An address, which will be of peculiar interest and which will be delivered in a convincing way, will be on "Conservation." A message from the Institutes of Central Ontario will close this session.

At six o'clock the delegates will lunch together, and will listen to brief addresses.

At the evening session of this day, the present need in patriotic work will be the subject of an address, and under "Women in Agriculture"; three brief addresses will be given on "What Farm Women Are Doing to Help," "Women and Farm Work" and "My Experience as a Farmerette." It is also expected that an address on "The Farmers' Opportunity" will be given by the Minister of Agriculture, Hon. G. S. Henry.

On the morning of the 31st, the greater part of the time will be given to a discussion of District and Branch work, and an address on "Canadian Tradition and Ideals" will close the session.

(*Continued on page* 64.)

The Home Garden

(*Continued from page* 20.)

will not be sorry. Darwin Tulips can be had in endless varieties and shades. The varieties for the third row are as follows: For Paeonies, owing to the numerous varieties on the market, one is apt to get muddled if trying to select six from the catalogues, and from experience would recommend Festiva-Maxima, Rosea, Humeii, Therese, Martin Cahusac, and Model de Perfection. As we have so few blue flowers in the garden, I always look upon the Delphiniums or Larkspur as very majestic, and strongly recommend Duke of Connaught, Musea, King of Delphiniums, Persimmon, or you can raise some good seedlings yourself. I raised two which turned out to be excellent varieties, one a semi-double of a mauvish blue, and which I have named after a friend, Mrs. W. H. Alderson, and another of a single type, pale blue, with immense spikes, and which I have named Rotary.

Phlox Perennial, the grandest of our garden flowers, owing to the wonderful shades and colorings, and profusion of bloom, should be in every garden, and the following varieties will be found to give the very best results, Coquelicot, Eclaireur, Wm. Robinson, Europa, and White Lady. For Heleniums, Riverton Beauty, and Autumnale Striatum, and for Helianthus, Daniel Dewar, Miss Mellish, and Orgyalis, but build a cement wall around these, as they will run all over the garden in time if not checked. The Boltonias are very much admired, and justly so, and Asteroides Decurrens, and Latisquama will be found to be very satisfactory. There are three good varieties of the blooming shrub Tamarix, one or more of which should be in every garden, and are Indica, Africana, and Hispida Estivalis, the former for preference; they will train nicely on a fence or trellis.

More important gardening operations are missed between Sept. 15 and Oct. 15 than any other month in the year. Cut out the spring rush. Save a year by planting trees, shrubs, plants or vines this Fall. It is possible to plant them next spring, but the chances are you won't. You will be too busy. The Fall is the best time to perfect your garden of perennials by multiplying the best kinds, buying new ones, and rearranging the whole according to a definite color scheme. You can divide perennials, and rearrange your border as late as the last week in October. More money is spent in September on Paeonies than on any other plant of the perennial family. Don't plant Paeonies in the Spring. September is the best month, but October is good. If frost has not destroyed your garden, you can enjoy it two to six weeks longer by covering plants with boxes, burlap, newspapers, etc., at night time.

Worse than death, taxes, and the poor—the dear little cut-worm is always with us. To be sure, there are many sure death devices on the market and many sage instructors—for placing sugar-plums for cut-worms on the shady side of a shingle near where the cut-worm is working. Now, how is anyone to know where the cut-worm is working until he has worked? If we knew where he was working we would simply dig him up and make an example of him. I find the best preventive is slaked lime and powdered sulphur in equal parts.

A few words on the storing of vegetables for Winter use will be timely. Potatoes should be taken up the first week in October. Try to arrange for three fine dry days before digging if possible. Bag them up, leaving them in the bags; place scantlings on the cement floor of the cellar for them to rest on; cellar must be cool and dry. First or second week of January take them out of the bags and spread them out in layers on shelves or boards, with holes through the boards for the air to get through; pick them over occasionally for possible bad ones. Cabbage can be pulled up by the root and placed in the root-house if you have one; if not, make a slanting trench in the garden, where the water will not drain in, cover with a thick layer of straw, and cover over with a good thickness of garden soil. For Taproots, such as Beets, Carrots, Parsnips, turnips, and winter Radish, get a large packing case, set on two pieces of wood, to keep off the cement floor in the cellar, placing a layer of Taproots, then a layer of earth, damp but not sodden; or sand may be used. It is advisable to change them out of one box into another once during the winter.

Tomatoes that have not ripened before frost arrives can be pulled up root, bine and all, and hung upside down on the wall in the cellar, or each tomato can be picked off, wrapped in paper, and packed in a box; they will ripen very quickly. Onions should be pulled up and left lying on the ground for three days; do not let the rain on them. Then place them on boards or benches in the cellar until they are thoroughly dry, when they can be bagged up. Dig up parsley by the root, pot them up, and place in the cellar window.

Training Boys and Girls For War Time And After

(*Continued from page* 18.)

yet the first sentence in that last paragraph worries me. She says "he changed to a pig"—that "he" meaning iron; so she thus delicately poetized my prosaic "pig iron"! What a happy thought to me! It certainly is very plainly "pig" in Helen's bold roundhand, so I wouldn't for the world change it, even though I might be tempted to think it was a slip of the pen for "pin."

Sergeant Thomas tried his hand also at political economy lessons, giving them to a class of boys in afternoons at Memorial Institute, but I am sure he did not put so much poetry into his work as I got out of mine! I speak with all humility, however, for I am prepared to give Helen all the credit for the poetic and dramatic touches!

The Fireless Cooker.

While on the subject of compositions, I may say I offered similar prizes in connection with the fireless cooker, which was exhibited and explained to the children, with a telling illustration of its use, namely, treating the children to hot boiled rice from the pot carried in the cooker. Many of these cookers were made in the schools, and thus I hope something was done to help war-time economy. Here is the first-prize composition on the cooker, by Charlotte Green, aged 14, from Memorial Institute:—

The fireless cooker is made for a purpose of conserving gas, coal and electricity . . . enables us to cook our food in less . . . and also the food tastes the s . . .

With very little skill, anyone may make one for themselves by taking an ordinary board box, packing it with excelsior not quite to the top. Then put pasteboard on top to keep the excelsior packed tight. Then cut a hole the size of the pot, line the hole, and put a cushion on top to keep in the heat, then put the lid of the box back on again.

If rice is being cooked, it will cook in forty-five minutes in the fireless cooker. (She should have added: after five minutes' boiling on a fire.)

People should take advantage of this, as they don't know until they have tried how much it saves. It is also a great labor-saving device; you may put it in the fireless cooker and go on with other work.

The Vacation School as a War Measure.

An Alberta teacher, Miss Bessie M. Arkell, happened to be in Toronto when the Vacation Schools were in session, and she wrote a paper for a Western Women's Institute, in which she gives her impressions after a tour of our schools. I am permitted to quote from her remarks, which show the value of these schools from another point of view—that of the public school teacher, who knows how difficult it is to get pupils to settle down to their studies after an exciting and disturbing vacation.

"At no former time in the history of our country have we needed to consider more seriously the needs of our boys and girls, both individually and collectively; on no former occasion

The Waterman Mark

The Mark that proclaims quality in a Fountain Pen is

Waterman's Ideal Fountain Pen

The instant Waterman's Ideal touches paper, it gives unmistakable evidence of quality, both in construction and materials as well as of service.

Waterman's Ideal is ready to write instantly, anywhere, without skip, dip, scratch or blot—No other writing tool matches it for convenience and efficiency.

There is a size of barrel to fit every hand and a choice of nibs from which any individual preference may be exactly suited.

Waterman's Ideal is needed by everyone today because it makes possible more and better work with less effort and with a real conservation of time, labor and materials.

Three Types: Self-Filling—Safety and Regular—$2.50, $4, $5 and up

Don't overlook the Announcement of Prizes offered for Suggestions On Page 64

Acknowledgments to Luke Fildes.

TO every home there comes a time when every thought, every hope, every prayer for the future centres on the recovery of one loved one. In that hour of anguish, every means to recovery is sought—the highest medical skill, trained nurses, costly treatment. Does the price matter?

★ ★ ★ ★

It may be so great as to stagger the imagination—a sum beyond the posssible.

But does anyone ask, "Can we do it?" Money or no money, they do it. And somehow they pay.

It may mean doing without things they think they need. It may mean privations, sacrifices, hardships. They make unbelievable savings, they achieve the impossible, but they get the money to pay.

★ ★ ★

To-day in this critical period of our nationhood, there is imperative need for MONEY—vast sums of money. Only one way now remains to obtain it.

The nation must save, every community, every family, every individual Canadian must save.

If anyone says "I cannot save" let him consider to what extent he would pinch himself to relieve the sufferings of a loved one at home; and surely he would not pinch less for our fighting brothers in France.

Without suffering actual privations, nearly every family in Canada can reduce its standard of living, can practice reasonable thrift, can make cheerful sacrifice to enrich the life-blood of the nation.

You who read this, get out pencil and paper NOW. Set down the items of your living expense. Surely you will find some items there you can do without.

Determine to do without them.

Start TO-DAY. Save your money so that you may be in a position to lend it to your country in its time of need.

The Minister of Finance
of Canada.

A Rose Enchanted

(*Continued from page* 23.)

The anclent fairy glanced at the waitlng court.

"Harken ye all!" she said In that ringing voice. "You have seen what you have seen, and heard what you have heard. See and hear further. One and all, you know that again the Princess Jewelette has shown that her heart was to-day dominated by love of self—and love of self only. Now, love we must all have In some form.

"Through love of others we grow to be like the God-of-All-Things. Through love of self, we grow to be unlike Him. That, my chlldren, is to change, little by little, to what is evil.

"So, little by little, your princess is losing from her heart all love but that of self, yet hope is not yet gone. I would save her, my chlldren, and to save her, she must be made to suffer, and she must learn to love *another* better than *herself*.

"One wish remains in this old, old ring of mine. With it I will turn her into a rose. But it will be *a rose enchanted*. In the heart of it will be held a drop of magic perfume. The leaves around the golden heart of the rose will be folded so closely that this perfume cannot escape unless the flower itself so wills; and while the perfume is held there, the rose will live on, and *never* fade. Should it let the magic essence sweeten the air, it will swiftly *die*. What may happen after, I know not; but in this matter I must not falter, but deal with the princess only for her spirit's good."

Raising her ebony cane, the ancient fairy looked around the assembled group. No one had dared to move or question her, yet fear whitened every face.

The queen clung to the king's arm, and the king was as immovable as though under a spell. The little court fairies seemed about to fly, yet did not, and the cross-legged grey elves gazed at the scene with unblinking goggle eyes.

The princess alone stood as before, disdain and anger in every line of her face and figure. In the shadow of the great tree she still seemed enfolded by the afternoon light and color.

Not for a moment had she thought of asking for pity, even if she believed her godmother would carry out her dire threat. She alone, among them all, looked quite unafraid.

The ancient one paused, as though waiting for some word of repentance or supplication—some littlest word.

There was only a dread silence in all the king's garden.

Then slowly the black cane swung through the air—once—twice—three times. A sudden darkness fell, as though the sun had been snuffed out like a candle.

A roll of thunder followed, and after that, slowly, slowly, the light came back. From a misty grey it grew into the radiance of afternoon. The birds were again singing in the garden, and a light wind ruffled the leaves.

All the fairies stood as before, on the green heneath the great tree—*all but the little princess Jewelette*. She was no longer there, but on the rose-bush in the golden pot bloomed a marvellous rose not yet quite blown—a red, red, red rose of perfect beauty!

The fairy queen slipped down to earth in a deadly faint, and they carried her away to the castle. The fairies, so long undetermined whether to go or stay, lifted their silvery wings and flew

(*Continued on page* 58.)

The Queen's Tear-Bottle

(*Continued from page* 47.)

placing the bottle again within his pocket, and fastening his coat.

"It has been a pleasure to see it," answered the old clerk. "A great pleasure. Should you wish to part with it at any time, sir, we would be glad to consider—"

"No, thanks, no," he answered, and went out again into the storm.

But still the words of the Egyptian sounded in his ears, insistently. "Then came an ancient minister of state to the Queen—'Your Majesty,' he said, 'the people need bread, there is indeed wheat in the city—but they have no money wherewith to buy it.' Then the Queen called her maids-of-honor. 'Bring hither my jewels and golden ornaments'—she commanded — 'Take them to the dealers in wheat, that they may be paid; give the wheat to the

(*Continued on following page.*)

The Queen's Tear-Bottle

(Continued from preceding page.)

people, and deal fairly by them everyone.'

"Then came again the ancient Minister. 'The wells are empty, O, Your Majesty,—where shall the people go for water to drink?' 'Bid them come to the royal wells,' she answered, 'and fill their pitchers so long as the water remains.' "

On and on through the storm pressed the Man-Who-Was-Rich. It beat against his body; but the words of the Egyptian beat still more against his soul —haunting him.

"And again the ancient Minister of State came, and he said, 'O wonderful Queen—there is dread illness among the people!' and, she commanded her servants to bring them into the palace, and she said, 'I will go down into the city and help those whom I find.' And she went abroad and by day and night forgot her own grief in ministering to those who had fallen."

On and on the words pursued him, as though carried on the wind.

"Then came the runner of the King. 'O dear runner!' she cried. 'What news? What news of my Lord the King?' And the runner bowed his head. 'The King has passed on—into the land of Peace—'

" 'Now—methinks all is told—naught is left for me but to meet my Master, the King.' But before she set out, she went to the Temple of Amen-Ra.

" 'I come not to pray—but to lay my offering of tears upon the altar.' "

So the words haunted him. He bent before the wind, and struggled onward. "If it were true," he thought. His hand went against the crystal lying near his heart.

Through the white smother of the snow he saw a wide frosted window, and upon the white banner of the frost a lighted cross of red.

Buffeted by the storm, he yet stopped and gazed at it.

And it grew to be a new and wonderful sign in his eyes. The old hard look vanished out of them.

"Little Queen," he said, softly, "O little Queen of the faithful heart—I would be worthy to follow you down into the city of the dead, and dying—worthy to be the keeper—even in this day—of the gift of tears you laid on the altar of the gods who are gone."

THE END.

A Woodland Sketch

(Continued from page 44.)

"Me neither," echoed Fat.

"Those tadpoles were all right," condescendingly remarked Bill.

"They were all right. only they weren't tadpoles; they were pollywogs," corrected Archie.

"Same thing," said Fat. "Call them either one you like."

"I remember now they are *not* the same," said Bill. "Tadpoles are little hop-toads, while pollywogs are small frogs, and frogs are all right to eat, but not hop-toads. What do you say, Frank?"

The captain reflected, "Fat's right. Toads are always toads. I know, because I've seen them when they were teeny things and they were just toads and didn't have any tails, so pollywogs must be the same as tadpoles."

"Those that think they're pollywogs come on this side and those that think they're tadpoles go on that side, and we'll soon find out what they are."

This was strictly in accord with the present day world-cry—which we hope is slowly changing—that "might makes right."

Bill and Archie stood side by side. The captain faced them. Fat was really neutral, but in order to swing the balance of power evenly he sided with Frank. They began in fun, but as the impetus increased the fury of the battle raged hotter.

Suddenly around the curve in the road, a siren horn sounded. As four heads spontaneously turned to see what it was, their fist blows missed their marks, and all four scouts went sprawling on the ground.

"Any chance of getting something to eat here?" sang out a voice through the trees, which turned out to belong to Mr. Norwood.

"Sure," the boys responded, before they had time to remember that there *was* nothing to eat.

Mrs. Cunningham had not brought up four boys without acquiring considerable wisdom along the boy line. Knowingly she said, "Now you boys never mind getting us anything to eat, we will just go up on the verandah and eat our sandwiches and coffee there." Whereupon a hamper of delicious looking things was opened and its contents spread upon a white cloth. The parents expected the would-be primitives to make quick work of the lunch, and for that reason they brought an ample supply. However, they were much mistaken. The boys hung back and seemed very silent over the adult picnic.

"Come on boys," said Mrs. Norwood. "You all ought to be ready for a second dinner."

"Naw," said Frank. "We don't want anything to eat—we're chucked full to the brim."

"Yes, and almost spilling over," blithely added Fat.

"I don't know as I can eat anything more till breakfast," said Archie.

"Me neither," chirped in Bill.

Yet as mice nibble around a cheese until finally the whole is consumed, so the scouts nibbled at a sandwich here, and a bun there, until the major part of the lunch was chucked into their four stomachs.

It was not long until Archie disappeared. Concerning his disappearance he vouchsafed no information, but his three comrades looked at his pale face and knew.

They were to have stayed another night, but Mrs. Norwood's remark that "Of course you boys will want to walk back but the car is out there if you would rather ride," sounded like sweet music, or, as the college boys say, "like money from home."

As *well* and *healthy* youngsters, they had wished to be close to "mother Nature," but as *sick* boys, they were longing to be close to their *own* mothers by the shortest route possible.

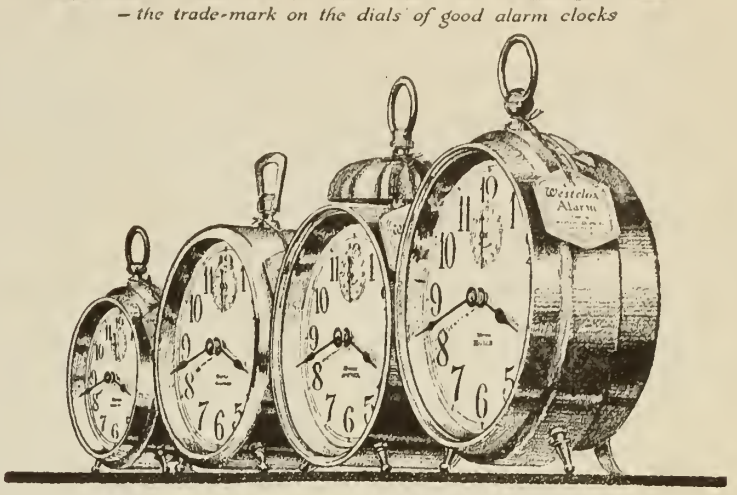
After they were a mile on the journey home Fat remarked that he hadn't been in an auto for so long—four days to be exact—that the riding made him seasick.

At the Norwood residence, as they were alighting from the auto, Mrs. Norwood said to her son, "Frank, whatever is the matter with you I do not know, but get your things off and go to bed. If it were summer I would think you had been eating green apples."

"There is nothing the matter with me. I wish you wouldn't all make so much fuss—guess I'm tired, that's all."

"Tired. yes—and something more. No more nonsense, get into bed."

In truth, the captain did not know how he could possibly stay *out* of bed, so he said no more.



All that night he knew he was lying in his own bed, yet he seemed to be riding round and round and round and round on a merry-go-round, with the merry left out. Toward morning calm seemed to settle down, and as in a semi-dream he heard his parents discussing as to "whatever in the world that boy could have eaten," but the captain said nothing, for he was fast sliding down that incline which takes a sudden drop into the abyss of dreams.

THE END.

A King In Babylon

(*Continued from page* 51.)

Without a word Davis snapped open the bag beside his cot, took out the pistol and handed it over.

"It's loaded?"

"Ten shots."

"Come along, then," said Creel, and stepped out into the night.

"But wait!" Davis protested. "This is the wildest folly I ever heard! Do you mean to tell me seriously that you're afraid of a thing buried four thousand years . . ."

"I saw it!" I said again, and staggered to my feet and followed Creel.

"Oh, well!" said Davis, and with a gesture of despair, came after us.

Outside, we drew insensibly together, and hastened on under the palms—Creel first, his weapon ready; I next; Davis last, sending the beam from his torch to right and left and behind us—oh, behind us . . .

And then we caught the sound of the chant.

"It's all right!" said Creel, hoarsely. "We're in time!"

The next instant, the chant was drowned in a chorus of shrill cries—then it rose again—we heard the whip crack . . .

And then we came out on the slope above the camp . . .

"Good God!" muttered Creel. "Are they all dead?"

But they were not dead. After that wail of terror, they had flung themselves on their faces in the sand, grovelling hideously, paralyzed with horror; and in their midst stood Jimmy, whip in hand; and just outside that circle of prostrate forms hovered a grisly shape . . .

"So you've come, Tina!" called Jimmy, with a bravado which his voice belied. "I'm ready!" and he cracked his whip again. "Come closer, Tina! You shall feel the lash again . . ."

His voice broke sharply; he stood an instant staring, then took a slow step forward.

"Is it you?" he muttered. "Is it you? You are both the same, then! I thought so!"

Creel had swung his pistol up—then his arm fell to his side again.

"Look!" he whispered. "Look!"

And I swear, as I stared out across that circle of huddled figures, I saw beyond them, on the spot where that grisly shape had hovered, a woman's form, clad in robes that sparkled in the moonlight; I could see her shining eyes; I could see the smile that parted her red lips; and she raised her hand and beckoned . . .

"Quick!" cried Davis. "Quick! It's the ape! I was sure of it!"

"No, no!" I gasped. "It's the girl—it's . . ."

Jimmy took another slow step forward.

Then, from the corner of my eye, I saw Creel's pistol-arm swing up again; and I sprang wildly upon him and pulled it down.

"You can't do that!" I sobbed. "You can't do that! It's murder!"

"Let me go!" panted Creel, and tried to throw me off. "Billy . . ."

He stopped, staring; and looking over my shoulder, I saw that figure, now luminous, now dark, glide swiftly away into the desert, gazing back with alluring eyes — eyes that promised everything . . .

And Jimmy followed. It was our scene of the afternoon over again — but this time in deadly earnest!

We watched them, spell-bound, as they moved away . . .

"Give me that pistol!" growled Davis between set teeth, and tried to take it, but Creel shook himself free.

"I'm all right," he said. "Come on—we must catch them! If they once get out into the desert . . ."

But they were headed not toward the desert, but toward the mounds which marked the ruins. Jimmy was running now, his arms outstretched; and the figure he pursued glided on just beyond his reach.

It was luminous no longer . . it was black and menacing . . A moment more, and both of them vanished among the mounds.

What would happen to him there? What dreadful thing would happen to him there? Over and over I asked myself that question, as we raced on. She would lure him into the tomb; and there, in the terrible blackness, what awful thing . . .

(*Continued on page* 60.)

A Rose Enchanted

(*Continued from page* 56.)

madly in every direction. The king stood as still spellbound, while the grey elves rose from the grass and clustered together.

"Hither!" the ancient one called to them. "Hither, my good grey elves! Lock again my jewels in the black box! Take it and drop it into yonder lake where the water is deepest. Then return. Be nimble! Be nimble!"

They did her bidding and returned.

"Hasten once more!" she said to them. "Hasten! Lift the golden pot wherein grows the rose-plant with its one blossom, and bear it to the garden of the great and lonely king who reigns over the first and most troublesome kingdom of mortals beyond the river bounding the land of fairies. Leave your burden within the stone wall of his garden, close by the bridle path, and near the great iron gate that opens to the high road."

As she spoke, her voice changed, quavered and grew old. Yet the king, listening, heard each word. He saw the grey elves lift the golden pot and fly away with it. Powerless to detain them, silent as though under a spell, he watched until they disappeared in the blue of the air.

The ancient fairy sank into her twisted green chair. Folding her withered hands on the crotch of her stick, she leaned her chin upon them. Her strangely young eyes gazed out over the king's sunlit garden, gazed long and lovingly. Then she closed them.

The king came close to her and called her by name. Again he called her, and his voice was shaken and very sad. When she did not answer, he stooped and looked into her old, old face, and then he saw she had departed to the land where all things are made new.

END OF PART I.

Wholesome Foods At Reasonable Cost

(*Continued from page* 32.)

potatoes from burning, slice in as many potatoes as required, and allow one good sized onion for each pound of potatoes. Sprinkle well with pepper and salt and cover over with sliced bacon, cover with the lid, and cook until the potatoes are done, over a rather slow fire.

MINCED STEAK WITH VEGETABLES.—Season two pounds of minced steak with one teaspoonful of salt and one-half teaspoonful of white pepper, then add one tablespoonful of butter substitute, one cupful of fine bread crumbs and one well beaten egg, mix well, moistening with a little milk if too dry. Put into a baking pan with four potatoes pared, sliced and arranged as a border to the meat. Drain one can of tomatoes free of liquor. Mix the bulk tomatoes with the same amount of bread crumbs, and add seasonings of salt and pepper and put a layer of tomatoes on top of the meat loaf. Cover and bake for forty-five minutes, reducing the heat after the first ten minutes. When done remove the meat to a large hot platter with the potatoes around it. To the gravy in the roaster add one tablespoonful of corn flour, one-half cupful of boiling water, one finely chopped onion and a dash of powdered nutmeg, allow to cook for five minutes and pour over the roast.

CHICKEN STEW.—This dish should be started about four hours in advance of the time for serving. First fry in a large saucepan one-half pound of fat salt pork for ten minutes. Add two cupfuls of boiling water and the following materials chopped finely: Five onions, one-half pound of liver and four good-sized potatoes. Let cook for thirty minutes, then add one can of corn and two cupfuls of boiling water and cook for thirty minutes. Now put in two chickens which have been cut into neat joints, and the giblets. At the end of another hour add one can of okra, or an equal amount of green okra that has been well cut up, one can of tomatoes and two cupfuls of boiling water. One hour before dinner put in a loaf of bread, which has been broken up, soaked in hot water and squeezed to a pulp, one tablespoonful of butter substitute, one teaspoonful of salt and one-fourth teaspoonful of white pepper. Cook slowly, stirring often.

All Ranks in Every Service Prefer and Use the Gillette!

The Gillette is the fighters' razor.

It shaves the General; it shaves the private. It is at home in the artilleryman's kit. The airman, the engineer, the transport driver, the staff officer—all use it!

A "clean shave" is not only a matter of pride with all ranks in every service. It is the daily luxury, standing out in bold relief against the discomforts of trench and camp.

There isn't a regiment in the field to-day under any of the Allied flags but numbers more users of the Gillette than of all other razors put together.

There isn't a condition that a man can face in his shaving—heat, cold, sunburn, windchap, water scarce or bad—but has been met by the Gillette thousands of times in over four years of war service.

And it costs little to give a soldier the daily comfort of a Gillette!

No Stropping; No Honing—(A soldier will not carry around a hone and strop). The Gillette Service Razor tucks away in the corner of a kit bag, or in the soldier's pocket, complete, compact, simple, strong, weighing next to nothing and ready for use at all times. It is the one Razor of International Service.

The Gillette Set No. 19 is a Pocket Edition Razor in a soft Roll Case of heavy Khaki cloth, with 12 double-edged blades and an indestructible Trench Mirror.

The Gillette Set No. 20 is the same set in a heavily nickel-plated case, handsomely embossed.

Thanksgiving Cheer

By MARION HARRIS NEIL,

Author of "Salads, Sandwiches and Chafing Dish Recipes."

"The waning year grows brown and gray and dull,
And poets sing of autumn, bleak and sere;
But from the bounteous garnered harvest store,
With grateful hearts we draw Thanksgiving cheer."

Thanksgiving is one of the red letter days on the calendar when old-fashioned cooking and family recipes are set forth to regale the palate. This year let us have a rational Thanksgiving feast. The groaning board that our grandmothers knew has been materially reduced.

To simplify the labor entailed in preparing a family dinner, it is a good plan to prepare as many dishes as possible the day previous. Pastry shells for mince and pumpkin pies should be made the day before, or the whole pies for that matter, when the cook understands the art of making a wholesome, crisp crust.

Cranberry sauce or jelly should be made in individual molds. It is more attractive when served in this manner. Fruit cakes are richer and tastier when they have been made two weeks or a month in advance. Mince meat for pies should be prepared and time allowed for the ripening process, which adds so much to its richness and flavor. A month is none too much to develop its spicy seasoning. Contrary to general opinion, mince meat is not necessarily unwholesome eaten in moderation. The proper proportion of meat, fruit and spices and the fine "mince" to which they are subjected tend to make the mince meat easy of assimilation. Nor should it be expensive when apples are cheap and plentiful. The spices should be of the purest.

Even the most humble Thanksgiving table may have its attractive centrepiece. Autumn leaves, with their glowing color, ferns, strings of bright red cranberries, ears of corn, sheaves of wheat and bowls heaped high with fruit and nuts are decorations for the table and house that blend most pleasingly with the harvest season. A well-shaped pumpkin or cabbage, when hollowed out and filled with fruit, makes an attractive centrepiece for the table. Place cards with little personal jokes, simple pen-and-ink sketches and tiny snapshots add zest to the most simple meal and provoke good cheer and conversation.

MENU.

THANKSGIVING SOUP
PICKLES CELERY
ROAST TURKEY BREAD SAUCE
CRANBERRY JELLY
POTATOES BAKED SQUASH
LETTUCE FRENCH DRESSING
MINCE OR PUMPKIN PIE FROZEN PUDDING
FRUITS NUTS CANDIES
COFFEE

THANKSGIVING SOUP.—Three pound shin of beef, one chopped onion, one chopped turnip, two chopped carrots, one-half cupful of chopped celery, one bay leaf, twelve cupfuls of water, one tablespoonful of salt, one teaspoonful of peppercorns and the grated rind of half a lemon.

Wipe the meat and cut the lean part in small pieces. Sear one-half the meat in a small saucepan on a hot fire, using the beef marrow from the bone as fat. Put the remainder of the meat with the bone in a soup pot, add water and browned beef, bay leaf, peppercorns, and bring to boiling point; cover and simmer for four hours, removing scum as it rises. Then add vegetables, salt and grated rind of lemon, cook for two hours, strain, and when cold remove fat and reheat. Save the fat to use later for cooking purposes. If the stock has been simmered slowly, the fat carefully removed and the straining done through a fine strainer, the stock will be quite clear. The meat may be used as hashed meat.

ROAST TURKEY.—The Thanksgiving turkey should be selected some days in advance. See that the eyes are full, the feet soft and moist; if young, the lower end of the breast-bone will be soft and pliable, the legs short and plump, and many pin feathers on wings and body. Long hairs indicate age, as do thick, coarse scales on the feet. To remove the sinews, a slight incision is made below the leg joint; it is caught on a heavy hook, and with one jerk the sinews are dangling.

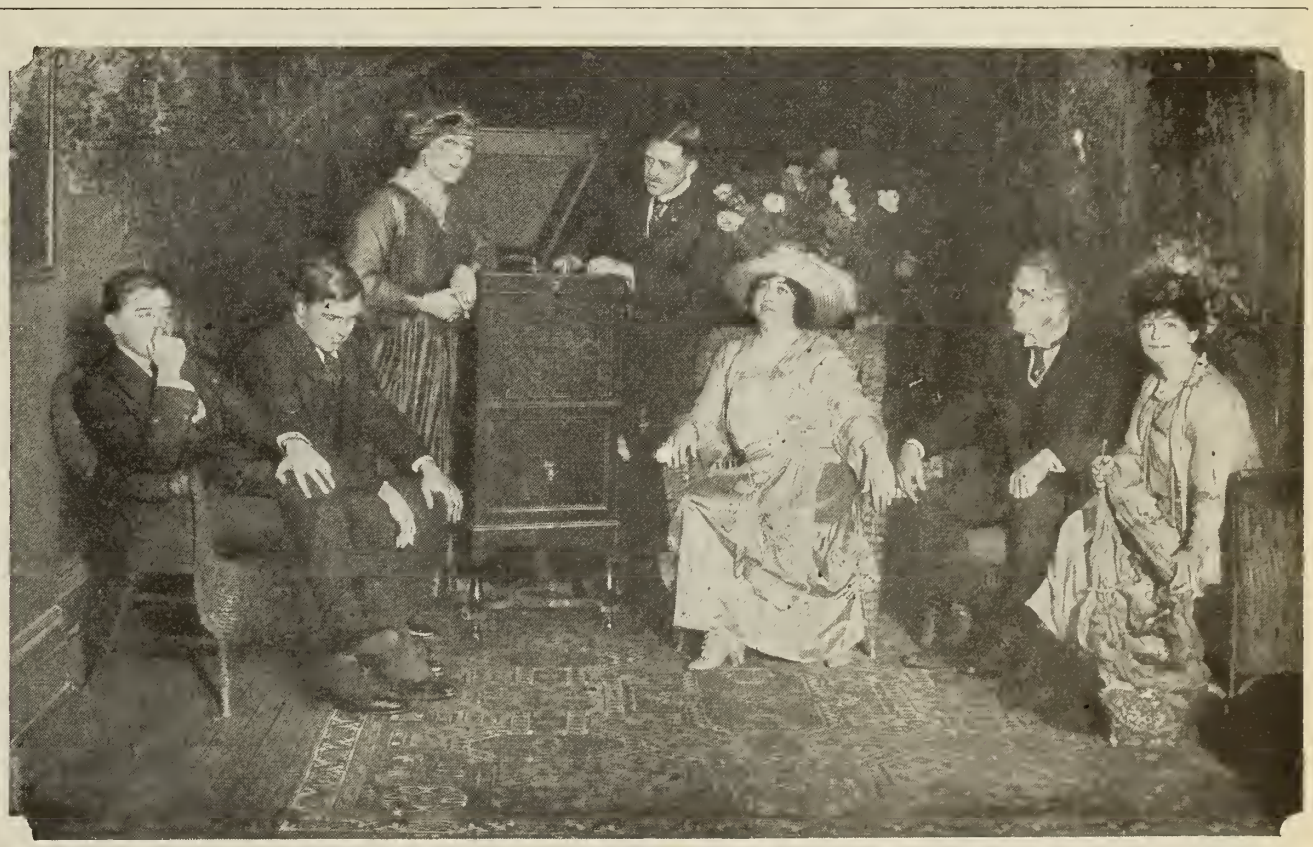
After singeing cut off the head, just below the beak, and break the legs below the joint. Cut off the feet and lay them aside. Turn the bird over on its breast and with a sharp knife cut down the skin over the backbone from the neck downward; draw back the loose skin, loosen windpipe and crop and pull them out. This leaves the skin over the breast intact. Cut off the neck close to the body, leaving the flap of skin to cover its removal. At the end of the backbone, close to the tail, is the oil bag, which must be carefully cut off, then turn the bird breast upward. Cut the skin above the vent sufficiently to admit of the introduction of a couple of fingers. Loosen the various organs from their attachments to backbone and ribs. Grasp firmly the gizzard and with a steady pull draw it out; it will bring with it the liver and intestins. Cut the skin entirely round the vent, thus removing the abdominal contents without cutting. Inspect the cavity, removing lungs, heart and kidneys. Wipe out the cavity with a wet cloth and cleanse the skin by a thorough wiping. Stuff the bird, both the breast and body; sew up with string and roast. A turkey weighing from eight to ten pounds requires fully three hours' cooking in a hot oven, and another hour must be added if from twelve to fifteen pounds in weight. Rub the skin well with butter substitute, dredge with salt and pepper and place in the roasting tin. Tie stout paper round the legs to keep them from burning, and protect the breast in the same way. Baste well during the cooking with a mixture of water and butter substitute kept hot for the purpose. Dish the turkey on a hot platter, pour a little good gravy round, and send the remainder to table separately. Also serve bread sauce.

To Make the Stuffing.—Mix two cupfuls of breadcrumbs with one small chopped onion, add one teaspoonful of salt, one-half teaspoonful of pepper, one-half teaspoonful each of sage and poultry seasoning, one-half cupful of chopped nut meats, one-half cupful of seeded raisins and one-half cupful of melted butter substitute. This makes a delicious stuffing.

BREAD SAUCE.—Put one cupful of milk into a saucepan, add one onion stuck with three cloves, and four peppercorns. Bring it to boiling point, then add one cupful of bread crumbs and one tablespoonful of butter substitute. Let it simmer very gently for ten minutes. If it is too thick, add a little boiling water. Remove the onion and peppercorns, season with salt and add one tablespoonful of cream. Serve it in a hot tureen.

CRANBERRY JELLY.—Cranberry jelly may be easily made by boiling for thirty minutes one quart of cranberries in half a pint of water. Strain and add one cupful of sugar and one cupful of syrup or honey, cook again for ten minutes and pour into glasses. Turn out when wanted.

POTATOES BOILED.—Select potatoes of equal size and peel a strip one-half inch wide around each one. Cover with cold salted water and boil covered for thirty minutes or until tender. Drain and serve.



For Baked Squash:—Split the squash, remove the seeds, and bake until tender. Scoop out the pulp, mash it, add salt and pepper to taste and one tablespoonful of butter substitute. Fill into the shell, cover with crumbs, dot with butter substitute and brown. This dish makes a very pleasing appearance on the table.

PUMPKIN PIE.—Pare and cut the pumpkin in pieces one inch square, put them in a saucepan with just enough boiling water to cover, stew very slowly until tender (about fifty minutes), then press through a sieve. To every cupful of pumpkin add one tablespoonful of butter and a saltspoonful of salt; mix and stand until cold. When cold, put one and one-half cupfuls of this pumpkin into a bowl, add to it one cupful of milk, one teaspoonful each of powdered cinnamon and ginger, one-half teaspoonful each of powdered mace and nutmeg, two tablespoonfuls of honey or syrup and two well beaten eggs. Line two pie plates with pastry, fill with the mixture and bake in a moderate oven for forty minutes.

FROZEN PUDDING.—Scald two cupfuls of milk and when cool add one cupful of whipped cream or whipped evaporated milk, one-half cupful of sugar, one-half cupful of honey, two tablespoonfuls of grated chocolate, and one teaspoonful of vanilla extract. Freeze and when half frozen add one cupful of cleaned raisins, chopped figs and cherries cut in small pieces. When frozen pack in a mold and allow to ripen for three hours.

COFFEE.—For after-dinner coffee, use one tablespoonful of coffee for each cupful of boiling water. After putting the coffee into the pot, pour over it the boiling water. Pour off into a hot pitcher and serve in small coffee cups.

A good reliable man or woman (particularly teacher) well and favorably known in local community, who can devote some spare time to soliciting orders for Christmas cards. High-class proposition and only high-class agents wanted. Full particulars Dept. 4, Canada Fine Art Co., Toronto, Ont.

CICCOLINI CHALMERS LAZZARI MATZENAUER SCOTT DE TREVILLE

TESTING THE NEW EDISON'S RE-CREATION OF LAZZARI'S GLORIOUS VOICE

CAROLINE LAZZARI, contralto of the Chicago Opera Company, gifted with a golden voice that will win her a high pinnacle of fame, is the latest acquisition of the Edison Laboratories.

The photograph illustrates one of those tense moments when the work of Mr. Edison's recording experts is tested by direct comparison with the voice of the artist.

To develop a phonograph capable of sustaining this test Mr. Edison spent more than three million dollars in research work. The result is The New Edison, "the phonograph with a soul", which is the only sound-reproducing instrument capable of sustaining the acid test of direct comparison with living singers.

Signorina Lazzari, as a new member of the Edison family, enjoyed the distinction of making her test before five other great opera singers. She stood beside the instrument and sang the same arias she had recorded. From time to time she paused and The New Edison sang alone. The renowned artists who listened to the test with ears trained to note the subtlest shades of tone color were unable to detect the slightest difference between Signorina Lazzari's voice and The New Edison's RE-CREATION of it.

A post card request brings our interesting magazine "Along Broadway" and other Edison literature

A King In Babylon

(Continued from page 58.)

The silence was rent by a wild cry of triumph

"He's got her!" gasped Creel; but the words were drowned by a scream so shrill, so fiendish, so inhuman . .

We scrambled up a mound of loose sand, clawing for a foothold, and the excavation lay before us, bathed in moonlight . . .

Near the black entrance to the tomb, a ghastly struggle was in progress. We could hear a man's gasping breath; we could hear an inhuman voice chuckling as in triumph; and then there was a shrill cry of pain, and we saw Jimmy trying to tear himself away from something that caught and held and dragged him down — something dark and hideous and ape-like, that dragged him toward the blackness . . .

I shall never cease to admire Creel. It was he who rushed for the steps—who sped down them three at a time. I am glad to think that Davis and I were close behind!

"All right, Jimmy!" shouted Creel. "We're here! Hold on!"

The struggle paused for an instant; then the dark shape shook itself free and darted for the hole. Creel's arm snapped up and he fired; and then we were at the entrance to the tomb; and Creel sprang inside and fired again; and I saw the flash of the powder; and then the beam from Davis's torch leaped through the blackness . . .

"Come back! Come baok!" he cried, and caught Creel by the shoulder and dragged him back.

There was a crash like thunder; the world fell to pieces about us . . .

CHAPTER XXXII.

AS I wiped the dust from my eyes, gasping, choking, half-stunned, I realized what had happened —the roof of the tomb had fallen in. And Creel? Yes, there he was; safe, thank heaven, with Davis still dragging at his arm . . .

It was plain enough — the heavy vault, groaning under the weight of the tons of sand which the winds of forty centuries had piled above it, hanging by a thread since the removal of the supporting wall, scarcely braced at all by the rude prop which Davis and Mustafa had hastily reared, had been brought crashing down by the detonation of Creel's pistol-shot. The debris, hundreds and hundreds of tons of it, filled the tomb from side to side. The entrance to the inner chamber was irrevocably blocked. Whatever it was had flitted along that passage, would never emerge again.

That was the thought which filled my mind, as I stood blinking at the ruins, and I found myself murmuring, "Thank God, Thank God, Thank God!" over and over. Thank God that horror was forever buried; thank God no other ear would ever hear that beating on the wall; thank God that that age-long dream of vengeance must remain unsatisfied . . .

But must it!

And suddenly I remembered Jimmy. Perhaps it had done its work, with claw and fang—perhaps . . .

Creel was already kneeling beside that body, flung limply on the sand, peering anxiously down into its face.

"Bring the light!" he called, and slipped a hand inside of Jimmy's shirt. "He's not dead," he added in a moment. "His heart's beating. Let me see."

He took the torch from Davis's hand and turned it upon the unconscious face. There were ugly purple marks about the throat, but the chest suddenly rose and fell convulsively with a labored breath. We had been in time! But what was that dark spot, spreading across the shoulder?

With a little cry, Creel tore back the shirt, almost before I realized that the spot was blood.

With his handkerchief, he wiped the blood away. In the top of the shoulder was a savage bite . . .

And just then Jimmy opened his eyes.

"Where is she?" he gasped, and his hand groped for tho whip, which had fallen close beside him, found it, and grabbed it tight. "Where is she?" and he thrust Creel aside and sat erect.

"Lie still, Jimmy!" said Creel. "You're too weak . . ."

"I'm all right! Where is she?"

"She's gone," said Creel. "She will never trouble you again!"

"I am not so sure of that!" Jimmy muttered. "Help me up."

We raised him to his feet. He staggered for an instant and pressed his hand against his eyes, as though to conquer a sudden giddiness. Then he straightened up and looked around.

"I'm all right!" he said again. "Now—where is she? In the tomb, isn't she?"

"Yes," said Creel; "she's in the tomb."

I saw the convulsive shudder that shook Jimmy from head to foot — a shudder of mortal terror. Then his lips drew away from his teeth in an ugly snarl, and his grip on the whip tightened.

"I'm going after her!" he said. "I'm not afraid! And by God, this time I'll finish it! She can't get away in there!"

"It's no use," said Creel. "Look!" And he threw the light from the torch over the towering, tumbled mass of sand and rock. "She will never get ut again!"

For an instant Jimmy stood staring as though unable to believe his eyes. Then a great breath of relief shook him.

"You are sure she went in?" he asked.

"We all saw her. I took two shots at her. That's what brought the roof down."

Jimmy's face was alight with triumph, as he sent his lash cracking forward into the darkness.

"Good-bye, Tina!" he called. "Good-bye—you're safe now for all eternity!" and he turned back to us, and I saw how his eyes were shining. "I've won!" he cried. "I've won, Creel! You don't know yet—but you will . . ." His eyes fell upon the pistol-butt protruding from the pocket where Creel had hastily thrust it. "Have you any shots left?" he asked.

"Yes—eight."

"Let me have it."

Creel hesitated an instant, then placed the weapon in Jimmy's outstretched hand. He supposed, I think, as I did, that Jimmy wanted to discharge those shots toward the imprisoned Tina. Instead, he thrust the pistol into his own pocket.

"Thanks!" he said. "I may need it. I must hurry—I've got a lot to do."

"Wait!" shouted Creel, as he turned away. "A lot to do? What do you mean? The first thing you've got to do is to have that wound dressed."

"What wound?"

"On the shoulder—you were bitten . . ."

Jimmy glanced down, his head awry, and saw the dark red stain.

"Bitten, eh?" he laughed. "Well—she's fond of biting! Mustafa can tell you that!" And he sprang up the steps and out of sight.

"What the devil is he up to?" Creel demanded, staring after him. "I was a fool to give him that pistol!" he added, half to himself.

"Yes," agreed Davis crisply, "I think you were."

"Somehow I couldn't help it," Creel explained, and mopped his forehead. "There was something in his eyes . ."

"But it's not the first time to-night," Davis went on. "Why didn't you shoot that ape?"

"Look here, Professor," and Creel swung full upon him, "on your word of honor, now, do you really believe it was an ape?"

"Certainly I do," answered Davis sharply; "a chimpanzee, to be exact—the mate, no doubt, of the one I killed last fall."

"It didn't look like an ape," protested Creel. "It looked like that dried-up, blackened body I saw lying on the floor of the inner tomb."

"But, great heavens, man," began Davis, in a voice shrill with exasperation, "do you realize . . ."

"Yes," said Creel, "I realize the monstrous absurdity of it. Nevertheless, I believe that is what it was!"

"So do I!" I burst in. "Why, you saw it — both of you — you saw it change to a woman—to the Princess —you saw the shimmering garments . . ."

"I saw the moonlight shining on its fur," said Davis. "The rest existed only in your super-heated imagination, son! Though I suppose you saw the lady, too!" he snorted at Creel.

"Yes," answered Creel, soberly, "I did. That's why I couldn't fire."

Davis tossed his arms despairingly above his head.

"It's a breeder of lunatics, that's what it is—this moving-picture business! You're mad, both of you! It was an ape, I tell you! Why, don't you see," he added excitedly, "this makes it all clear!"

"No, I don't see" said Creel doggedly.

"It was the ape that was in that rear chamber—it was the ape beat upon the wall—it was the ape scratched Allen . . ."

Creel stood staring.

"How could it get in there?" he demanded.

"I don't know—perhaps the wall had given way, or a bit of the roof fallen in—there's a crevice somewhere—and the ape crept in, frightened by us, perhaps, and couldn't get out—and it beat against the wall when it heard us, for it would be half-crazed with thirst—but when we got the stone out, we frightened it again, and it hid away in a corner, except for that one dash at Allen—and then, as soon as we went away, it worked that loose stone out of place, and ran over to the well, and then skirmished around the native camp, looking for something to eat — for it would be hungry, of course — yes, and emaciated just like the body . . ."

Creel passed his hand dazedly before his eyes.

"Perhaps you're right," he said. "I hope you are—it seems to hang together. Just the same . . ."

"No, it's not picturesque," sneered Davis. "It's not . . ."

And then we stood rigid, staring into each other's eyes, for, from the direction of the oasis, came the sharp crack of a pistol.

"Good God!" groaned Creel. "It's that madman!" And he darted for the steps.

Blood-curdling visions flashed through my brain as I panted after him—I saw the Princess in her cataleptic sleep—I saw the spirit leave the body and float out across the sand and enter the inner chamber—and that other body suddenly stirred and sat erect and rubbed its eyes; and stole out of the ruins and back across the sand, on its deadly errand—and I remembered Jimmy's shout of triumph . . .

"I've won! I've won! You don't know how—but you will!"

And he had seized the pistol and sped up the steps . . .

What was it he had planned? What desperate deed? To rush in upon the girl—to sit beside her, pistol in hand, and wait . . .

Or, perhaps, not to wait, not to let her waken, but to press the pistol to her temple . . .

I am sure it was some such vision as this which urged the others forward, too, until we all were gasping for breath . . .

And then my heart leaped sickeningly, for a shrill screaming rent the air—the scream of a soul in torment . . .

"Good God!" panted Creel again, and paused. But Davis laughed mockingly.

"Another ghost!" he sneered. "Or perhaps a banshee!"

"What is it, then?" gasped Creel.

"It's just a camel howling!" snorted Davis.

In a moment, another took up the cry, and then another. We were quite close to the oasis now, and Davis stopped and stared with frowning brows toward the native camp, where the camels were tethered.

"We'd better see what is going on over there," he said. "Camels don't scream like that for nothing. Surely, those natives . . ."

He broke off and hurried on, his lips compressed. Then we caught the murmur of excited voices, and another voice shouting commands — Jimmy's voice. The chanting had ceased . . .

And just as we reached the first group of palms, a weird procession passed like a shadow before us. At its head marched Jimmy, with Mustafa a pace behind; then came three camels, and then the whole string of fellahin . . .

(Continued on page 66.)

Labor Savers are Life Savers

In nothing are we more extravagant than in the waste of vital energy, and the results are serious.

The home is the centre of the universe—woman is the centre of the home; civilization, therefore, is dependent upon her health and her stimulating influence. All household improvements and labor saving devices which can be provided to conserve her strength will add to her power and efficiency.

The average woman wastes a large amount of energy in useless walking. She crosses and re-crosses the central floor space from one place to another.

Disorganization in the kitchen means wasted energy.

Have a place for everything and everything in its place. Why not some built-in cupboards and utensils and supplies nearby? If built-in cupboards are an impossibility, then a kitchen cabinet fills a necessary need. A tall stool adds much to the housekeeper's comfort in the kitchen. She can sit down to iron clothes, peel vegetables, mix breads, etc.

A dumb-waiter saves much travelling up and down stairs.

Do we all use an egg-beater instead of a fork? a long-handled soup ladle instead of a cup? sharp knives for carving and slicing? a can opener? a food grinder instead of a hand chopper? a bread mixer, etc.? If not, we are wasting our energy.

The fireless cooker is not only a labor saver, but a fuel saver—hence, a necessity this year. Then again, some foods are improved by long cooking at relatively low temperature. The texture and flavor of tougher cuts of meat, and old, tough, fowl, are improved by slow cooking. Cereals, dried legumes and dried fruits are more palatable and wholesome when cooked for a long time. Soups and stews are delicious when cooked in the cooker.

If you do not care to purchase a commercial fireless cooker, you can make one successfully in the home—an old trunk, a candy bucket, or a lard pail, a little galvanized iron, some asbestos and excelsior and a soap-stone are all that are necessary to make a fireless cooker.

A service table wagon is a strength and time saver. The tray saves many trips between the dining room and kitchen, both in serving and clearing away meals. The top and shelf spaces are sufficient to remove all dishes to or from the table in one trip.

The vacuum cleaner has come to stay.

If we cannot have the one worked by electricity, let us use the one worked by hand power. The cleaning part is simply a pumping apparatus, very similar to a well or cistern pump, but instead of sucking water, it sucks air and the suction is strong enough to draw the dust out of the carpet, along with the air. It raises no dust. It is unnecessary to remove anything from the room, therefore much time and energy are saved.

Hot and cold running water.

Have you piped the water into the house? Many have the water piped into the barn for the stock. Why not into the house? It is needed there.

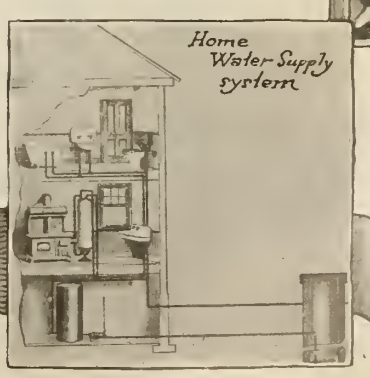
If nothing better can be afforded, a large barrel placed outside the kitchen wall and fitted with a pipe and faucet will furnish running water for a large portion of the year. The eavetrough might be connected with the barrel. Storage tanks which furnish running water throughout the house are being more and more used and are inexpensive and easy to install.

It will not cost any more to outfit your house with a bathroom and hot and cold water taps in the kitchen than it will cost to buy a new binder.

Let the engine do the work.

The engine in the farm home makes possible the combination of a number of labor-saving facilities.

The engine will do away with the weekly turmoil of the wash tub, saving much work and many back-aches. It will do the churning, separate the cream, pump the water, grind the feed, saw the wood and run the vacuum cleaner.



It will also furnish the power to operate a home lighting plant.

For practical information on labor saving devices and the installation of water systems for the home, write the

ONTARIO

Mr. Hoover

"Citizen of Honour and Friend of the Belgian People"

Pleads for the

Belgian Children

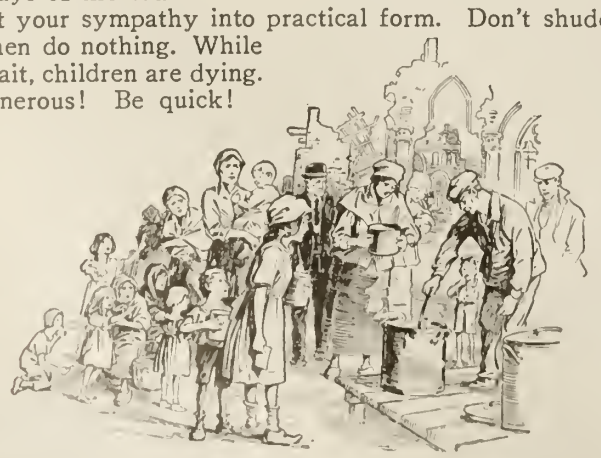
Mr. Herbert Hoover, Food-Controller of the United States, has earned the title bestowed upon him by King Albert and the Belgian Government—"Citizen of Honour and Friend of the Belgian People."

The world knows what was accomplished under Hoover's administration before America's entrance into the War. In July of this year, he was in London in connection with his responsibilities as Food Controller, and took the opportunity to learn how things stood in Belgium.

So terribly serious are conditions there among the children that Mr. Hoover wrote an urgent plea, parts of which are quoted:

"On May 14th, 1917, I advised you of the financial arrangement with the United States Government whereby funds were provided for the general rationing of the civilian population of Belgium..... I stated my hope that the various committees of the Commission for Relief in Belgium that had already accomplished so much would hold together despite the new financial arrangement in order to support certain needed special charities.....

"It can be readily understood that in providing a general ration for the whole nation the rigorous system necessary to handle such a great project can make little provision for special cases and for special needs. These cases, running into hundreds of thousands, of sick and defective children.....cannot be taken care of by the general funds. There is an increasing need for funds in these cases. The gifts are running low, and our last reports show that the soup lines of Belgium have increased from one-and-a-half to two-and-a-half million persons.



"I wish particularly to remove any doubt as to the acceptability of contributions to the Commission for Relief in Belgium for the special purposes above indicated..... This transmission of money is absolutely guaranteed by virtue of an agreement between the belligerent Governments, the C.R.B. and the Neutral (Spanish and Dutch) protecting Ministers in Brussels."

Read between the lines of Mr. Hoover's letter to his associates, and you will realize the ever fresh tragedy of Belgium. You will see little babies, pinched with hunger, waiting in line for the bowl of soup and the two pieces of bread that form their daily ration.

Think of it!

Is it any wonder Consumption and kindred ills sweep through the stricken country, harvesting the starved orphans left behind by soldiers who died holding back the Hun in the first days of the War.

Put your sympathy into practical form. Don't shudder—and then do nothing. While you wait, children are dying. Be generous! Be quick!

A Million Children Facing Starvation

Twelve Hundred Thousand Young Belgians Dependent Upon Relief Work.

With the advent of war in Belgium, both public assistance and private charities found their resources strained to the breaking point. Children's aid societies, orphanages, day nurseries, etc., viewed with alarm the swift dwindling of their finances. Well might they be alarmed, for upon their efforts depended the lives of more than one million children. From the very beginning, the Belgian Relief Commission undertook the special task of nourishing children as well as the general work of alimentation. A children's department of patronage was established. At first this department was devoted to helping charities already in existence, but gradually its scope was extended until it embraced three branches: Children's Aid Societies, the Feeding of Children, and War Orphans. These three branches have a common secretary, and a complete board of inspection sees to it that measures decided upon at the monthly meetings are put into effect. Every two weeks delegates from all the provinces meet in Brussels and discuss plans for the whole kingdom. At least 20,000 men and women are devoting themselves to the protection of children in the occupied parts of Belgium. The branch having to do with the feeding of children is managed by the Commission for the Alimentation of Children, to which are attached the most eminent Belgian physicians. One section of this branch provides meals for 985,617 children at the schools in 1,897 communes. Canteens for debilitated children provide special nourishment for 53,311 little tots.

It is an indisputable fact that but for these activities over a million children would be without the means of supporting life, that over a million children would perish of starvation and diseases consequent upon malnutrition. This great work is at present seriously hampered by lack of funds, and looks to the Belgian Relief Commission for the means wherewith to continue its noble efforts. It is on behalf of these and similar organizations, on behalf of the lives of more than a million Belgian children, that the Belgian Relief Fund is appealing to the generosity of the Canadian public to-day. Every dollar contributed or withheld means life or death for a child. Contributions should be sent to the local branch of the Belgian Relief Fund or to the Canadian headquarters at 59 St. Peter street, Montreal, Que.

Training Boys and Girls For War Time And After

(*Continued from page* 55.)

have we called on the resources of our boys and girls, as at the present time.

"Many of the younger children of the cities are attending the Daily Vacation Bible Schools, and they just love to sing hymns and jolly songs, repeat yards of Bible verses in unison, make hammocks and baskets, rugs and toy-waggons, dresses and aprons, fireless cookers and fly-swatters, mud pans and clay men, *ad infinitum*."

Rev. J. B. McLaurin, of India, who made a tour of the schools, writes:—

"I had been slightly prejudiced against the idea of using the children's holidays to foist another school on them, but this was removed by actual observation. Here were no tiresome books or homework, but carpentry, knitting, weaving, chorus songs, in which the children delighted, and bright, interesting talks. I was impressed by the evident enjoyment of and absorption in their work by the girls and boys. In most of the schools they would hardly look up to notice the visitor. Under these circumstances, the discipline seemed to take care of itself. There was a welcome lack of glaring posters and charts, and the now too universal appeal to the eye was offset by teaching the children to learn by hearing as well.

"The very high quality of the officers and teachers also impressed me. As we went from school to school and saw the almost perfect discipline, combined with a fine comradeship between teachers and children, noted the spirit with which the pupils sang, and the accuracy with which lengthy passages of Scripture were recited, the conviction grew that the movement had been most fortunate in the calibre of the helpers it had attracted into this work. The evidences of patience, real interest in the children, ability to grip a situation, and Christian character, were marked in every school we entered.

"It seems to me that many homes, as well as public and Sunday schools, will find discipline easier and children happier and brighter through this summer's work of the D.V.B.S. And best of all, it represents the churches getting to work amongst the unchurched."

Trade Talks, Lantern Lectures, Cartoons, etc.

Cartoon Chalktalks, by Mr. J. W. Bengough, were again a feature of the Vacation Schools, and they were so thoroughly appreciated that the lecturer generally responded to the encore by reciting "Little Orphan Annie," or some other juvenile piece, which tickled the children immensely. Our good friend, Mr. Geo. W. Allen, was generous with his lantern lecture on the "History of a Lump of Coal," and also told the thrilling story of the "House that Jack Built," which, in this case, was the true story of his own home, which he built entirely with his own hands in spare time—a marvelous tale, as strange as any in the "Arabian Nights." Dr. J. N. E. Brown pleased both children and adults with his lantern lecture on "Gold Mining in the Yukon," showing how the mines are worked, and also scenes on the trail and in Dawson. Mr. J. L. Rook, of the Canadian Home Journal, told the mysteries of the "Art of Advertising," illustrated with specimens of beautiful advertisements. Miss Grace Johnston spoke about singing, and practically demonstrated how easily children catch new tunes, by teaching a new "Round." Miss Martha Cullen exhibited a fireless cooker which she had made principally from material which is usually wasted, and demonstrated its use. Mr. Laing, of the Navy League, gave an illustrated address on the wonderful work of the navy in the war. In addition to my talk on the Pin, I gave an exhibition of Industrial Art by children and peasants—leather, clay, wood-carving, needlework, etc.—from different countries, distributing the various articles among the children and explaining their features while they were being examined and admired.

How the Schools Were Appreciated.

Letters poured in telling of the way in which the schools were appreciated. Many were received at Parliament street, where the number of children is great, the attendance running up sometimes to over 180, although this was the first year of the school.

Extracts from some of the letters received may be interesting:—"My little girl thoroughly enjoys the school, and looks forward to it more and more every day, and has been helped very much by it. What I saw on Friday evening surpasses all my expectations." "We think it is a grand thing for the little children, and we hope it will be a great success." "My child has received a great benefit from the D.V.B.S. It has been somewhere for her to go in the mornings for which she looks forward, and the picnics she has thoroughly enjoyed. Many a little child has had an enjoyable outing which otherwise they would not have had." "Thank you very much for your kindness to my grandson. It has helped him very much, and he likes going. I am sending a thankoffering. I wish I could give more, but being a widow I have not got much." In many cases donations towards the school work, which is conducted on an entirely philanthropic basis, were enclosed with the letters of appreciation.

The weekly calendar of Bloor Street Baptist Church, in which a very successful Vacation School was conducted for the first time, had the following comments in connection with the "Trade Talks":—

(*Continued on page* 65.)

Knitted Comforts for the Frosty Days that are Coming

Any of the articles illustrated on this page would make the best possible sort of Christmas gift for friends.

Pictorial Review Knitting Directions No. 546.—The bed-socks shown at the right were made of knitting-yarn and worked on two needles.

No. 546—Practical Knitted Bed-socks that are atractive as well.

No. 512—A useful Knitted Cap—Pulls down over the ears.

Pictorial Review Knitting Directions No. 512—This cap will be found especially comfortable on the steamship as it pulls down over the ears. For working directions No. 512, which include knitted stockings for men and boys, send 10 cents and stamped self-addressed envelope.

No. 547—Ladies' Knitted Stockings.

Pictorial Review Knitting Directions No. 549.—Mittens like these will provide comfort on many occasions as they can be worn alone or over gloves. They are very simply made as both are alike and can be worn on either hand. Upon receipt of 10 cents and a stamped, self-addressed envelope, full working directions for No. 549 will be sent.

Pictorial Review Knitting Directions No. 547.—These well-fitting stockings will be valuable to the woman engaged in out-of-door work. Those shown above were made from a Scotch mixture knitting yarn. Send 10 cents and a stamped, self-addressed envelope for working directions of No. 547.

If your local dealer cannot supply these patterns, send direct to the Pictorial Review Co., 263 Adelaide St. W., Toronto

The Garden God—The Sun-Dial

(*Continued from page* 21.)

many memento moris. It rather takes away the charm of the sun-dial to be continually confronted with "Oh! remember how short my time is." "I shall return, thou never." "I mark the time which thou dost lose." "Snatch the present hour and fear the last." "Before thou lookest if I am right look if thou art right thyself."

After these lugubrious sentiments, the following seems quite merry:

"Time wastes us, our bodies and our wits,
And we waste time, so time and we are quits."

The following exquisite little French poem adorns a very beautiful sun-dial in a Paris garden:

La vie est veine
Un peu d'amour
Un peu de haine
Et puis—bon jour.

La vie est breve
Un peu d'espoir
Un peu de rire
Et puis—bon soir.

The day of the sun-dial is not yet done. It is still quite an industry in Birmingham—or was before the war. Whatever part it may have to play in the future history of individuals and nations, it must never be forgotten that as a faithful recorder of the passing hour, it remains the most accurate keeper of sun time that has been discovered by man.

The Girls' "Carry-On" Column

(*Continued from page* 19.)

only our duty. But I am sure we would look a long time before we could find such a pleasant one.

QUESTIONS AND ANSWERS.

I do so much want to do something to help in this great war, but here seems so little a country girl can do. How old must one be to take the Massage and V.A.D. course? What are the expenses of the course? Are girls sent overseas before they are 21?

Ripples, N.B.

The Massage course is given without tuition, and the girls are paid a certain amount after they have served their

Plain Living Gives a Nation Strength—Save.

How Much Money Can You Make? Let the Auto-Knitter Answer for You.

It does the work of 20 hand-knitters.

Turns out Beautiful Work. Makes Money at Home.

The Auto-Knitter works by turning a handle—thirty stitches a minute. It is easily learnt; our Instruction System is very clear and simple. It is a pleasant, permanent money maker in thousands of homes—why not yours too?

KNIT SOX AND DOLLARS.

If you want to make money at knitting, you must get away from slow hand knitting and use the fast, reliable, modern Auto-Knitter. Affords you profitable work in peace or war time.

THE WONDERFUL AUTO-KNITTER

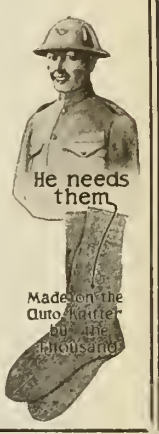
is the most modern development of the knitting machine. It works very fast and turns out high-grade socks, even better than hand knit, plain or ribbed, such as soldiers, sailors and civilians need in thousands. Weighs only about 20 pounds; may be fastened on any table. It is sent, guaranteed perfect, and with a piece of work started, ready to continue. Can do the work of 20 hand knitters, using much less yarn.

JUST LIKE KNITTING DOLLARS.

Making money? Yes, indeed—if you want to make money in the quiet of your home, we gladly arrange, for as long as you wish, to take all the Auto-Knitted socks you do not wish to dispose of otherwise, and pay you highly profitable prices for your work. The demand is tremendous, our present workers cannot begin to meet it.

War Relief Organizations throughout the Allied countries are using Auto-Knitters with wonderful results. One or two of these fast, reliable machines in each district can do more work than fifty ladies hand knitting.

These are extracts from customers' letters:—



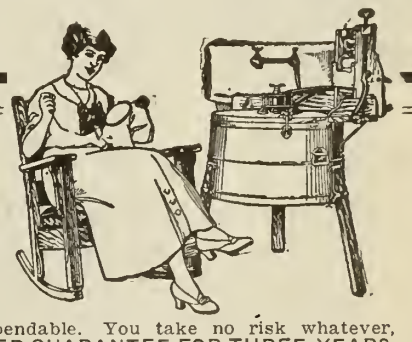
Mrs. W. A. C., Vancouver: "Have just finished two dozen pairs soldiers' sox on my Auto-Knitter, and it is very satisfactory. I work in my spare time for the Red Cross." Mrs. A. S., Dauphin: "The Auto-Knitter is fine and everybody who sees it thinks it is great. We are getting all the work we can handle." Mrs. R. E. D., Westport, N.S.: "I find it a pleasure to work the Auto-Knitter and the Instruction Book is a wonderful teacher." Mrs. G. W., Miniota: "Since receiving my Auto-Knitter I have been kept very busy. I had no idea orders would come in so rapidly, and I fear I will have no socks to send you as I am selling them locally." Mr. P. J. M. (fireman), Edmonton: "I have knitted over 2,000 pairs of men's socks in ten months. I have tested the Auto-Knitter and it is splendid."

NO YARN PROBLEM

We send replacement yarn free when you are working for us, and guarantee you liberal pay for your work. This agreement is continuous on our part.

MORE SOX. THE URGENT CALL

It is your patriotic duty to answer it—now—and you can provide yourself with a good income maker at home with the Auto-Knttter no matter where you live.



The hosiery trade is booming, more workers are wanted at once. Write to-day for full particulars enclosing 3c stamp, and see what you and your family can now earn at home and do for Patriotic work.

AUTO-KNITTER HOSIERY (Canada) CO., LTD.

Dept. 210D. **607 College St., Toronto, Ont.**

Try This Washer Before You Buy It

You have seen many other Water Motor Washers, but, until you have investigated the "1900" Agitator Machine, you do not know what perfection is, in a washer that operates by water pressure.

The motor is thoroughly dependable. You take no risk whatever, because **WE GIVE YOU A PRINTED GUARANTEE FOR THREE YEARS.** The washing action is the same as is incorporated in our splendid Wood Tub Electric Machine. No other Water Motor Washer has this feature.

Our specially designed (and patented) swinging Agitator Board cannot possibly do any injury to the most delicate fabric, and yet it accomplishes a surprisingly good washing effect. And when we say "surprisingly good" we mean that you will actually be surprised at the splendid results secured.

We have a liberal "trial offer" whereby you can test the machine in your own home. We know you will decide to keep it—and it can be paid for by easy installments.

Write **NOW** for our illustrated folder containing complete information.

We also make a full line of hand and electric power machines. State whether you are interested in a Washer that operates by Hand, Engine Power, Water or Electric Motor. Our "1900" line is very complete and cannot be described in a single booklet.

Better address me personally. O. L. MORRIS, "1900" Washer Company, 357 Yonge Street, Toronto.

KEEP YOUR SKIN LOOKING LOVELY

It is not difficult. By using our preparations which counteract the causes of defective skin the beautiful, clear, freshness of youth may be restored. Sufferers from Eczema, Pimples, Blackheads, Wrinkles, Undue Redness, Blotches, Crow's Feet, etc., should consult with us at once and secure our free advice as to the proper preparations to use.

Princess Complexion Purifier	$1.50
Princess Skin Food	1.50
Princess Hair Rejuvenator	1.50
Princess Cinderella Cream	.50

Write for FREE SAMPLE of this delightful Cold Cream. Our preparations, with full instructions for home use, sent to any address on receipt of price.

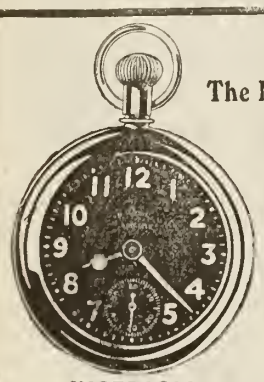
Write for copy of our Booklet "H."

THE HISCOTT INSTITUTE, LTD.,

Established 1892. 61B College St., TORONTO

MONARCH-KNIT SWEATER COATS

THERE is a certain captivating style to Monarch-Knit Sweater Coats which wins the instant approval of the woman of taste. There is likewise a real economy in their sturdy construction and careful finish, as well as warmth and comfort in their fine yarns and closely-woven fabric. In times like these when supplies of raw materials vary so frequently, both in quantity and quality, it is well to safeguard your purchase by asking for Monarch-Knit. The models now being shown are especially designed for Fall and Winter wear; ask to see them at your nearest dry goods store.



One of the season's newest models. A pretty combination in pink and green.

The Monarch Knitting Co., Limited

Dunnville, Ontario, Canada

Manufacturers of sweater coats, hosiery and fancy knit goods for men, women and children. Also Monarch Floss and other hand-knitting yarns suitable for soldiers' sox, etc.

The Name *Ingersoll* on the Dial

INGERSOLL RADIOLITE $3.00

Guarantees you a watch that has given a better time-keeping service to the people of the world than any other watch, at any price.

Before the invention of the Ingersoll, a quarter of a century ago, watches were luxuries, now fifty million men, women and children—seven times the population of the Dominion—have learned to be punctual and systematic by using an Ingersoll watch.

From coast to coast, from pole to pole, all around the world you will find Ingersolls ticking off the hours for work and play, night and day.

Made in Canada and sold by all good dealers at prices to suit every pocketbook—low cost—fine appearance—sturdy workmanship—correct time-keeping. These are the qualities built into every Ingersoll watch and guaranteed by the makers.

WATERBURY RADIOLITE $5.50

Robt. H. Ingersoll & Bro.

Canadian Offices and Factory

128 Bleury Street, Montreal, Quebec

Canadian Women's Institutes

(*Continued from page 54.*)

In the afternoon, the delegates will visit the Byron Sanitarium, in which so many of the Institutes in Western Ontario have taken a practical interest. An address will be given at that place on "The Education of Returned Soldiers," and the delegates will visit the hospitals and class rooms and work shops.

Full information regarding the Conventions will be sent the Institutes concerned.

Central Convention.

The Central Convention will be held in Toronto during the second or third week of November. This will be attended by delegates from the Eastern and Western Districts as well as from the Central District, and will really be a Provincial Convention.

Plans are being made to have representative reports from a few Institutes which have been doing original work along patriotic lines, and Branches which have been carrying on regular work effectively, as well as their share in patriotic work, will report. Opportunity will be given for discussion as to ways and means.

The activities of the Women's Institutes along Medical Inspection lines and an outline of workable and effective methods for rural districts will form an important feature of the convention.

Production and conservation will receive attention, the work of the canning centres being emphasized.

The delegates will be addressed by a leader in the education of returned men, and an opportunity will be given to visit one or more military hospitals, as well as work shops and class rooms of returned men.

Educational matters and better health campaign are included in the proceedings, as well as the housing problem, and woman's work on the farm.

Full announcement of the Central Convention will be made in the next issue of this Journal, and direct to the Institutes.

Girls' Canning Centre.

The Girls' Service Battalion of Niagara-on-the-Lake, in co-operation with the Women's Institute of that place, and the Institutes Branch of the Department of Agriculture, have had splendid results at the canning centre which they opened recently.

The volunteer work has been most willingly given, and donations of fruits and vegetables sent in have been most gratifying. That the good things put up by the girls have been appreciated is indicated in the following letter:

Niagara Camp, Ont.,
August 26th, 1918.

To Capt. Rigg, O.C., Girls' Service Battalion, Niagara-on-the-Lake, Ont.

Dear Captain,—It is difficult for me to really adequately express the thanks of the patients for your kind donation of twenty-nine quarts of fruit received to-day. As you know, army rations are intended for strong, healthy and vigorous men, and sometimes it is difficult to provide the boys who are ill in hospital with a few comforts. Fruit is out of the realm of possibility for them, unless it were of the canned variety, which I have hesitated to provide. If you could have seen the glad faces on the tasting of the fruit sent to the hospital, it would prove ample reward for your efforts. I fully realize the trouble entailed in preserving fruit, and I know that it is no small effort so to do, but I can assure you that your efforts have met with silent appreciation on the part of all the patients in hospital, and they have asked me to try to express to you and the girls of your battalion, their heartfelt thanks for same.

Wishing you every success in future,

(Signed) GORDON ARMSTRONG,
Captain,
O.C., A.M.C., T.D. No. 2.

Cherry Valley Institute.

The Cherry Valley Institute in Prince Edward County, has been constantly at work and has done a great deal towards greater production, also providing comforts for the soldiers.

One member alone cultivated, planted and cared for 4 acres of land. Her vegetable garden has been reported as doing unusually fine.

The district of Prince Edward County, of which Cherry Valley is a branch, during the past year, sent over 9,000 pairs of socks overseas, and monthly contributions are made to the Prisoners' of War Bread Fund. Interest is also being taken in providing supplies for the new hospital at Picton.

Bangor Institute gave the popular play, "The Temple of Fame" recently, the crowded house showing the interest and appreciation on the part of the entire community in their endeavor. Four hundred dollars was raised for Red Cross, and they expect to make an additional $200 by giving the play again at Massie.

(*Continued on following page.*)

Important Notice

For Every Women's Institute Member

In an endeavor to enlarge and improve the Women's Institute Department of "Canadian Home Journal," we request women from British Columbia to Nova Scotia to send direct to us reports of work being done in their Societies. These reports should tell of new and interesting work being successfully accomplished; new courses of study which have proved beneficial; new methods and plans of raising money; new forms of entertainment and work; unique methods of making appeals for money and labor to the community; new ways in which the Institute has bettered the community; methods which have worked well in enlarging membership of Institutes.

Cash Prizes For Institute Members

First: A Prize of Five Dollars will be given any Women's Institute member who sends in the best description of the way in which her Institute raised money successfully.

Second: A Prize of Five Dollars will be given any Women's Institute member who sends in the best description of some unique way in which she thinks an Institute could raise money.

Third: A Prize of Five Dollars will be given any Women's Institute member who sends in the best description of the way in which she thinks "Canadian Home Journal" could be of more service to Institute members.

All letters become the property of "Canadian Home Journal," that extracts may be published from time to time.

All communications must be addressed to:

Women's Institute Department,
"Canadian Home Journal,"
71 Richmond St. West, Toronto, Ont.

The contest closes November 1st, 1918.

SOMEBODY WILL WIN THESE PRIZES—WHY NOT YOU?

Plain Living Gives a Nation Strength—Save.

Canadian Women's Institutes

(Continued from preceding page.)

MODEL CANNING CENTRE ESTABLISHED AT BARRIE.

The town of Barrie can boast of a patriotic work which equals that of many of our larger cities, in using the means at hand to the best advantage to help win the war, says the "Sunday World." At the beginning of August, the Simcoe County canning centre was opened under the auspices of the Women's Institute. The Department of Agriculture (Women's Institute Branch), as part of its work, is establishing canning centres and community kitchens in the fruit districts, for the canning and preserving of fruits and vegetables. This department installs the necessary equipment, all of which is the latest and most modern that can be obtained. The Government also gives the services of a demonstrator to show the workers the how and why of the work they have undertaken, and this good cause has been so well advertised in the town and surrounding districts that fruit and vegetables are poured in from far and near, in large and small quantities, to be used as the centre deems best.

Almost without exception every woman in Barrie is interested in the work, many of them giving a few hours of their time each week, while others devote every minute they can spare from their household duties. Some come from a distance to give a morning or afternoon to help out. The women work in shifts of a few hours each to prepare the fruit and vegetables for preserving, and as a rule many willing workers make the duties light and agreeable. The women are an organized body and no work is done in haphazard style.

Town Hall as Factory.

The use of the old town hall has been given by the council, in which to carry on the work. The kitchen where the work is done consists of the front part of the building divided in two sections by a glass and wood partition. The walls of both apartments are whitewashed and are kept spotlessly clean. Every pan, tin and other utensil not in use hangs on a nail, while the butcher's tables on which the paring and stoning of the fruit is done are kept well scrubbed. Everything presents so clean and neat an appearance as to suggest a model centre rather than a working one. The building is so located as to command an excellent view of the road, the railway and across the lake. The big double doors which compose the main entrance to the building are thrown wide open, and the passers-by can see the work in vegetables. Thirty sealed tins are placed in a retort and thoroughly sterilized. The tins are placed in a galvanized receptacle, which fits neatly into the steel retort. The top is screwed down tightly and about ten pounds of steam pressure turned on. This gives a heat of roughly 240 degrees Fahrenheit. A short time in the retort finishes the canning process, and the tins are ready to be packed two dozen in a case and taken to the station for shipment. The retort can also be used for cooking purposes, and the demonstrators hope to be able to cook 10,000 chickens to be canned. They could be cooked a dozen at once in a very short time. The whole chicken is cooked, and whatever cannot be canned is used for a chicken soup.

All Help Voluntary.

A boiler erected in the basement of the building supplies the power, and is attended to by voluntary help, though arrangements have been made to employ an engineer, who will also perform the duties of caretaker. Outside of the work of the caretaker and that of the cooking demonstrator, every bit of work is done voluntarily. Every item of fruit and vegetable is donated, and also the use of utensils. The upkeep of the equipment is provided for by the Government. Sugar, spices, vinegar and the containers come from the Red Cross Society in Hamilton. Peclin, which is made from apples, is used as a substitute for sugar, and a great saving of a commodity fast-growing scarcer has been the result. Incidentally peclin thickens the jam, making it much more easily handled.

Extent of the Work.

Some idea of the extent of the work being done can be gathered from the figures showing the output up to the present date. Since August 1 there has been put up in tins over 5,000 pounds of jam of various kinds: raspberry, rhubarb, blueberry, and a combination of raspberry and rhubarb. About 750 pounds of apple butter have been made, besides over 50 quarts of canned apples. Beans, peas, carrots and beets constitute the 400 quarts of vegetables which have been preserved. Other vegetables will be handled when in season. Fruit and vegetables have been sent a distance of 70 miles to the centre to be canned.

One of the objects of the centre is to promote to a greater extent the practice of canning and preserving of all available fruits and vegetables. The women of the district may bring their fruit and vegetables to be preserved, which is done free of charge, provided a fair part of the canned goods be donated to the centre.

Qaalified Demonstrator.

A qualified demonstrator instructs the women in the art of preserving and shows many economical and modern ways of storing away for the winter months some of the things we can't always get in the colder season, without paying an enormous price to satisfy our luxurious tastes.

Every tin of canned fruit and vegetables is turned over to the Red Cross Society, to be given out to the boys at the front and in the military hospitals, and the work of the women and girls is certainly worth while, according to the number of appreciative letters received from "over there."

"A FRIEND."

This little verse was quoted by Miss Isobel Noble, president of the Women's Institutes of Alberta, in an excellent address before the Rural Leadership Conference recently held in Edmonton. It may well be taken to heart by busy women everywhere.

Around the corner I have a friend
In this great world that has no end,
And days go by and weeks roll on
And before I know it a year has gone;
And I never see my old friend's face,
For Life is a swift and terrible pace.
But he knows that I love him just as well
As in the days when I rang his bell and he rang mine;
We were younger then,
But now we are busy, tired men,
Tired of playing this foolish game,
Tired of trying to win a name.
To-morrow, I say, I'll call on Jim,
Just to prove that I really think of him,
But to-morrow comes, and to-morrow goes,
And the distance between us grows and grows,
Around the corner, yet miles away.
"Here's a telegram, sir; Jim died to-day."
Yes, that's what we get and deserve in the end—
Around the corner, a vanished friend.

Training Boys And Girls For War Time And After

(*Continued from page* 62.)

'These talks by men in different walks of life are part of the instruction in the schools, giving the boys and girls some idea of the wonders of modern industry, and directing their thoughts toward callings, hitherto unknown to them, so that they may have some definite basis for their choice of a life work."

As one outcome of the Vacation work at Bloor street, the superintendent of the Sunday School, Mr. H. L. Stark, is making arrangements for evening classes twice weekly during the winter, for instruction in woodwork of an advanced and very interesting character, such as large relief map three by six feet, made of wood and plaster, models of missionary houses, chapels, etc., the whole to form a grand exhibition at the close of the term. The map and mission buildings will all be correlated with the lessons and work of the Sunday school, forming a new development of Sunday school work in Canada. The director of this work will be Mr. E. Gulley, who is recently from England. He holds a gold medal for special excellence in woodwork.

Thus these Vacation Schools are proving to be "experiment stations" for educational work on new lines, and are proving to be pathfinders, showing Sunday schools as well as our public schools the road to new vital and profitable lines of development.

MACLEAN'S

"CANADA'S NATIONAL MAGAZINE"

The old delusion that Canada could not produce a first-rank magazine of its own has been upset during the past few years. The phenomenal growth of MacLean's—in quality, in circulation, in public esteem—has been an eye-opener to the general public. MacLean's is to-day entitled to rank among the leading publications on this continent.

The October cover carries the likeness (in colors) of Canada's foremost soldier—Sir Arthur Currie.

MacLean's is edited and published by Canadians, and on merit alone has developed into "Canada's National Magazine." There are three reasons:

The first is that the publishers have not been afraid to spend thousands of dollars each month for the best reading matter and illustrations. MACLEAN'S publishes exclusively the best work of the best Canadian authors—

Stephen Leacock, Robert W. Service, Agnes C. Laut, I. B. Yates.
Arthur Stringer, W. A. Fraser, Alan Sullivan, and many others.

In addition, stories and articles are purchased direct from many writers of widest reputation, including H. G. Wells, George Bernard Shaw, E. Phillips Oppenheim, C. N. and A. M. Williamson.

The second reason is that MacLean's has spoken out frankly and fearlessly on all public questions. It has told the truth about the war and about politics with a directness that has been electrifying. When necessary the articles in MACLEAN'S hit straight and hit hard.

The third reason is that MACLEAN'S is thoroughly Canadian in tone. The reading matter is clean. The advertisements are rigidly censored. MACLEAN'S can be received into any home with utmost confidence.

Test this out by getting a copy of the October issue, which contains among other features

"The Story of War Under the Earth"

You have read countless articles about war in the trenches, in the air, on the sea. Now read something new. Read of the warfare that goes on under the earth—of tunnels that stretch under enemy lines, of death-grapples in the dark, of strange devices and destructive machines. Read Lieut. Tilbrook's article on tunneling, "An Underground Tank." It is gripping, stirring and different from anything you have read about the war.

A STRANGE NEW CHANGE IN WOMAN'S WORLD. By Agnes C. Laut.
The new status of women, arising out of the war, is treated in the powerful style of this famous writer, who came from the Canadian West. It introduces a new thought.

CONSCRIPTION AFTER THE WAR. By Brigadier-General A. C. Critchley.
A young Canadian who rose from Lieutenant to General in three years and originated the "Critchley Method" of military training, tells what he thinks about the need for compulsory service after the war.

THE LIFE OF MARY PICKFORD. By Arthur Stringer.
The second of a series of articles on Canada's most famous woman. No expense has been spared to produce the beautiful illustrations shown in this article. Miss Pickford specially posed for the photographs.

THE FOUR FACTIONS AT OTTAWA. By J. K. Munro.
That the House will split into four, more or less, distinct groups is the guess of the author, a trained political observer. He outlines the reasons, humorously, pungently and impartially. It is a political article on new lines and will be found refreshing.

BONEHEAD BILL—Another Service Poem.
Robert W. Service, most popular of poets, sends all his war verse to MACLEAN'S. In "Bonehead Bill" he depicts the grief of a soldier for his fallen foe.

THE EVENTS OF A MAD WORLD.
are summed up in the "Review of Reviews" which give reprints of the best articles from the magazines of the world. All the best and most important articles are selected—five dollars' worth for twenty cents!

In addition to above there are five splendid stories by our best authors.

A King in Babylon

(*Continued from page 60.*)

They were headed in the direction of the tents . . .

"He's gone mad!" said Creel hoarsely. "He's starting a mutiny!"

"Come on!" said Davis. "We must head him off!" and together we dashed toward the tents.

We reached them first, and were welcomed with gasps of relief by Ma Creel and Mollie, who were white and shaking.

"He's been here," whispered Ma Creel. "He ran past into your tent and stayed there a minute, and then came out and ran toward the camp . . ."

"Is the Princess still asleep?" asked Creel.

"How do I know? Do you suppose I'd go in . . ."

And then Jimmy strode out from the shadow of the palms, with Mustafa at his elbow, and the three camels towering behind him, and the rabble of natives bringing up the rear.

Creel went forward steadily to meet him. Good old Creel—I take off my hat to you!

"What does this mean, Jimmy?" he demanded sternly, and from his look you would have thought it was he who had the pistol.

"I'm going to leave you, Warrie," Jimmy answered sweetly, without a trace of the excitement I had feared.

"We are all going back to-morrow," Creel pointed out.

"I can't wait till to-morrow," said Jimmy. "I've got to go to-night."

"You *can't* go to-night."

"Yes, I can, Warrie—and what is more, I am!" said Jimmy quietly. "Don't try to stop me. It wouldn't do any good—and it might do a lot of harm."

There was not a trace of threat in his tone; but his hand fell carelessly to the pistol-butt, and he stood for an instant looking smilingly into Creel's eyes. Back of that smile was a meaning there was no mistaking. Creel saw it—and drew back a pace. He realized the uselessness of argument.

"That's right," said Jimmy, with a nod. "That's sensible."

"But you will lose your way," Creel protested. "You'll die of thirst."

"I can't lose my way," said Jimmy. "The river is to the west—I couldn't miss it possibly—I have only to follow the moon by night and the sun by day. As for thirst, I want to load one camel with food and water. You have plenty—and I'll pay for it—and for the camels, too, if anything happens to them—out of my salary. I leave all that to you."

"Is it so, Mustafa?" Creel demanded. "Is it so that he can't miss the river if he holds to the west?"

"That iss so, saar," said Mustafa. "North and south the river stretches, hundreds of miles."

"What provisions will he need?"

"He should have provisions for a week, saar."

"Give him provisions for two weeks," said Creel. "Or for three weeks, if he can carry them. That is, if he is really determined on this crazy project."

"I am," said Jimmy. "If I can't have the provisions, I will go without."

"Of course you can have them," said Creel. "All you can carry," and Mustafa, calling a force of natives, hastened to the supply tent.

A moment later, the camels, protesting loudly, were forced to kneel, and one of them was quickly laden. I saw that the other two were fitted with saddles; and it occurred to me that Jimmy was not taking much of a chance, since he evidently intended taking a guide along. No doubt he had already picked one of the men.

"There is one thing, Warrie," said Jimmy. "If you have any extra cartridges for this pistol, I wish you would let me have them."

"It isn't my pistol," Creel began, and turned to Davis, but the latter had already started for our tent. He reappeared in a moment, a box of cartridges in his hand.

"There you are," he said, and Jimmy slipped them into his pocket with a nod of thanks.

"How about your wound?" asked Creel. "It ought to be dressed."

"It's all right," said Jimmy. "I ashed it out and dabbed some iodine on it when I changed my shirt just now."

"All is ready, saar," announced Mustafa, coming forward and reporting to Jimmy as to a natural and recognized commander. "You will not forget — the river is to the west, always to the west. To the south, there is only the desert—the great desert—that star yonder . . ."

"I know," said Jimmy. "Stand back, everybody!"

And suddenly he raised his arm and cracked the whip.

"Tina!" he called. "I'm ready! I'm waiting!"

And again the whip cracked.

And suddenly I understood. I stared toward the door of the women's tent, my hair on end . . .

"Tina!"

The call was commanding, insistent, not to be denied . . .

The tent-flap was thrust aside—the girl came slowly out, like one walking in her sleep.

"I'm ready!" Jimmy said again, and held out his hand.

She came slowly forward, as though impelled by a force she was powerless to resist, and placed her hand in his; and he led her forward to the camels.

Not till then did Creel understand.

"No, no!" he shouted. "That won't do, Jimmy! I won't have that!"

Jimmy never so much as glanced at him; he only thrust the whip under one arm, and drew the revolver from his pocket and held it ready.

"Mount, Tina!" he said; and the girl stepped up into the seat on the camel's back.

In an instant he had leaped into the other seat—the camels rose growling to their feet—and then I saw that they were tethered together by stout leading-ropes. Mustafa had certainly thought of everything . . .

For a moment, Jimmy looked down into our upturned, staring faces, and his eyes were like coals of fire.

"Good-bye, friends," he said. "Good-bye, Ma Creel!"

"Oh, Jimmy!" she cried, and ran forward toward him. "*Must* you go?"

"Yes—there's no other way!"

He sat an instant longer looking at us, then he struck his camel sharply, and turned him toward the desert. The others followed . . .

We strung along behind, overwhelmed, inarticulate . . .

In a moment we were at the edge of the oasis. Jimmy looked back at us and waved his hand.

"Good-bye, everybody!" he called again.

The girl stared straight before her, out across the sand, erect and motionless, as though struck to stone.

Spell-bound, we stood watching them as they faded away through the moonlight.

"My God!" said Creel suddenly. "He's not going west—look, he's going south! Toward the desert!"

He started to run forward; stopped; came slowly back.

"He's mad!" said Mollie, bitterly. "So is she. I have known it from the first!"

But Creel, his eyes on those dim shapes, fading out against the horizon, shook his head impatiently.

"They're not mad!" he said hoarsely. "They're sane—supremely sane! Saner than any of us! Ahead of them is romance, adventure — and they're riding forth to meet it!"

"There's death ahead of them!" said Ma Creel, softly, and I could see the glimmer of the tears which were streaming down her cheeks.

"There's life ahead of them!" said Creel. "If we weren't fools and cowards, we'd ride after them . . ."

But alas and alas for romance and high adventure! it was toward Luxor and civilization and the lights of Broadway we turned our faces next day.

Alas for romance, did I say? For Creel, perhaps; for Digby; not for me.

For Mollie rode close beside me.

EPILOGUE.

IT was last night I read them the story, clustered around the table in Creel's library. They were all there—Creel and his wife and Mollie and Davis and old Digby—and when I had finished, they sat silently for a moment, weighted down with poignant memory. Then Creel leaned forward across the table and held out his hand.

"It's fine!" he said. "Nobody could have done it better!"

I tried to protest that it was no great

Newest Fancies In Fashions

(*Continued from page* 37.)

7958—Ladies' Jacket. Six sizes, 34 to 44 bust. Size 36 requires 2⅞ yards 54-inch gabardine—3 yards 36-inch Pussy Willow taffeta for lining. Length at centre-back 45 inches, perforated for 42-inch length. No 7797—Ladies' Two-piece Gathered Skirt. Seven sizes, 22 to 34 waist. Size 26 requires 2½ yards 54-inch gabardine. Width at lower edge 1¾ yard. Shawl and notched collars, both of which are included in this jacket pattern, are the newest neck finishes for the season's tailored suits.

7818—Ladies' Dress. Nine sizes, 34 to 50 bust. Size 36 requires 3½ yards 36-inch satin—2⅜ yards 44-inch serge—½ yard white satin for vest—1¾ yard fur banding—⅞ yard 36-inch lining for underbody. Width at lower edge about 1½ yard. There is quite a fad for these conservation frocks that by using part satin and silk minimize considerably the quantity of wool material that is necessary.

(*Continued from page* 38.)

7344—Ladies' Sleeveless Overblouses. Five sizes, 34 to 42 bust. Size 36 requires for the overblouse illustrated 3¾ yards 36-inch black velvet. Embroidery or braiding No. 11818, blue or yellow transfer. Two overblouses are included in this pattern.

7778—Ladies' and Misses' Sleeveless Overblouse. Three sizes, small, medium, and large, corresponding with 16 years, 36 and 40 bust. Medium size requires 2⅜ yards 36-inch sports satin.

7854—Ladies' Sleeveless Overblouse. Three sizes, small, medium and large, corresponding with 36, 40 and 44 bust. Medium size requires 2¼ yards 54-inch wool Jersey. Braiding No. 11347, blue or yellow transfer.

7792—Ladies' and Misses' Sleeveless Overblouse. Three sizes, small, medium, and large, corresponding with 15 years, 36, and 42 bust. Medium size requires 3 yards 36-inch velvet. Embroidery No. 12372, blue or yellow transfer.

(*Continued from page* 39.)

7984—Ladies' Dress. Nine sizes, 34 to 50 bust. Size 36 requires 3 yards 36-inch satin—3¼ yards 40-inch Georgette crepe—¼ yard white Georgette crepe—2 yards fringe—⅞ yard 36-inch lining for underbody. Width at lower edge about 1½ yard. Beading No. 12461, blue or yellow transfer. Georgette crepe and satin combine attractively in this frock which is designed to give length of line to stout figures.

7927—Ladies' Dress. Nine sizes, 34 to 50 bust. Size 36 requires 4¾ yards 44-inch serge—⅜ yard 36-inch satin for overcollar and cuffs—⅜ yard white Georgette crepe for vestee—2¼ yards 36-inch lining for underbody and top of skirt. Width at lower edge about 1½ yard. Braiding No. 12321, blue or yellow transfer. A tunic with irregular lower edge gives style to this simple frock of blue serge which is suitable for afternoon street wear for stout women.

7897—Ladies' One-piece Dress. Nine sizes, 34 to 50 bust. Size 36 requires 5¼ yards 44-inch check serge—⅝ yard 36-inch black satin for collar. Width at lower edge about 2½ yards. Distinctive style is given to this good-looking frock of check serge by the yoke which extends into a full-length panel at the centre-front and back.

(*Continued from page* 40.)

7973—Misses' Dress. Three sizes, 16 to 20 years. Size 16 requires 5⅞ yards 36-inch plain taffeta—1 yard plaid taffeta for collar and trimming—⅞ yard 36-inch lining for underbody. Width at lower edge about 1½ yard. Among the smart features of the season are the surplice blouses that are drawn around to form a girdle. In this model the surplice closing is outlined by a long shawl collar of plaid taffeta, and the plaid is repeated in the facing of the sleeves, and of the tunic which is a one-piece gathered model pointed front and back. It is mounted on a two-piece skirt closing in front.

7906—Misses' Dress. Three sizes, 16 to 20 years. Size 16 requires 3 yards 36-inch taffeta—2¾ yards 40-inch Georgette crepe—9¾ yards silver ribbon. Width at lower edge about 1½ yard. Over a kimono blouse of Georgette crepe is mounted a panel of taffeta front and back cut with the straight neck-line that is so fashionable. The sleeves may be in elbow length as illustrated or they may be cut off at drop-shoulder line and deep Mandarin sleeves attached. Over the two-piece gathered skirt of taffeta which closes at left side is arranged a three-piece gathered tunic open in front and trimmed with bands of silver ribbon.

7778—Ladies' and Misses' Overblouse. Three sizes, small, medium, and large, corresponding with 18 years, 36 and 40 bust. Small size requires 2¼ yards 36-inch velvet—⅝ yard white satin for collar. Embroidery No. 12372, blue or yellow,

No. 7776 — Misses' Dress. Three sizes, 16 to 20 years. Size 18 requires 4⅜ yards 40-inch Georgette for dress without collar. Width at lower edge 2 yards. For early fall afternoon wear a frock of Georgette crepe in delicate coloring with an overblouse of black velvet is distinctly chic. The waist of this dress closes in front, but the closing is concealed by a panel which fastens on the left shoulder. High V. and round neck outlines are provided, and Mandarin sleeves may replace the gathered sleeves illustrated.

8002—Misses' Dress. Four sizes, 14 to 20 years. Size 16 requires 3⅜ yards 36-inch serge—2⅛ yards 36-inch satin—1¾ yards soutache braid—⅞ yard 36-inch satin lining for underbody. Width at lower edge of accordion-pleated skirt about 2 yards. There is a perfect craze for these plaited skirts, and many of the newest frocks show them developed in satin with long Mandarin or Russian blouse of serge. This closes at the back, and the long sleeves may be made without the flaring cuffs. The deep circular peplum forms points front and back, and it is worn over a one piece skirt that may be accordion-pleated or gathered.

7977—Misses' Dress. Four sizes, 14 to 20 years. Size 16 requires 6 yards 44-inch organdy—10 yards satin ribbon for ruching and trimming—¼ yard satin for girdle—⅞ yard 36-inch lining for underbody. Width at lower edge about 1½ yard. There is a quaint old-time charm to this frock of maize organdy with its Quaker fichu that is finished with a ruching of ribbon. The waist closes in surplice style and the odd sleeves are in two sections. Over the two-piece gathered skirt which closes at centre-front, are two straight tunics gathered at the top, and finished with ribbon ruching to match the fichu.

(*Continued from page* 41.)

8005—Misses' Dress. Four sizes, 14 to 20 years. Size 16 requires 5¾ yards 36-inch satin. Width at lower edge of accordion-pleated skirt about 2 yards. Braiding on blouse No. 12419, blue or yellow transfer pattern. Presented here is the new Mandarin blouse with the fashionable Renaissance neck cut straight across from shoulder to shoulder, though it may have high or round neck if preferred. The blouse closes at the back, and plain sleeves may replace the flowing Mandarin sleeves. A one-piece accordion-pleated or gathered skirt is attached to the underblouse.

Fortunately, the United States got over the idea that it could lick the world single-handed before the world decided to let them try.

Congressmen who voted against the war because they thought their constituents didn't want war are now discovering that it was themselves the constituents didn't want.

SETTLE DOWN FOR THE WINTER

Make Dull Days Bright—
Gladden Your Home
With Music—Get a

Pathephone

With the Pathephone playing, what will it matter how the gale rages or how heavy the fall of snow? Merry laugh and exuberant spirit will be in everyday evidence. It is a possession that will bring pleasure to man, woman and child. Your Home will be your Opera and Theatre. It will prove a greater addition than any other single article it is possible to buy;—it will make you forget for a while your cares and anxieties, and you will go singing into each day's work and into each evening's rest!

Within the Pathephone is truly all the music of all the world, the music of any opera you have ever listened to, of any concert selection, of any waltz, of any song that gives so much comfort and courage to our boys "over there"—

ALL the interesting music for generations past and ALL the bright, happy music of to-day—it's ALL there, and the RECORDS OF ANY MAKE WILL BRING IT OUT! The Pathephone is equipped to play ALL makes of disk records—gloriously and well—BETTER than their OWN machines!

Visit the Pathé Dealer. HEAR the Pathephone, get a glimpse of the glories within! Learn about its many exclusive features such as the Sapphire Reproducing Ball. The Pathé Dealer will show you how easy it is to own a Pathephone, how a small cash payment—probably less than you had expected to pay—will bring to your Home the GREATEST entertainer ever invented!

Newest Fancies In Fashions

(*Continued from page* 67.)

7966—Misses' Dress. Three sizes, 16 to 20 years. Size 16 requires 3 yards 36-inch navy satin—3½ yards 40-inch navy Georgette crepe—½ yard white satin—⅞ yard 36-inch lining for underbody. Width at lower edge about 1½ yard. Embroidery No. 12461, blue or yellow transfer pattern. Over the front closing blouse of Georgette crepe is arranged a jumper section of satin that is draped around to form a girdle. This closes at left side-front. Over the two-piece gathered skirt which closes at centre-front, is a gathered tunic falling in a deep point at the side-front and side-back.

7982—Misses' Dress. Three sizes, 16 to 20 years. Size 16 requires 5¾ yards 36-inch taffeta—⅞ yard 44-inch organdy for shawl collar and chemisette—⅞ yard 36-inch lining for underbody. Width at lower edge about 1½ yard. Braiding on collar No. 11290, blue or yellow transfer pattern. Among the new fashion features of fall frocks are the long-waisted surplice blouse worn without a girdle, the shawl collar, and the irregular edged tunic. This charming frock of taffeta combines all these features and is ideal for afternoon wear for the young girl. The blouse buttons at the left side-front and crosses in surplice style over a front-closing underbody with square or V neck. The waist is attached to the gathered two-piece tunic which extends in a deep point front and back. The one-piece skirt may be accordion-pleated or gathered.

7980—Misses' Dress. Three sizes, 16 to 20 years. Size 16 requires 9¼ yards 36-inch black satin—¼ yard white satin for un ercollar. The overcollar is an embroidered one that may be purchased ready-made. Width at lower edge about 1¾ yard, a pleated panel is applied at the centre-front and back of this frock of satin, the foundation of which consists of a front-closing blouse with square or round neck joined to a gathered skirt in two sections tucked above a deep hem.

7860—Misses' Dress. Three sizes, 16 to 20 years. Size 16 requires 5½ yards 32-inch figured challis—⅜ yard white organdy for collar—½ yard 36-inch satin for sash—⅜ yard fringe. A charming feature of this simple frock is the yoke which descends into a panel at the centre-front and back of the blouse. This blouse shows the fashionable low waist-line, and the neck, while high at the back, descends in a V in front. Full-length or three-quarter sleeves may be selected and the waist closes on the left shoulder, and at left side-front. It is joined to a three-piece side-pleated skirt with straight lower edge and about 2⅜ yards wide.

(*Continued from page* 42.)

7994—Infants' Layette. This consists of a dress, kimono, pinning blanket, shirt, and bootees. Cut in one size only. The dress requires 1⅝ yard 36-inch nainsook, the kimono 1⅝ yard 40-inch cashmere, the pinning blanket 1⅛ yard 36-inch flannel, the shirt ¾ yard 27-inch baby flannel and ¼ yard 27-inch pique for bootees. Scallop on kimono No 11747, blue transfer pattern. Featherstitching on pinning blanket No. 12363, blue transfer.

Religion In China

(*Continued from page* 14.)

women. In the Book of Rites of the Chau dynasty these men and women are indiscriminately called Wu. Such men still exist, and it is not contended that they are confined to China. Long before the appearance of Confucius the ancient forms of religion were practised by the people. Confucius, like the Buddha and other religious founders, came as a Reformer, and to restore forgotten or neglected forms of truth.

In the ancient religions of China the names and attributes of the Divine were as varied as in Egypt and other lands. The state or Shinto religion follows the ancient forms. The terms Shang-ti, Supreme Ruler, and Tien, Heaven, are used interchangeably. It must be evident to the student that Tien means much more than Heaven in the conventional sense. It is really Space, with which is associated Time or Duration, and Motion or Life, better conveyed by the old word "quickening." These inseparable three, unthinkable apart from each other, are One. That One is Shang-ti.

Rev. John Ross, D.D., missionary of the United Free Church of Scotland in Manchuria, says that in this ancient period the religiosity of the Chinese was most pronounced "They appear to have lived und the unceasing consciousness of the presence and interference of an all-knowing Power, and under the protecting care of an intelligent, just, all-knowing, benevolent and almighty Providence." There was no image of any shape, nor idol worship of any kind. A temple, styled Miao, was dedicated to the worship of ancestors, and only in this temple could ancestors be worshipped. But there was no temple to God or to Heaven. Anywhere and any time, however, an altar could be raised on which to offer sacrifice to God. Hence, we infer, says Dr. Ross, that God was believed to be everywhere present.

Taoism originated in the dynasty of Tchou as recorded in the 12th century, B.C. Lao-Tze, who is identified with Taoism, was born much later in 604, B.C. It is said that when he was very old Confucius paid him a visit. This was in 517 B.C., when Confucius was 33. Taoism has never been popular in China and is not now, says Walter Old, in repute among the learned men of the land. The reason is that such a mystical philosophy does not appeal to a practical and ambitious people.

Tao represents the ancient esorteric conception of the Sanscrit Bodh, wisdom or enlightenment, like the Parabrahm of the Secret Doctrine, and the Ain Soph of the Hebrew Kabalists. It is in a deep and spiritual sense the Way of Christianity. The Tao-teh-King, or "Book of the Way of Virtue," is becoming more and more widely known in Western lands. It embodies much of the occult ethics, and is purely spiritual in its aims.

"Could the most ancient MSS. of the Lolo language, that of the aborigines of China, be got at and translated correctly, many a priceless piece of evidence would be found," is the statement of one of the Brothers to whose resorts Lao-Tze betook himself when, long past ninety, having finished his work, he bade farewell to his friends and, setting out on foot, disappeared among the mountains to the west, and was never seen again.

It was on the 30th day of the last month of the year 68 A.D., that the first Buddhist Hindu missionaries were admitted to see the Chinese Emperor. Buddhism, like Christianity, though several centuries earlier, was founded on purely spiritual teachings, but developed later into a great ceremonial institution or church. It never was the state religion in China, but grew side by side with it, and obtained the partial support of the people. Buddha, known as The Lion, the Great Hero, the Honoured One of the World, the King of the Law, and by other titles, was received as an incarnation of Kwan-Shai-Yin, who is "the light that lighteneth every man that cometh into the world," and is known in China generally as Amita. It will be remembered that Buddha was canonized by the Roman Catholic Church as St. Josaphat. He is first mentioned thus in the Romish martyrologies of 1370. Confucius was also canonized two hundred years ago. But the ancient blending of nature-worship and the worship of ancestors, called Shintoism has never been displaced. This and Buddhism and Confucianism are three approaches to the one religion underlying all. Confucianism is a practical code for every day living. The ceremonial ancestor-worship is really recognition of the "Sons of Mind," the spiritual selves of men who incarnate in human bodies, and the mystical union with whom on the part of men during incarnation is the birth from above, and the object of the Tao. The Buddhism of China embraces all these more or less, and is but a later development of the old and universal principles. "The Knowledge of that Eternal Tao is illumination."

A King In Babylon

(*Continued from page* 66.)

feat—that I had only set down what had happened—that there was no art about it—but Creel wouldn't listen. Nor would the others. And Mollie's eyes were very tender.

"The only trouble with it is," said Ma Creel, at last, "that it doesn't end—it just stops."

"There isn't any end," said Creel. "There never will be—not as far as we're concerned. We'll have to imagine it for ourselves."

And then there was another silence, broken only by the rustling of paper as I gathered my manuscript together. Each of us, I suppose, was trying to imagine what the end had been . . .

Many things have happened since that day—how long ago it seems!—when we said good-bye to the oasis. Sekenyen-Re rests gloriously in a glass case at the Metropolitan; there are rumors of a great work which Davis is preparing. We had our hour of triumph, too, when "A King in Babylon" was shown for the first time. But I needn't tell that story! Those who haven't seen the picture, have at least read about it, for the papers gave flaring headlines to the sensation it created; and then more flaring headlines to the money it was earning—"A Poem Makes a Million!" "A Gold-mine in 'Poets' Corner!'"—well, those were exaggerations, but not such great ones . . .

At least, we were on Easy Street again, with reputation re-established. The trouble was to live up to it! . . .

Davis sat there scrabbling at his beard, in the familiar way, and looking at us with that quizzical smile of his.

"Yes," he said, at last, "we shall have to imagine the end for ourselves. What is your guess, Mrs. Williams?"

"I'm almost afraid to think of it," answered Mollie, slowly, "for of course they just rode on and on till they could go no farther . . ."

"Nonsense!" broke in Creel. "They travelled on and on, till they came to a wonderful oasis, far out in the desert, whose people had never seen a white man, and they are living there to-day, worshipped as gods, just as they were in Egypt four thousand years ago . . ."

"Behold the movie imagination working!" commented Davis. "I'm afraid you'll never outgrow it, Creel."

"I don't want to outgrow it!" Creel retorted. "It's a heaven-sent gift! Come, then, since you're so wise—tell us what really happened!"

Davis smiled around at us again, and there was something in his face that brought us upright.

"Oh, Professor!" Ma Creel began. "Do you really know . . ."

"I really know very little—and I warn you it isn't at all romantic! It won't make a picture!"

"Well, let's have it, anyway," growled Creel.

"What I do know amounts to this: it wasn't toward the illimitable desert that Jimmy Allen rode away that night. It was toward another oasis not far south of ours. Mustafa confessed to me that he had told Allen about it, and how to get there. Allen had been consulting him it seems . . ."

"Yes," I broke in; "I stumbled over them, one night, with their heads together!"

"Of course Mustafa was well-paid," Creel added; "and no doubt he has taken care that the two shouldn't perish!"

Creel ran his hand perplexedly through his hair.

"I always admire your explanations, Professor," he said; "they are adroit and they hang together; but they never satisfy me. For there is an element—and a very important one—you don't take into account—a supernatural element . . ."

"Poof!" scoffed Davis.

"And furthermore, they haven't always worked out. You will remember you couldn't find any opening at the back of the ruins—not so much as a crack . . ."

"I had only an hour to look for it," Davis broke in, "you were in such an infernal hurry to leave. Besides, the sand may have drifted over it."

"And finally," Creel concluded, "I have the feeling that all these theories of yours have been just a sort of desperate barricade between yourself and the unknown . . ."

"Why, I admit that!" cried Davis. "I've tried to find a rational explanation for events which were very puzzling, and I haven't always succeeded . . ."

"We'll give you one more chance," said Creel. "Assuming that Jimmy did conspire with Mustafa and reach the oasis, what was his game? Do you mean to say that all those heroics were a fake?"

"No," Davis answered slowly, "I don't think they were a fake—at least, not altogether. Jimmy was desperately in love with that girl—he felt that he couldn't live without her. and he realized that the only way he could get her was by some monstrous coup. But events got a grip on him and whirled him along out of his depth—and undoubtedly there was a psychic element which grew stronger and stronger—he was just a sort of inspired lunatic at the end—it's always dangerous to meddle with the unknown . . ."

His voice trailed away, and again there was a little silence. It was almost like those shadowed days in the desert . . .

"Do you know the position of that oasis?" Creel demanded, at last.

"Mustafa does."

"By George, I've a notion to organize an expedition and test your theory! Consider my position, Professor! I discover the greatest star the screen has ever known! I produce a tremendous picture! And then I'm done—my star has disappeared! Why, if necessary, I'll go out to that oasis and build a studio there . . ."

"Oh, you won't have to do that!" said Davis. "Some night there'll come a knock at the door . . ."

Will there? I wonder!

THE END.

Douglas Fairbanks Leads In Canada's Victory Loan Picture

(*Continued from page* 15.)

Almost instantly the way by which they had entered was cut off by falling columns and beams hurled there by the explosion.

Then John Bull heard the summons and answered nobly. One, Two, Three, Four lines of hose he threw into the conflict, but still the inferno raged. Then he sent aid in overwhelming numbers, and the Fifth Victory Loan, the final outpouring, soon began to make headway against the blazing furnace.

Democracy, though cut off by the flames at the window and the wreckage at the doors, fought manfully to open a way to safety for National Liberty and himself, and John Bull pouring forth his resources through the Fifth Victory Loan, soon subdued the flames around the window sufficiently to give hope that rescue might be made. But Propaganda, sneaking around from the front, saw this and hurled a bomb of "Lies" into the alcove. But Democracy caught it and hurled it back at Propaganda's feet, where it exploded, ending Propaganda. A span of life was formed by the Man-Power of the Allies from the roof of the Hall of Justice to the alcove where Democracy and National Liberty were imprisoned. and he with National Liberty in his arms, strode across the living bridge and he turned her over to the Free Nations of the world.

Prussianism from his point of safety, saw this and ran to find some place to hide, which fittingly enough was the Hall of Justice. As Democracy handed over National Liberty to the Free Nations, he saw Prussianism through the skylight. Jumping through, he caught Prussianism, tore his cloak of "Kultur" off, and without a moment's hesitation, hurled himself at the beast. Unaccustomed to fair fighting, the brute was soon at Democracy's mercy. After smashing him into insensibility, Democracy dragged him out of the Hall of Justice, grabbed a fire hose, and threw him into the gutter. To the delight of the entire world, he then washed Prussianism where he belonged—down the sewer.

Cannerettes vs. Farmerettes

How Many Girls Will Volunteer?

Will Canada's girls can fruit and vegetables? Well, rather. Ten National Service college girls sat around a table in a cannery, blithely cleaning blueberries for canning. No green berries, no leaves must go in, but careful work did not prevent them from singing lustily as they worked with purple stained fingers.

It was such a jolly sight that the visitor donned an allover apron, borrowed a pan of clean water, cleaned blueberries too and questioned the girls.

"Do you really like cannery work?" "Oh, yes, We came out here to help send more food to the boys overseas, and to conserve it for home consumption, but now it is a pleasure as well as a duty. Most of us would rather work indoors than outdoors now. At first we objected to cannery work and preferred being farmerettes, but now we welcome it, especially when it is hot outside. Besides, we have just as jolly times as they do in the fruit camps. The Y.W.C.A. supervises them and there are just as nice girls."

The visitor then sought the employer. "Does this type of worker make good?" was asked. "Fine, better than any others we have ever had—they don't quarrel, they don't steal the goods, they behave themselves after hours, they work well, they are not nearly the worry and trouble that other types of workers are."

So much had been said about low pay in canneries, close, bad-smelling canneries and back breaking work that the sceptic visited another cannery camp where National Service girls to the number of twenty-four were working They sat around one big table in farmerette costume covered by a big apron, stemming cherries. A big machine pitted them and several girls were busy filling cans with the cherries. There were no songs at this big, airy, busy place, but the girls all looked cheerful. The camp secretary, who was good enough to take the vistor about, said: "The girls certainly like the cannery work better than the outdoor work. I do not know why it is, but I do know that, without exception, the girls who asked for outdoor work when they came soon grumble when there is work to be done for more than a few hours outside.

"Personally I think working in a cannery is as good as a course in cookery, and a very practical one, too. I have already learned a great deal about canning fruit and vegetables. Besides, I am gaining in strength. The past two seasons I was on a farm, but went home played out, but this year I am able to stand the work, and have gained five pounds."

The foreman of this factory said gleefully: "They are just fine girls. I don't see how they ever got such good girls to come here."

The conditions in the canning camps are continually improving. The minimum rate of pay where National Service girls work is $1.50 a day with piece rates. On berries the girls were making $2.00, $2.50 and $3.00 or more a day. When beans came on it was very hard to earn even the minimum, but when the girls begin to pick tomatoes they will again earn good money. More and more canneries are asking for National Service girls, and all are agreeing to the terms set.

One canner who had had National Service girls for picking cherries and hoeing said, "I want seventy-five girls like these for peeling tomatoes this fall. I'm sure that this kind of help will get more cans of tomatoes out of a bushel than any other kind, because they are so careful about anything they undertake."

(*Continued from page* 63.)

The Girls' "Carry-On" Column

(*Continued from page* 6 .)

two months probation, which is necessary before they are finally accepted for service. The V.A.D. course costs $2.50 for First Aid, and the same amount for Home Nursing. V.A.D.'s. are sent overseas at the age of 23. The age for Massage is 22.

Thank you so much for your very kind letter, also the addresses. The letters to the boys are on the way. I have much spare time on my hands, and I would like to knit some sweaters for the soldiers if I could procure the wool. I would be very glad if you could put me in touch with some society which looks after that department of the work. Wellington.

The Red Cross does not give out wool for sweaters. They are trying to discourage the knitting of sweaters for the soldiers; it takes too much wool, as the wool is very, very scarce at the present time. Instead, they are making sweaters of wool cloth and I am sending you the address of the society from whom you can get the patterns for making these sweaters. In fact, so short is wool that the socks for the soldiers overseas are now made nine inches instead of eleven inches as formerly.

I am just convalescing after a rather serious operation; my head bothers me yet, so I cannot write just as I want to. I am a bank clerk, but as there seems to be no scarcity of them, I feel there are places where I am needed more. I want to know about the Y.M.C.A. canteens and how I could go overseas in that capacity. Also, about the Massage course, and address where the course is given. Prince Edward Island.

Have you taken into consideration the fact that a girl must be abnormally physically fit to do canteen work in France? And in your physical condition I am very much afraid it would be too much for you. On account of so many Canadian women being overseas, there has not been the demand for canteen workers that would have otherwise ensued. However, there have been a few sent over. These were chosen from those who have been connected with active Y.W.C.A. work as secretaries, etc. There is a course starting on Sept. 28th in Montreal to train young women for Y.W.C.A. work. It extends till December 21st. After this course you can take a position, and if you can prove your worth, and canteeners are needed, I am sure you might stand a chance. But do not mistake me, this is not a direct training for girls to do canteen work in France. I am sending you the information about the Massage course, and also the address to which you should send your application.

Could you please tell me if I have a chance of being accepted for the Physio-Therapy, or Functional Re-education course you so interestingly described in the "Canadian Home Journal"? I am a Scotch Canadian and have had a great deal of experience in mental cases, being a trained nurse. Hartford, Conn.

I am sorry that I could not say if you would be accepted or not, as that is a question that is settled by the military authorities. I should judge, however, from your letter and your wide practical experience that you would stand a good chance. I am sending you the address of the O.C. to whom to address your correspondence, and I sincerely wish you success.

We are a club of fifteen girls who belonged to the same holiday camp this summer. We were there two months and we decided soon after we arrived that we would do no fancy work or any kind of sewing for ourselves, but we would knit for the soldiers. The consequence is that we have an enormous amount of scarfs, socks, trench caps, mitts, etc. We want to send them to the men in the front line trenches, and as we are not not interested in any particular battalion we do not know how we should send them. We thought perhaps you could help us out. The Busy Fifteen.

I am sending you the address of the society which looks after the soldiers' comforts. All comforts for the men in the front line trenches are sent to them and they repack them and send them to their headquarters in London, Eng. If any requests for soldiers comforts come to the commanding officers from the men in the front line trenches they are immediately passed on to London and the supplies are sent to the men from there. I think your idea of working for the soldiers in your holiday is a splendid one, and I know if you dispose of your work in this way you will be entirely satisfied. I hope many more girls will follow your example.

Plain Living Gives a Nation Strength—Save.

Ask Us Any Question

State the questions clearly which you wish answered, and enclose a self-addressed stamped envelope. Address the letters to heads of the Departments named. These questions are answered absolutely free of charge to our subscribers.

Dr. Laura S. M. Hamilton.

About Health and Children.

Your problems of the feeding, clothing, weaning and general care of the baby will be carefully answered by Dr. Laura S. M. Hamilton.

About School Matters.

Of course you are interested in your child's education, but you may have several questions to ask about school matters. Write to Thomas Bengough.

On The Kootenay Trail

(*Continued from page 9.*)

things with her. I holds the paper awful quict, till my arms is achin' an' cramped-like, an' my eyes a-burnin' from trying to sec enough of Nellie to last me fcr another ycar. Then I notices she's got somethin' on her mind. I keeps quiet—just sittin' still and waitin'—an' so help mc, ma'am—but it's God's truth—word by word she points out a message from that paper, crawlin' here an' there. 'It's time for you to come,' she points out. I whispers 'How?' But it ain't a regular whispcr, scarcely, 'cause my tongue sticks to the roof of my mouth. She lifts herself in the air, an' I reaches up for her—I'm scared she'll go without tellin' me the way. She comes down againn, slowlike, an' settles on my rifle a-standin' in the corner. Then, there afore my eyes she begins ter fadc. She lifts in the air like a speck o' smoke—an's gone.

"So—I'm a-goin' to Nellie—that way—by the rifle route. And I come to ask you, would you be so kind as to send the first trapper that happens along—sorter to see to the remains?"

He ceased speaking, and the muscles of his face and neck twitched horribly. The woman sat against the door, spots of red growing in her cheeks, her eyes narrowing to thin angry slits. Behind the door one of her babes whimpered in its sleep. She spoke suddenly.

"Remains?" she snapped. "You think I'd trouble about your remains? A coward like you, who'd come to a woman alone in the night, with a story like that?"

Then all her loneliness, all her heart's longing for her husband, all the growing horror of the monotonous days of winter silence became merged into a fierce, primitive hatred of the man before her, a hatred that was part unutterable contempt and part anger at the eerie, gripping fascination of his tale. She placed the gun again behind the door, and breathed deeply of the warm air of the cabin.

"You—you dog!" She cried it out malevolently. "Rotting in your bunk alone would be too good a death for you. You come to me with a story like that—a woman, alone with her three babies, snowed in, and fighting the isolation of mid-winter! Do you think I can forget it? That my flesh won't creep to the memory of your vile lie again and again, till God's springtime comes and brings me my man back? You're a miserable, weak-minded craven, scaring women with your ghost tales. The country's got you, but you wouldn't be hard for any country to get. There's no sand in your make-up, only a mile-wide streak of yellow. You've sat quiet and brooded and nursed your grievance, never fighting it, and now it's bigger, stronger than you. And so you want to pass it on to somebody else to carry. It's ruined your poor little mind, and now you'd poison mine, if you could. Lor' if there only was a man here to lick you—as you sure deserve. Why didn't you take your troubles to Old Warder? I'll tell you why. You were scared to. Afraid he'd lick you off his place with his belt. And that he would! Ten years you've loafed in the woods. Ten years, a seventh of a lifetime, wasted 'cause you were too lazy to get up and dust and chase the bugaboos away. If you'd logged your place off, there wouldn't be nary a shadow, either in your mind or the woods, for spooks to sneak around in. Look at you—caved in—dumped down—done for! Nothing but bacon from the store—ugh! If you'd killed more jack-rabbits and listened less to flies buzzing in your brain, you wouldn't be out scaring lonely women to-night. Go back to your cabin, crook your toe around the trigger of your rifle—and put out your feeble little light! The world's the better for the riddance of such as you. But don't flatter yourself that I'll bother about you, or send a real man over there. Stand up—if you can. Stand up! Now get out of here, and get fast, while the going's good! Hear me?"

She rose and opened the door. The keen cdge of the wind cut knife-like through the warmth of the cabin, through the velvet black of the aperture gleamed the twinkling stars, jewels caught in the prongs of the silver forest.

"Now go!" She flung her arms out in a comprchensive gesture toward the night.

The man shambled forth, and she slammed and bolted the door behind him. Then, with the passing of her anger came reaction, all her strength and courage ebbed as swiftly as her passion vanished. Its stimulant gone, she stood shaking as with fever, her hand still clutching at the latch, her ear against the door, harkening fearfully to what she deemed his returning footsteps, but which in reality was but the pounding of her heart. A grey pallor washed out the flaming spots on her cheeks, and in its pallid trail her eyes burned somberly, like embers dashed with water.

"Jerry," she moaned. "Jerry, boy, I'm scared—terrible! I want you—the country's got me—I'm scared——"

She sank slowly to the floor of the cabin as one bends frost-numbed limbs and winces with the pain. Behind her a door opened softly. The woman heard it not. Little, warm feet pattered across the distance, and moist, sweet lips mouthed her face. With a joyous cry that was half-sob she turned, and caught the little body close, straining its yielding suppleness to her breast, the while her lips caressed the rosy, laughing countenance. In her eyes was a great light, of understanding, and in its dazzling beacon was nothing of fear, but only age-old mother wisdom.

Long before the gilt specks of the mountains were picked out against the morning sky, the woman stood at her cabin window, staring outward. In the snow a troubled trail led up the canyon and away into the bleak fastnesses. As far as eye could reach, piercing through the grey vapor of dawn, the trail led on and on. Fourteen miles, she remembered, he had said. She stepped to the door and opened. There was no sign of trapper or hunter in the silver forest; there was no track, save only the grimly troubled one that staggered mountainwards. The lifting darkness, filling still the deep footsteps, gave them a semblance of wells of blood. Presently, she went to the room where the children slept, and quietly assembled her snowshoes and furs. Then the baby woke, opening his little shining eyes and stretching rosy fists at her, and she knew she could not grant the last request of Cole McCrew; that she could not leave these little ones alone. She came slowly to the window again, and stood there.

Gradually the gold in the east flowed down and gilded the snow. The staggering tracks to the mountain looked less like blackened blood and more like the footsteps of a man. A weasel came out and trailed across the light. The smoke from her fire caught the wind and wafted forward like a blowing veil. She pressed her face hard against the pane and prayed that the sunshine would last.

Then, away in the distance something moved. Through the frost upon her window it wavered as a figure upon a swaying curtain. She caught her breath sharply, and her nails sank unnoticed into the palms of her clenched hands. Whatever it was, man or beast, it came steadily on. She threw back the window and the bitter-sweet intoxicant of the morning drifted in. She drank deeply of its tang. Something big and comforting and dearly familiar, something that hulked reassuringly against the sky like Jerry, caught her heart and set it swelling in her throat.

"He said he would come back by midwinter. He said it wouldn't take him long to get on his feet. And he's coming—as he said!" So sang her heart. But her lips were white and trembling; the cry she sent out over the canyon rang in a thin, weak treble, that quavered and died away in an inarticulate murmur. Carrying like the triumphant blast of a trumpet came the answer: "Hallo-o there!"

. . . . . .

On his melancholy errand, fourteen miles up the canyon, toiled Jerry Sullivan, and at length shoved gently, gingerly against the door of a secluded shanty. Out on the winter air floated the fragrance of frying meat and the cheering aroma of fresh coffee. Silhouetted against the snow that banked the solitary window sat the occupant of the shack, chin up, cup poised to drink as he swallowed the mouthful he was then munching. His face was twitching, humorously, the corners of his mouth dragged upward in a smile, that broadened to a grin. Jerry Sullivan—prepared for death, recoiled from life. Hearing, McCrew turned, and with cup suspended midway to lips, eyed the intruder.

"I—I just came by," Jerry began lamely.

"Come on in," responded the host, and he shoved another straight-backed chair into place at the table.

"Can't stop," mumbled the visitor; "I'll be goin'—"

Cole McCrew arose and came to the open door. He still gripped the coffee-cup in hand.

"Did the woman down the canyon send you up?" he asked.

"Yep," said Jerry.

"Well, say—you see what I'm eatin'? Fried cotton-tail! You go back an' tell her that—will you? And see them trees standin' outside? Come spring, I begin' loggin' them off an' floating them down the river. Tell her *that*, too. And, say—tell her this sure—for me. There ain't nary a man livin' can keep his right mind without some woman to tell him a few things when he needs ter know them. An' there ain't a man neither but will try to do better when the right kind of woman tells him them same sad truths—an' what she thinks accordin'. An' ask her fer me, if it won't be too much trouble to her, I'd 'preciate bein' allowed to go down there—say 'bout once a year—an' have her tell me what I am an' what I ain't—which same she did last night. Good-bye! Good luck—old man!"

THE END.

Cannerettes vs. Farmerettes

(*Continued from preceding page.*)

"You ought to pay them well then," challenged the visitor. "I intend to if I can get them," said the canner. "I'll not raise the piece rates, but I'll certainly give them a bonus of one cent a pail if they do better work than my ordinary help, and I expect they will. Girls like those," he said, (pointing to his cherry picking farmerettes) "can easily earn $2.50 and $3.00 a day without the bonus. Some will earn considerably more."

That canner's camp has now opened with twelve girls. The girls live in a house and in military tents near Lake Ontario. At night farmerette suits are exchanged for the bathing suits, for the dip before bed time. The girls are very busy; they sometimes get tired, but a good spirit pervades the camp, and the girls report all sorts of jolly times.

More girls are still needed for food conservation, as several more camps are to be started. All camps will be supervised by the Y.M.C.A., who will staff and provision the camps. Some of the camps will be by the lake shore or river side. Every care is taken that congenial girls are put together. The board is $4.50 a week, and girls are asked to bring their own bedding and towels.

The wages earned are according to the terms above, and it depends on a girl's ability how much above the minimum she makes. Unsatisfactory workers are sent home after a trial of reasonable length, but no girl of average ability need fear not being able to earn the minimum.

To-day a letter was received from a young woman by the director of Women's Farm Work, saying, "You promised to place me in September for peach or apple picking, but if there is still room in any of the canning factories I'd rather peel tomatoes. I do hope you can place me at canning work."

The director of Women's Farm Work, 43 King street west, Toronto, will welcome further enquiries *re* cannery work.

WON'T YOU ASSIST US?

To the Lady of the House:

Please order your supplies for the day early in the morning, and all in one order. One daily trip to your door should be enough. Two trips wear me out twice as fast.

Telephoning in an extra order doubles the work for both the driver and the horse. This adds to the cost of all you buy.

Hurry-up orders make whippings for me.

Please think of those who serve you, both people and horses.

Your obedient servant, The Delivery Horse.—"Our Dumb Animals."

LIVING CONDITIONS IN OCCUPIED BELGIUM.

Since the high cost of living is engaging the attention of nearly every person in the United States, the following passages from a private letter, a copy of which has been received by the Belgian High Commission, in the occupied portion of Belgium, have a special interest.

"We are all well. We have told you about the heightened cost of living, but what will you say to this: Butter, 22 francs ($4.40) a kilo (2.2 pounds); meat, 14 francs ($2.80); bacon, 21 francs $(4.20); eggs, 1 franc 10 centimes (22 cents) apiece; coal, 150 francs ($30) for 100 kilos.

"The students of the college and university come to class in wooden shoes; women and girls as well. Men's sabots cost 7 francs 50 centimes ($1.50) and women's 4 francs 50 centimes ($1.90); before the war they sold for 1 franc 10 centimes and 90 centimes, respectively (22 cents and 18 cents). A pair of socks costs 20 francs ($4); a small spool of thread, 5 francs 50 centimes ($1.10). A bag of potatoes, 125 francs ($25).

"Just now we sleep on straw, as all the mattresses have been requisitioned.

"The new chapel of the parish of St. Rombaut is almost finished. Mgr. Mercier is coming to dedicate it. It is all rebuilt and is more beautiful and bigger than it was before.

"The trams are not running any more. At night we get along by the light of a candle, costing 1 franc (20 cents). Before the war it cost 10 centimes (2 cents)."

ENGLISH WAR WORKERS TIRELESS.

Hamilton Bell, writing of "British women in the war," has this to say of the way English women have supported war industries: "Their numbers have not been reckoned and perhaps never will be. The call goes forth and they respond at the rate of 15,000 a week, old as well as young. As was said of them by the superintendent of one of the largest munition factories: 'They're saving the country.' They don't mind what they do. Hours? They work 10½ or, with overtime, 12 hours a day, 7 days a week. The Government insists on a Sunday or two off a month. But the women resent it. 'We're not tired,' they say. And look at them—they are *not* tired. I call for a bit of extra work—they stay and get it done, and pour out of the works singing and laughing. In one factory near here, for nearly a year the women have never had a holiday. They won't take one. 'What will our men at the front do if we go holiday-making?'"

AMERICANS HAVE NICKNAMED THEIR FRENCH COMRADES "DIDONKS."

It wasn't to be supposed that *poilu* would suit the American as a nickname for the French soldier. It doesn't have the tang or the snap the Yankee requires when he calls any one "out of his name" in a friendly manner. To the Americans the *poilu* has become a "didonk," and the term is used quite affectionately. Explaining the origin of "didonk" a woman correspondent of the Chicago *Tribune* writes:

Trust our men to have a phrase all of their own for the *poilu*. They call them "didonks" with all the affection which an applied *petit nom* can have. The derivation of the word is amusing. All French *poilus* address you in the second person singular. The *camaraderie* of war has broadened the use of this *tutoiement* until only your superior officer gets addressed as "you." And every *poilu's* first phrase, whether he is asking you for a drink of red wine, or is about to grill you within an inch of your life for having broken some rule, begins, "*Dis donc!*"—the equivalent of our national "say."

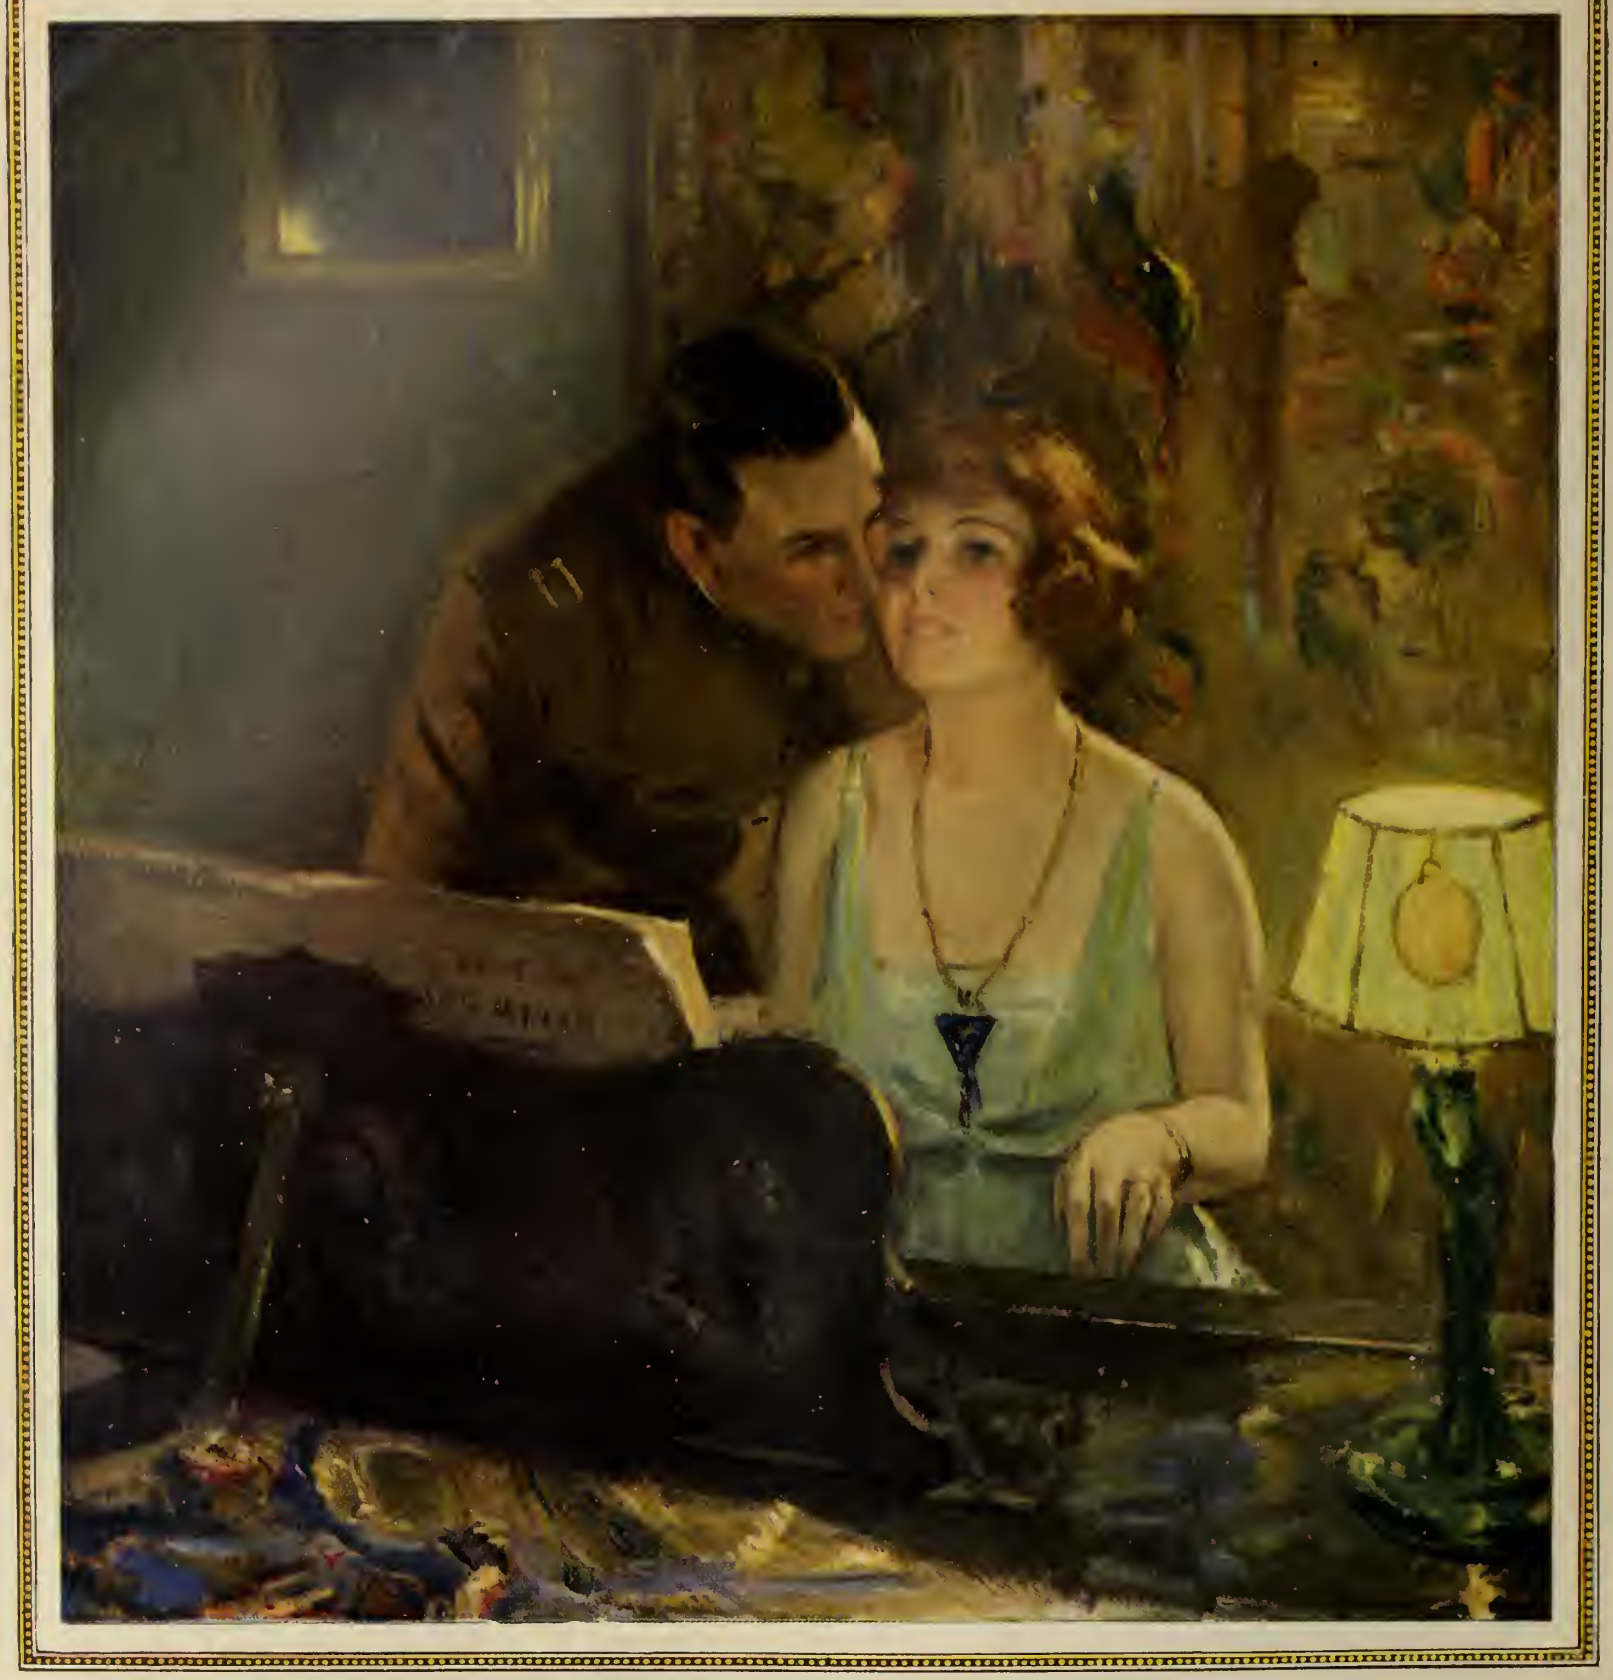
Hence the nickname.

LUX

Guards her Treasure Chest

For washing all those dainty fabrics which delight the eye and give a true atmosphere of charm to the wardrobe and the home, there is nothing to compare with Lux—the purest essence of soap in satiny wafer form.

Ladies know and appreciate its powers of keeping the sheerest blouses, the fluffiest woollens and the daintiest lingerie fresh and charming.



It is a genuine war-time economy to trust anything that pure water itself will not harm to the soft, creamy lather of Lux, for to do so is to renew its youth and beauty.

How to Wash Silks

Use a table spoonful of Lux to a gallon of water. Dissolve in boiling or very hot water and stir into a copious lather. Cool with cold water and dip your garment through this rich suds many times. Work it about in the suds—squeezing the water through the soiled parts but do not rub. Rinse in three waters, clear and lukewarm, press out—but do not wring. Dry in the shade. When nearly dry, press on the wrong side with a warm iron—never a hot one. Press crepes from side to side and stretch a little as you press.

"WHO GOES THERE" By Robert W. Chambers

IS THE GREAT NEW WAR ROMANCE STARTING IN OUR

DECEMBER NUMBER

This novel has never been published serially in any magazine, and it is only by a most fortunate arrangement that "Canadian Home Journal" has secured the right to use it.

WHO GOES THERE? will be illustrated with nine excellent drawings by the popular American artist, Dan Sayre Groesbeck, who is now serving overseas in a Canadian Battery.

In this new serial Robert W. Chambers does not depict the horrors of war, but rather shows up the shrewdly daring movements of the secret service, and at the same time weaves in a very pretty romance.

Backed up against a wall to be shot, a young prisoner escapes only to find that he must choose one of two things—death, or a trip to England to find and bring back safely to his captor, the German General, his ward, a young lady caught in England at the outbreak of war. If successfully accomplished this act will give him freedom to serve again his beloved Belgium. He goes, and his adventures form the plot of this intensely dramatic and delightfully human story.

The new way to manicure. Read how easily you can have lovely, well-kept nails

A touch of Cutex Nail White underneath the nails removes all stains—gives them snow-white tips

Cutex Nail Polish gives just the quick, waterproof polish you want

Why cutting ruins the cuticle

How you can keep it smooth and firm without cutting

START today to have the shapely, well-kept nails that make any hand beautiful. See how quickly, how easily you can have the most wonderful manicure—see how smooth and firm Cutex keeps your cuticle without trimming or cutting it; how lovely it makes your nails look.

(Photo by Lumière Studio, New York)

Ethel Clayton, beloved by motion picture "fans" everywhere, says: "Cutex keeps my nails looking so beautifully, my friends often remark it"

See what specialists say

Over and over, specialists repeat the advice—"Do not trim the cuticle." "Under no circumstances should scissors or knife touch the cuticle." "Cutting is ruinous."

It was to meet this need for a *harmless* cuticle remover that the Cutex formula was prepared.

Cutex completely does away with cuticle cutting; leaves the skin at the base of the nail smooth and firm, unbroken.

(Photo by Campbell Studio, N. Y.)

Anita Stewart, whose return to motion pictures after a long absence has so delighted her friends, says: "I have used Cutex for years. It has made my manicure the work of a moment and makes my nails so attractive. I never tire of admiring them"

(Photo, Ira Hill Studio, New York)

Elsie Janis, a favorite in every American city, says: "I am delighted with Cutex. I have just finished my nails and find it most wonderful"

The new way to manicure

In the Cutex package you will find an orange stick and absorbent cotton. Wrap a little cotton around the end of the stick and dip it into the Cutex bottle. Then work the stick around the base of the nail, gently pushing back the cuticle. Almost at once you will find you can wipe off the dead surplus skin. Rinse the hands in clear water.

A touch of Cutex Nail White—a soft, white cream, removes all discolorations from underneath the nails.

Cutex Cake Polish, rubbed on the palm of the hand and passed quickly over the nails, gives them a delightful polish. Should you wish an especially brilliant, long-lasting polish, apply Cutex Paste Polish first, then the Cake Polish.

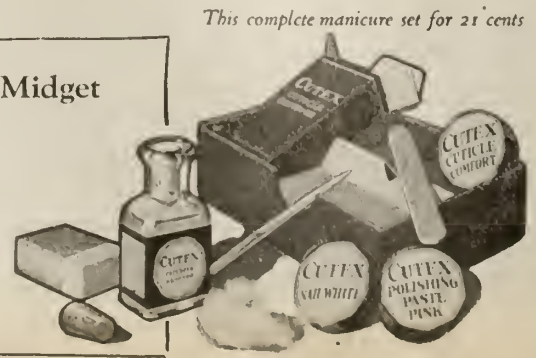
The first Cutex manicure makes a decided improvement

Until you use Cutex, you cannot realize what a great improvement even one application makes; you cannot know how attractive your nails can be made to look.

After a few applications, no matter how ugly cuticle-cutting has made your nails, Cutex will soon give them the shapeliness and symmetry everyone admires. Try it. See for yourself.

Where to get Cutex

Cutex manicure preparations are sold in all high-class drug stores and at the toilet goods counters of department stores.



Cutex comes in 35c, 70c and $1.50 bottles. Cutex Nail White is 35c. Cutex Nail Polish in cake, paste, powder, liquid or stick form is also 35c. Cutex Cuticle Comfort, for sore or tender cuticle, is 35c. If your favorite store has not yet been supplied with Cutex, order direct from us and we will fill your order promptly.

The Victory Loan 1918

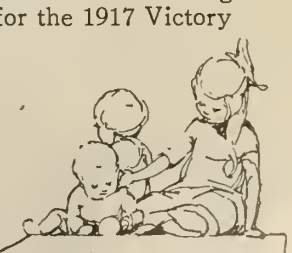
The case for the second Victory Loan is unanswerable. Canada is still at war, and, from present indications, will continue to be so for some time. The Central Powers are flying signals of distress and undoubtedly are willing to make some concessions in order to secure peace. But Germany continues unrepentant, manifesting no disposition either to make reparation for her crimes or to give adequate guarantees for her good conduct. So the struggle must continue until Germany's actions give genuine evidence of a change of heart.

The war is now costing Canada fully $1,000,000 a day. As the number of men in the army, especially the number overseas, grows the expense increases. Up to date about 425,000 men have been sent across the ocean, and a determined effort is bound to be made to keep the ranks filled, which means that for some time the flow of men overseas will continue uninterrupted. This rate of expenditure, $1,000,000 a day, means $45 a year for every man, woman and child in Canada. In other words, it amounts to this: If 1,000,000 people subscribe $500,000,000 to the Victory Loan, $36 of every $50 will, at the lowest estimate, go for war purposes. Indeed it is quite possible that $40 would be nearer the actual amount. This presupposes, of course, a continuation of the struggle.

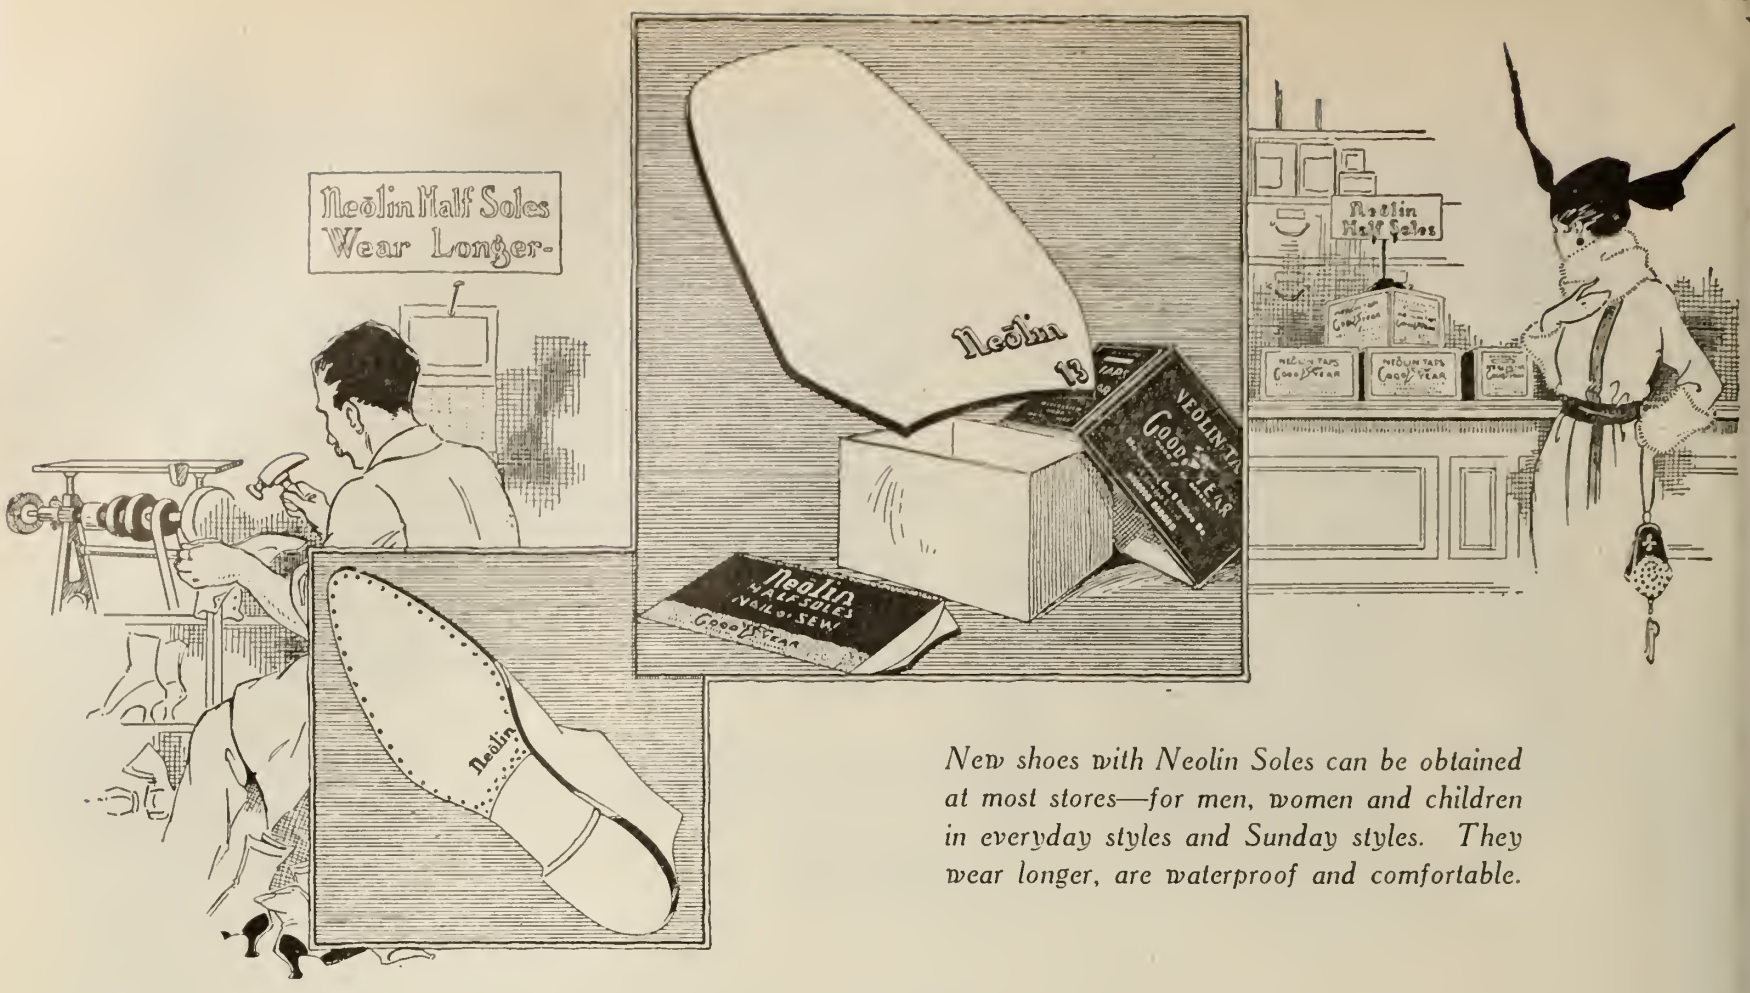
IF PEACE SHOULD COME SOON. Even though peace should come within the near future, the necessity of making a large expenditure on war account would continue. It is estimated that the troops could not be brought back from Europe within less than eighteen months. In the meantime pay goes on, to say nothing of the expense of keeping the men, pay alone averaging $14,000,000 a month. Ocean and land transport to date has cost $35,000,000. This item, then, is an indication of what it will cost even to bring the soldiers home. If the war were to end to-morrow, pay and transportation charges would amount to perhaps $225,000,000 before all the troops were demobilized.

THE CHIEF PURPOSE. To raise money to meet the cost of the war is the chief purpose of the Victory Loan; but there are attendant purposes of very great importance. The unprecedented industrial activity that Canada is experiencing to-day has been made possible by the last Victory Loan, which provided a fund that has enabled the Dominion Government to advance over $300,000,000 to various branches of industry during the last ten months. The Imperial Munitions Board has received $20,000,000 a month; then $100,000,000 was advanced to finance the 1917 wheat crop; nearly another $100,000,000 to finance the sale of beef and pork products to Great Britain, and well on to $40,000,000 to finance the sale of cheese and other farm products.

What was done last year through the Victory Loan must not only be done this year, but on a much larger scale. Not only does the Dominion Government propose to make the advances it did last year, but it intends to make others. The advancing of $10,000,000 to finance the sale of the surplus B.C. salmon pack is a case in point. The sale of surplus butter, eggs and condensed milk will be financed in like manner. Then, again, large advances must be made to carry out the Government's shipbuilding programme. It cannot be impressed on the public too strongly that Canada's present prosperity is due very largely to this method of financing made possible through the unexpectedly large subscription to the 1917 Victory Loan.



CANADA'S MILITARY EFFORT. A cursory glance at what Canada has done since the outbreak of the war will help to a better realization of the need for the millions that Canadians are being asked to provide through the Loan. Since August, 1914, when the war broke out, there have been drawn into the Expeditionary Force nearly 600,000 men, 425,000 having gone overseas, among whom is to be found as fine a body of fighting men as exists in any of the world's armies. Two hundred thousand casualties tell the story of Canadian valor; of this number probably 33,000 have been killed in action and not more than 3,500 have become prisoners of war.



THE MONEY EXPENDED. With the growth of the army the expenditure has mounted rapidly. In 1914 it was $25,379,748; in 1915, $127,616,300; in 1916, $248,665,769; in 1917, $315,094,000. For the first six months of the present year the expenditure was $173,752,381, and that during a period of quiet, which means practically $30,000,000 a month, the total expenditure to date having been $1,000,000,000.

BUILDING OF AIRPLANES. All materials relating to airplane production and equipment are under the direction of the Aviation Department of the Imperial Munitions Board. Last year the production of airplane engines was begun and it is expected that between 1,250 and 1,500 of a high grade will be delivered overseas within the next eight months. The spruce for the British airplane factories is drawn from Canada and the United States, and as there are no reserve stocks in Britain, it is absolutely necessary that shipments of this timber should be continued without interruption. The best spruce is obtained in the Queen Charlotte Islands, although six other districts on the mainland of British Columbia are also worked. Two hundred and fifty million feet of logs have been contracted for. This, however, by no means represents anything like the amount of airplane timber secured, for owing to the extreme care exercised in the selection of wood, the recovery is only about 15 per cent. For the most part the districts in which these lumbering operations have been conducted are extremely wild, which has made necessary the building of roads, the erecting of camps, and other like work in order to get out the timber. Fir is also used chiefly for shipbuilding, a portion of it, however, being used in the building of airplanes.

BENEFITS WILL CONTINUE. What the 1917 Victory Loan has done for Canada during the last twelve months will be repeated during the coming year. At the present time the Imperial Munitions Board has $500,000,000 of orders for next year. As this implies the making of large advances by the Dominion Government, it is necessary that the money be made available through the Victory Loan. Canada is well able to subscribe half a billion dollars. That Canadians have the money is to be seen in the latest bank statement. On August 31, 1918, bank deposits were $1,569,618.382, an increase during the year of $177,000,000, and this increase went on during a period when $400,000,000 was subscribed for the 1917 Victory Loan. To-day there is $569,000,000 more on deposit in Canadian banks than there was in 1914.

In no way can the people at home better manifest their patriotism than by subscribing for the Victory Loan. Not only will it help greatly to win the war, but it will also do much to ensure a continuance of the present prosperity.

New shoes with Neolin Soles can be obtained at most stores—for men, women and children in everyday styles and Sunday styles. They wear longer, are waterproof and comfortable.

Neōlin Now in Half-Soles

Every subscriber to Canadian Home Journal has read about Neōlin in these pages.

Probably you, like thousands of other Canadian women, have tried these better soles on your own shoes and on the children's.

You will welcome, then, Neōlin Half-Soles.

For Neōlin has now entered a broader field. It is now *easily* available for worn shoes as well as on new shoes.

You can go to your repairman and have Neōlin Half-Soles put on your shoes, your husband's shoes, the children's shoes. It doesn't matter what the style. And the soles can be nailed or sewn.

Or if you prefer you can go to the nearest hardware store and buy Neōlin Half-Soles and—apply them at home.

Many people get more wear from shoes *after* Neōlin Half-Soles are put on than they got before the original soles wore through. Neōlin was invented to give greater wear and so lower shoe-costs.

But there are other advantages. Neōlin Half-Soles are flexible and do not slip easily.

Start now to save money and get greater shoe-comfort. Get Neōlin Half-Soles.

The genuine have the name "Neōlin" on the bottom.

Neōlin Half Soles

The Trust of Carmen Shelley

By BLANCHE GERTRUDE ROBBINS
Author of "In the Glow of the Christmas Candle Light."
Illustrated by E. J. DINSMORE.

Little Sonny did "run faster'n Petey Rooks" and the great surgeon came again into his own

THE fingers of the consulting physician rested with an affectionate pressure on the boy's crippled foot, then raising his keen, gray eyes to the mother's anxious face, he announced without hesitation:

"Your boy need not be crippled for life. Under the treatment of a skillful surgeon, he has every chance of regaining the use of his foot. You see, the cords have been paralyzed. It will be a delicate operation and will require skill."

The woman drew a quick, panting breath and dropped her head until her flushed cheek rested against the boy's black head. A mist clouded her eyes and the furnishings of the office swam dizzily before her vision. Under the intense pressure of her embrace, the child wriggled impatiently.

"An' I can take off the old brace things an' run, Mamsy?" he questioned excitedly, his black eyes snapping with fire.

"Maybe—in a little while, Sonny," Carmen Shelley answered, unsteadily.

It meant so much to her—the walking of her little son. She had not dared to hope for a complete recovery since he had suffered from infantile paralysis, and the little leg and foot had been left a crippled, useless thing. Hope was overpowering her senses. Dully she comprehended that the office nurse was pulling on Sonny's tan stocking and boot and adjusting the brace. Then she caught a phrase of the consulting physician's directions and she pricked up her ears.

"I would recommend Farris, though Brice might have the knack and Monteith is a children's specialist."

Carmen Shelley leaned forward, the beauty of her face startlingly distinct, strange fires burning in the depths of her coal black eyes, her cheeks flaming scarlet. For a moment she gazed out of the window across the roof garden of the adjoining hotel. Then turning to the consulting physician, she questioned, a slight tremor in her voice:

"Could Haddon Spurr do it?"

"Haddon Spurr!" ejaculated the consulting physician, standing erect, a gleam of incredulity lighting his steely gray eyes.

"But Haddon Spurr is down and out," he added, his fingers nervously stroking the end of his pointed beard.

"I'm aware of that," the woman responded quickly, 'but if he were the surgeon that he was six years ago, could he do this delicate operation?"

"Haddon Spurr was most promising. He would have been a specialist in this sort of thing. There is no one to whom I would have entrusted the operation more readily than to Haddon Spurr—if he were now the surgeon he was six years ago," exclaimed Dr. Broderick.

"Then, Dr. Broderick, I shall take Sonny to Haddon Spurr," announced Carmen Shelley, a note of finality in her tone, that aroused the consulting physician's protest.

"But, Mrs. Shelley, Haddon Spurr is down and out," he declared heatedly, adding, "drink has done its worst for him. He no sooner recovers from one carousal than he courts another. The knife would be useless in his fingers. You could not trust him."

"I know too well of his downfall and his frequent carousals, but I believe the surgeon's cunning is still in his hand—if only he can be pulled up—"

"It would take a miracle to pull him up," expostulated Dr. Broderick.

"I believe *this* is the miracle," replied Carmen Shelley, softly, resting her gloved hand on the little misshapen foot.

The consulting physician threw out his long white hands in a gesture of protest, his cheeks tinged with the flush of indignation.

"But, my dear Mrs. Shelley, you are mad to entrust the operation to Haddon Spurr. I tell you his fingers are nerveless."

"But if he pulled up, he could in a little prepare himself for surgical work. I could trust Haddon Spurr—the surgeon I knew six years ago—far more than anyone who is now in the forefront," she argued, smiling a little defiant smile, then adding breathlessly, "will you give me his address?"

Dr. Broderick glared back, frowning darkly into the girlish face with its appealing sweetness. Then he turned abruptly toward his desk, fumbling among loose papers. Stooping, he scribbled an address on a prescription blank and passed it to Carmen Shelley.

"I am giving you this, that you may see for yourself the downfall of Haddon Spurr. When you have seen him, you will be horrified and will realize how preposterous is your idea—or shall I call it whim? For a few days keep under consideration those others—Farris or Brice, or even Monteith. Do not hurry the operation for the lad is young."

Carmen Shelley rose swiftly to her feet, slipping the paper inside the pocket of her tailored suit coat of battleship grey. Helping the lad from his chair, her fingers gripped his arm tightly until he had slipped his tiny crutch into place and the little, braced foot was thumping across the office floor.

"I shall always remember your kindness with a great emotional gratitude, Dr. Broderick, and some day Sonny and I will come back to show you that he can walk," she flashed back radiantly.

The boy laughed happily, his face roguishly dimpled, his arm clinging to the mother's as they passed out into the corridor.

"An', Mamsy, I'll be runnin'—jus' go a siftin' down the hill so's you can't ever ketch me. Are we going' to the *big* doctor-mans now?"

"Straight there, Sonny," responded the girl-mother.

It was an arduous task creeping down the stairway and Carmen Shelley felt impelled to gather the boyish form in her arms and hurry over the steps. But she must never put a single stone of hindrance in the path of Sonny's independence. He was alive with determination, the fighting nature bottled up in his little, crippled body, crying out for expression; yet she drew a sharp breath of relief when they had reached the pavement and she had signaled a taxi-cab.

The policeman at the cross-way rushed forward eagerly, and lifting the lad, set him inside the cab. The woman turned with a word of gratitude, but the boy, his eyes filled with tears of resentment, cried out petulantly: "Oh, an' I wanted to get in all by myself."

Carmen Shelley sank back among the cushions, her arm around the little lad, scarce more than a baby, yet so fearless. With alarming rapidity the streets narrowed and they looked out upon an obscure part of the city with low, tumbled down tenement houses crowding either side and dirty boisterous foreigners idling about the corners.

Suddenly the taxi-cab halted and Carmen Shelley stared, half frightened, out at the tumble-down doorway. A sign hung crookedly, the breeze flapping it against the grimy walls of the broken-windowed tenement house. Her heart beat suffocatingly and her confused senses only half understood Sonny's spelling out the letters on the sign:

"Dr. — Spurr!"

An icy chill ran down her spine and she shivered involuntarily, clutching the boyish form in a sudden panic of fear. What mad impulse had brought her here? She had not seen Haddon Spurr since she had married Major Shelley—six years ago. But she had heard indirectly of his downfall. If only she had been free to marry the young surgeon, she could have helped him win success. She would have proved an able support. If only he had come into her life before Hugh Shelley, but Hugh and she had been engaged when they were scarcely out of petticoats. Hugh Shelley was the best friend and chum she had ever known, but Haddon Spurr had taken possession of her heart. She had been soul in soul with him in his fight against his inheritance—a passion for drink. She had glorried in his success as in the few years of their acquaintance, he had climbed rung by rung to his pinnacle as surgeon. Then Major Shelley had come home from his military college and claimed her for his bride. Haddon Spurr had lost his grip in the fight. He had gone down to even this.

Suddenly she realized that the cabman stood before her with the door of the taxi-cab opened wide. Sonny was questioning breathlessly, "Mamsy, is this *the* doctor-mans?"

Tremblingly, silently, she helped the child to the pavement and half stumbling, pushed him gently toward the broken down doorway and battered sign. Conscious of shaking knees and pounding heart, she lifted the boy up the two rickety steps, then pushed open the the door standing ajar.

With a little gasp of terror she shrank back within the shadows of the evil-smelling corridor. Startled, she gazed into the little low-ceilinged, cobwebby

(Continued on following page.)

Carmen Shelley drew a sharp, sobbing breath, clutching Sonny's arm frantically. There surely was some mistake.

Every woman who buys Bonds stands behind a soldier.

THE TRUST OF CARMEN SHELLEY

(*Continued from preceding page.*)

room with its grime and chaos of broken furniture. Instinctively she noted the dusty shelf of books and the long, rough table crowded with dingy phials of drugs. A man, in a frayed, greenish-gray suit, a worn hat slouched down on his head, stooped over the table. At the sound of footsteps on the threshold, he wheeled suddenly, jerking off the seedy hat and exposing a tumbled shock of black hair streaked with gray.

Carmen Shelley drew a sharp, sobbing breath, clutching Sonny's arm frantically. But she must not let the shock of terror overpower her. She must pull herself together. Still there surely was some mistake. That broken, stooping figure, that face, unshaven and bearded, with despair dulling the heavy, bleared eyes and the long, unkempt hair straggling over the dusky forehead, could not belong to Haddon Spurr. Then the light of recognition flashed into the man's eyes and Carmen Shelley knew that she had gone too far to make her retreat.

"Carmen!" the man exclaimed, thickly, instinctively straightening his broken figure, questioning hoarsely, "What are *you* doing here? Have you, too, come to mock me?"

A swift sense of pity swept over the woman and she strangled back the sobs choking her. This was the hour for her mission and she must be courageous. With an impetuous gesture she pushed Sonny forward and sat him down on the battered old lounge, its tattered coverings trailing the floor. She cleared her throat of its huskiness, then dropping on the lounge beside the boy, she rested her fingers caressingly on the little braced leg.

"We have come as patients, Dr. Spurr. Sonny, you see, is crippled, and Dr. Broderick says a slight operation will straighten his foot. But it must be a skillful hand that does the work. And I would trust no surgeon but you."

"Ye gods, Carmen, but you mock me!" the man laughed hoarsely, leaning forward to scrutinize her face. "A *surgeon!* Don't you know I've not grasped the knife this four years? Why, I'm all but on the rocks. You're not blind and your woman's wit can understand how I've gone to the limit. I've been studying the drugs to make sure of the swiftest to the end," his voice broke in its agony of desperation.

The woman ignored the man's utterance of despair, though its bitterness stabbed her heart mercilessly. She raised her face, a sweet, radiating smile playing in her black eyes.

"But you must look at the foot and the poor, useless leg," she protested, removing the brace and pulling off the tan boot and stocking.

As she bared the misshapen foot, the man stood gloomily silent, then moving forward, he scrutinized it with a keen glance.

"Are *you* the doctor-mans that makes little boys *run?*" questioned Sonny, his eyes snapping with excitement. "I wants to run like Petey Rooks an' I'se bet him I can run faster'n he can when you fixes my foot."

The man started and for the first time peered curiously into the boy's flushed face. Then reaching out his long, hairy hand, he ran it swiftly over the crippled leg and foot.

"You couldn't refuse a petition like that, could you?" entreated Carmen Shelley, adding in explanation, "you see it is the result of infantile paralysis. He was so ill—so hopelessly ill for awhile—and when it was over the little leg and foot were so pitifully crippled. That was two years ago, and I was all alone to bear the burden for Sonny's father was overseas. Dr. Broderick has been treating Sonny and now he says that it is time to think about operating. He says the cords are paralyzed, but then *you* understand."

At the mention of Sonny's father, Haddon Spurr winced perceptibly, then his long fingers probed the muscles of the misshapen foot.

"It is Farris or Brice you want to consult. They are perfect wizards with the knife," exclaimed the man shortly, pausing abruptly in his examination.

"Yes, perhaps they could make him walk, but Sonny wants to *run*. Can't you understand *you* are the only surgeon that I would trust to make him run," persisted the woman.

The man pulled a wrecked kitchen chair toward the lounge and seating himself, rested the little misshapen foot on his knee, his fingers resuming their probing. Gradually intelligence crept into the lustreless eyes and a flash of animation radiated the dusky face. He was a long time silent, bent upon his tireless examination. Then suddenly he burst out exultantly:

"Jove, the simplest thing in the world! Of course the boy shall run." Then as swiftly he lurched backwards, burying his face in his hands and groaning in an anguish of despair.

"And you will do it?" questioned Carmen sharply, her voice vibrant with faith.

But the man shook his head, answering dully, "I tell you it is work for Farris. I've lost my cunning. My hand is shaky. It is not sure, and this is a most delicate operation. I've gone too low. I have lost my chance. And, Carmen, God knows I would give my right hand to make straight that little foot."

"But you can. You shall—my boy *must* run and you are the one to do it. You must *pull up* and operate," she protested vehemently.

The man struggled to his feet and paced the floor, his hands clenched by his side. "But I'm too far down to pull up," he retaliated bitterly.

"In the old days you fought and won for your own selfish goal—success," remonstrated the woman softly, the appeal of her soul illuminating her eyes. "To-day there is a new goal—Sonny wants to run. You remember how you always chose the woods for your battlefield. Up north Vincent Hardy, my cousin and your old chum, is fighting tuberculosis. He will share his camp with you. You can go there and fight back to your old footing in surgical science. It may take months to pull yourself together, but Sonny and I will wait. We shall not wait in vain for you are going to prove worthy our trust."

She ended, a little breathless, her cheeks crimson, her eyes sparkling with strange lights playing in their depths. Then picking up the little tan stocking, she proceeded to dress the boy's foot. The man leaned heavily against the crudely carved table, his head sunken forward.

"Vincent Hardy is in the city to-day for medical consultation. He will come here to-night and persuade you to go North with him. You will be ready?" she queried in a tone that demanded an answer in the affirmative.

As she slipped the brace into place, the boy clutched the tiny crutch and stumbled to his feet. The fire of battle glowed in his eyes and he turned appealingly toward Haddon Spurr.

"Say, Mister Doctor-mans, I am going to run faster'n Petey Rooks, ain't I?"

A tremor passed through the man's unkempt figure and he reached out a trembling hand toward the boy's black head. For a moment he gazed fascinated into the depths of the fearless eyes that had aroused the fighting spirit within him.

"You accept the challenge?" questioned Carmen Shelley, springing to her feet, the passionate entreaty of her being vibrant in her voice, her face wondrously, appealingly sweet.

"I—I—dare not," muttered the man incoherently, then with a sudden frenzied impulse, he lifted the boy from the floor, holding him tight in his trembling arms, resting his unshaven cheek against the misshapen foot.

"God helping me, you *shall* run, boy!" he broke out hoarsely, passionately.

He set the boy on his feet with a vehemence that made Sonny grasp his mother's arm for support, as hungrily he searched the woman's face for the faith glowing in the misty glory of her eyes.

"You will not fail our trust," she whispered softly, then turned toward the door, her hand guiding the little lad out over the rickety steps to the narrow, noisy street and the taxi-cab awaiting them.

. . . . . .

During the months that followed, Carmen Shelley's trust in Haddon Spurr never flickered. An occasional missive from Vincent Hardy told of the surgeon's stubborn fight in the Northern camp. Once a week, Sonny laboriously printed brief but emphatic epistles to "the doctor-mans who could make little boys *run*." They breathed courage incarnate, and the man, reading them was imbued afresh with the fighting spirit. Sonny, taller and rounder-faced, stubbornly met the wagers of Petey Rooks, persisting that "soon, bye an' bye," he could "run faster'n Petey hisself."

It was nine months to the day, following Carmen Shelley's visit to the tumble-down office of the down and out Haddon Spurr, that she received a summons to the Children's Hospital. She found Haddon Spurr—the surgeon that she had known in the days preceding her marriage to Major Shelley—awaiting her in the consulting room. His manner of assurance and the readily assumed professional dignity were in themselves startling, and somewhat in confusion she greeted him. Then suddenly she was conscious of the wonderfully significant fact. He had conquered. He was prepared to operate, and would not fail her trust.

"I am ready to operate—if—if you still trust me," he announced simply, his clear, brilliantly keen eyes searching her face.

The mother bent her head until her cheek rested against the boy's head. All these months she had been schooling herself, and now she must struggle against the emotion surging her woman's soul.

"We are ready, aren't we, Sonny, to let Dr. Spurr fix the foot?" she questioned breathlessly.

"Yes, an' pretty soon, bye an' bye, I'll be runnin' an' beatin' Petey Rooks," Sonny announced triumphantly.

"If you could leave him here at the hospital to-day, we might arrange for the operation to-morrow," responded Dr. Spurr, his tone purely professional, his eyes fixed on the little braced leg.

"We came prepared to stay," answered Carmen Shelley, her fingers pointing toward the club-bag on the floor by her chair.

"I will go and find the superintendent," offered Haddon Spurr, and turning, left the consulting room. Carmen Shelley's arm reached out and drew the little, boyish figure close to her side, till he leaned hard against her heart.

"Oh, Sonny, you *are* going to run," she murmured passionately.

. . . . . .

It was at noon the next day that Haddon Spurr, seeking her, found Carmen Shelley in Sonny's little white hospital room. She sat by the window, her head bowed on her arm, her hands clenched, vainly striving to quiet the terrifying tumult of her heart. At the sound of his step, she turned her face, appealingly beautiful in its unwonted pallor.

But the glow of exultation in his laughing eyes made the blood leap in her veins. In the martial swing of his tall, gigantic frame she read conquest. His hands were clapping together in the old-time, characteristic, boyish expression of enthusiasm. She sprang to her feet, holding out her arms beseechingly.

"I am cock-sure that Sonny will run," he announced triumphantly, taking her hands in his own and holding them, explaining eagerly, "You must have all kinds of patience, Carmen, and leave Sonny here in the Children's Hospital for long weeks. So much depends on treatment and care. And, Carmen, my hand never once shook. Dr. Broderick was present all through the operation, and he is sending me three similar cases at once. I can scarcely wait to see them. If only I can be as successful with them as I was with Sonny's poor, little, misshapen foot. I wonder if you understand what you and Sonny have done for me—"

His voice broke, and he ended abruptly. The woman raised her eyes, luminous with gratitude, then swiftly dropping her head, she broke into sobs—her woman's expression of joy.

The swift running of the stretcher along the corridor aroused her. They were bringing Sonny back to his room. She ran forward, then tremblingly stood aside until the nurses had tucked Sonny in between the blankets of his little white bed. A moment later she was down on her knees at the bedside, her flushed cheek resting against the cheek of the sleeping boy. For a long time she knelt there, crying softly, yet she could not have told whether the joy surging through her heart was because of the healing of the little misshapen foot or the man reborn in Haddon Spurr.

The weeks at the Children's Hospital passed swiftly. Every day found Carmen Shelley in Sonny's little white room, the merry, captivating playfellow, bubbling over with games and stories. Twice a day, fresh from his conquests in the operating theatre, Haddon Spurr came there to visit with Sonny. They were great friends—the man, who had fought his way back to the surgeon's pinnacle, and the boy, who was going to "run faster'n Petey Rooks." The woman, with her irresistible charm of motherhood, enhanced the glory of those visits. The sweetness of friendship impregnated those hours, and the woman's heart throbbed joyously at the sound of the man's laughter.

Then one day, when the boy lay sleeping, Haddon Spurr slipped softly into the room and stood looking down at the flushed face with its roguish dimples. Suddenly he turned to the mother and spoke huskily:

"Carmen, it is time to take Sonny home. You have seen him walking, and before many weeks you will see him running along with Petey Rooks and the other boys. I have done all that a surgeon can do. My work is finished. What you and Sonny have done for me can never be put into human language. But I want you to know that I do not fear slipping back. God helping me, the fight will stand victorious to the end. You were right—it was the selfish goal of my own success that lured me on in the old days. But now, it is a

A HOSPITAL IN FRANCE

By CONINGSBY DAWSON

Hushed and happy whiteness,
Miles on miles of cots,
The glad contented brightness
Where sunlight falls in spots.

Beauty, blood, and sorrow,
Blending in a trance—
Eternity's to-morrow
Is this half-way house of France.

Sisters swift and saintly
Seem to tread on grass;
Like flowers stirring faintly,
Heads turn to watch them pass.

Sounds of whispered talking,
Labored indrawn breath;
Then like a young girl walking,
The dear familiar Death.

Every woman who buys Bonds stands behind a soldier.

Mac, The Younger Brother

A Character Sketch

By MAZO DE LA ROCHE

Illustrated by Norman Price.

IN the living-room of a country house, two young men had their heads bent together over a letter, which one of them was reading aloud for the second time. They were both so young that they seemed little more than boys; the red glow from the "self-feeder" touched them caressingly, bringing out the bright tints of their hair at the temples, the color in their smooth cheeks, and the whiteness of their round young wrists.

"It just amounts to this," said Ernie, the elder, as he finished the letter, "that he has got himself into a beastly mess, and has had to clear out, and expects us to stay here till the hue and cry is over. It's the rottenest thing I ever heard of!"

"Yes, but look here!" broke in his brother, "look here—we can't stop any longer in this dog's island—I'm sick of it already, and I guess a week of us is about enough for Uncle Tom."

"Can't you understand plain English?" said Ernie testily, "Hear what he says." And he read a portion of the letter for the third time.

"You may be certain," it ran, "that I had no idea the Permanent Loan Company was on such a precarious footing, and I took Fisher's word for it, that, as things brightened up, we could pay all the dividends. I thought the whole thing was on the square, though, of course, I knew the situation required delicate handling. I believed it would work out as other things have—Fisher has such a head!

"Well, it's all up—gone to smash—Fisher's nabbed—and they're after me. He'll get five years at least. I shall go abroad for a rest, God knows I need it! Funds are very low. Your poor mother and the children have gone to your Aunt Amy. The house is shut up, so I am afraid there is nothing for you but a prolonged visit at Uncle Tom's.

"I know you would not care to face your college friends just now, and, as I said before—I am completely strapped.

"It should not be hard for young chaps like you to pass the time on a Canadian farm. It will be a new experience. I hope the deer-hunting turned out well. Your mother was very nervous about you. Poor girl, this is an awful thing for her! But, there are always fresh fields for an energetic man, and I'm not so old yet. We might move to Western Canada.

"You must just buck up and help me out with this, boys. Then we'll all work together and make good in some fresh place.

"No address at present, and in a great rush.

"Your loving Dad."

The brothers stared at each other in bewilderment. It was their first experience of the painful side of life, and they did not know how to meet it. Hitherto they had existed only as healthy young organisms, singularly untouched by what passed on around them.

They had seen little of their busy father, but they rather liked him. He was not difficult as some fathers were. They liked their mother, too, though she was fussy, and asked questions, and always had neuralgia.

At college they made many acquaintances, but no friends in any serious sense. Ernie, who had just attained his majority, had some renown as a speedy and reckless motorist, but motoring was beginning to have no sensation for him. He would sit, unmoved as the Sphinx while bridges, ledges, and houses were passed in a blur, and village constables rushed out to take his number. He had once said—"If you go fast enough, the sensation is almost the same as standing still, so it's not much use after all."

He was a lounging, active fellow with golden brown eyes, clear-cut features, and a rather wintry smile. He had white, effeminate hands, which, somehow, were always in evidence He could play rag-time, and certain classical selections with speed and precision. He had no preference between the two, but he liked the feeling of mastering the piano, and putting his fingers through their paces. He paid attentions to a new young lady every three months, and forgot even the names of her predecessors. He simply changed them with the same regularity with which he tried new brands of cigarettes and shaving soap.

Mac was nineteen. Taller than Ernie and more loosely built, he lacked the elegance of his brother. His eyes were intensely blue, his features rather heavy, with a sullen expression, except when a naive smile, like a child's, lifted his upper lip. He drove the motor with less verve than Ernie, played the gramophone in preference to the piano, and he sometimes looked after Ernie's latest young lady in his absence.

The brothers, in spite of their close companionship, would have found it difficult to say whether they loved each other. "We get along well" would have been their reply. Their only violent collisions were usually the outcome of a damage to the car, for which neither would assume responsibility.

"You told me to drive faster!" Mac would bawl.

"I didn't tell you to run up the telegraph pole, you loon!"

But these little passages were soon forgotten, and they would resume their habitual attitude of almost melancholy indifference.

Their Uncle Thomas entered. He was a tall, dark-bearded man of fifty-five, their father's brother. Ten years before, he had bought an isolated farm in Canada, and, since then, had never been seen by his nephews, until, on their return from their deer-shooting expedition, they had, by their father's command, stopped off to spend a week with him.

He lived alone on the farm save for a Scotch married couple, employed in the house and garden, and a family of Indians, who lived in a shack at some distance from the house, and who did the work of the farm.

Uncle Tom was a man of great repose, who seemed to wander in a twilight of memories, from which he roused himself, now and then, to speak in a tone of forced cheerfulness to his nephews.

"Well, my dear fellows," he now exclaimed, "what have you been doing with yourselves to-day? Had a walk? Walking is a great thing—I'm as hard as nails from it! MacDonald and I have been away back to the bush. I think we're going to have a snow-storm."

"Uncle Tom," said Ernie, handing him the letter, "just read this."

Uncle Thomas went to a shelf beneath a large-antlered deer's head, and took from it a pair of steel-rimmed spectacles. Having adjusted these, he carried the letter to the window to catch the last of the failing light.

He read the letter to the end without comment, pushed his glasses up on his forehead, and then muttered, as though to himself—

"It's the crowd that does it—the turmoil—you get caught—hurried on—you can't think clearly—you're trapped—trapped." He shook his head commiseratingly at his nephews. "It's bad for you. Very. But you mustn't blame your poor father. It's the turmoil that does it—you lose all sense of proportion. He should have come to the country with me. I begged him to."

He picked up the iron shaker and moved the grate of the self-feeder back and forth. Fresh coals rattled down from the reservoir smothering those which glowed, so that the room suddenly became gloomy.

Ernie sighed heavily. Mac turned his head to look at him curiously. Uncle Thomas was warming his hands on the bulging nickel top of the stove. Presently, without speaking again, he left the room, fumbling with his foot to find the step that led downward into the hall.

"Shouldn't be surprised," said Ernie, "if he'd had to beat it, that time, ten years ago. Maybe it's in the blood." He laughed bitterly.

"Do you mean *being crooked* in the blood?" whispered Mac.

"Well, yes. That's heredity, you know."

"Dad's all right," Mac said with a catch in his voice. Ernie sneered.

"If you call it all right to get us in a box like this and leave us here! Why, we haven't the price of our return fare even, and nothing but disgrace to face, if we did go back, and the mater creeping off to hide at Aunt Amy's. If you call *that* all right—*I* call it rotten!"

"I wonder if Uncle Tom would pay our fare," said Mac.

"*Where?*" Ernie faced him, holding a lighted match to a cigarette. The flame flickered in his cold bright eyes.

"I dunno," murmured Mac, crestfallen.

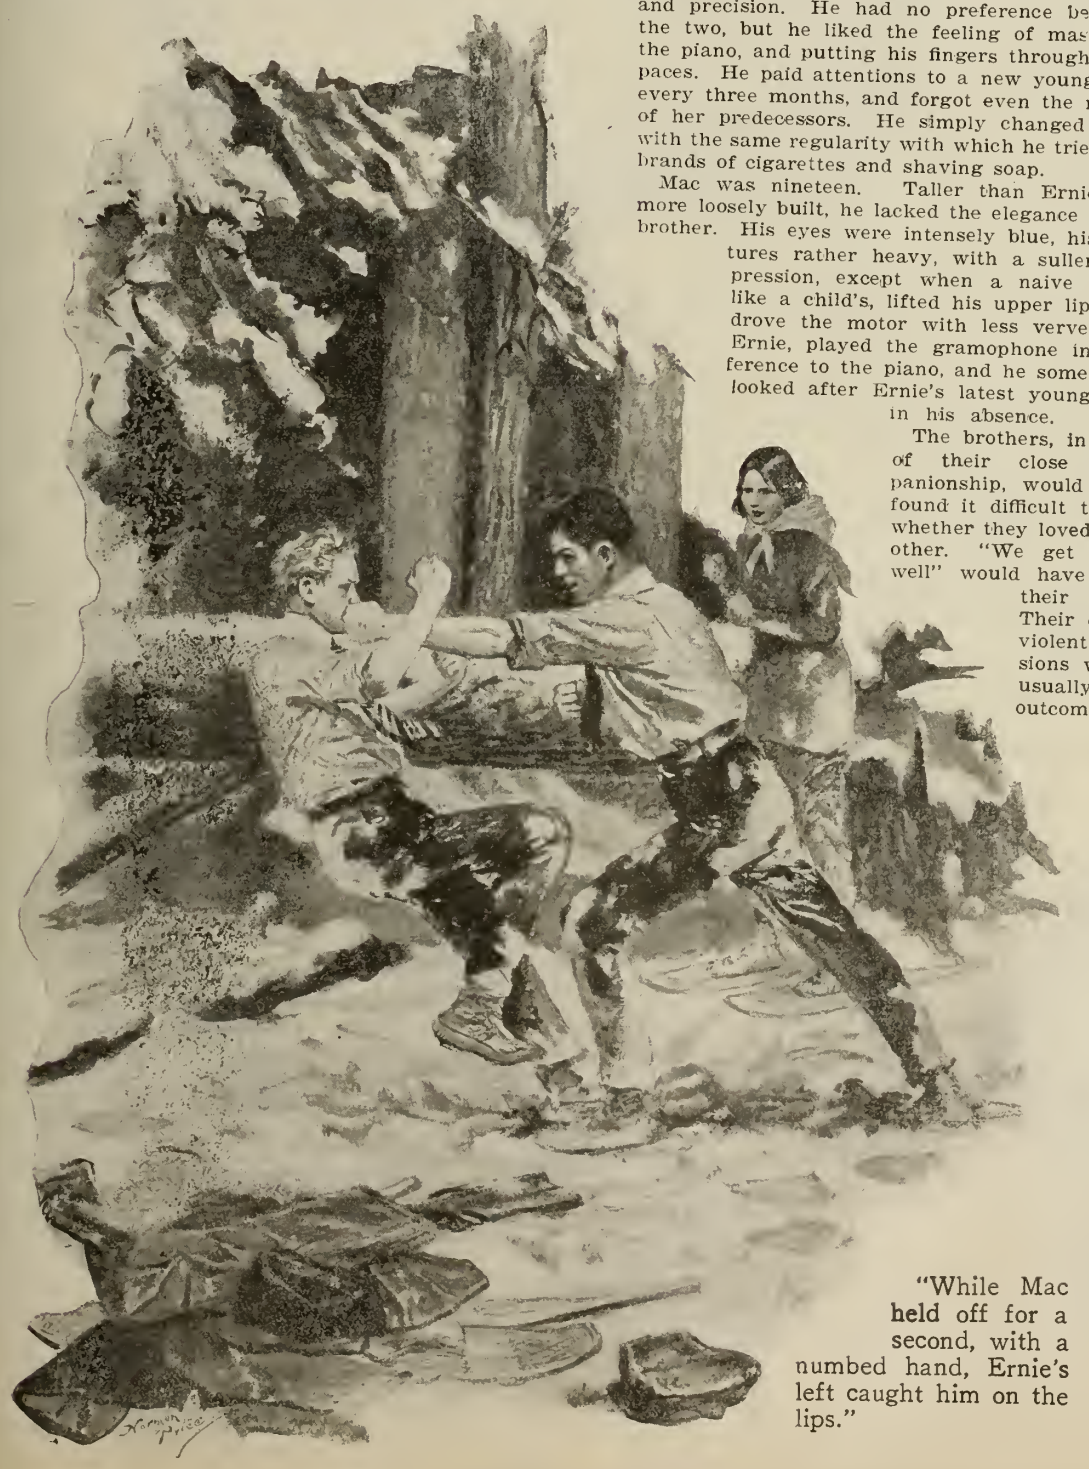
"No," said Ernie, "we've got to stick it out here, till we hear from father; then we'll make him let us take a trip South, or a cruise, until things blow over."

Mac was comforted. The strange unaccustomed weight, that had been pressing on his chest, lifted a little. He yawned and stretched.

"If there was only something to do," he yawned, "if there was some shooting—but there's nothing but rabbits and squirrels."

"If there were only some girls about," sighed Ernie, "or even a piano!"

"Gee! We'll get sick of each other!" said Mac.



"I'm sick of you already as far as that goes," replied his elder, pleasantly.

The housekeeper came in, carrying a lighted lamp; she drew the blinds and began to lay the table.

"We'll be havin' a rare lot o' snow afore the morn," she said, "the sky is heavy wi' it noo, and it'll drift too—oh, hearken to that!"

A wail of wind, gathering in volume till it became a shriek, swept past the house, jarring and shaking it.

(*Continued on following page.*)

"While Mac held off for a second, with a numbed hand, Ernie's left caught him on the lips."

Every woman who buys Bonds stands behind a soldier.

Mac, The Younger Brother

(Continued from preceding page.)

Uncle Thomas' Scotch collie entered the room majestically. He sought the shelter of the woman's skirts, hiding his head among their folds.

"Sit doon, Jock," she commanded, "what's wrang wi' ye, ye puir loon?"

The dog's under jaw quivered as he raised his eyes full of mute appeal to her face. The woman laid her hand on his head. "Puir laddie, dinna fret," she said.

Mac looked at Ernie with a sheepish smile; he was afraid Ernie had seen the tears in his eyes.

All night long, the brothers, as they lay, half-awake, could hear the raging and racing of the storm. Now it was the fighting and cheering of soldiers, mingled with the cries of the wounded; now a great pipe-organ, whose music, surging through the universe, lulled them to sleep once more.

Ernie, in his pyjamas, scratched a clear space on the frosted window-pane.

"Whew!" he ejaculated, "look here, Mac! Some storm."

Mac interposed his blond close-cropped head between Ernie and the clear space.

"Good gosh," he said, "we're snowed in!"

The wind had fallen; the sky was splendidly blue, save for a few transparent wisps of cloud, like white yarn; the earth lay, subdued, beneath its weight of snow. The branches of the fir trees sagged.

At breakfast, Uncle Thomas, who looked as though he had passed a sleepless night, wore, in contrast to his red-rimmed eyes and pale cheeks, an air of great cheerfulness.

"Now, my dear fellows," he said over his porridge, "you have your first opportunity to enjoy a real Canadian winter. We'll put away all misgivings and worrying thoughts and try to make the best of things, eh?"

"I don't intend to squeal," said Ernie, sulkily. "No oatmeal thanks."

"Oh, I forgot," said his uncle, "ah, that's where you make your mistake. Cultivate a taste for porridge and solitude—porridge and solitude. I take 'em in large doses."

"He's batty," said Mac, resentfully, when Uncle Thomas had left them.

Ernie made no reply. He had dragged his chair from inside the table to the stove, and sat, hands deep in pockets, staring gloomily into the coals.

Mac took a few turns up and down the room, and then looked at his watch. It was nine o'clock. He sat down beside his brother in utter dejection.

The room was filled with sunshine. From the kitchen came the clackety-clack of a churn. Mac had an idea.

"Believe I'll go and work the churn for the woman," he said.

"Don't be an ass," snarled Ernie.

An hour passed. Two passed.

Ernie said suddenly, "Go and fetch the cards. We'll play Rummy."

They played Rummy till one o'clock, when dinner was announced. Mac won $1.40 from Ernie, who give him an I.O.U. for the amount.

At dinner Uncle Thomas abruptly laid down his knife and fork, and exclaimed, "I've got an inspiration! Why didn't I think of that before? Ever tried snowshoeing?"

They shook their heads.

"Well, now is your chance!" he cried, with his pathetic heartiness. "I have both snowshoes and moccasins—Oh!" his face fell, "but there is only one pair of each! Tck—tck—too bad!"

"Never mind," said Ernie, "I don't care about it."

Mac was interested. He changed his boots for the moccasins with a sense of relief from boredom. Uncle Thomas showed him how to fasten the deer-skin thongs of the snowshoes and instructed him in their manipulation.

"I'll write to Orillia to-day," he said, "for another pair of each, so you can take tramps together." He and Ernie had come to the verandah to watch his first efforts.

"I see your finish!" grinned Ernie, as Mac tripped over his own toes.

"Fine!" shouted Uncle Thomas. "Go straight up the lane to the woods!"

Mac drew in a long draught of the crisp December air. The brilliancy of the sun on the snow made him pucker his forehead; his body was bathed in freshness and light. He wondered why he had sat all those centuries by the hot coal stove. Good old Uncle Tom to think of these snowshoes! In a little while he would be on to the racket, and would run a bit. He whistled to Jock, the collie, who came bounding, showing his pointed white teeth in a grin. He circled about Mac, uttering sharp barks and snatching hurried mouthfuls of snow with an air of relish.

They passed the orchard, where trees clothed in white cast delicate blue shadows on the snow. Half-hidden in the drifts beyond the orchard, stood the Indians' shack, a spiral of smoke rising from a stove-pipe in the roof. Several miniature wind-mills, made fast to the ridge-board, turned and jiggled with a whirring sound. Some skins of small animals, skunks, squirrels and muskrats were nailed on the door. From a corner of the shack to the gnarled apple-tree nearest, a clothes-line was secured, from which depended some dark-colored garments, and one bright red petticoat. A dark face appeared for a moment at the small-paned window and was quickly withdrawn.

For some reason, unknown to himself, a picture of the little shack was carried in Mac's mind as he swung across the fields. There was something in the poverty of it, in the crude, wild sincerity, that touched him. Dash it all—he *was* in a funny state to-day!

And yet, he felt swift and strong. Before him lay all this snow, waiting in quiescent purity for the print of his snowshoes. His to be the first—but no—over there—was it possible? A trail of other snowshoes! He tingled with excitement. Yes, there they were, heading towards the gateway in the lane—smaller than his; almost—that fellow—almost he toed in!

Joyfully Mac and the dog followed the trail, across the field, up the lane, guarded by oak, and beech, and silver-birch, never deviating, but just as though the unknown one had jogged pleasantly on, enjoying the movement and the keen, bright air.

Presently the wood loomed before him, dense with a new growth of spruce and pine. Here the trail meandered in and out; Mac had to crouch low to follow it in places. What the deuce was the fellow up to? The snow was not so deep here; there were treacherous half-hidden roots and fallen branches. A ticklish place for snowshoes. Anyone might have been tripped up, but Mac, sprawling in the snow, horribly tangled up with himself, cursed his stupidity.

At the same moment he heard a low laugh, a musical chuckling laugh, of infinite amusement. He turned his head sideways in the direction of the laugh, supporting himself on all fours. He saw, amid the rich green of a clump of young spruce trees, a little brown face peering out, and again came the malicious chuckle. Like the face that had appeared at the window of the shack, this was withdrawn the instant that it was observed.

"Come out and help me up," said Mac coaxingly.

"I am afraid," came a very small voice.

"Afraid? Why should I hurt you?"

"You would hurt me 'cause I laugh at you."

"Say, I'd fall all over again just to hear you laugh like that! Come on out!"

"I am afraid. You come and bring me out."

"Oh, that's it, is it?" said Mac, springing to his feet, and approaching the evergreens. "Do you know that you smell just like Christmas in here?

"I suppose she's an Indian girl—a little squaw—" he thought, as he parted the branches, "but what stunning eyes she's got, and what a glorious color!"

The warm red beneath her brown cheeks was indeed lovely, and the square of bright green stuff she had about her head, and her red jacket seemed all of a piece with this woodsy place. Mac remembered in a flash the red petticoat on the line at the shack.

"I saw you comin' an' I hid," she explained, with a little apologetic glance at him from under her long lashes, "then when you fall, I jus' got laughin', you look so fonny." Her teeth gleamed.

"Well," said Mac, "it's just three days till Christmas—this is a Christmas tree—and you're my Christmas present—that's your punishment! Now, will you come for a little walk with me, and tell me all about yourself—and everything?"

"I come here," she said, "to look in our traps for rabbits an' I jus' got killin' this feller here—" she held to view a dead rabbit, which she was carrying by the back of the neck.

"By jove, you're a little rip!" exclaimed Mac, admiringly, "did you kill him yourself? But how?"

"Yes," she said, "I kill him. That's not hard. I jus' foller him kinder quiet till he git settin' down, nibblin', then I give a jump an' hit him on the head with this stick—he squeak jus' once—an' die! Tonight, my mother put him in the pot"—she hunched her shoulders in a little foreign gesture. Spanish she looked, Mac thought. Only far more vivid—why, her movements as she walked beside him were as swift and unconstrained as a bird's.

His spirits rose, his young limbs rejoiced in the exercise, and his laugh rang out through the woods.

She was the most primitive being he had ever met—pathetically innocent — those slanting looks came naturally to her — she had a way with her!

She scratched the snow from a bank of wintergreen, and gave him the red berries to eat; she taught him to climb fences, to run and jump in his snowshoes. He was filled with admiration for her prowess, yet felt tender towards her because of the wistfulness in her deep brown eyes.

"Let us sit on that log," he said, at last, pointing to a fallen tree, whose trunk, still attached to the stump, and supported at the other end by strong branches, made a high, but inviting seat.

Mac swung himself up easily, and the girl, dropping her rabbit, made an ineffectual attempt to raise herself to his side.

"Here, you lift me," she commanded, "my legs are too short."

Mac put his arm about her waist, and drew her up beside him. He did not remove the arm and she, looking down at his big hand on her side gave a little laugh and pressed closer to him.

"Do you know," said Mac, "that you are awfully coquettish?" She nodded, chuckling.

"Come now," he probed, "I don't believe you know in the least what coquettish means. Now do you?"

"Yes." She regarded him seriously. "It means that I act like I was half white—eh?"

"Oho!" He laughed uproariously. "That's a good one! Why not make it *all white* and be done with it?"

"Oh, I couldn't be *all* white," she objected, "but I might be just *half*. Some Injuns are."

"I suppose they are," said Mac, looking at her meditatively.

"You are awful white," she commented, and pulling off a red mitten, she laid a small nut-colored hand on his.

He thought it was the prettiest hand he had ever seen, smooth, delicate, with such shapely nails, and such a round, supple wrist!

They were alone in the sunlit fragrance of the pine woods. Their eyes met. He saw the lights that moved in the brown depths of hers, was conscious of the exquisite curves of her dusky eyelids, of the pulse that throbbed so quickly in her throat.

"Promise me," he said, a little thickly, "that you will come again—here—just like this—to-morrow."

"Yes," she whispered, "to-morrow in afternoon. I got to work all mornin'."

"Will your mother and father mind your coming to snowshoe with me?"

"No," scornfully, "not as long's I work! They don't care what becomes to me."

"Hm," said Mac, puckering his eyes.

They walked homeward together through the snow, still virgin save for their double snowshoe tracks, but pink with the reflected splendor of the sunset.

The girl moved lightly by his side in silence, but her eyes were ablaze with rapture.

"What are you thinking?" he asked softly.

"I was thinkin' how I jus' lof this day."

"So do I," he said, "it's the best day I've had in a long time."

After he had left her, he ran back to ask breathlessly,

"Your name? I don't know what to call you, do I?"

"My name is Madeline, but they call me Bee," she said simply.

"All right. Good-bye Madeline! Good-bye Honey-Bee! Say, Good-bye, Mac!"

"Goo'-bye, Mac!" She disappeared into the shack.

Mac found Ernie still sitting by the stove, with a copy of "Scottish Chiefs," lent to him by the housekeeper, in his hand. He had passed an afternoon of unspeakable boredom. Mac, on the contrary, was filled with an elation new to him. The piquancy of his adventure gave a savor to his meal. He praised the Scotch woman for her scones. He did not, however, expatiate with too much enthusiasm on the joys of snowshoeing. With a weather eye on Ernie, he told his uncle that he believed, with practice, he should find it rather good sport.

"Just so," affirmed Uncle Thomas, "and I only wish the new ones would arrive from Orillia to-morrow, so you could go off together. Much better."

"Thanks," said Mac, "but somehow I don't believe Ernie will take to it."

After tea they again played Rummy and Mac won $1.80 from Ernie. Everything, it seemed, was coming his way.

All next morning he strained with impatience towards the hour of meeting, and when, at last, he set out, with Jock at his heels, he could have sung for joy. He came upon her at the foot of an oak tree in the lane, smiling at him over an odd little muff, made of mink skin. Something she had hidden in it, of which she made a mystery. He must guess. It was a present for him. He guessed vainly. It was not an Indian meal cake, it was not a rabbit. That guess brought a scornful "No-o!" He gave up. She brought it forth then, a little oval box of birch bark, bound with sweet hay, and embroidered in porcupine quills, in their natural shades.

"It is for you," she announced, proudly, "to hold little things what you lof—I make it all myself."

Mac was struck by the beauty and precision of the work on the box. Certainly she was a little wonder! How superior this to the gaudy sofa pillows and boat cushions other girls offered! And how seemly that she should make beautiful things of natural

(Continued on page 53.)

In The Baby's Eyes

What is the dream in the baby's eyes
As he lies and blinks in a mute surprise?
With little wee hands that aimlessly go
Hither and thither and to and fro;
With little, wee feet that shall lead him—God knows.
But a prayer from my heart like a benison goes;
Bundle of helplessness, yonder he lies—
What is the dream in my baby's eyes?

What does he wonder and what does he know?
That we have forgotten so long, long ago?
Bathed in the dawnlight, what does he see
That slow years have hidden from you and me?
Out of the yesterday seeth he yet
The things that in living he soon shall forget,
All that is hidden beyond the blue skies?
What is the dream in my baby's eyes?

Speak to me, little one, ere you forget
What is the thought that is lingering there yet?
Where is the land where the yesterdays meet,
Waiting and waiting the morrows to greet?
You wee, funny fellow, who only will blink,
What do you wonder and what do you think?
Bright as the moonlight asleep in the skies,
What is the dream in my baby's eyes?

—Tom Cordry.

Stuart's grocery shop, over which lived Canada's greatest woman poet, Isabella Valency Crawford.

Some Literary Traditions of Toronto

By KATHERINE HALE.

Trinity College, a rendezvous for literary lovers.

WHEN the matter of authors and authorship comes up in Canada the invariable comment occurs: "Of course, Toronto is the 'centre.'" What is meant by that apparently cryptic phrase must be that Toronto happens to have become the publishing centre of Canada. And indeed, when the spring and fall lists come out, it would seem, by the testimony of hundreds of books bearing a local imprint, that this city is a centre of literature in a very practical sense. Canadian publishers, however, speaking generally, are not so largely agents for Canadian literature as for British and American publishing houses, although there are, one is quite willing to admit, some noble exceptions.

Canadian publishers have been known to purchase poems, novels, or whatever the book may be, even in some cases paying advance royalties, but as a general thing a successful Canadian book is sold first in London or in New York. After that, the Canadian publisher buys the right for this country, affixing the name of his house to the title page. And so it is that many a literary aspirant in the Middle West or the Far East looks with longing eyes toward this "centre," not realizing that his Mecca is more or less of a chimera.

All of which is not to deny that Toronto is a stimulating city in which to live and write. The very fact that the news and announcements of books, many books each season, issuing hot from the presses, is as much a part of the early spring and the late fall as the announcement of new habiliments, puts one into a sort of living mood as regards literature. Also, there are always "chances" in journalism. And journalism is the school of authorship. But when all is said and done, we must hark back a little to find any real atmosphere in Toronto.

One of the most delightful of Canada's writers, in talking over the situation the other day, resolved it in one sentence when she said: "The truth is that the Toronto of Colonial Canada possessed literary value; the Toronto of a National Canada is largely commercial and almost untouched by literary tradition."

"The Grange" with its artistic setting, the former home of Professor Goldwin Smith.

Perhaps one reason for this obvious truth lies in the fact that the Toronto University has never entered the life of the city. It exists, a little citadel-town, the world forgetting, by the world forgot. Apart from the large body of students, who are, of course, absorbed in its life, it might as well be situated in Chicago. There is something almost phenomenal about its lack of real influence over the community at large. Perhaps at the heart of it lies the fact that the spirit of romance has been absent from its life. The consequence is that, from all the band of writers who have gone out from its gates, I have yet to read one arresting line in poetry, and very few in prose, testifying to any romantic passion for Alma Mater.

A few lines I do recall from Harvey O'Higgins' little-known and beautiful novel of Canadian youth, called "Don o' Dreams," where he writes describing the effect of the perfect Norman Tower of Varsity on the uninitiated student.

The Toronto University has had some great professors. It has also refused the services of some great professors, notably Charles G. D. Roberts, who might have meant much to students in and outside of the college halls.

But there are little shrines, there are sweet-scented traditions, there are ghosts that haunt old streets and buildings and soften the commercialism of to-day.

Once I had a charming letter from Algernon Blackwood, an English writer who is perhaps the completest and most delightful pagan and mystic in the world, and he said: "The heading of your letter—Beverley Street—recalls many things to me. I used, in student days, to go up and down that quiet street and to haunt the garden of the Grange. Can you still hear the crows and the rooks in those mighty trees?"

Professor Goldwin Smith, the "Sage of the Grange," the caustic philosopher of an older age, who came to Toronto from Oxford University and became allied by marriage with the old Canadian family of Bolton, made for himself a beautiful house and garden on Grange Road, at the head of John Street, then quite far out of town. Here he used to gather visitors of note from many places in the fine old colonial house, standing so grandly on its great tree-decked lawns.

As a child, I can remember the charm of the gloomy, richly tinted old hall and library. There seemed to pervade the whole place the essence of an exquisite colonialism, but colonialism tinged with an acid that youth finds it hard to understand. The tender mercies of the Sage were not always kind, and it could hardly be said that he encouraged anything or anybody. But somehow, and by what magic one hardly knows, the feeling of the beautiful old Grange certainly permeated much of old-time Toronto.

There was another rendezvous of literary lovers during the late 70's and the 80's and extending into the 90's, and that was the residence of Professor and Mrs. William Clarke, of Trinity College. At first they lived, as Goldwin Smith did, near the centre of the town, but later they moved out Queen street to take up residence at Trinity.

Most beautiful of colleges, one of the loveliest exteriors in all America, it was a fit setting for that genial, charming Englishman, whose lectures on Tennyson and on Kingsley's "Water Babies" endeared him to a whole generation of Canadians. Those who possessed his friendship knew him for one of the most truly cultured, benign and delightful personalities imaginable. His love of literature was as sincere as it was deep and broad. His very voice was an education, and his outlook, being more human, was therefore more vital and constructive than the bitter learning, the caustic comment of Goldwin Smith.

Trinity College was "out in the country" in those days, but Jordan street—now almost on the water front—was quite in the midst of things. And it was in a certain dingy office of a grimy building in this lane-like thoroughfare that there was installed a brilliant journal called "The Week," which existed for over a decade and became of decided literary influence. "The Week" was really founded by Goldwin Smith, with Charles G. D. Roberts as its first editor.

A study of the files of this journal would show that nearly all the names we know so well to-day—Lampman, Bliss Carman, W. W. Campbell, and so on—appeared very frequently here. It is interesting also to note that in those comparatively early days the Woman Editor was already in evidence, for we find that Mrs. J. W. F. Harrison, known by her pen name "Seranus," was the musical and then the literary editor of "The Week," and Sara Jeanette Duncan was also an editor.

It was at this time, while Mrs. Harrison was its literary editor, that a new genius climbed those dingy stairs. "A tall, dark young woman," says Mrs. Harrison one whom we would gather was difficult, almost repellant in her manner, a victim of sad

(*Continued on page* 42.)

Literature and Journalism ---A Criticism

From one special correspondent I have received certain questions, the answers to which embrace those requested by other young writers along the same line.

This correspondent encloses a poem, a short story and a play. She asks for a frank expression of opinion on each, and also wishes to know which of the Canadian magazines pay for all publications, and how a young and inexperienced writer may obtain his or her first "start."

My reply is that all magazines, Canadian or foreign, that are worth writing to pay for all material accepted, and that the best test of the value of work is to send it persistently to the best magazines.

This special correspondent shows through her letter, a real desire to write, the sincere feeling which lies at the root of all expression of life in art. The MSS. does not yet exhibit originality or any special "gift," yet the gift must lie latent behind so strong a desire.

Originality, the germ of story writing, does not come "naturally" as most people imagine, any more than the bird-like voice of the great singer arrives at the beauty and spontaneity in which we hear it without long study and much practice. Originality is the result of a study or a strong realization of life, and this knowledge, this feeling for life, applied to the story-form.

To a young writer, therefore, the first concern must be with life itself, by which I mean the looking into and the living of that which is fundamental, until one finds certain phases or circumstances of life so vital that the imagination is seized and stirred thereby. And so this desire to write, coupled with an experience of life, brings the student to the place where he is willing to work very hard and to accept a slow success, and one must be ready to study short story writing by the only possible process: the study of life, the study of literature, the study of story-forms and the technique of plot-making. Also one must acquire patience to write and re-write until the work becomes actually human and arresting. A helpful text-book, as to plot-forms, is written by Henry Albert Phillips, and called "The Plot of the Short Story." It may be ordered through the publishers, Stanhope-Dodge, of Larchmont, New York.

Many amateur MSS. read as if they were invented for some strange effect and could not really happen in every day life. Strangely enough, this may come from the very fact that the episode chosen did actually occur, but the writer had not sufficient experience in the use of material to make it appear life-like.

The most difficult of arts is to go direct to the heart of life so that the reader is made to experience the emotion of the writer through the fictional character.

It is a great thing to be young and to want very much to write. For Art is old, and like most beautiful old beings is very kind. Follow her faithfully and she will lead you, through difficulties, perhaps, into the land of far prospects and great rewards.

The Peacemaking Perambulator

By
THEODOCIA
PEARCE

Illustrated by Mary Essex.

A Humorous Sketch in which all ends happily for Rosie, Little Billy, Teacher and Principal Blain

"I don't give a hang if you want blue paper all over the house—inside and out."

ROSIE MARTELLO, of the third row, fourth seat, spread out the starched skirt of her pink frock impressively, and awaited her turn in the spelling lesson.

Rosie was very confident and self-assured.

And why shouldn't she be, since she had more reasons than one?

Rosie was "smart," and she knew it. Her dad at home had told her so again and again. And once she had heard Miss Pass saying it to another teacher as she passed them in the hall, so there in itself was ample proof.

Besides, the Martellos had risen!

Years before, hadn't her grandsire earned but a few honest pennies trundling an all-glorious hand-organ about the streets of a distant city? And wasn't that same organ the family pride, although it eked out its last days in the dark and the silence of the back shed? But now—what a change! Wasn't her dad the owner of the very finest fruit store in the district, where even the well-dressed ladies from the Avenue came to buy! Rosie not only had new dresses, and a new home, but a new baby as well. He was six weeks old and "Billy."

Lastly, but not least, Rosie was in love with the teacher, and she was learning that "to love is to serve." She served her copy-book, her 'rithmetic and her speller with a diligence that would have astounded any who knew not Rosie's heart.

Moreover, she was to be twelve in a month, and she had been promised a wrist watch of real goldness. Already she felt its weight above her hand, as with the air of the reassured she pushed back the hair at her shoulder.

"Rosie, your turn now."

Miss Pass's voice came clear and confident.

Rosie sprang nimbly to her feet.

She smiled at Miss Pass. Miss Pass smiled back at her.

"Now, Rosie," she said, "spell 'perambulator.'"

"P-e-r—" Rosie began heroically, and then stopped abruptly, her tongue cleaving to the roof of her mouth. She could go no further, simply because of the limitations of her knowledge.

"Spell 'perambulator.'"

But Rosie stood dumb and rigid in her desk.

Miss Pass and the class waited.

"What is a perambulator?" the teacher suddenly questioned, desirous of helping her "smart" pupil along the way.

"I dunno," the little girl admitted regretfully.

"Come, come now, Rosie," and Miss Pass's voice grew stern, "certainly you know what a perambulator is. Why, you have one at home."

She had heard of the six weeks-old wonder.

Rosie's mind made a flying mental inspection of their house from cellar to garret.

"Does everyone have them?" she asked bravely.

The class tittered.

Miss Pass shook her head negatively.

"Not everyone, Rosie, but you have."

"Well," Rosie blurted out, driven to desperation, "I guess it's the new kind of peanut stand we've got."

Instantly the class was in an uproar. Rosie could have flung defiance and scorn at those elder boys and girls for their cruel laughter, but looking to Teacher for sympathy, she saw her laughing, too.

Rosie's warm little heart froze within her. She sat down stolidly, but in spite of her resolves, the tears came. She wept bitterly. Even after the tumult had subsided and the lesson resumed, she sniffed on. Recess came at length. To Rosie it was a godsend. She filed out with the rest, her head hung down. Never again did she intend to look Miss Pass squarely in the face. Of that she was quite sure, although further future action was an uncertainty.

She sought a spot alone in the yard and brooded.

The laughter and the glad cries of the others at tag came to her. How she longed to join them and forget! But alas, was it not a duty for her to remember! Presently she heard them talking—speaking her name. The uproar of merriment that followed told her of what they spoke.

She couldn't see any joke. Ah, that was just the trouble of it—she could see no joke! What had it been, anyway? Rosie's lips twitched in spite of herself. Forgetful for the time of Teacher's heartless laughter, she raced across the yard, into the school and upstairs to the classroom. Out in the hall before the door she precipitated headlong into the person of Principal Blain. One swift glance at his face assured her of his anger. Waiting for no reprimand whatever, she ran into the classroom, banging the door behind her.

Teacher was crying, head down upon the desk.

Rosie tiptoed close to her and laid a hand upon the bowed head.

"Please—please quit it."

Instantly Miss Pass sat up, and with the aid of a much bedraggled handkerchief make a brave attempt to resume her professional serenity.

Rosie stepped back a space, awed by the unexpectedness of the moment.

"What did you want?" Teacher presently managed to ask.

Rosie looked meditatively at the toe of her shiny black slipper.

"I wanted to know about that p-e-r word—please."

Teacher reached across the space and drew Rosie close to her. Inwardly Rosie thrilled. She had quite forgotten now her idol's laughter.

"Why, it's the very nicest kind of a baby carriage," she explained.

The little girl was mute.

"Don't you understand, Rosie?"

"Yep—I do," she admitted. "And so them kids," with a gesture of disgust towards the rows of empty seats, "them kids thought I'd wheel our Billy out in the peanut stand."

She laughed harshly.

Suddenly the gong resounded through the hall.

"We'll fix it up splendidly," Miss Pass assured her, as she crossed to the door, whilst Rosie made a scurry to her place.

Presently "them kids" filed in, unconscious of the stern scrutiny of one—Rosie Martello. Lessons were resumed. Apparently the storm had abated altogether. But within Rosie was a vortex of perplexities.

What had made Teacher cry?

Instinctively she sought an answer in Principal Blain. Often she knew he visited the rooms at recess, and quite often it was theirs, for Rosie "stayed in" sometimes. She took the matter quite to heart. It would be settled—she would see to that. Slyly she tore a sheet from her scribbler and laboriously wrote:

"Dear Miss Pass,—

"Are you going to lose your job?

"Yours truly,

"Rosie Martello."

This she skillfully shifted to Teacher's desk, simultaneously with a trip to the waste basket.

Teacher read it hastily, then catching Rosie's awaiting glance, she shook her head slowly. Rosie did not this time see Teacher smile. If Teacher wasn't going to leave them—well, she was happy. And if Principal Blain caused any more tears—here thoughts became chaotic.

That evening at home Rosie was permitted to rock the six-weeks-old bundle of redness.

She was in her element, when suddenly the incident of the afternoon smote full upon her consciousness, and yes—her happiness.

She eyed "Billy" pitifully.

"I guess we'll fix them kids sure," she whispered. "If you got-a this country name, you kin have-a this country baby carriage."

But Dad Martello was opposed to the new proposition. He couldn't understand such a little baby really needing anything.

Rosie brooded for two successive nights beneath her blankets. Then came Friday. After class she lingered, feigning to tidy her desk. But Miss Pass was wiser than the spoken word credited. She came down the aisle and stood beside her little pupil.

"What is it now, Rosie?" she questioned.

Rosie stood up purposefully.

"Do them p-e-r baby carriages cost much?"

Miss Pass was surprised.

"Why, Rosie, that isn't bothering you *yet?*"

The little girl's eyes welled with tears. Miss Pass quite forgot the teacher duty and became sincerely the friend.

Then did Rosie wax eloquent, showing in her speech great partiality for "Billy" and small consideration for Dad Martello's opposition.

"He isn't goin' to be laughed at, if I know it," she ended proudly. Rosie was sternly antagonistic.

Later, she "walked home" with Teacher, a privilege not to be treated lightly. Rosie hoped they might pass some of the older girls. But she hoped in vain. Her defiance was a proposition latently solved as they walked.

Before Teacher's house they paused.

"You will believe something nice will happen for Billy, won't you?" Miss Pass pleaded. "You know, we always get what we want if we want it badly

The Second and Concluding Installment of the Fairy Story

A ROSE ENCHANTED

By VIRNA SHEARD.

Illustrated by Norman Price.

UP and over the garden of the fairy king flew the six grey elves bearing between them the golden earth-filled pot from which grew the wonderful rose-bush.

On and on they flew making signs now and then to each other, and gazing intently down on the country with their great goggle eyes in search of the land-marks that were to guide them.

It was a long journey, but their grey wings did not easily tire, and they were always faithful to the orders of their mistress. Now, though, they were troubled and very sad, for each one of them had adored the little princess even with all her wilful ways and selfishness, and they deeply regretted the magic that had in the twinkling of an eye turned her into a flower.

Dumbly they communicated this to each other and their eyes filled with tears when they rested for a moment on the exquisite red rose.

It did not seem to them the punishment fitted the fault for which it was given. If the Princess Jewelette had desired the string of moonstones, they thought she should have them. It was for *her* to choose and *others* to give up,—to their way of thinking.

Beautiful as the Lady Mayblossom was, she was not to be compared to the fairy king's little daughter. She had seemed made of snow and peach-bloom—and her hair was like copper spun fine as cob-web. Always when the elves looked at the princess, this red-gold hair had dazzled them, and they —so devoid of color—so like the grey fog, and the grey clouds, and the grey river mist, that they could easily be lost in any one of them, worshipped her, as long ago mortals worshipped the sun.

Therefore, they flew onward with something almost like anger in their hearts. But they were good elves and struggled to overcome this feeling, knowing how just their ancient mistress had always been. For long years she had given herself to deeds that brought only blessings to mortals and fairies, and indeed, to little grey elves as well.

Onward they flew until the sun rolled down behind the hills and into the sea.

Then the river that divided the fairy country from that of mortals came in sight, gleaming across the twilight land like a silver embroidery.

As the moon rose they flew over the river, and now in the country of mortals the King's Palace and wide court garden appeared. The garden was walled by cemented stones of red and green and violet grey, and at intervals stone dragons with faces set and fierce kept perpetual watch and ward upon it. In the moonlight these looked like living things, and the elves shuddered as they flew, for never before had they been beyond the river boundary.

They flew with fast beating hearts to the great gates of the wall. Here the dragons set in the side pillars, were more fearsome than any of the others, for their eyes were lit with red lights and their wings seemed lifted for flight.

The grey elves looked about in dumb terror; but the orders of their mistress were imperative, and the golden pot with the rose-bush must be set within the garden.

With a last wild effort of strength and courage they darted over the wall, found the path and gently lowered their burden beside it.

The light of the full moon touched the half-brown rose to almost unearthly beauty, and the golden pot shone against the grass as though the sun had left a spot of brightness there. The grey elves turned their big troubled eyes around the unfamiliar garden and then back to the rose-bush that seemed to them dreadfully lonely in this unknown land.

Yet they could not discover that it looked strange or out of place. No—it was just an ordinary rose-bush bearing a red blossom of unusual beauty as far as anyone could see. Still their hearts misgave them, and they would gladly have carried the golden pot back the way they came.

But they were loyal to their old beloved mistress, and knew they must leave the little lovely rose-princess to her fate. So one by one they climbed up the rose branches, for the grey elves are small and light in weight as moonmeams, though they are strong to lift and carry. One by one they reached up and touched the rose with their tiny pointed hands, gazing at it with dumb longing. They leaned their faces downward, then shook their heads to one another. "No!" "No!" There was no perfume. By signs they spoke to the rose and bade her hold the magic essence fast; *never* to let it escape at dawn or dark, or in the light of the sun or moon, for that meant *death*.

Passionately they warned her of this impending tragedy, this desperate peril! They tried also to comfort her by saying in pantomine that some day her godmother might send them to bear her home again and lift the enchantment that bound her. They strove to remind her of the wishing-ring her father, the King, had chosen; for though the wish had no power in the land of mortals unless used there, yet he might find his way over the boundary river.

But alas, this thought gave them little hope, for although the fairies were permitted to enter many countries, to this one, only the elves, so far, had found the road.

The mortal king's garden was sweet and still and scented by innumerable night-flowering trees. Here and there a bird made restless by the vivid moonlight, sang a few sleepy notes. A fountain played ceaselessly, and the sound of the falling water was like a lullaby.

The little elves would gladly have curled down under the rose leaves and gone to sleep, but the night was slipping away, they had performed their mission, and must return with word of its accomplishment.

.. th many sighs they lifted their grey gauzy wings and flew away toward the fairy country; so the rose-bush was left without friends in the wonderful garden.

The wind before dawn blew over its green leaves and the red flower swayed back and forth. At earliest light a humming-bird darted around and around it as though seeking for some sweetness, and finding none.

Then came the head gardener and looked the plant over, apparently puzzled. He examined it with minute care through his big horn-rimmed spectacles and shook his frosted head, for he was a very old gardener.

"Where be thee come from?" he questioned, for he always talked to his flowers. "Where be thee come from, thou pretty thing? Art some gift-plant a lady ha' sent His Majesty? Ay! Ay! that be likely." Then he laughed softly. "Pretty thing!—pretty thing!—" he repeated, "there be no lady half as lovely as thee—else had my royal master wed long ago. None so lovely as thee I warrant, nor half so sweet." Bending down he almost touched the rose with his old wrinkled face "or half so sweet," he said again, dreamily, then lifted his head and looked puzzled. "Why," nodding, "why, bless me, pretty one! Thou 'ast no scent! No scent at all—an' I be keen to catch the scent o' roses! What now — what now? Hath a moth rubbed thee, or one o' those long-beaked hummers?" He rubbed his white head and ruminated, then went along with his basket of tools.

"'Tis none o' my affairs," he soliloquized. "I'll let it be, gold pot an' all. But a rose wi'out scent, she be not a rose, say I. She be not a rose. I would na ha' such in my rose-garden. I must let be—let be, though. But give me a rose wid scent, say I, even if it be a common hedge-rose, or a cinnamon bud, small as a button—Ay; I'd sooner ha' a road-side briar sweet-scented, than yonder beauty. A rose without sweetness—she be like a woman wi'out love in her heart. Ay! Ay!"

Muttering to himself he went his way among the flower-beds.

Sunlight flooded the garden at high noon and it was a place filled with life and music. Butterflies hovered over the rose-bush—then left it. The bees hesitated on their flight near it, then passed by. A white moth touched it fleetingly; and none of these returned.

Only the sunlight seemed to abide with it—the sunlight common to all.

(*Continued on following page.*)

She looked up into his face and smiled happily.

Every woman who buys Bonds stands behind a soldier.

A ROSE ENCHANTED

(Continued from preceding page.)

By and by a group of courtiers strolling gaily past noticed the rose-plant in the golden pot, for no flowers had hitherto grown near the bridle path.

"Heigh-ho!" sang out one young cavalier. "By St. Elizabeth—the lady of roses—in truth here is the pick of them all! His Majesty must be growing extravagant when he has his bushes potted in gold! Methinks I will clip the blossom—I know one could wear it most charmingly in her hair. A red rose 'gainst such raven hair, as I know of—well, 'tis beyond words to paint the picture!"

He touched the stem of the rose, and was about to break it, when one of the little court ladies stayed his arm.

"Nay! Do not pluck it, my lord!" she exclaimed warningly. "I have a presentiment that the King would not have it touched! See! It is a most rare blossom, and after all, it belongs to His Majesty."

The cavalier laughed. "Here's a to-do!" he said. "What is one rose more or less, sweetheart! Here to-day—gone to-morrow! 'Gather ye roses while ye may,' some poet hath said. The leaves of this one will be scattered on the bridle path e'er two moonlit nights go by."

"Not so!" she answered. "It is but half-blown. 'Twill live a week." Then she leaned down to it. "Why pri'thee," she cried, "it hath no perfume! Now, my lord," laughingly, "you will be content to leave it. There are a thousand scented blossoms growing in the rose-garden free for your taking."

He frowned and tweaked his small mustache. "I desire what I desire," he said. "If I desire a scentless rose, 'tis my own affair. This is the one I would have, and I shall proceed to pluck it."

The little maid-of-honor spread out her brocade skirts and stood before the rose-bush.

"Thou shalt not! Thou shalt not!" she cried defiantly. "'Tis the King's rose and very specially set in this golden pot!"

"With all deference to you, dear lady," he returned, bowing low, "I most certainly shall—golden pot or no!"

So saying, he swung her lightly to one side and caught the rose stem to break it; but one of the thorns went deeply into his thumb, and he shook his hand free angrily.

The little maid laughed, with much delight, and stepping again between him and the golden pot, danced lightly before it.

"Little torment!" he muttered. "The mischief is in you, and a devil in the rose-bush! I have pierced my thumb to the very quick, and will not be able to touch my guitar this whole evening! I gainsay the dastardly thorn hath run through a nerve, for it throbs to the elbow!"

At this the maid-of-honor went into a perfect gale of merriment. "Alack! Alack!" she cried. "Call the court-surgeon! My Lord Harry hath stabbed himself with a rose-prickle!" So making merry at his expense, she caught her flowered gown over her arm and ran after the others, leaving the young cavalier to follow sullenly after.

When the sound of their voices had died away, the rose-bush was alone again.

Was it always to be so? she thought. Would everything pass by and leave her? She longed even for the summer breeze to keep her company, to stir her crimson leaves, and sway the green bush of which she seemed to be a living part. For, most strange of all, the Princess Jewelette, though changed to a rose, in some magic way was still the little princess, and by a mystic power could see and hear and feel and think, even as she had at her father's court. But she could express nothing; no power was given to let any know of the enchantment that had befallen her.

Again and again in spirit she lived over the fatal hour in the garden, and traced each action that led up to the moment her godmother had so deliberately wrought her doom. Most horrible indeed it seemed to her, and fear and loneliness took up their abode in her heart.

Beautiful she knew she was as a rose; but to be only a rose, a thing plucked for anyone's pleasure perchance, or torn by the wind and beaten by the rain, as must surely follow should she outlast the summer! She shuddered as she pictured her fate.

Then slowly the balm of memory came to her. Her godmother had promised that while the magic perfume was held in her golden heart she would not die. Some small comfort crept through her. Little by little the trembling that shook her red leaves ceased.

But to what end should she live? she questioned. Everyone and everything passed by. One rose in a great garden! Who would care if it lived or died? And a rose without perfume was a disappointment. None would desire it except for a whim, as the young cavalier had. The bees and butterflies and humming birds would all leave it untouched.

No man or maid would give it a second thought once they had discovered it was scentless. The old gardener had been right. It was better to be a common hedge-rose that smelled sweet, or a highway briar that perfumed the air for tired travellers.

True, there was the perfume locked under her curled leaves—but that she must hold fast. Death followed if she set it free. Her godmother had said so. The grey elves knew and they had warned her. She must hold the perfume very fast. If none plucked her from the stem, and the wind and rain did not loosen her crimson leaves—perhaps—perhaps, she thought, the king, her father, would come with his wondrous wishing-ring that could turn her back into her own beautiful self! With the desperation of despair she clung to this thought. Then came another. She remembered that none of her people had ever, ever found their way across the boundary river to this country. To other countries they had often gone—but they had been warned not to cross the river to this one.

Black grief filled her heart. There was no way out of it all, she thought—no way, no way. Memories of her wilfulness, her unutterable selfishness, her constant haughtiness, haunted her as out of a mist of pain. This was indeed punishment for all her selfish deeds, but a punishment greater, it seemed, than she could bear.

At last one thought only dominated her, and it was that she must hide and cling to the magic perfume or she would die. For if she lived on, help might come. Her father would not forget, and the grey elves would entreat her fairy godmother to break the spell of enchantment.

Mortals she did not fear so greatly, for the rose branches were beset with sharpest thorns, but the high wind and the pitiless rain and the hot sun of noonday—these filled her with dread unspeakable.

The noon passed, and the flowers in the garden grew drowsy in the quivering heat.

No one came by—for there were many other roadways and gates, and none would take the bridle path when the sun was high.

After the merry court at her father's palace, this was desolation to the little rose princess. A very passion of homesickness swept over her. She longed for anyone she knew—even the dumb grey elves—when faintly, and afar off, she heard the sound of horses' hoofs upon the beaten path. A faint interest stirred her, for the hours had been so long and monotonous.

Soon a man dressed in black came in sight, riding a great black horse, and beside him rode a woman with snow-white hair, but none could tell her age, for her eyes were so merry and young.

Behind these riders came two little grooms, who looked bored and preoccupied with their own affairs. They rode grey ponies, and were dressed in gay-colored cordovan leather jerkin and leggings laced with silver cord and thick-set with loose-sewn silver buttons, that jingled like little bells.

The rose wondered who the man upon the great black horse could be. He filled her with awe, he was so grave and dark and strong. Mortals were new to her, and this one was not at all like the merry ladies and gentlemen who had passed in the morning. They were not so different, except in size, from the folk of her own father's court. But no two could be more different than the cavalier who pricked his thumb and this man upon the black horse. The grooms were simply grooms such as might be anywhere—she thought—but the woman with her white hair and sparkling eyes was different again from any she had seen.

She wondered about her also, and listened intently to the sound of their pleasant voices as they drew slowly near. When a word drifted to her she understood it, as she had the words of the gardener and the little court-maid and the cavalier.

Of this she was very thankful, and she hoped they would not pass without seeing her. She longed to have them stop, if only for a moment, for the garden was so wide and lonesome.

She had forgotten she was a rose, until the riders were close beside her, and she heard the woman's voice speaking eagerly. "Look, my son!" she exclaimed. "How lovely a thing! Saw you ever such a perfect rose? Yet what extravagance to set a carven gold-pot beside the bridle path! It is quite lost," she laughed, "but in truth the rose is worth it—it is a very marvel! I must dismount and breathe its fragrance!"

"Nay, my mother," the man answered, "it shall be brought to you."

He beckoned to a groom. "The Queen desires yonder rose," he said; "pluck it carefully, and strip it of thorns."

The groom bowed, and turned to obey, but the Queen-Mother checked him. "No! No!" she commanded. "With all the thanks in the world, my son—I will not have it plucked. But I would see it closer. Bring hither the golden pot."

The New Serial

Who Goes There

begins next month in the Christmas Number. This is one of Robert W. Chambers' newest and best stories, never before published serially in any magazine.

Don't miss the opening Chapters

The groom sprang to obey, and brought the rosebush to the Queen's side. She bent down from her horse, lifting the blossom to her face. Presently she looked up with a little smile and shook her head.

"It is without perfume," she said, "quite without. How disappointing in so wondrous a rose!" Then to the groom—"Take the plant away."

The dark man smiled also. "You are mistaken perhaps, mother mine; the rose is only half-blown, you see—" She shook her head again.

"'Tis but a small matter, your Majesty, but I am right. It has no vestige of sweetness."

"Bring me the plant," the King said to the groom.

The golden pot was lifted again, and the King drew the rose towards him. "In truth you are right," he assented. "It has no sweetness, but instead is beset with most villainous thorns! A rose without perfume is like a woman without a soul, methinks. Yet withal, this is a rare and lovely thing. Wilt change thy mind and have it?"

"No, dear heart," she refused. "I would rather have a bramble that was sweet. Perchance I am fondest of pansies, after all. They look up at me, and remind me of children. Here in this great garden, where are no faces so innocent."

The King frowned. "We need no children in the palace garden, my mother," he returned. "The times are full of peril on land and sea. My nights and days are overfilled with anxieties for the State—and thee. We need no children."

The Queen-Mother sighed, then turned the subject lightly.

"Well, pri'thee, 'tis a rare flower, and a costly pot. Who could have brought it hither so far from the rose-garden?"

"Perchance I have a friend I know not of," the King answered absently. "Of givers of gifts there is no end." So speaking, they passed through the gates, and the rose was again left alone.

"The King!" she thought. "So that was the mortal King—of a land of mortals! Of a certainty he was good to look upon—though one would not think to find a king so grave and troubled."

The Queen-Mother had more of youth in her eyes and smile, than he.

Was that the way, she wondered, of kings in this new land? No one in the fairy country showed such weariness. What could these perilous times be—what the heavy cares of State? A feeling of pity stirred within her golden heart as she thought.

That a king should look so sorrowful, she sighed. What then was the use of being ruler over a country of mortals? Strange that his eyes were so grave in his young face—strange the note of bitterness in his voice. Why should there be no need of children in the garden? What could befall them but joy? It was all a puzzle to the rose princess, and it took her thoughts away from her own doleful fate.

All through the late afternoon and on through the tinted twilight—on into the moonlit night, she wondered and wondered about the young king, and sighed and pitied him. She forgot even to be lonely, though the birds and butterflies were asleep, and only the flitter-mice, the lantern-eyed owls and other fly-by-nights were abroad. Indeed, as dawn drew near, she had forgotten to grieve over her own sorrows, and only thought of his.

His words haunted her. "A rose without perfume," he had said, "is like a woman without a soul." Such words should have angered her—perhaps—but they did not, for she was not a rose without perfume.

Remembering this, she folded the leaves still closer about her heart. Death—death—would follow should the sweetness escape. Then, should the King ride by to-morrow, he would see only a withered flower upon the stalk, or a scatter of red leaves on the bridle path. There might be a scent of attar-of-rose on the air—nothing else. She shuddered and shuddered, then, as the night had been long, grew drowsy and slept as flowers sleep.

A week went by, a week of sultry heat, then one morning the old gardener came.

"Thou art a long-lived rose, my pretty," he said, pausing. "A long-lived rose. But the wind will blow up, and the rains will come. Roses be like joy, my pretty. They last not long."

So he tottered away. More and more lonely grew the little rose-princess. Over and over she counted the sum of her selfish deeds in fairy-land, and regretted them. For she had come now to know both sorrow and regret. Through all these intolerable hours she watched for the young king and thought of his grave face. But he did not pass, and the memory grew to be like a dream.

On the eighth morning, though, he came, one of the gay grooms riding behind. The rose heard the jingling of the silver buttons before they came in sight.

His Majesty was in black, as before, and rode slowly on his great black horse, for the day was warm. They had almost passed the rose-bush when the King spoke.

"How many days have gone since we took the bridle path with the Queen?" he asked.

"Eight days, your Majesty," replied the small groom.

"Eight days! And the rose on yonder bush still blooms!" the King exclaimed. "Sure 'tis not the same blossom, Nicholas?"

"The very same, your Majesty," he answered. "I noticed there was no other bud on all the plant but this alone on the topmost branch."

"Strange!" said the young King. "Eight days.

The Passing of The Old Maid

By JEAN GRAHAM.

The Exit of a Type No Longer Aidful

MANY times during the last ten years have we heard and read the wail over the disappearance of the old-fashioned grandmother—the dear old soul, who sat in the chimney corner and was beloved by a host of grandchildren. Her hair was always silvery, her hands were always toil-worn and she had an inveterate fondness for a large apron. That dear old grandmother is vanishing so swiftly that it is hard to obtain a farewell glimpse of her form. The grandmother of to-day seems to defer the silvery locks—and when they do arrive, dresses them in the most becoming fashion she can find in the coiffure pages of the magazines devoted to women's interests. Her toil-worn hands are properly treated with cold cream and other aids to loveliness, until they are quite presentable, and she wears an apron, only when such a protective array is absolutely necessary. She can talk politics and dehydration, and it is more than likely that she knows about the most famous stars that are twinkling in the movie firmament. She may not always be on hand to tie up cut fingers and spread vaseline on a burned wrist; but she is, perhaps, more of a chum than the grandmother of the chimney corner.

We notice the disappearance of another figure, familiar to our childhood days. Where, oh where is the maiden aunt? In fact, we might go further and ask: "Where is the Old Maid, herself?" Yes, the unmarried woman of thirty, forty, or fifty years of age and "upwards" is to be found in every community—but she is not the Old Maid of yesterday. The Old Maid of conventional pattern is following the dear old grandmother into obscurity—and may she have a safe journey to the Land of Used-To-Be!

There was a certain age at which the unmarried woman was supposed to drop all the airs and graces of youth and suddenly to assume a garb and manner suggestive of retirement from the matrimonial competition. A few years ago, I remember hearing a severe and stately dame from Boston lamenting the frivolity of the modern spinster. "It seems so unbecoming for unmarried women of mature age to be called 'girls' and to wear such youthful hats. Why, I remember that, when I was over twenty-five years of age, I was expected to wear a bonnet. Really, I do not understand the modern maiden lady." The Bostonian of the old school is probably busy with war work to-day, and may be reconciled by this time to the extremely active and effective bachelor maid, who has taken the place of the demure spinster who considered a bonnet the proper headwear for all the unmarried sisterhood "above twenty-five."

The very expression, "Old Maid," was dreaded by many a young person—and, no doubt, a host of early and unconsidered marriages took place because the aforesaid young person was in haste to be fore-armed against such a title. It was a case of better to have been married, at all costs, than to have been left, "a faded rose on the ancestral tree." In fact, the unhappily-married woman who mourned the alcoholic excesses of her erring husband would speak in pitying accents of her unwed sister.

Not Without a Romantic Story.

Even the Old Maid, however, had her romantic aspects. There was the one, for instance, who had suffered from that mysterious experience known as a "disappointment." In Mapletown, to be sure, there was Maria Johnston, whose blighted romance was retold to every newcomer. Her lover was a perfidious young man, a handsome creature with dark eyes, who suddenly left town about two weeks before the wedding was to have taken place and married "some girl in the States," before the year was out. It was horrid of the youth—I always wondered why these villains were dark-eyed—and, of course, Mapletown, was sure that he would come to no good end. In the meantime, Maria had "pined," until she looked like an anaemic lemon—an aspect that was heightened by the wearing of sad-colored and unbecoming garments. Maria, after the passing of a decade or so, seemed to take a pensive pride in her bereft condition, and would sigh over wedding presents and shake her head at the sight of a trousseau, as if all these were a vain show and man was a poor creature, after all, in whom it was unwise to trust. What had originally been a mortification had become, with the passing of years, somewhat of a distinction, melancholy, but not wholly undignified.

There was Melissa Gage, an entirely tragic young person, whose lover had likewise proved a defaulter in the court of Cupid. After becoming engaged to the gentle Melissa and giving her a pearl-and-turquoise ring with their initials intertwined, the gentleman became enamored of the charms of a widow from Montreal, who was visiting in Mapletown. Wherefore, they departed unobtrusively one stormy afternoon and were married in haste, while Melissa actually "went into a decline" and died, gracefully and decisively, ere she had reached her thirtieth birthday. Melissa was regarded as rather weakly and tamely sentimental, but "very much of a lady" in her gentle despair over the lover who had proved so much of an illusion.

These spinsters with a "blight" in their young lives were rather the exception, and the Old Maid was usually an exceedingly practical person, with an inordinate horror of dust or disorder and a rather contemptuous regard of man as a being who would make muddy tracks on the kitchen floor and disarrange the parlor ornaments. Sometimes she developed into the Old Maid Militant, who invariably spoke of man as an inferior creature. There was Miss Caroline Briggs, for instance, who was honestly distrustful of every man, except her father, who had been the leading doctor in Mapletown for many years and who had bequeathed his sturdy virtues of independence and integrity to his only child. Miss Caroline, curiously enough, in view of her scorn of masculine pretensions, was decidedly mannish in her style of dress. She had the courage to appear in tweed suit and a stiff collar, when the rest of the feminine world went in fluffy muslins. Even at a garden party, Miss Caroline wore nothing more frivolous than a dull black silk with the plainest of cuffs and collar.

Old Maids and New.

There used to be a general tendency to regard the Old Maid as a person over-concerned about trifles. Most of the Old Maids of Mapletown, however, were given to good works and many activities, with little to repine at or regret. They took life philosophically, and usually found a "cause" in which to interest themselves. Has anyone ever realized what a boon the W.C.T.U. and the missionary societies were, to the woman who had a small round of duties and little opportunity for hearing of the outside world? Women's clubs and associations have often been abused—chiefly by those who are doing very little for the good cheer of the community. How seldom we have stopped to consider the blessed break in the monotony of lonely lives which came with the formation of a missionary society or a reading circle—while a travel club meant an approach to dissipation.

The true Old Maid, who moved up (or down) to the traditions of her estate, was absorbed in the most minute affairs of the household, to the exclusion of larger issues. Cooper described her well, more than a hundred years ago:

"For threescore years this life Cleora led,
At morn she rose—at night she went to bed."

It was no wonder that the young girls who regarded Cleora's existence were alarmed at the prospect of single blessedness and were ambitious to lead the more varied life of matronhood.

In England, the lot of the old Maid has been sadly limited for several centuries, because there was so strong a prejudice against a woman having a "career" of any kind. In reading English novels, one is sometimes amazed at the brazen resourcefulness of the match-making mamma. When we consider the deadly monotony and the littleness of life led by the Old Maid of the British Isles, we see that the mother's manoeuvres, though sometimes desperate, were inspired by genuine maternal regard for what she considered her daughter's highest interests. The Old Maid of the land seemed to spend her time in embroidering altar cloths or in visiting the poor. I believe that many poverty-stricken citizens must have hated her heartily, but she seldom wearied in well-doing. I remember rebelling against the "Girl's Own Paper" heroines, long ago, because they always carried soup and jelly to the poor, and they had a way of admiring the curate which sometimes led to a marriage of the most prominent helper to the dejected clergyman and a season of depression for "the others."

Thanks to Canada's newness and the demand for work from everyone, there have been no such desperate match-makers in the land as these anxious matrons of England, nor have we seen such utter devotion to the trivialities of life on the part of our spinsters. It is true that we sometimes speak of this village or that as "A Canadian Cranford," but it takes time—a great deal of time—to make a Cranford. There certainly has seldom been found in this country an approach to the gentleness and the timidity of Miss Matty. The Canadian type more closely resembles that of New England, which is typified in the story of the elderly maiden who had corrected a young man who addressed her as "Mrs. Jackson":

"Miss, sir—Miss, from choice."

There is a certain independence about the Old Maid of the New World (which sounds like an Irish phrase), such as society has not seen before.

The Gossipy Old Maid.

To the Old Maid was attributed much of the idle gossip of the small community. Here, again, the unkindly words could be accounted for by idleness, rather than by sheer malice. The mischief which Satan finds for idle hands to do is nothing in comparison with the evil which he accomplishes by using idle tongues. You see, it is a necessity for most of us to do quite a bit of talking. A married woman can discourse by the hour of the virtues of her husband and the amazing ability of each of her children. But the Old Maid was simply obliged to have recourse to the neighbors for the personal element of her conversation. Consequently, there were always several Old Maids in the community who were regarded with either fear or hope, according to whether the caller was anxious to say nothing which could be "misrepresented," or was desirous of hearing something not exactly creditable of how Mrs. B———'s husband made his money or Mrs. C———'s husband lost his position.

There was a certain inquisitiveness about the genuine Old Maid's nature, which was highly amusing when it was not irritating. There was Miss Charlotte King, who had a positive genius for discovering details of family history or matters of household economy. She would have made an excellent income in the modern world as a private detective, while, as a journalist, she would have had a "scoop" every day. She called constantly at the dressmaker's in order to find out just what parties were about to be given and what journeys to be undertaken; she made every business call on butcher, baker or grocer an occasion for finding out what her neighbors were buying, and why. All this curiosity was without envy or malice—it was merely a case of wasted energy. In these days, Miss Charlotte would have been invaluable in the country's service and would have proved a veritable artist in espionage. No pro-German could have escaped her eye, no Teutonic propaganda could have deceived her ear.

There was the Old Maid who rejoiced in church work and who joined every association connected with religious activity, until she became a positive nuisance to the minister. There was Miss Harriet Baird, for instance, who was nicknamed the "assistant pastor" of Knox Church, and who was ready to advise pastor and elders concerning every change in service or officers. She was organist in the Sunday School, a prominent official in the Missionary Society, a member of the choir and an organizer in every movement which aimed at the betterment of Mapletown. Finally she awoke to the fact that the place was without a Humane Society—and she turned all her energies to protecting cats and dogs and writing to the papers about drivers who beat their horses. The small boys of Mapletown—always the sworn foes of the genuine Old Maid—used to tell her horrible tales of cruelty and let Miss Harriet's righteous wrath reach its height before revealing that "there was no such cat"—and, anyway, they couldn't remember the names of the boys who had stoned it. Mapletown heaved a sigh of relief when Miss Harriet's activities were ended by a fatal attack of typhoid fever, and on her tombstone is the inscription: "There remaineth, therefore, a rest for the people of God."

The Departure of the Old Maid.

The expression, "Old Maid," has come to be recognized as belonging to a type rather than to an individual. It implies a Martha-ish tendency to be careful over many things, and to sacrifice the spirit to the letter. In fact, the expression, "a perfect old maid," frequently finds itself attached to a man who insists on fussing.

A Wonder Child and Clever Mother

By THOMAS BENGOUGH,
Secretary, Toronto Vocational Committee.

How Winifred Stoner with her Marvelous Memory, Physical Perfection and Musical and Linguistic Ability was Trained---Interview with her Clever Mother---Hints on "Natural Education" for Other Mothers

It was my unique pleasure on a recent Saturday afternoon to shake hands with and talk to a child-wonder, and to interview "the most wonderful woman of the age," according to the opinion of Mr. S. S. McClure, the New York publisher, who says that Mrs. Winifred Sackville Stoner will "revolutionize education throughout the world." Such a testimony is all the more remarkable when it is remembered that Mr. McClure was the man who introduced the Montessori system into America. By the way, Mr. McClure had been to Rome to see Doctoressa Montessori only a few weeks before I called upon that lady, and he anticipated my own desire, and secured the copyright on the now-famous Montessori method of teaching. But that's another story, as Kipling would say.

Winifred Stoner, the child wonder.

I might here add that the ideals of Miss Montessori and Mrs. Stoner differ entirely on one point, which Mrs. Stoner thinks is fundamental in child-training; that is, the Italian lady bases her system on facts, and taboos fairy stories, while Mrs. Stoner sets so much store by the fairies that the password leading into her methods is: "I believe in fairies." If you don't believe in fairies, you can't accomplish the wonderful results Mrs. Stoner has achieved, and which I am about to relate. It was amusing to me, a mere man, who was not brought up in the fairy cult, to see Mrs. Stoner give Mrs. Groves the grip, signal and recognition of Fairyland; and when Mrs. Groves recited some of her fairy verses, Mrs. Stoner arched still more emphatically her wonderfully artistic eyebrows and exclaimed, "Why, you are one of us! We should have met long ago!" Mrs. Stoner was delighted when Mrs. Groves consented to preside at her lecture that evening.

Then my turn came for a chat with the mother, and an introduction to the girl.

The Child-Wonder, Winifred Stoner, Junior.

You think of a small, thin, delicate girl, with pale face, soulful eyes, peering through short-sight glasses, and a far-away look—ethereal, psychic, sickly because of over-study. Guess again! Nothing of the kind; quite the contrary. This 15-year-old young athlete weighs over 140, and is quite as keen on physical games and sports as on study. She rows, skates, fences, swims, rides horseback, and can hold her own in feats of strength with the average boy a year or two older than herself. One of the illustrations in a booklet issued by her publishers shows her in a glove-boxing contest with the male champion of the Southern States, and exhibits her remarkable physique. My medical friend who saw this picture was astonished to note that Winifred has the classic Greek development of body—the neck, upper arm and calves being precisely equal in girth. This strikingly illustrates the fact that Natural Education improves the body no less than the mind. Many scientists and educators declare Winifred to be the most wonderfully developed girl in America. Note her remarkable attainments, and the periods at which they were made:

At 6 weeks she could sit alone.

At 6 months could talk and knew colors.

At 8 months could walk unassisted.

At 1 year used polysyllables in conversation.

At 16 months could read.

At 3 years learned musical notes and played simple airs on the piano.

At 4 years learned Latin declensions and conjugations as singing exercises; received diploma for speaking, reading and writing Esperanto; wrote on the typewriter.

At 5 years wrote stories for newspapers, spoke 8 languages, translated Mother Goose into Esperanto rhyme.

At 7 years learned the outlines of Greek, Roman and Scandinavian mythology.

At 9 years passed entrance examinations of one of the largest Western Universities.

At 12 years was ready for graduation work in any university in the United States; she plays the violin and piano well; sketches from life; is an expert chess-player; and in addition to the sporting "stunts" I have mentioned, she can also help mother with any household task—and loves to do so.

Of course, a girl with such a combination of attractions — physical, mental, linguistic —has hosts of admirers among the youth of the opposite sex; she had had seven such who called during the afternoon on which I met her; but she can hold her own with any of them, and before her mother's audience in the evening was perfectly self-possessed, as well as very entertaining. She recited "Mother Goose" and other selections in Esperanto. She is perfectly normal, natural,

Mrs. Stoner, whose experiment in educating her daughter is told in this article.

The Why of the Lather

IT is the Ivory lather that makes Ivory Soap so satisfactory for bath and toilet. It is thick, copious, lively; this is because it is one tiny bubble after another instead of a thin, slimy soap solution.

It does not irritate the skin; this is because Ivory Soap contains no free alkali to smart and burn.

It rinses easily; this is because Ivory Soap contains no unsaponified oil to make it stick to the skin.

It cleanses thoroughly; this is because Ivory Soap is so pure.

You owe it to yourself to see how Ivory Soap lathers, how Ivory lather feels and how Ivory lather acts.

IVORY SOAP

IT FLOATS

99 44/100 % PURE

Made in the Procter & Gamble factories at Hamilton, Canada

She's gone!

If war work has summoned daughter from the home, or the maid to the munition factory, there are busier times than ever ahead—for women who stay at home. You need all the time-saving helps you can get hold of. See how Gold Dust helps out day by day:

Monday

Besides being laundry day, means 'picking up' and freshening the house after Sunday. Gold Dust takes care of the 'wiping up' of kitchen and bathroom, removes finger prints from woodwork and windows because it quickly and gently dissolves all oil and grease. A tablespoonful to half a pail of water.

Tuesday

After the ironing is out of the way there is time for such little odd jobs as cleaning cut glass and bric-a-brac, mirrors, windows, glass globes, lamp shades. They all sparkle like diamonds after an easy application of Gold Dust and hot water.

Wednesday

After baking there must always be a general clean-up of utensils. Gold Dust dissolves the grease quicker than soap—important to remember after shortening has been used. No soapy taste left behind.

Thursday

—is Gold Dust day for bathrooms. Gold Dust smoothly—without scratching, gently dissolves all oil and grease and quickly removes dark circles and stained rims from bath-tubs and bowls. Remember, too, to flush out the pipes with hot water in which you have dissolved a tablespoonful of Gold Dust.

Friday On sweeping day a cloth dipped in Gold Dust water freshens and purifies door sills and window sills, dark nooks and crannies, and corners of rooms and other places hard to reach where 'oily dust' sticks. A tablespoonful of Gold Dust to half a pail of hot water performs sanitary wonders, for dirt simply can't stick after Gold Dust gets rid of every particle of oil or grease.

Saturday

means extra cooking for over Sunday and the final clean-up of kitchen and kitchen utensils as well. Gold Dust freshens the ice box to receive Sunday's supplies with no danger of soap left behind. A tablespoonful to a dishpan or half a pail of water accomplishes a wonderful amount of sweet cleansing.

GOLD DUST

The Busy Cleaner

MADE IN CANADA

A Wonder Child and Clever Mother

(Continued from preceding page.)

without egotism or self-consciousness, happy and joyous; in short, an ideal girl.

How the Girl Was Trained by Mother.

Winifred's mother is still a young woman; one of those bright, enthusiastic women whom it is a delight to meet. Every fibre in her being tingles with enthusiastic life; her cheeks glow with unusual color, which heightens the impression of her exquisite complexion—she was born in Kent, England; her eyes flash with magnetic intelligence. Her smile is catching; she believes smiling is a joyous duty. These natural qualities, which she has improved by practice, make her teaching, her conversation, her public addresses most attractive and compelling. Not many children have such mothers as this remarkable girl happily possesses. Mrs. Stoner has written nine books, has taught Esperanto at Carnegie Institute, Pittsburg; has been making educational experiments for years, and had been teaching the blind in Montreal just before coming to Toronto on her way home to Pittsburg, where her husband, Dr. H. James B. Stoner, is connected with the United States Marine Hospital.

I told Mrs. Stoner that I wanted an outline of her system of training, so that the mothers and teachers who read my articles in the CANADIAN HOME JOURNAL could profit by her experiments. I asked her, firstly, why she called her system "Natural Education," when it seemed to produce such unnatural—at least unusual—results.

"It is called Natural Education," she replied, "because it means education from the first breath to the last; education that is practical and useful, that makes a child feel 'at home' in his or her environment; it is 'playing with a purpose.' All is expression, not repression; joyous service, happiness, harmonious development of body, mind and soul."

Philosophy and Method of Natural Education.

"But what is the secret of its success?" I queried.

"The ten commandments of Natural Education indicate its philosophy. Here they are." And she handed me a card saying:—

Thou shalt not whip.
Thou shalt not scold.
Thou shalt not say "Don't."
Thou shalt not say "Must."
Thou shalt not say "I can't."
Thou shalt not frighten thy child.
Thou shalt not tease.
Thou shalt not kill self-respect.
Thou shalt not refuse to answer questions.
Thou shalt not banish fairies from the home.

"On these principles little Winifred was trained, and the result of the methods is most gratifying. In the School of Natural Education, New York, of which I am director, 500 children have been trained by this method, and have been pronounced by psychologists to be exceptional. Recently this school was visited by expert psychologists from Yale and Harvard Universities, and the tots from age two to eight were put through a severe list of 180 questions covering geography, history, etc., and came off with flying colors."

"But what is the method?" I pursued.

"We boil down the essence of knowledge into jingles, and the children delight to learn and repeat them. Our school children, not yet eight years old, know the essential points of the history of Canada better than your ordinary Canadian school children of twelve and over, because we don't try to teach the great mass of details, and the points we want to impress are put in pleasant and easily digested form—a jingle. You remember how you learned the months of the year by jingling—

Thirty days hath September,
April, June and November.

Well, we just keep on jingling other facts into the children's minds. Better still, they learn these jingles while they are doing something that is useful and healthful. Instead of going through calisthenic motions with the old-time 1, 2, 3; 1, 2, 3, we set the motions to a tune, hitch up a jingle, and brighten up the whole exercise, making it a delightful game instead of monotonous drudgery. We have a Trip to the North Pole that brings in all the facts about that country, the climate, the people and their habits, etc.; and this Trip is one of the most vigorous and delightful physical exercises you could imagine. When I join in this game I kick as high as my head. We encourage enthusiasm, naturalness, freedom, and the children take the greatest delight in such a Trip. Winifred has compiled a book called 'Facts in Jingles,' which contains the rhymes my little girl, when only twelve, wrote to help her fix in mind important facts, dates, etc., in history, science, etc. The little tots in our school learn Latin roots in jingles; they have one rhyme beginning, "Leo, the lion, most savage of beasts," and going on with the root-name of other animals."

Mrs. Stoner showed me the only textbook on Geography she uses; it comprises about twenty small sheets of typewritten jingles. Yet the little children answered all the questions of the learned professors, for they have the facts, names, dates, etc., at their tongues' end in jingle language.

Mother Cat's Tail Gave Teaching Tips.

Mrs. Stoner studied pedagogy with old Mother Cat. She observed that Mother Cat does not turn her children over to aunts, grandmothers or hirelings, but teaches them herself, and plays with them for a purpose. Tail-catching is the first game; it trains muscles that later will catch mice and rats, and make the kittens self-reliant. When they play they play vitally—and then lie down and rest. There is no pretence. Old Mother Cat is closely (though all unconsciously) observing these five objective points of natural education:—

(1) OBSERVATION—they watch mother do it.
(2) ACTIVE INTEREST—they are intensely eager to do it.
(3) CONCENTRATION—for the time being they know nothing but tail-catching.
(4) IMITATION—they do the way mother does.
(5) EXPLORATION — they investigate and invent new ways of tail-catching.

This wise human mother applied these principles of natural education to her child, with the remarkable results noted.

"But what can the ordinary mother do?" I asked Mrs. Stoner.

"Every mother of average intelligence can make her child far more efficient—and herself, too. Play and love are the secrets of the remarkable results I have achieved with Winifred. All mothers who love their children can train them, and should do the training for the first few years, and thus relieve the overcrowded public schools. A child, if it is to be above the average, must have individual training. Nature intended every mother to be a kindergartner. This better training does not require any more time than the average mother spends with her child, but let her spend it intelligently and happily, playing to a purpose; make every task a game; this takes the drudgery out of life, and makes 40-year-old mothers look like 20. Do everything possible to make the child interested in things worth while. Stimulate the child's curiosity, and then satisfy it. Always answer that everlasting 'Why'?"

What a Baby Can Learn.

"How soon would you recommend the mother to begin this training?"

"Begin natural education the day of a child's birth—and before. As soon as the mother knows that the fairies are to bring her a baby, every breath she draws should be one of love. It is the mother's privilege to give her child a heritage of courage, strength, health, good cheer and love. She should prepare for this by eating pure food, drinking no stimulants, breathing and exercising much in the open air, and—most important of all—by thinking beautiful thoughts and doing kind deeds. She should make her surroundings as beautiful as possible, for we grow beautiful by looking at beautiful things with seeing eyes. I believe in the old philosopher who said, 'If you have but two loaves of bread, sell one and buy a rose.'"

"And having made such a good beginning, how shall the mother proceed?"

"When baby is but a few days old, let mother begin with a purpose by training the senses—eye and ear—first. Those first weeks and months must not be lost, and the child should be treated as a human being from the start. A child is not hurt, but is all the better, for having body, mind and soul all trained

Every woman who buys Bonds stands behind a soldier.

To make your skin fine in texture
- lovely even when seen closely

MANY a face that is attractive at a glance, loses all its charm when seen closely.

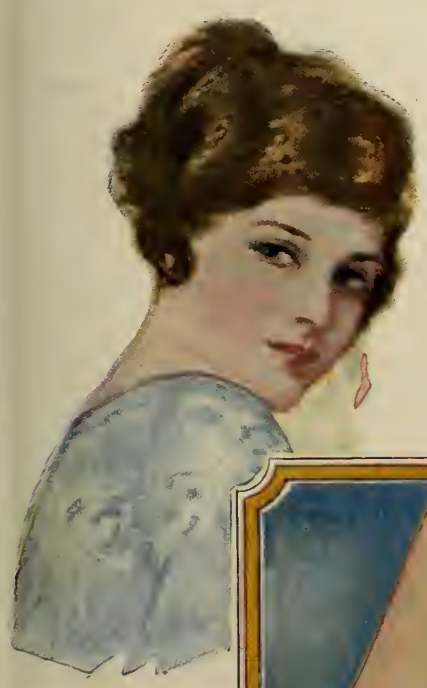
For your face to be truly lovely, even when seen closely, the texture of your skin must be fine and smooth, the pores should be *hardly visible.*

Take your mirror in hand, now, and examine your skin closely by the strong light. Notice the pores on the cheek, on the chin, on the wings of the nose. Compare them with the pores on the inner surface of your arm.

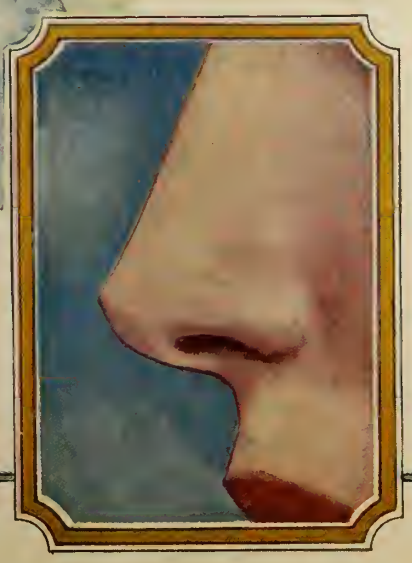
The skin of your face is more exposed to wind and dust and cold than any other part of the body. Its delicate pores contract and expand under the influence of cold and heat. Irritating dust is carried into them. They clog up and become enlarged. If you neglect your skin, it becomes in time quite coarse. The pores lose their power to contract again.

This is why it is so important, in order to keep your skin fine in texture, to use the proper method of cleansing and stimulating it with a soap prepared especially to meet its needs.

This famous treatment has helped others: Dip your washcloth in very warm water and hold it to your face. Now take a cake of Woodbury's Facial Soap, dip it in water and rub the *cake itself* over your skin. Leave the slight coating of soap on for a few minutes until the skin feels drawn and dry. Then dampen the skin and rub the soap in gently with an upward and outward motion. Rinse the face thoroughly, first in tepid water, then in cold. Whenever possible, finish by rubbing the face with a *piece of ice.* Always dry carefully.



Use this treatment persistently



This treatment, if used persistently, will strengthen the small muscular fibres and gradually rebuild a smooth-textured skin. Within a week or ten days you will notice an improvement, but, remember that you cannot correct in a day what years of neglect have caused. Only the *steady* use of Woodbury's will give you that greater smoothness and finer texture you *can* have.

For a month or six weeks of this treatment and for general cleansing use for that time, you will find that the 25c cake of Woodbury's is ample. Get a cake, and begin tonight the proper treatment for your skin. Woodbury's is for sale at drug stores and toilet goods counters throughout the United States and Canada.

Blackheads — How to get rid of them

If you are troubled with blackheads, try the treatment given in the booklet wrapped around every cake of Woodbury's Facial Soap. It tells you the cause of blackheads and how to get rid of them

Conspicuous nose pores — How to reduce them

Conspicuous nose pores sometimes spoil an otherwise flawless complexion. A special treatment for reducing conspicuous nose pores is among the famous treatments given in the booklet you get with every cake of Woodbury's Facial Soap.

Send for sample cake with booklet of famous treatments and samples of Woodbury's Facial Cream and Facial Powder

Send 6c for a trial size cake (enough for a week or ten days of any Woodbury Facial treatment) together with the booklet of treatments "A Skin You Love to Touch." Or for 12c we will send you the treatment booklet and samples of Woodbury's Facial Soap, Facial Cream and Facial Powder. Address **The Andrew Jergens Co., Limited 5211 Sherbrooke St., Perth, Ontario.**

MADE IN CANADA

Pond's Cold Cream has exactly the consistency demanded by masseurs

One application of Pond's Vanishing Cream makes your skin noticeably lovely

Every day your complexion pays toll to dust and wind

BUT WITH THESE TWO CREAMS YOU CAN KEEP IT RADIANTLY LOVELY

Begin early in the season to apply Pond's Vanishing Cream just before you put on your veil and you will find your complexion keeps its pliancy, its brilliancy throughout the most trying weather

THE rough, cold winds chap and roughen the skin; dry heated air draws and parches it. The constant strain under which we live—the ceaseless activity of crowded days, the constant effort, the lack of rest—all these things take daily toll of the complexion.

You *can* protect your complexion from the wear and tear of winter—can prevent that tired, drawn look from appearing in your face, by giving your skin the care it needs.

Every normal skin needs two entirely different creams

It constantly needs a greaseless cream to refresh, soften and keep it elastic, and at night it needs an oil cream for cleansing and massage.

Try these two creams on your own skin and see how different they are.

When you dress, rub a little Pond's Vanishing Cream lightly over your face and neck before powdering. See how gladly the pores absorb it—your complexion becomes soft, healthfully rosy and refreshed. The cream completely disappears, leaving the skin soft, smooth and free from any "shiny" look.

(Photo by Lumière Studio)

Norma Talmadge, who needs no introduction to theatre-goers, says: "Pond's Vanishing Cream leaves my skin refreshed and clear"

(Photo by Campbell Studio)

Mabel Taliaferro, famous since her wonderful "Polly of the Circus," says: "I never knew a cream could make my skin look so well"

This fragrant, dewy cream contains a skin-softening ingredient of great value – that one that skin specialists recognize as most efficient in keeping the skin supple, for giving it the transparent freshness everyone admires.

Apply a little Pond's Vanishing Cream when you motor or travel. Rub it in lightly. This will protect the sensitive pores from grit and grime, will keep your skin free from that parched feeling that generally follows exposure to dust and dirt.

For cleansing and massage you need an oil cream

Pond's Cold Cream is an *oil* cream.

Much of the value of a cleansing and massage cream depends on its consistency. Unless it is easy to work into the pores, it does not thoroughly benefit the skin. The moment you use Pond's Cold Cream, you will exclaim at its delightful softness and smoothness.

Do not expect one cream to accomplish the gratifying results you can attain by the use of these two *entirely different* creams. Neither cream will cause the growth of hair—both are obtainable at drug and department stores. Get a tube or jar of each today and try them. See how their use will improve your skin.

MADE IN CANADA

TRY BOTH CREAMS FREE

Tear out and mail the coupon before you turn the page—and get sample tubes of Pond's Vanishing Cream and Pond's Cold Cream *free*. Or send 10c and we will send you tubes of each cream large enough to last two weeks. Send today. Address Pond's Extract Co., 146 Brock Ave., Toronto, Canada

The Girls' "Carry-On" Column

By BETTY O'HARA.

Story of the Department of Occupational Therapy for the Education of the Soldiers

"IT'S just perfectly great," and four happy faces appeared at the door of the Occupational Therapy work room of the Mining Building of the University of Toronto. "You know," one of them continued, "we were only supposed to teach those soldiers for an hour, and would you believe it, two hours slipped away before we felt as if we had got fairly started. I don't know what they will say about it, but the work was so interesting, and the soldiers so eager to learn, and they actually wanted to finish those baskets this very day. Somehow or other, the time just seemed to fly, and we couldn't keep track of it. And as to watches, we forgot we possessed such a thing," and they continued to murmur in undertones to an appreciative audience which hovered near for the next ten minutes, girls who were anxious to know what it would be like to work in a real military hospital.

These girls belonged to the class of Occupational Therapy which the Government is now establishing in the Canadian military hospitals. It is the method they are using to help the men win back some of the lost ambition and enthusiasm which months of dull, monotonous hospital life, the suffering and consequent disabilities, have brought about.

Not that the soldiers are taught this work as a future means of livelihood; far from it. The work is a pastime which strengthens weak muscles and helps nervous and shell-shocked men back to health and strength. "You see," one of the instructors of this work said to me, "the massage sisters, the V.A.D.'s and the nursing sisters all help to cure suffering and pain, but the girls of the Occupational Therapy try to make the men forget all that just for a little while." He is a returned man himself, and he knows.

The room in which the girls do most of their work is a very interesting place. Baskets of all shapes and sizes in their various stages of development stood on the tables. Trays, yes, hosts of them, made of wicker with dainty cretonne, stood around in inviting array, all ready for the dainty sugars and creams, and should we dare to hint such a thing in war time, "afternoon tea." Handsome book-racks and other examples of woodcarving and leather work reposed with dignified aloofness in a corner all their own, while a green parrot and a bright little bluebird, carved and painted as garden-markers, were on guard just beside the door.

It seems queer, when we think of it, that these heroes of many battles should be taught this work or take any interest in it. But they really enjoy it, and I have often seen them work at some of these pastimes in their own account. I was rather surprised the other day, in one of the bed patients' wards, to see one of the men busily engaged in embroidery work. "How did you come to start that work?" I asked him, my curiosity getting the better of me. "You see, the time here goes so slowly, and my leg pains rather badly sometimes, so I thought this would give me something else to think about," and he looked up with a smile. "I am copying from that," and he directed my gaze to a little Union Jack which decorated the top of another patient's bed, and I must say the stitches were so even that many girls could not have made such a success of it. "Sister, will you buy me four skeins of Teazle wool; I want to make a scarf," and a good-natured Irish face smiled up into mine. When that scarf was finished, the girl to whom it was given must have been proud of it. So you see, the men are sometimes interested enough in that sort of work to try a hand at it themselves.

Uniform worn by girls studying Occupational Therapy.

The studies the Government is providing for students of this course are not so numerous, but the girl who would make a success of this work must not stop studying when the course is finished. The other day I actually saw one of the men making a ukulele under the direction of one of the aides, and it looked as useful as it was ornamental, too. The study on which stress is laid is all kinds of leather work, book-binding, basketry and bead work. The bed-side loom is very popular among the bed patients, although basket-weaving is a close second.

Besides this practical work, the girls are given one lecture a day on hospital problems, and they are also qualified to teach stenciling, metal and wood work, blocking, lettering and designing.

The girls are given six weeks' training in the work. They are then sent to the hospitals, and do half-time practical work and half-time teaching. This is continued until they are considered capable to carry-on by themselves, when they are sent to the hospital in which they will be stationed permanently. The course is about six months in all.

This work differs from all the other work done by girls in the military hospitals, on account of being under the control of the Invalid Soldiers' Commission, and not the Army Medical Corps, as is the other work. The uniform now being worn is illustrated in the cut, the working-dress having a long veil like that of the nursing sisters, and the great-coat for winter wear is an attractive dark green with leather buttons, and made along military lines to some extent. The girls, as in the other courses, are obliged to sign up for a year after the completion of their training, and for girls who do not care for work in a medical line, but would like to enter a military hospital, it gives the desired opportunity.

QUESTIONS AND ANSWERS.

I would like very much to take a course in Functional Re-Education, but I cannot afford to pay my board while taking the training. Does the Government give any subsistence?

A. B., Winnipeg.

While taking your training at Hart House in Functional Training you are given a subsistence allowance which is quite ample and enough to supply all your wants while in training, although after you have finished your course you are not given as much. Ten dollars a month is given, and a very small amount a day for subsistence. You could not depend on it to completely cover your board bill, as it is not sufficient.

We would like to do some war work. What would you suggest for a Sunday School class? Blenheim, Ont.

How would you like to adopt a couple of Belgian children? If your class could make a small amount of money, I do not think you could put it to better use. Three dollars and seventy cents per month keeps one child. Not much, is it, when you come to think of it? This is looked after by the Belgian Relief Committee. I am sure your class would be industrious enough to make a few clothes for the children, too, as the winter will bring untold suffering to the little Belgians. If you decide to proceed with this, I will give you the names of a couple of children.

Could you please tell me how long the V.A.D.'s are obliged to sign up?

J. C. L., Vancouver.

V.A.D.'s in Canada must sign up for six months after their probation, which is one month.

We would like to have the names of some Canadian soldiers who are prisoners in Germany, so we can send them parcels and write letters to them. Would you please forward the same?

ELVA and EVA.

I am sorry that it is impossible to forward you the names of prisoners in Germany, as this is all taken out of the hands of the public, and is looked after by the society for that purpose. The only way you can send parcels to Germany now is to send the money to the Prisoners of War Fund, 1416 Cockspur St., London, S.W., Eng., and they buy whatever the prisoners need and send it direct.

We live in a very small town, and there is no particular war work accomplished. There are so many troop trains going through here, and generally stopping at our junction, that it impresses me that there must be work that we could accomplish even in our small town. Could you suggest anything?

D. R.

Why do you not inaugurate a canteen service for the soldiers who are going through? A club of girls could do some valuable work in that line by

An Afternoon on The Aventine

By E. A. TAYLOR.

A Little Trip to Italy and a Glimpse at Her Customs and History

"Come and have breakfast with us to-morrow," the Contessa wrote. "I want you to meet my aunt from the North—Signora Reni. She belongs to our Italy's heroic age, and often met your Margaret Fuller, our Marchesa Ossoli."

Now, Margaret Fuller, the brilliant New England writer, does not in any sense belong to me or my country, which is Canada, but Contessa del Noti has the education of a better-class Italian girl of a generation back, when they seemed to have learned to be most economical housekeepers, also to have the most charming manners of any women in the world, and a few accomplishments, like music and dancing—and very little else. I fancy my particular friends, the three contessinas, Celia, Stefana and Lella, are being taught many things their mother never was, but I hope, with all their book-knowledge, they will learn as much as she knows of things not in books.

Noon is the Italian hour for breaking one's fast—the Contessa's time was one—and as I walked across the old city to the Aventine Hill, where my hostess lived, I passed many dark-eyed, strong-limbed laborers, sitting in the streets eating their lunch, as we would call it, though it was their first meal that day; they had done hard work since early morn on nothing but a drink of water. Richer men had gone to their offices after a thimbleful of coffee, while the children started for school on a cup of milk Exceedingly temperate and economical, Italy has two meals a day—breakfast any time between ten and one, and dinner somewhere near sunset. And judging by the vigor and grace in the figures of men, women and children I passed simple living does not seem to harm them. Then the food of my laborer friends is only a huge slice of cold, well-boiled polenta (a flour food, of the macaroni class), with a hunk of hard bread and a big onion to give relish to the whole. For supper they will probably have a very toothsome vegetable soup, which, as it takes three hours to cook properly, will not probably ever be used in countries that appear to prefer to spend time in indigestion after eating, rather than in careful preparing of simple foods before. Meat is only eaten by the poorer people here on special occasions.

Then I reached the Aventine, where the air was perfumed by the orange trees in the beautiful gardens of Santa Sabina and the Priorato. I stopped for a minute by the splashing fountains among the blossoming roses, to look across the Tiber and a part of old Rome, for the Aventine is one of the famous seven hills on which the great city, which "ruled over the kings of the earth," was built. I have often thought there were three Romes—first, the ancient city of history, about which a thousand books have been written, and whose ruins draw a steady stream of visitors to the Eternal City. Second, there is Rome of the mighty Church, which held the wild Europe of the Dark Ages a little in the fear of God; hers is the glory of great churches and galleries of art, and to her also come an army of visitors, pilgrims to the shrines of their religion or art. The third Rome is very detached from the other two, and is of little interest to visitors, being an ordinary modern city, the capital of a very modern country—united Italy. And it was in this last Rome that I was to spend my afternoon on the Aventine.

Back of the gardens, on a narrow street without sidewalks, is the Palazzo Noti, one of those enormous square stone buildings that make up so much of Rome. It is three hundred years old, and its lower windows are all barred with iron. I pushed open the great

Music and the Home Beautiful

By HECTOR CHARLESWORTH.

The Development of the Phonograph from its First Crude Form to its Present Magnificent Design

THERE is one development of the modern recording and reproducing instruments, that, while it has no direct connection with music as an art, has much to do with music in the home. Illustrations, which accompany this article, show the extent to which they have become a factor in the movement which is widely described as "The Home Beautiful."

The effort to make domestic surroundings more attractive in an aesthetic sense, is almost as modern as the reproducing instrument itself. True, there have always been wealthy men who took a deep delight in constructing palatial homes for themselves, and filling them with rare and beautiful objects. But the great mass of the public,—the people of moderate means,—paid little attention to the matter of making their homes aesthetically attractive or tasteful. At certain periods the homes of average people and even of poor people, have been rich in bits of furniture and other objects, that were really graceful and precious; and which command very high prices to-day. But the people who originally made them and acquired them were quite unconscious of their artistic importance. We may be sure that the Pilgrim Fathers and the early settlers of Canada had no real apprehension of the charm and grace of the grandfather's clocks, and spinning wheels and settles, which command so high a price to-day. Otherwise they would, no doubt, have thought them sinful. The early missionaries of California who designed the Mission furniture which so appeals to modern taste by virtue of its simplicity of line had little thought of artistic effect. They, like the early settlers in other parts of this continent, aimed at utility and achieved art.

They achieved art for the reason that the good workman is usually an unconscious artist; and in the times when all household furnishings and objects of use were made by hand, a surprising aggregate of beautiful articles was accumulated in the homes of the people; which connoisseurs seek out and pay high prices for, to-day.

With the age of machinery, this production of charming things born of the instinct and enthusiasm of the hard-worker ceased almost entirely. That is why Ruskin, and other writers of the nineteenth century, railed in and out of season at machinery. Machinery turned out by the hundred sections of chairs and tables in the time that it took the old hand-workers to make one. No attention was paid to questions of simplicity and beauty. The effort was to make a cheap article as quickly as possible and fill a popular demand. There was no general resentment at this change and people filled their homes with ugly things, just as readily and just as unconsciously as their fathers and mothers had gathered things that we now regard as precious.

Then came creeping in the aesthetic movement, the desire for the home beautiful, which finds its expression in countless domestic interiors to-day, and has for its organs many publications on both sides of the Atlantic. With it came the surprisingly simple discovery that it is just as easy to make a graceful and artistic thing by machinery as to make an ugly one. Incidentally the discovery of the preciousness of hardwood; its possibilities in the creation of rich surfaces attractive to the eye, was only made by the public at large, when hardwood itself, began to be expensive.

Nowadays the young couple setting up a home, the matron who is re-furnishing the living room, the wealthy man who is building himself a house, deliberately think of aesthetic considerations; and are willing to get along with fewer articles, in order that those which they do possess themselves of, may satisfy the eye by their simplicity and grace. This modern movement, coming but little before the allied movement for music in the home, has had a direct bearing on the manufacture of musical instruments.

The phonograph of other days, ugly and clumsy.

This is true not merely of the reproducing machines, but of all classes of musical instruments. All manufacture, even that of hardwood, has been affected by the aesthetic impulse. There are, of course, certain musical instruments which cannot be made artistic objects. It would be impossible, for instance, to make a cornet of appealing appearance; while on the other hand the lines of a violin have always possessed a certain ineradicable grace. The old-fashioned grand piano of the days of our youth was not an attractive object to the eye; and now the chief value of such of them as survive, lies in the hardwood they contain, which may be sawn up for other uses. It was a cumbrous object which occupied an inordinate amount of space in the average room. An improvement came with the upright piano, with its simple lines and adaptability to spacious effect. It was capable of becoming the vehicle of decorative effect and incorporated into keeping with a general scheme of furnishing in a certain wood; so that the tones of the piano-case did not clash with those of the table, the chairs, and the writing desk. If you glance over the catalogue of the average piano manufacturer to-day you will note how careful he is to offer a variety of lines which may come within the decorative scheme that the man who is furnishing a new house or even a single apartment, may have in mind.

A modern phonograph of English Gothic design.

An oak hand-carved instrument, copied after a famous English piece.

So also with the reproducing instruments. In their beginnings they were frankly ugly; but people were so delighted with and interested in the new invention that they did not mind. Glance for a moment at the picture showing an early model of a talking or singing machine. Certainly it would not be chosen for its decorative possibilities. Plainly, with the increasing favor of such machines in the eyes of the public, there grew up a demand for a model that would look well in a room, or that at any rate would not be an eyesore or interfere with the general charm of a well considered interior effect. The manufacturers were quick to see their opportunity; and soon the early models were succeeded by neat and graceful affairs in mahogany, walnut and "mission" woods, in which the reproducing machine was housed and drawers and cupboards for records for needles, appliances and records were included.

There is no doubt that this effort to make the reproducing instrument a thing pleasing to the eye, has been fruitful of good results for music itself. It has induced many a woman to admit such machines to her drawing room who would not have tolerated them had they been permitted to retain exclusively their original form and aspect.

There is almost no limit to what can be done in the matter of developing the reproducing instruments in a decorative sense. The mechanism itself is comparatively small and compact, but in the housing of it the freest play may be given to imaginative decoration and handicraft; and the choicest materials utilized. The skilled wood-carver has a vehicle which gives him a very full opportunity to exercise his art; while there is a great range in what can be done in the use of inlaid woods and various materials to produce a decorative effect. The wealthy man who wishes it, may have a case specially constructed to match the particular period in which his music room or his drawing room is designed.

Certain of the manufacturers, seized of these possibilities, have gone to remarkable lengths in this direction. Two pieces illustrated herewith are a demonstration of this fact. In one we see a cabinet in the English Gothic style, actually copied from an old piece of furniture in the Metropolitan Museum of Art, New York, hand-carved in oak and "antiqued." That is to say, the wood has been high lighted to reproduce the marks of time; a trick which is frequently used in fabrication of alleged old furniture; but which in the case of an obviously modern affair like a phonograph cabinet is perfectly legitimate. The other, which is narrower in width, and to the taste of the writer even more attractive, is also in the English Gothic style, copied from a famous museum piece, hand-carved in oak, and treated in the same fashion. Though these English Gothic pieces have been chosen for illustration, because of their essentially picturesque qualities, there is no school of cabinet making, carving and decoration that cannot be imitated with equal facility.

Every woman who buys Bonds stands behind a soldier.

An Afternoon on the Aventine

(*Continued from page* 21.)

doors and walked through a gloomy tunnel to a centre court, with the usual Roman fountain and shrubs. Then I opened a door into a great marble hall, desolate and dusty-looking, with a grand white staircase leading up, past two floors of huge marble rooms, sixteen feet high, and too large ever to look furnished. These were all rented to wealthy foreigners, but between mortgages and the heavy taxes that press on all Italy, they brought no revenue to the owners, who lived on part of the third floor. Here the marble gave place to tiled floors, and several cheerful Italian families had their homes. There was the noise of children home from school, and the smell of cooking food. And, turning an angle in the passage, I came on a lively scrimmage. A small, fat girl with a very flushed face was throwing a variety of articles at a boy, who dodged round and round her, chanting in the maddening style common to the small boys of all nations: "Lella's as ugly as sin, and she has a temper. Oh, my! So she shall have a German sposo (betrothed). Yes, she shall, a German sposo."

Two other small girls joined in the clamor—I was not sure on which side—and an older boy looked on, laughing at them all. Then a side door opened, and two women looked out, both in underskirts and dressing jackets—the Contessa del Noti and her cook, Giacinta. Giacinta is the only servant of the Notis; she is a stout, good-looking girl, who never wastes a crumb, and who would walk a mile any day to get the scrap of meat for dinner at one cent less, for, while economy may be a virtue in some countries, in Italy it is a passion. Giacinta is also a very good cook, but her wages are just nineteen dollars a year, and she often talks of "the America," where servants such as she get a year's wages every month. Yet I hope she won't emigrate, Here, she knows the Count's salary at the Post Office, where he works, and she takes the keenest interest in the pinching and scraping to add another franc to the little hoard for the three girls' dots. And the Contessa is so perfect a lady in every sense that, though she confides so much to her cook, yet the girl never presumes on it. To keep Giacinta as perfect a servant as she is here, she would need as perfect a mistress.

"Ercole," began the Contessa, in placid reproof of her youngest son, then seeing me, she came forward, not in the least embarrassed at being found by a visitor in undress, helping her cook. Then I was escorted to the salon, a big, bare room, with red tiled floor, and furnished with an old mahogany table, a stiff row of chairs to match; also there is a piano and a few pictures. There was no fireplace, the kitchen being the only room capable of being warmed, and there, except when there is company, the family eat, with the cook.

Giacinta pointed to a picture of a girl with very smooth black hair, and a face that was pleasant and strong rather than beautiful, who sat by a great harp, her fingers caressing its strings. "The Signora Reni, when she was a Signorina," said she, "and when she used to play the harp at concerts."

In the hall the children's voices rose shrill. I heard "sposo" often, and was not surprised, for in a perfectly matter of fact way Italian girls are brought up to get married, and their brothers must act as their chaperons. Indeed, Italy's comparatively high morality is largely due to a young girl's shame meaning that a reflection is cast on her brother, if she has one. Even among the poorest classes, many of the factory girls are met as they leave work by some fierce-eyed young man, who looks daggers at anyone he suspects of lacking in respect for "sorellina mia" (my sister), and as the unwritten law of the land would allow him to use literal daggers, if he thought there was need, to avenge an insult or wrong, it follows that young men are usually circumspect in their behavior. Also, if they have sisters themselves, accompanying them takes up much of their spare time.

So the Contessa's boys teased their sisters as to their future "sposos," but I did not understand the frequent and very uncomplimentary references to Germans. In this year—1912—Italy is firmly allied with her old enemy, Austria, and Germany. The alliance is a very good one for Italy from a political and business standpoint, yet the children at play heap contempt on their great ally, and as Giacinta sets the table she laughs and says: "Eh, Signor, but it was one of our own writers who said, 'The German need never paint a picture of the devil; to see his image, he has only to look into a mirror.'"

Children and servant girls do not represent the *thought* of a nation, but they may its *feelings*. And I wonder, should ever a great crisis come, if Italy would be swayed by her intelligence or her feelings.

Yet I wondered what Germany had done to be so despised, till a few contemptuous words from Giacinta threw some light on the subject—Italy, where the poorest classes guard the honor of their daughters jealously, is allied with the two European nations who are the most careless of their maidenkind. England may believe in and trust a beautiful, ideal German, but on the Continent they know better. I hear little Lella Noti shout in her baby treble, "I won't. I tell you I won't. I'll have a Turk sposo, or a Jew, as soon as a German."

Breakfast was ready—coffee, rolls, the tiniest pat of butter, a big dish of sorrel salad, and another with the three smallest cutlets that ever were. But meat is dear. I know the scraggy beef Giacinta has bought for dinner was a franc (twenty cents) a pound. It will be eaten to-night with pickled peppercorns and vegetables by the family, but the Contessa invites company to breakfast rather than the later meal, because she can set her table with so much less then. There is no land more heavily burdened with taxation than Italy, and certainly none where the people bear their burdens so lightly. Italy is a Mrs. Wiggs of the Cabbage Patch in her brave enjoyment of poverty. "The taxes on land are often over sixty per cent. now," I remarked. "No wonder so many of your people were against this war in Tripoli, which is just over—war must raise taxes everywhere."

"I pray that we may never be at war again," cried the Contessa earnestly, for we are all at the table, the Contessa in a perfectly-fitting, plain dress, the color of mignonette blossom, and her aunt, a very stately old lady, in mauve and black lace. Signora Reni's hair is white, but I can still see a likeness to the girl with the harp who played to the men who made united Italy, and worshipped Garibaldi.

"Eh, it is hard to live in a land that must build battleships and keep up an army out of proportion to its means," said Signora Reni. "And it is much harder when war demands more from you of money and men. Yet the hardest of all is a peace like I have lived in—under Austria."

Dark memories made the fine old face look bleak for a moment, and I asked: "Was that in '48, Signora?"

"No, Signor, '48 was the year of our glory, when we felt the flame of which the 'Marseillaise' speaks, and not all the dark, terrible years that came after could quench it in our hearts. We were of Venice, but my father came with Tito, my brother, and I to Rome. The Pope ruled there then, and it was far better under him than to stay and see our land eaten up by those Tedeschi (Germans)."

"Surely, Signora, it was the Austrians that held North Italy, and 'pro-

Music -- Nature's Great Tonic

WHEN evening comes and finds you weary, with jumpy nerves and the whole world out of tune, put on your slippers, pull up your favorite "comfy" chair in front of your own cosy fire, load the good old jimmy pipe and then turn on your Pathephone.

Away flies the haunting care, gone are the morbid fancies, soothed are the ragged nerves and in their place are comfort and sweet contentment.

In these Mighty Times an extra drain is placed on our endurance. We owe it to Ourselves, to our Country and to our Boys at the Front to **keep smiling,** MUSIC will help take the sting out of our worries and anxieties. An hour of music each day and we tackle our problems with new vigor and freshened outlook.

The Pathephone

The Pathephone is the supreme achievement amongst music makers. Through its beautiful art cases comes the combined record libraries of the world, for the Pathephone plays all other records as well as the famous Pathe record itself which requires no steel needles. Although the most beautiful phonograph made—being copies of famous period furniture—it costs no more than the ordinary talking machine.

Every woman who buys Bonds stands behind a soldier.

Ambassador Gerard Says:

"The German Armies were held only a few days, yet the delay of those few days changed the fortunes of the whole world."

The Belgian soldiers who held on those few days, died fighting. Their children are dying of slow starvation. It would be well to digest these two statements.

If we grasp what this situation means, we can SAVE Belgium—not by the sword, but by paying our debt in part.

A contribution of a few dollars, administered by the Canadian Bureau in Brussels, will restore health and strength to a little Belgian, now in the grip of pitiless starvation. Oh, it is hard to write calmly and sanely about a horror that is positively ghastly.

Growing children struggling along on a bowl of soup and two pieces of bread a day, furnished by United States loans to the Belgian Government. . . . . Poor little mites, what hope is there in such a ration of building flesh and bone? No wonder Consumption and Rickets stalk through the stricken land.

Through the Belgian Relief Fund, YOU can help to alleviate this horror for at least one little sufferer. You need not forego your three good meals a day to do it. Send in your contribution. Mark it "For the Belgian Children." And whatever you give, give quickly!

Belgian Children Suffer Privation

Terrible Conditions Confront the Children of Belgium

Suffering is the lot of the children of Belgium. Pale, emaciated, racked with pain and weak from hunger, mere ghosts of the children of pre-war days roam about the streets of the occupied towns, pleading pitifully for bread. In dark, cold cellars little tots seek shelter from the inclement weather and often death kindly intervenes to relieve the famished little ones lying curled up in these miserable shelters, and the one who died for want of food provides a repast—for the rats!

There are no words to paint the horrors impending over the heads of more than a million Belgian children. Like hunted things they avoid the light of publicity, so grievous is their anguish; and what they have suffered history never will tell. It may be well the story should be forgotten, for Christianity must feel the reproach of such things being possible in the twentieth century.

In Belgium the gift of life has come to be regarded only as a legacy of pain. Yet the children of Belgium cling to life with a passionate love, for they have heard their parents say all will be well and there will be sufficient food when the invader is driven from the country. But until that day all is pain, and the menace of starvation and disease is omnipresent.

"We have too much to let us die and too little to live on."

This excerpt from the letter of an unfortunate Belgian victim of German domination, epitomizes the food situation in his unhappy country. The general ration (a bowl of soup and two slices of bread a day), which is just too much to let the adult population of the country die, is insufficient to maintain life in the children. Their growing bodies require a more substantial fare. The soup and bread does not furnish them with the alimental stimulus necessary to them; it provides them with no reserve of physical strength to be called into service when disease lays its hand upon them. Therefore, many thousands of them have already succumbed to tuberculosis, rickets and other ills and many, many thousands more look Death in the face. If they cannot be properly provided for they must die. The Belgian Relief Fund is endeavoring to save them all. It has saved vast numbers to date, and the only limitation ever recognized in carrying on this magnificent work has been the limitation enforced by insufficient funds. It is for these children, these hollow-cheeked, shrivelled and prematurely old sufferers, that the Fund is to-day sounding a clarion note to the general public of Canada, pleading, on behalf of the little ones, for the gift of life, for money wherewith to carry-on in the fight against starvation and disease.

A lady who is connected with one of the departments for relieving the distress of the children says that one day she was on the outskirts of a small town when she heard yells and howls from a distance. Hastening to the scene of the disturbance she saw a horde of half naked children scrambling among themselves for deteriorated food that had been flung into the road as unfit for human consumption. Attracted, doubtless, by the noise, a number of half-starved curs had also come upon the scene and were busy getting their share of the "delicacies." Regardless of bites, the children, ravenous with hunger, were mixed up in a tumbling, fighting heap on top and under each other and the dogs. Horrified at the spectacle, she yet did her best to frighten the dogs, succeeding only after many efforts. They circled round her and the children long after the "feast" had been disposed of.

In many districts of occupied Belgium fifty per cent. of the children are consumptive. The ravages of the disease are extending daily, and the entire generation is threatened with extinction. To save the little ones is a task that grows in difficulty as the numbers of patients swell. Hundreds of sanitaria have been established in Belgium and in Holland, where these youthful sufferers are cared for, and restored to health, but so rapid are the strides now being made by the disease, so physically weak are the children through want of proper nourishment, that the organizations which are combating the dreaded white plague are barely able to hold their own. New institutions for the care of the children must be opened; more wholesome food must be secured. The institutions and organizations devoted to this work are to-day seriously handicapped by lack of resources. They look to the Belgian Relief Fund to provide further support, and it is to be able to provide that so vital support that the Belgian Relief Fund has launched a new appeal to the people of the Dominion.

"Impose no restrictions upon us and we shall save every child life in Belgium; but, restricted as we are, much good must be left undone. In other words, many children who might be saved must die of disease or of starvation." This declaration was made by an official of the Belgian Relief Fund in reviewing the work done in the invaded country. It is true the workers are subject to restrictions. Those restrictions are not imposed by the Germans. The Germans can only place difficulties in their way, and these difficulties are always overcome. The restrictions are imposed, unwittingly, by the people of the allied countries. If the citizens and subjects of those nations allied with Belgium in the fight for world liberty were to give to the Belgian Relief Fund what financial support it requires to carry on its work to the fullest possible extent, such restrictions would be removed. It is only lack of necessary funds that prevents the Belgian Relief Fund's caring for every one of the twelve hundred thousand destitute children of Belgium. It is only because the Fund has not sufficient means that some children must die of starvation and some must be yielded up to the diseases which stalk through the land in the wake of privation.

Sons and daughters of the men who held Germany long enough to change the whole course of history are in need of those essentials of life which we from our abundance and despite all the demands made upon our resources can and must give. The race which unflinchingly bared its breast to the dagger of Germany, when that nation first ran amuck, must not be permitted to perish from the earth. That is the fundamental war aim of embattled Democracy. We who remain away from the front can assist in the achievement of this purpose by subscribing to the fund which is being used to take Belgian children from their war torn land into Holland for a brief respite and so prepare them for the honored place that will be theirs in the new scheme of things.

Every cent given to the Fund is a step towards the conservation of some little child's life. Ten dollars will support life in a child for a month. The Belgian Relief Fund is appealing to the people of Canada on behalf of the starving, sickly children of unhappy Belgium. Contributions should be sent to the local committee of the Belgian Relief Fund, or to the Central Committee at 59 St. Peter street, Montreal, Que.

UNDESIRABLE LITERATURE.

A glance over the magazines displayed on the average news-stand makes it clear that a censor should be given power to restrict the flood of fifth-rate publications pouring in from the States during the last few years. Magazines that appeal to the worst elements in the community and specialize in stories of the Tenderloin district in New York are given prominent display. Much of this literature is of the most filthy and disgusting character and has not a redeeming feature. It is surprising that the religious organizations have not taken steps towards securing Government action to exclude the offending publications, which cannot help but have a harmful effect wherever they have circulation—especially on young people. —*Owen Sound Sun.*

Every woman who buys Bonds stands behind a soldier.

A Story of the Early Life of the Commander-in-Chief of the Canadian Forces, and Sketch of the Place Where the People Say:

Know Art. Currie—Well, Rather!

By ARTHUR C. CARTY.

WHEN Mr. C. Columbus, a Genoese land speculator, embarked, under the terms of a recent partnership with Isabella Castile, upon a big real estate deal, the folks at home in Genoa still combed wool, and exchanged small talk in which Chris. was not the principal subject of discussion.

Now I am told—and the information seems reliable—that in Genoa young Chris. occupied a position of obscurity in civic life comparable only to the sepulchral fate that, in a national sense, usually befalls the vice-president of the United States. Insofar as the young Mr. Columbus was concerned, the town crier, in the flat verbiage of his official communique, probably told the townspeople that "there is nothing new to report."

So when Christopher pulled up stakes and left to take a job at Lisbon such of the townsfolk as had gained his casual acquaintance nodded pleasantly their farewells and went back to rave against the high cost of living and comb wool.

Then one day came the news, that young Columbus, who used to live in Genoa, had taken out three old tubs and brought back a continent. In one stroke he had landed townsites and close-in subdivisions without number; he had earned eight-column scare-heads, only the days of "Wuxtrees" had not yet come; and as a by-product of his enterprise, he had turned a deal that would put his impecunious and royal partner on her feet financially.

Lisbon was tickled. Genoa, in her elation, forgot the wool-combing and the high cost of living; built bonfires; passed congratulatory resolutions, and boldly, though albeit with some uneasiness, to the world declared: "He's ours. We saw him first."

"What has that to do with this story?" you may enquire.

Frankly, it has nothing. That is simply a cubistic sort of introduction, and cubist work, whether executed on a typewriter or from the point of a crayon, never seems to mean anything.

This story, after all, concerns the writer's quest, about the familiar haunts of his boyhood associations, for close-up views of Major-General Sir Arthur W. Currie, commander-in-chief of the Canadians on the West Front.

Napperton, so "Who's Who" relates, was the place of his birth, but "Who's Who" editors have only recently had thrust upon their attention the General's presence in the world. Perhaps they have not heard of what is going on, but slips of that sort are not uncommon in times of peace, much less of war. Strathroy, Ontario, has proclaimed to such of the world as lies round about that that is the place from whence the General sprung.

Seeking with reasonable diligence, one who is familiar with the old North Riding of Middlesex County may find Napperton; but anyone possessed of a railway time-card, or a sense of direction, may strike westerly from London and, with moderate assurance, expect to find Strathroy at the end of a twenty-mile journey.

And so, for reasons of convenience, if for no other, Strathroy will doubtless

Major-General Sir Arthur W. Currie.

be awarded the honors of strongest claim on Currie of the Canadians.

Some day, perchance, the little town will spread beyond its present rather narrow confines, and adding linear greatness to its quaint main street, reach out along the old Fourth Line of Adelaide to absorb the Currie homestead.

Just two miles of a westward growth will turn the trick, for there, in the pretty, wholesome countryside, lies the place of his birth, a many-gabled house, on the farm on which not only was the General born, but his yeoman father also. There, too, his grandfather pioneered a long way toward a century ago, for the property came into the Currie name by direct purchase from the Crown. No other white folks ever owned or lived upon the place.

December 5 of this year marks the forty-third anniversary of an event of the utmost importance to Canada nationally, but of immeasurable consequence to the house of Currie—a general was born. Naturally, to the folks at home he was manifestly wonderful, but no particular stars loomed in the firmament to advise the wise men of the village to the east, Strathroy, that a history-maker had arrived with a commander's baton in his grasp.

Neighbors dropped in to pay their casual respects to the happy parents, and to little Arthur William. But time wore on, and it appears quite probable that "little Artie" became just an incident in a community, which was indubitably more concerned with the pros and cons of National Policy and the accession to power of Sir John A. Macdonald.

The general's boyhood days were spent upon the farm, which from the pioneering times of his grandsire had developed as one of the finest in Middlesex County. His father died when he was still a boy, but there his mother still resides. With her are two daughters and a son, John, Reeve of the township.

"When will the war be over?" or "When will the boys be home?" are the questions uppermost in the mind of the general's mother, while, disinclined to court reflected glory, his sisters are wont to tell the interviewer simply that "We are only pleased that he has been of service to his country."

Across the shaded highway, on a little rise of ground, still stands the country schoolhouse, S. S. No. 5 of Adelaide Township, where under the tutelage of John Reinhardt, native of Germany, the general first attacked his studies. The little mistress of the present class finds happy auguries in such surroundings, for may not the lightning of command and intellect strike twice, and in years to come thrust fame anew upon the whole constituency? At any rate fortune will not again find that community a-napping.

When the day came for the coming general's graduation from the rural class-room he transferred his studies to the Collegiate Institute of Strathroy, and eventually, having determined to devote his life to the teaching profession, he trained at Strathroy Model School.

The old schoolhouse of S.S. No. 5, Adelaide Township, opposite the Currie homestead, which the commander-in-chief of the Canadian forces attended when a boy.

Thus has been established Strathdoy's claims to the production of Currie. Until perhaps his eighteenth year he was regularly about the town; and then, like many another, he weighed anchor and set out upon his career. Striking West he made a commencement in 1893 as a school teacher at Sydney, B. C., a little town on Vancouver Island. Followed his engagement on the staff of the Boys' Central School, in Victoria, B. C., and at length his abandonment of pedagogy for the real estate business, in which, under the firm name of Currie and Power, of Victoria, he was engaged when the war broke out.

The blood of two generations of soldiers flowed in his veins, merging with the Celtic spirit of a father from Dublin, Ireland, and a mother from old Sligo, in the Province of Connaught Ireland. He had spent fourteen years with the 5th Regiment Canadian Garrison Artillery, and his keen interest in, and patronage of the British Columbia Rifle Association, brought about his

Phyllis the Dairymaid is in Demand

Creameries, Cheese Factories and Dairy Farms are Eager for Her Services—Courses at Agricultural Colleges Soon Start—Recruits Wanted Immediately

By ISHBEL M. ROSS,
Information Division, Canada Food Board.

DAIRYMAIDS wanted!

Dozens of them, scores of them; hundreds of them. But dairymaids, like school teachers or conductorettes, need to be trained, and the first step in raising an army of this kind is to enroll recruits at the agricultural colleges where the maximum of scientific training is acquired in the minimum of time.

Last spring girls were called to the farms. They went in numbers far exceeding other years. They broke down the barrier of prejudice that had been raised against them. They learned to do by doing. Their strength increased as they worked.

They were to be found on the mixed farms and the fruit farms all over the country. But they were few and far between on the dairy farms, because they lacked the necessary training for this kind of work. It is safe to say that a very large percentage of the farmers who wanted to employ girls this year were chiefly concerned about their ability to milk cows, and many a girl lost the chance of a good position because she did not have the necessary training along this line.

There are easier things in the world than milking. Anyone who has tried it out will tell you this. Indeed, Miss Winnifred Harvey and Miss Hazel Martin, of the Ontario Government Employment Bureau, both of whom are responsible for placing girls on farms throughout the province, are quite willing to admit, from first-hand knowledge, personally acquired on Ontario farms this year, that it is a little hard at first. However, as one's wrists grow stronger, it becomes a correspondingly easy task to fill the pails with the primary necessity of life.

Dairying has many phases, and today women can turn to any or all of them, feeling perfectly assured that in so doing, they are rendering patriotic service of a high type and are pursuing a profession that is healthful, remunerative and interesting, and one that will assuredly expand after the war.

Export Possibilities.

To appreciate the truth of this one has only to glance over the facts and figures relative to the European dairy situation. The chances we have on this continent to step into the breach and "make good" are immediately apparent.

As everyone knows, Denmark led the rest of the world in dairy exports until the war broke out. Through the medium of co-operative creameries her butter output was astounding. The volume of butter which in normal times reaches the channels of international trade, amounts to 728,000,000 pounds. Great Britain used to take three-fifths of the world's surplus of butter. In 1912, out of 728,000,000 pounds moving in international commerce, the United Kingdom took 435 000,000 pounds. She got her dairy produce from many sources—from far Siberia in which Canada now has a close personal interest; from Denmark, Norway, Sweden, Holland, Bulgaria and Switzerland.

But the herds of Europe are sadly depleted and it takes time to undo the havoc that has been wrought by the necessary killing-off of stock. No wonder there is a shortage of butter on the other side of the Atlantic! No wonder the ration in Britain is only five ounces a week, margarine included.

As a result of the war Britain is short 209,148,784 pounds of butter. Last year Canada exported 6,993,100 pounds to the Old Country. She is sending over increasing quantities now, however, and between May and September 21st of this year, the Dairy Produce Commission bought in Canada $912,794 worth of butter, $28,243,152 worth of cheese and $2,778,663 worth of condensed milk. The number of milch cows in this country is steadily increasing, too. To-day there are approximately 3,500,000 as compared with 2,673,286 in 1914.

All these figures lead to the one conclusion—that Canada has boundless dairy export possibilities; that she can step in where other countries have fallen out; that she can double and treble and quadruple her dairy exports and still supply her domestic market if her sons and daughters throw themselves heart and soul into the game. And it is just here that the appeal reaches women in particular.

Colleges to Train.

There are agricultural colleges all over the country where dairying courses are part of the regular curriculum, including the Ontario Agricultural College, Guelph; Kingston Dairy School; St. Hyacinthe College, Que.; Macdonald College, Ste. Anne de Bellevue, Que.; Truro College of Agriculture, N.S.; Manitoba Agricultural College, Winnipeg; School of Agriculture, Ste. Anne-de-la-Pocatiere, Que., and the Agricultural Institute of Oka, La Trappe, Oka, Que.

The courses are neither lengthy nor expensive. They embrace milking, butter-making, cheese-making, cow-testing, etc. The latter is an untried line for women as yet, but an authority on dairying states that there is absolutely no reason why it should not be taken up by them. It simply means travelling around from farm to farm getting reports for the Canadian Holstein Association. Cream testing is another interesting phase of dairying and one that is eminently suited to women. In the Old Country there are travelling demonstrators, women highly trained along this line, who travel from town to town and from village to village, showing housekeepers how to make butter and cheese and how to use left-over or souring milk in the preparation of soft cheeses.

Creamery and Cheese Factory.

There is an increasing demand for women in creameries and cheese factories. They are employed extensively for printing, wrapping and doing up the butter. Among those who have never seen the inside of a cheese factory there is an impression that the work is altogether too heavy for women. This is not the case. Miss Harvey, who has had a chance to try it out for herself declares that women can do it all although the tipping of the cans is rather heavy and, where men are employed, it is better to let them do this.

To be in charge of a cheese factory should be rather a coveted post for women, and by next year it is hoped that a good many will have availed themselves of the opportunity to train for this post. Only two or three people are usually employed in a cheese factory and the Chief Dairy Inspector for Eastern Ontario, who declares that his best cheese-makers have been women, feels strongly that the standard of cheese-making would be improved if there were one woman at least in every factory where there are two assistants. A month's training would be sufficient to fit a girl for this kind of work, and wages vary from $35 a month and board.

(*Continued on page* 42.)

Save Coal! Save Money! Save Health!

By PROFESSOR ELLSWORTH HUNTINGTON
of Yale University.

Less Coal, More Cash.
Less Coal, Fewer Colds.
Less Fuel, Fewer Deaths.
Burn Less, Bury Less.

Save coal and you will save money. It is easy to see how this will happen in these days of high prices. Save coal and you will save liberty. It is also easy to see how our fight for liberty will be helped if the coal bins of our factories, railways, and steamships are kept full. Save coal and you will save health. Can this be true? Will not our saving coal be at the expense of health?

On the contrary, the shortage of coal will actually improve our health. With better health we shall have fewer doctor's bills. That will not only mean the saving of money for ourselves, but we leave the doctors more free for war service. It will have still another great advantage. It will give the whole country greater strength to put into the work of winning the war.

Do you doubt this? Then consider these three facts:

1. An average temperature of 64 degrees is the best for the human race.

2. Moist air is more healthful than dry, provided it is not too warm. Such air feels warmer than dry air at the same temperature, and retains its heat longer.

3. Variations of temperature are much more healthful than a uniform temperature. As a means of preserving health, few things are better than a frequent fall of temperature followed by a more gradual rise.

More Health at Lower Temperature.

In winter, when we control the temperature within our houses, we ought to be able to live under ideal conditions. We certainly do no such thing.

In order that people may enjoy ideal conditions of bodily health and of mental activity, they ought during the winter to sleep with open windows and in a temperature ranging from about freezing up to 40 degrees or 50 degrees. If rooms are used only for sleeping, there is no necessity of warming them above 50 degrees at any time of day. Of course people must be well covered at night. They should use warming pans or foot-stoves rather than suffer from the cold. Nevertheless it is decidedly good for people to dress and undress in a temperature of 40 to 50 degrees, provided they do so actively and quickly enough so that they do not become chilled.

Keep Rooms at 64 Degrees.

The next requisite for health, so far as temperature is concerned, is that the rooms where people live and work should average about 63 or 64 degrees. During the part of the year when such temperatures prevail out of doors, we get up in the morning and eat breakfast with a temperature of about 60 degrees. By noon the temperature rises to about 70 degrees. Toward sunset it is, perhaps, 64 degrees, and by bedtime it is down to 60 degrees. All day we are perfectly comfortable. We do not feel the need of a fire either in the morning or the evening. We feel as if we could accomplish almost anything. Watch the thermometer during some of the most delightful Indian summer days, and see how comfortable you feel when the thermometer is about 60 degrees at breakfast time and 70 degrees at noon.

Should Be Plenty of Moisture.

This means that the extremely dry air of our winter houses not only makes people feel cold, but dries up the mucous membrane so that colds and all sorts of diseases become rife. Evidently the remedy, for this state of affairs is to keep the air in our homes relatively cool and give it plenty of moisture. Thus we save coal, save money, improve health, and make ourselves feel comfortable.

Four Good Rules.

From all these facts it appears that four things are needed in our houses this winter—four things which will save coal and improve our health and efficiency:

(1) The first is cooler sleeping rooms, which ought not to be heated by day unless people are going to sit in them. Such rooms will act not only as a mental stimulus, but will help to give the variability, which is so valuable as a means of preserving health.

(2) The rooms in which we sit, eat, work, and play ought not to average above 64 degrees. This, like the cooler sleeping rooms, will considerably diminish the demand for coal, and will at the same time improve our health. As a matter of fact, if the coal situation should demand it, there is no reason why the temperature should not average as low as 60 degrees. Indeed, 56 degrees would actually do less harm than 72 degrees, which is a common temperature in many houses at present. Of course people would have to dress warmly. If they faithfully carry out the other recommendations of this article, however, they may expect better health and as great comfort at 56 degrees as at 72.

(3) In order that we may be comfortable in temperatures of 56 to 64 degrees, the air in our houses must be much moister than is now commonly the case. This does not mean that it should be so damp that moisture accumulates on the walls. It does mean, however, that in almost all houses the amount of evaporation from pans in the furnace, on radiators, and in registers ought to be from three to five or even ten times as great as now. If rooms contain fairly moist air at 70 degrees they are likely to feel too warm and to be enervating. Moreover, when the rooms cool down at night, moisture may be deposited on the cool walls. On the other hand with a temperature of only 60 to 64 degrees, it is possible to have the air sufficiently moist to make it feel warm and comfortable, while the danger of getting the walls damp at night is much diminished. In this connection it must be remembered that moist air retains its heat much longer than dry air. Hence the amount of coal needed to keep such air sufficiently warm is less than when the air is dry.

(4) If the temperature is allowed to be variable, it does not need to average so high as when it is kept uniform. Under such conditions people's health improves and their capacity for resistance greatly increases. Thus people who have been in the habit of wanting the thermometer at 70 degrees at breakfast time, find themselves comfortable if the temperature is only 60 degrees. Later the thermometer rises to perhaps 66 degrees and they feel too warm. Then, when the furnace cools off a little they do not mind if it goes back to 62 degrees. Thus during the day the thermometer may swing back and forth a number of times. This is beneficial to health, and also enables a house to be heated with less consumption of coal.

Fish Recipes By Famous Chefs

Prepared By the New England Fish Exchange

BAKED FINNAN HADDIE, CLUB STYLE,
BY CHARLES FERRETTI.

Boil the finnan haddie about six or eight minutes, and then cut up in small pieces. Place in a baking-dish and cover with rarebit sauce. Shake a few crumbs of cheese over it, and place in oven until brown.

BAKED OYSTERS A L'ANCIENNE.
BY CHARLES FERRETTI.

Open some fresh oysters and leave in the deep shell. Put a small piece of butter on each oyster, and then a slice of bacon about one inch square on the top of each one. Shake a few cracker crumbs over them and place in hot oven for about five or six minutes. Serve very hot.

FINNAN HADDIE,
BY THOMAS McKENNA.

Finnan haddie cut in dice form. Boil ten minutes with chopped green peppers. Add boiled potatoes cut in dice form. Mix all with cream. Salt and pepper to taste. Serve in hot, deep dish or chafing dish.

CHICKEN HALIBUT AU GRATIN,
BY THOMAS McKENNA.

Chicken halibut cut in dice. Saute in cream. Bake in dish, bordered with mashed potatoes.

BLUEFISH, CREOLE,
BY THOMAS McKENNA.

Remove bones from a fresh bluefish. Place in a lightly buttered pan. Season with salt and pepper. Sprinkle breadcrumbs over the fish and place in oven for thirty-five minutes. Remove from oven. Cut a sound lemon in halves, finely slice and arrange around dish. Pour Creole sauce over it, and serve.

BOILED CODFISH,
BY R. J. CROASDELL.

Cover a three-pound fresh codfish with well-salted fish stock and let cook thirty minutes, without boiling; then take fish out and drain well. Lay it on a dish and garnish with a few sprigs of parsley. Serve with a cream parsley sauce separately.

How to Make Fish Stock.—Four quarts. Fill a saucepan with three quarts of water, one handful of salt, half a glass of vinegar, one carrot, one onion (both sliced), half a handful of whole peppers, one bunch of parsley, three sprigs of thyme, three bay leaves. Cook on a moderate fire for fifteen minutes. Cool and use when needed for various methods of cooking fish.

SALMON, OYSTER SAUCE,
BY R. J. CROASDELL.

Place two pounds of very fresh salmon in a fish kettle. Cover with cold water, season with a handful of salt, add one sliced onion, half a wineglass of white vinegar, eight whole peppers, two cloves, two parsley roots. Range the kettle on a good fire. Five minutes after coming to a boil, the salmon will be sufficiently cooked. Remove from the kettle, drain it well. Dress on a hot dish nicely garnished with parsley all around the salmon, and serve with sauce, recipe for which is below.

Oyster Sauce.—Put eighteen oysters in a saucepan with one ounce of butter. Cook for four minutes, remove half of liquid from pan, then add a pint of Allemande sauce. Mix together, without allowing to boil, and serve.

Allemande Sauce.—Put two ounces of butter in saucepan on a slow fire. Add three tablespoons of flour to thicken. Stir well, not letting it brown; then moisten with one pint of white broth, beating constantly. Cook for ten minutes. Dilute three egg yolks in a bowl; pour the sauce over the eggs; strain through a strainer; add half ounce of butter, juice of half a lemon, taking care it does not boil a second time.

FINNAN HADDIE (A LA WILLIAM SMITH),
BY VINCENT GIUGIA.

Steam the finnan haddie with Spanish onion sliced very fine. Have it covered with a light cream. Sprinkle with a little salt and paprika before serving.

SCROD A LA VICTOR,
BY VINCENT GIUGIA.

Take a nice piece of scrod (small cod or haddock), dust with bread flour, salt and pepper; dip in beaten egg. Fry in good butter until golden color. Have rich tomato sauce with double cream. Pour sauce over fish, sprinkle with Worcestershire sauce, and it is then ready to serve.

SMELTS SAUTE A LA MUNIERE.
BY VINCENT GIUGIA.

Roll your smelts in bread flour until good and dry. Fry a light brown in butter in frying-pan which is very hot. When ready, put a piece of butter in frying-pan and have it a nice brown. Add lemon juice. Then pour over the smelts with some fresh chopped parsley.

COLD SALMON, RAVIVANT SAUCE,
BY VINCENT GIUGIA.

Boil salmon in one-third vinegar and water, to which is added sliced carrots, lemon and onions, salt and two or three cloves.

Sauce.—Mix together Chili sauce, mayonnaise dressing and taragon leaves chopped very fine. Add juice of lemon and a little paprika. Serve over the salmon with hearts of lettuce.

RAY OR SKATE (AU BEURRE NOIRE),
BY VINCENT GIUGIA.

I choose the Skatefish first as one of the most delicious for lunch. Not very much in use in America, but, appreciated at the dining tables in Europe.

Boil the skate in salted water, have a couple of slices of lemon, a few parsley roots. When cooked through, drain off the water by laying on the top of a napkin. Have a good piece of table butter melted in a pan until nice and brown. Put in a half glass of vinegar, and while very hot, pour the whole thing over fish. Have your platter very hot, and garnish with chopped parsley. It is then ready for the table.

FRIED FILLET OF HALIBUT, TARTARE SAUCE,
BY CHARLES B. OEHLERT.

Cut the halibut in thin slices; remove skin and bones; season with salt and pepper. Dip in flour, then in batter (consisting of egg, salt, pepper and cold milk, beaten up), then in bread crumbs, and fry in deep fat, lard or olive oil. Remove when nicely browned.

Tartare sauce consists of mayonnaise with chopped capers, pickled gherkins, parsley, eschallot and tarragon in it.

SALMON SALAD RAVIGOTE,
BY CHARLES B. OEHLERT.

Boil two pounds fresh salmon in salt, water and lemon juice for twenty-five minutes. When cooked, set aside to cool. Slice six cooked cold potatoes into bowl with chopped green and red peppers, onions and parsley. Remove bones and skin from salmon and mix all together. Season with salt, pepper, paprika, olive oil and tarragon vinegar. Place on lettuce leaves, cover with mayonnaise sauce, and garnish with sliced tomatoes, cucumbers, pickled gherkins, beets and hard boiled egg.

FINNAN HADDIE,
BY CARLO CALDERONE,

Take one finnan haddie, trim and cut in quarters, boil in half water and half milk for fifteen minutes, then arrange the fish in a deep dish, take two small cups of thin cream and one tablespoon of sweet butter. Boil and pour over the fish. Serve hot.

BAKED BLUEFISH, HOME STYLE,
BY CARLO CALDERONE,

Take one medium bluefish, split and remove bones, then cut in six parts. Take a baking pan, put in some butter and one chopped onion with a little celery, arrange fish on the chopped onion in pan, pour over some melted butter, salt and pepper, and cook in oven about ten minutes. Remove and add juice of one lemon and one large cup of tomatoes. Put back in the oven for ten minutes more and serve hot.

SMELTS SAUTE.
BY CARLO CALDERONE,

Take one pound of smelts, cleaned and washed, then roll in flour. Take sauce pan, put in about a quarter of a pound of butter, and when the butter is warm, put in the smelts and a little sage, salt and pepper. Brown nicely on both sides, and when done arrange fish in platter with some chopped parsley and juice of one lemon. Pour over all the hot butter the fish was cooked in.

GRILLED HALIBUT, NEW STYLE,
BY CARLO CALDERONE,

Take one slice of halibut (about one pound), pour over a little oil, salt and pepper, put on the broiler and cook about seven or eight minutes on each side. When nice and brown, arrange on a warm platter.

Sauce.—Take about two tablespoons of melted butter, some chopped parsley, salt and pepper, and a quarter teaspoon of dry mustard. Mix together and pour over the warm fish.

A tale of two Trade Marks

For over 59 years Turnbulls have been making good knitted underwear in Canada—and underwear exclusively—They came from the Old Country with the knowledge of how to make good underwear bred in them—They brought out expert workers from the Old Country from time to time as their business grew—thus have always kept their products up to the highest standard, being made with that thoroughness and care for which the Old Country workers are famous.

The reason for this tremendous growth and popularity can be summed up in one word "Quality" first and all the time—

You cannot get away from the fact that Canadians appreciate "Quality" more than anything else—

Turnbull's two brands are

Turnbull's PERFECT FITTING and TURNBULL'S UNSHRINKABLE NATURAL WOOL

UNDERWEAR

This brand is on all Turnbull's ribbed underwear which is extremely popular with ladies and children because of its great elasticity and comfortable fitting. Made in all sizes in separate garments and union suits with special closed crotch.

This brand is on Turnbull's plain knitted underwear, all wool — finest and cleanest obtainable, made in separate garments and union suits with special crotch that stays closed and is always comfortable.

Sold by good dealers everywhere.

A. 84.

Made only by

The C. TURNBULL COMPANY of GALT, Limited

GALT, ONTARIO

Also sole manufacturers of the famous "CEETEE" full fashioned underclothing.

Knit Socks and Dollars with the Auto-Knitter

Profitable employment at home in war or peace time

Socks—more socks—the Soldiers' call! The hosiery industry is booming and the demand far exceeds the supply. Help us fill it, but get away from slow hand knitting. Use the fast, reliable, modern Auto-Knitter. We gladly take all the socks you wish to send us and pay you highly profitable prices.

The Auto-Knitter is simple and easily learnt—and secures a big income for full or spare time work right in your own home and no previous experience is essential. Write to-day for full particulars enclosing 3c stamp. See what good money you and your family can earn at home besides doing patriotic work.

Auto-Knitter Hosiery (Can.) Co., Limited, Dept. 210B, 607 College St., Toronto

You Can Be Handsome—If You Choose To Be

The charm of youth lies in the beauty of the skin. You can restore its texture, color and freshness if you will follow our instructions in the use of our preparations. We have given treatments at our Institute for 26 years, and the methods have proved wonderfully successful. If you have Pimples, Blackheads, Sunburn, Tan, Freckles, Undue Redness, Wrinkles, "Crow's Feet," Eczema, or any non-contagious skin trouble, our preparations will give you satisfactory relief. CONSULTATION FREE. WRITE US TO-DAY.

Wibby's Mended Stockings

Black-haired, rosy-cheeked little Wibby was always getting into mischief, tearing her dresses, cutting her hands or bruising her head, and all because she could never be still a moment. All day she ran and jumped about like a little cricket.

Often her mother would scold her and tell her she must stop running and walk like a little lady, but Wibby could not and would not walk if there was any chance for a good run. Once or twice she fell and cut her head badly on a stone in a road, but as soon as the wounds were healed she was as lively as ever. One fine afternoon her mother dressed her in a bright new dress, with stockings and shoes to match, and a sweet little hat.

"There," she said, as she put the last twist into the little girl's hair, "now I hope you will keep yourself nice and clean and not tear your dress or stockings; because a lot of ladies are coming to visit me, and I want you to look your very best."

Wibby loved to look nice, and promised to be good, but she heard Shep, the dog, barking over the hill, so off she ran, helter-skelter, to see what the matter was. Before she got to the top of the hill she stumbled against a stone and fell heavily on her knee.

When she stood up, luckily her dress had not been torn or spotted, but in her pink stockings was a big, ugly hole. All that afternoon she walked about, afraid to let her mother see what she had done. So ashamed was she that she stayed out in the barn with the little rabbits and did not go near the house until late in the evening.

She was afraid to go into the parlor, where all her mother's friends sat talking and laughing, lest they might all scold her for her carelessness. She went to the back door and sat down on the veranda. It was so quiet there that in a little while Wibby began to think of her bad ways and the hole in her new pink stocking.

How she wished she had taken her mother's advice, but now it was too late. Just then a big darning needle flew by, and Wibby called out to him:

"Oh, dear darning needle, please darn my stocking, and I'll never, never be bad again!"

The darning needle flew to and fro to look at the big hole. "Torn! Torn! Torn!" he said, and disappeared.

He has gone to get pink thread, thought Wibby, and waiting, fell asleep. Grandma had been sitting at an open window near by, and heard what her little granddaughter had said. So finding her asleep, hurried to her mystic workbox and soon had the stocking so nicely darned that the tear could hardly be noticed.

"Wibby! Wibby!" called her mother shortly afterwards, "come into the house and let us see how nice you look."

Wibby awoke with a start. First she looked at her stocking, and, to her great joy, found the hole was gone. Shamefaced, she went into the parlor, and everyone was pleased to see such a nicely dressed, clean little girl.

But Wibby felt ashamed all the time, and when she could get away, she slipped out into the kitchen and in whispers told Grandma how she had fallen and torn her stocking and that she asked the darning needle to fix it, and that it flew off and got pink thread and darned it up so nicely that no one saw it.

Grandma never said a word about what she had done.

The Travels of a Drop of Water

In a lake, high upon a mountain, a little drop of water became restless and curious to see the world. There it saw only the trees around, the silent lake and the sky;

It had begged of the bright sun to be taken away so long, that at last he sent one of his warm rays down to the lake to carry it upward. Oh, how high it travelled, far, far over the heads of the trees on the highest point of the mountains, higher and still higher, until it could see for miles and miles about.

Below, it could see the farms like a great checkerboard; the rivers looked like threads of silver, the houses and barns like colored spots. The people, moving to and fro, seemed as small as ants. Oh, how cold it soon got! In a twinkling it had to pull on a heavy coat, and if one could have seen it from the earth below it would have looked white.

As daylight faded its coat looked as if it were on fire, but, of course, it was only tinted with the glow of sunset. When the moon came out it joined a great many other drops, and they travelled on and on. Now the cloud passed in front of the moon, now by a star and now through inky blackness. At last day came again and it and all its companions grew cheerful, for none liked the night.

But suddenly a puff of wind separated the drops until there were only a few left together. Harder and harder it blew; the sky became black and an awful rumbling sound came from the clouds above.

A flame suddenly shot out from the dark sky and frightened the little cloud, only to be followed by a still greater noise and more wind. Now the cloud was driven at a fierce rate until each friendly drop had to leave the others. All the while it grew colder and soon the little drop, frozen as hard as a stone, fell faster and faster until it struck the window of a house at which a little boy and girl were sitting.

"What a pleasure it is to get back to the earth," thought the drop. It fairly jumped for joy as it bounced down near a little flower that cried:

"Oh, how thirsty I am!"

The little drop looked at the beautiful blue blossom and the dusty leaves and in a twinkling jumped upon one of the leaves and said gleefully:

"Drink me, little flower!"

In a moment its icy coat fell off and it melted and lay like a big diamond on the leaf.

"Ah, how kind of you, dear friend," exclaimed the flower as it drank of the drop of clear water.

"I love you so much," said the drop, "that I will stay with you for a long time."

So it remained with the flower for many days; then the sun took it back to the sky and let it drop into a river, which took it to the great ocean where it stayed for many, many years, well satisfied with its travels and the good that it had done.

Seven Prizes for Our Journal Juniors

Here are the Rules

Yes, boys and girls—in the offices of the Canadian Home Journal there are seven prizes, each a crisp, new Two Dollar Bill, waiting for you to win—to use just in whatever manner you wish—to be your very own.

Now, this is the way you can capture one of these prizes, or perhaps two if your work proves to be the very best sent in.

Letter Contest.

FIRST—There will be a prize of Two Dollars to the girl or boy of 14 years or under, who sends in the best letter on "What I am doing to help win the war." All work must be original. Of course all the Journal Juniors are helping to win the war, but sometimes the grown-ups seem to overlook this fact, and we want to tell them right in the columns of Canadian Home Journal how much our girls and boys are accomplishing. We know you are just "bubbling over" with interest, and it will be the easiest thing in the world to write down on paper just what you have done and are going to do to help win the war. Canadian boys and girls, as well as the British, French, and American children, are little workers—and think how happy it will make these other children to read about what you are doing in Canada—for Canadian Home Journal goes to these countries, you know, and the children there will read about what you have done when it is published. Perhaps they will read your name and address—if you win a prize they certainly will. Wouldn't that be splendid?

Camera Contest.

SECOND—One of those crackling Two Dollar Bills will be sent to the boy or girl under fourteen years who sends in the best photograph which he or she has taken. Any subject may be chosen, and any size.

Story Contest.

THIRD—This is something every girl and boy loves—to write a story of not more than three hundred words about something you have seen with your own eyes in Nature's kingdom. All stories must be original, from children of twelve years of age and under. The best will receive the prize of Two Dollars.

FOURTH—For girls and boys from twelve to sixteen there will be another prize of Two Dollars for the best story of not more than Five Hundred words, about something they have seen with their own eyes in Nature's kingdom. All stories to be original.

Note.—Write on one side of the paper only.

Housewives for Soldiers.

FIFTH—Journal Juniors have always loved to make things with their hands, but never before have prizes been offered for the work. A prize of Two Dollars will be given to the girl under fourteen who sends in the nicest housewife which she has made herself. All the housewives will be photographed and the picture shown in Canadian Home Journal, and then they will be sent to the Red Cross. Red Cross directions for making housewives are as follows:

Material: 18 inches of cretonne, linen etc., 5½ inches wide, with 1¼ yard tape or braid for binding, or simply hem all edges.

Size: Cut off about 3 inches to make second pocket, then turn up one end to form first pocket, about 3 inches deep. Size should then be 12 inches by 5½ inches.

Take strip of flannel 5½ inches by 3 inches and tack it at each end to strip of denim ½ inch above pocket. Then place strip of material ½ inch from flannel opposite pocket, stitch down side nearest flannel to make a second pocket, bind or hem around edges of two pockets and edge of housewife, finish with a dome fastener at opposite end to first pocket, pointing this end.

In first pocket place yarn and thread for darning, pair of boot laces, lead pencil, and blunt-pointed scissors. On flannel place large darning needles, thread with grey or khaki yarn, and large sewing needles threaded with grey or khaki thread. On the second pocket pin safety pins, large and medium, and also buttons. In the second pocket put court plaster. When folded, the housewife should measure out 3½ x 5½ inches.

N.B.—When fastening buttons to housewife, please use a separate thread for each, so that when one is removed the others will not become loose.

Knitting Needle Protectors.

SIXTH—For Boys, fourteen years and younger, there is a prize of Two Dollars awaiting the one who sends in the best knitting needle protector. Any material may be used, and the protector may be made in any manner, but it must be formed in such a way that it will slip over the ends of knitting needles and keep them from making holes in the knitting bag when not in use. You may carve the ends of wood, and fasten elastic between, or use any kind of metal, discarded thimbles, ends of shells, etc. The most original and best made protector will win the prize. All will be photographed and shown in Canadian Home Journal, then they will be sold, the money going to the Red Cross.

Soldiers' Scrap Books.

SEVENTH—This prize goes to either girl or boy who sends the neatest and most attractive Scrap Book for a soldier. These will also all be photographed and the picture shown in Canadian Home Journal, then the Scrap Books will be given to the Red Cross for the soldiers.

Be careful to have full name and address written plainly on all stories, letters and photographs, and enclosed on a slip accompanying each handmade article.

The contest closes on November 27th. Address all correspondence to

THE JOURNAL JUNIORS CLUB
Canadian Home Journal.

Every woman who buys Bonds stands behind a soldier.

Shadows of The Night-Bats

By ETHEL BAIN

Those Strange Looking Creatures Popularly Known as Birds, But Belonging in Reality to the Animal World, Perform for Us a Useful Service, Working as They Do While We Sleep.

Swiftly through the violet shadows of the deepening twilight came a transparent, winged, noiseless shape that flitted through the branches of the trees, barely seen in the darkest places, but sharply outlined against the fading gold and purple clouds of the sunset land. This way and that it came out and into the open glade, lightly caressing the leaves as it passed. All the little wild folk that were only abroad in daylight were fast asleep now and the night birds were sending their weird calls through the coming darkness.

A big owl swept silently overhead and the dark shape flitted into the shadows again, for it had no wish to become a meal for any night hunter. The owl's gold colored eyes searched the dark depths beneath him as he hovered over the hiding place, but even his piercing eyes could not see the strange half mouse, half bird, animal that clung to a branch, waiting for its enemy to go away.

At last the owl flew off, knowing that he must seek his supper elsewhere, so after waiting a few minutes the quaint animal that is known as a bat sallied forth under cover of Night's protecting cloak. Always on the alert, his glittering, bead-like black eyes scanned the sky as he flew on his way. The little mouse-like head with its big flat ears listened with their keen power to hear the slightest sound, whilst his little pug nose sniffed the air. He always found his nose very useful for his sense of smell was so sharp that time after time it warned him of the night prowlers, especially the rats and weasels, which were his greatest enemies. He trusted to his eyes to see the owls who tried to pounce on him unawares, but Mr. Bat was ever ready and depended on his lightning like swiftness of wing to save him every time and more often than not he disappointed his pursuers. If out in the open, he would fly at top speed in a straight line, then suddenly drop like a stone or shoot upwards, right before his enemy's beak, and before the astonished hunter could realize what had happened, the bat had disappeared, zigzagging into the darkness.

Now Mr. Bat had learned to dodge and disappoint his enemies simply because the dancing gnats, mosquitoes and other flies that he fed on, dodged him by darting here and there in the most tantalizing manner, so he had to do the same and then he found it easy to catch a good supper, for the insects did not know what to make of this strange hunter that, unlike the birds, could hunt them in their own way.

The moon now rose in the cloudless, clear sky, whilst here and there the stars began to twinkle in and out. The brown bat, his appetite satisfied for the present, wended his way over the tree tops. Such a quaint little animal he was, and not at all blind, as most people believed him to be. True, he did not like bright daylight, but then neither did the owls or the whip-poor-will. Like all night birds, he dozed and slept all day long until dusk, when he awoke and unfolded his large, curious wings, and slipping from off the beam of wood, where he had hung by his long nails, like a shadow he fluttered out into the twilight, there seeing everything as clearly as by day, for, like all night-hunters, the pupils of his eyes expanded so as to take in every ray of light. Presently he met other bats, and one he stopped to chatter with.

"How are the babies?" he asked in his tiny, harsh voice, which is more like the noise made by a cheap watch when it is being wound up than anything else you can think of.

"I have them with me," she squeaked. "See," she went on, flying close up to him, and sure enough, there were her two little baby bats, for all the world like nothing else but two crumpled brown leaves, clinging to her neck.

"No one can say that you do not care for your children," said Mr. Bat. "If only people knew what a devoted mother you were, I'm sure they would get to like and know us better than they do. It's so silly to be scared of a bat, anyway," he laughed, and darted off to catch a high flying moth that he had spied in the bright moonlight.

"There, little mother," he cried on his return. "You shall have this dainty bit, whilst you rest," and so saying he directed her to the top of a tree and soon found a forked branch where the babies could lie and cling to the bark, whilst the mother enjoyed the titbit.

When she had finished the juicy morsel, she gathered up each of her babies in turn and busied herself licking the fine silky fur and cleaning the membrane of their tiny wings by passing it carefully between her lips. At last they were tidied up to her heart's content so she prepared for flight again, and as she rose upwards in the moonlight they could be seen clinging to her neck in that mysterious fashion which is only known to herself and her sister bats, and not her swiftest flights or breathless downward swirlings could dislodge the babies from their hold. They were far too young to be left in the old barn where she made her home, for a prowling rat might find them, so the brave little creature whose body was only four to five inches long, whose heart was just as full of mother love as any human mother's could be, carried her wee children with her, for like everybody else, she must have food or die.

Again she joined her companion and they darted hither and thither in search of gnats and flies. So strange they looked with their curious wings that were so large as to dwarf their brown furry bodies. Composed of a dark membrane or elastic skin and very sensitive, the wings stretch over the elongated fingers and extend between the hind limbs and tail as far as the knees. The short thumb has no part in the formation of the wing, but is tipped with a hooked nail with which the bat can scratch an enemy if need be, and the enemy won't like that scratch, for the wings are strong and the nails sharp and Mr. Bat is very, very quick, so the enemy gets his scratch almost before he has seen the shadowy creature.

Such is that quaint animal—the bat, more like a goblin out of a fairy book than anything else, only to be seen flying when day has gone and night covers the earth. Still he and his family are useful for they destroy thousands of insects. Little night workers are they, taking up the labor of the birds that work only in the sunny hours of the day. Barely seen and rarely heard, they work steadily on, helping to keep down the numberless insects until as the first streak of dawn creeps across the sky, Mr. Bat wends his way homeward to the old barn or ruined building where he has his home in a dark corner, high up in the roof where the rats cannot follow him. Right into the very peak of the roof he flies, then after he has carefully cleaned himself of every speck of dust, for Mr. Bat is just as particular and dainty about his toilet as your pet pussy cat, and only when he is satisfied that his dusky wings are thoroughly clean and his silky fur all smooth, will he fold himself up in his wings, and taking a good hold of the edge of the wooden beam, turn himself over and hanging head downwards will go to sleep. There he stays until the next evening, once in a while waking up to protest as his neighbor pushes and elbows him to make more room.

Do you know Mr. Bat? Were you frightened when in the gathering twilight he darted over your head, as you wandered through the garden or the meadow? He was more scared of you than you were of him. Won't you get to know him better? Won't you invite him to live in the old barn or coach house? He will repay your kindness by destroying thousands and thousands of insects. One evening, several summers ago, when staying at Roche's Point, we went down to the barn which belonged to the house we had rented, and on opening the door were surprised at the number of bats that flew about. The old barn seemed to be full of them. We had always liked the droll creatures, so did not drive them away. The barn was their home, and they repaid us, for we were not annoyed by mosquitoes all the time we lived in the house close by.

PRICE PER 1000 CALORIES

Quaker Oats	5c	Stewing Hens	34c
Round Steak	37c	Broilers	70c
Leg of Lamb	52c	Eggs	43c
Veal Cutlets	44c	Fish	40c

Buy Foods

By Calories—Not By Pounds

Compare food cost by calories, and you'll use more Quaker Oats. The calory is the energy unit used by governments to measure food.

On this basis, at prices current at this writing

Meats Average 8 Times as Much.
Eggs, Fish and Fowl
Cost 8 to 10 Times Quaker Oats

That is, for the same calory value. Yet these are all major foods.

Pound for pound, Quaker Oats has twice the calories of round steak. Every cupful contains 280 calories—as much as four eggs.

Every dollar you spend for Quaker Oats saves at least $7 if used to displace meat, measured by the calory basis.

You have known the oat as the marvel food, well balanced, rich in minerals. But its wealth of nutriment makes it also the money-saving food.

Make Quaker Oats your breakfast. Mix it also with your flour foods. Use it to save money, to save wheat and meat, to add flavor and nutrition.

It is one of the greatest foods you have.

Quaker Oats

The Best One-Third of Oats

We use just the queen grains—big, rich and flavory—in making Quaker Oats.

We get but ten pounds from a bushel.

Thus you get oat flavor at its best. You get it without extra price. All oat foods are made doubly inviting when you use this premier grade.

35 and 15c Per Package
Except in Far West

Quaker Oats Bread

1½ cups Quaker Oats (uncooked)
2 teaspoons salt
2 cups boiling water
¼ cup lukewarm water
½ cup sugar
1 cake yeast
5 cups flour

Mix together Quaker Oats, salt and sugar. Pour over two cups of boiling water, let stand until lukewarm. Then add yeast which has been dissolved in ¼ cup lukewarm water, then add 5 cups of flour.

Knead slightly, set in a warm place, let rise until light (about 2 hours). Knead thoroughly, form into two loaves and put in pans. Let rise again and bake about 50 minutes. If dry yeast is used, a sponge should be made at night with the liquid, the yeast, and a part of the white flour.

This recipe makes two loaves.

Quaker Oats Pancakes

2 cups Quaker Oats (uncooked), 1½ cup flour, 1 teaspoon salt, 1 teaspoon soda dissolved in 2 tablespoons hot water, 1 teaspoon baking powder (mix in the flour). 2½ cups sour milk or buttermilk, 2 eggs beaten lightly, 1 tablespoon sugar, 1 or 2 tablespoons melted butter (according to the richness of the milk).

Process: Soak Quaker Oats over night in milk. In the morning mix and sift flour, soda, sugar and salt—add this to Quaker Oats mixture—add melted butter; add eggs beaten lightly—beat thoroughly and cook as griddle cakes.

Quaker Oats Muffins

2/3 cup Quaker Oats (uncooked), 1½ cup flour, 1 cup scalded milk, 1 egg, 4 level teaspoons baking powder, 2 tablespoons melted butter, ½ teaspoon salt, 3 tablespoons sugar.

Turn scalded milk on Quaker Oats, let stand five minutes; add sugar, salt and melted butter; sift in flour and baking powder, mix thoroughly and add egg well beaten. Bake in buttered gem pans.

Peterborough, Canada.

The Quaker Oats Company

Saskatoon, Canada.

AROUND THE HEARTH

By JENNIE ALLEN MOORE

"And so you saw them—when? and where?
The old man—is he hearty yet?
And mother—does she fade at all?
Or does she seem to pine and fret
For me? And Sis, has she grown tall?
And did you see her friend, you know
That Annie Moss—How that pipe chokes!
Where did you see her—tell me, Hal,
A lot of news about our folks?"

OUR FOLKS.

There is a depth of meaning in those two words—our folks! They belong to us—peculiarly our own—and it is a universal possession, not confined to any class or degree in society. We can all say "Our Folks" with a proud sense of ownership, for they are united by ties of consanguinity and affection. The natural condition of things as they should exist means that our folks are very near and dear to us, and are bound together by strong devotion and loyalty.

Our folks are those we have known from the earliest period of our recollection—the mother who first clasped us to her breast, the father who fondly held us in his strong arms, the sisters and brothers with whom we lived and played, and perhaps the dear old grandparents who lived in the home. All who were associated with us in the home of our childhood and youth come under the head of "Our Folks," and wherever we roam our hearts keep turning to the spot where dwelt those we loved first, and whose images are engraven in our memory.

Many years after a woman had left home, a friend of her mother's called upon her in a distant city. She asked, "Do you know what your family were noted for in your old town as you grew up together?" She answered that she was not aware of any especial attribute that particularized her family.

"Your independence and your loyalty to each other," was the reply.

What a beautiful compliment—that of loyalty to each other! What was one's pleasure was the delight of all; what was one's pain brought sorrow to the others.

Between members of a family there should be no room for jealousy, no disputing over unequal favors, just a great-hearted one-ness in all that pertained to the family as a whole, rejoicing together, or bearing one common grief.

* * * * *

We never realize all that "our folks" mean to us until we find ourselves separated from them and in a distant country. The person who comes to us with news of them is an angel of light. How we devour every item of information concerning the people nearest our hearts! Every sentence is a cooling draught to a thirsty soul.

We hear of an old acquaintance being in our town, and immediately our hands ache to bid him welcome. We may not have been very intimate, but we are not fully aware of how, and where, we stand to other people. A little personal illustration will make this plain.

My husband and I were visiting some Pacific Coast cities, and had sent word to a friend of our proximity, and our intention to visit her. As we loitered in one city beyond the prescribed time, it did not occur to us with what anxious delight our friend was awaiting our coming.

As we approached her house, she ran down the steps, and out to the gate to meet us, exclaiming—"I don't know what would have happened had you stayed there another day. I simply could not wait to see you."

Later that evening she said—"Do you know that you people are nearer to me than anyone else on earth? There is no person living that I would rather see."

This woman was an orphan, and her brothers were much older, and lived far away, absorbed with their own families and their business matters, and had grown away from her. She had been a pupil of mine in public school, and had known my husband as a big brother in her childhood home. She had lived in the same town as a young woman, and visited us in our home after her marriage, and so in her estimation we filled the place in her heart of "Our Folks."

Her remarks showed me that I had been remiss in my duty. I thought of the occasional letter I had been sending—probably at Christmas time—and my conscience smote me. When she added—"You and your husband have been father, mother, sister, brother and friend to me, all in one," I knew that I had sadly neglected a lonely heart in a strange land. I resolved that in future I would be more worthy of such regard in the eyes of one whom I had partially dropped in the rush of strenuous living.

It is well for us to appreciate our relationship to those who have known us intimately if we wish to bring happiness into their lives. So often we are interested in many things, and neglect the little courtesies of life. Especially when far removed we forget to write, and suddenly some day it comes to us with a shock that our friend has passed beyond our power to bestow the favor that might have cheered or blessed.

* * * * *

Sometimes we hear persons denounced because of odd little ways they have of doing things, or expressing themselves. We exclaim positively, "I don't like him," or "She is so eccentric I cannot care for her."

Then some one says, "Oh, but when you know them you never notice those little oddities."

Now, that is how we regard the peculiarities of our friends. George Klingle says:—

"They are such dear familiar feet that go along the path with ours—feet fast or slow, but trying to keep pace. If they make mistakes we must be mute, not turning to impute grave faults, for they and we have such a little way to go, can be together such a little while upon the way, we must be patient while we may."

That is all so beautiful and so true; if only we could always remember to be silent rather than fault-finding; to be patient instead of irritable, when those we are familiar with, and trying to keep step with, fail to meet our expectations. What remorse we would be saved had we but learned the truth of these beautiful lines by Jean Blewett:

"One lesson let us bear in mind,
Be very gentle with our own;
Be to their faults a little blind,
Nor grieve them by a look or tone.

"Put self behind—turn tender eyes,
Keep back the words that hurt and sting;
We know when sorrow makes us wise,
Forbearance is the greatest thing."

This, of course, does not imply that our own folks should become our worst enemies by overlooking faults that need correction, and unduly shielding us from the hurts of life that would strengthen our characters. They can do us irreparable injury by carrying our burdens, and preventing us from growing accustomed to shouldering them ourselves.

What greater mistake with people of wealth than to bring up a family in idleness, and with no training that will fit them to help themselves should it be required that they earn their own living!

The cases are legion where girls especially are left dependent because money has been suddenly lost in speculation and unlucky enterprise. Had they been educated thoroughly along some line, specialized in some one branch that could be turned to account, they would be equipped to enter the world of labor.

Thousands of women during these last four years—women who have never known work, but brought up in luxury—have been obliged to muster their resources of knowledge, and face a fight with poverty.

* * * * *

"Our Folks" are not always congenial beings. We can choose our friends, but we are helpless where our relations are concerned. An angry little girl said to a small acquaintance of mine: "I don't like you! I don't want you for a cousin."

"Neither do I want you," was the quick retort, "but I can't help it. You *are* my cousin, and I've got to have you."

George Eliot says: "Family likeness has often a deep sadness in it. Nature, that great, tragic dramatist, knits us together by bone and muscle, and divides us by the subtler web of our brains; blends yearning with repulsion, and ties us by our heart-strings to the beings that jar us at every movement."

Truer word was never written. The diversity of disposition in one family is something we all have discovered. The resemblance of feature is striking, but the mental qualities are very dissimilar. Children of the same parents and yet so unlike in character have puzzled us. Yet they are bound together by heart-strings so strong that the ugly and repulsive is lost in the tide of affectionate family interest.

But the "jar" leaves its effect. That is where the sadness comes in. An otherwise peaceful home is converted into confusion by one inharmonious nature whose movements disturb and interfere. It may be a domineering father, a nagging mother, a bullying brother, or selfish sister. There must always be excuse or apology for the one who is a misfit in the home life of a family.

And we love them, not always because they are worthy of our love, but because we believe these words—"If you loved only what were worth your love, love were pure gain, and wholly good for you. Make the low nature better by your throes; give earth yourself; go up for gain above."

In dealing with "Our Folks," we allow ourselves a latitude that is not extended to the folks beyond. We forget and forgive readily—love fulfills the law. This same love helps us to tolerate those who belong but are not a credit to the family tree—it enables us to sympathize with the weak—to sustain hope for those who have gone down—and to "give earth" that all who have a claim as "Our Folks" may enjoy worthy relationship.

And so we offer a toast to all—from the oldest grandparent to the tiniest infant—from the mature and wise to the little children—do our hearts reach out. Our Folks! here's to you!

* * * * *

For those in the war-stricken countries who have been left alone, and can no longer say "Our Folks," we drink to you in tears. May the great heart of a sympathetic and purified old world close around you in kindly compassion! May the allegiance that has its inception in the family life, that reaches out and beyond the limits of home, and extends to the nation and empire, include all men as brothers!

As Canadians to-day we speak of "Our Boys" at the front. Their successes are our joy, their casualties are our sorrow. Our boys have not disappointed us. They have distinguished themselves, and have won the admiration of the world.

"Our boys over there!" Here's to you! We would you could know how we yearn for you as we read the list of the fallen—how we look closely into the faces of those who have been killed in action—how our sympathies are stirred for the family who will have the vacant chair—how we want to claim you *all* as Our Folks!

We would you could know how we miss you in your accustomed places—how fully we realize all you have abandoned of the ambitions of a career—and how proud we are of your achievements, which Canadian history need never blush to relate.

"They are gone, one and all, at Duty's call,
To the camp, to the trench, to the sea.
They have left their homes, they have left their all,
And now in ways heroical—
They are making history.

"From bank and shop, from bench and mill,
From the schools, from the tail of the plow,
They hurried away at the call of the fray;
They could not linger a day, and now—
They are making history.

"And we miss them sorely, as we look
At the seats where they used to be,
And try to picture them as they are—
Then hastily drop the veil, for, you see—
They are making history."
—JOHN OXENHAM.

The Many Uses of The Lemon

By MARION HARRIS NEIL,
Author of "Economical Cookery."

"Fruits may come and fruits may go, but the lemon goes on forever. We may do without peaches and subsist without strawberries, but lemons are indispensable to our health and happiness and the glory of our cuisines. Long live the lemon."

Not even the indispensable potato or apple has so many domestic uses as the lemon. Without it the cook is reduced to vinegar or citric acid for her sauces and salads, poor substitutes, both.

Nothing takes the place of the lemon as the basis of a refreshing drink in cases of fever. Not long ago a prominent physician announced the discovery that lemon juice is a specific in typhoid. Other doctors have pronounced the remedy impractical, but no doubt time will vindicate the pioneer and put this specific in practical form.

For feverishness and unnatural thirst soften a lemon by rolling it on some hard surface, cut off the top, add sugar, working it down into the lemon with a silver fork, then slowly suck the lemon.

Lemon slices in tea not only provide a delightful flavor, but add a tonic property to the beverage. The juice of a fresh lemon added to a pan of water will freshen wilted vegetables. Lemon juice sprinkled over sliced peaches or apples will prevent them from turning dark, and is also a good addition to stewed fruit.

Copper may be cleaned by rubbing with a lemon skin and salt. It should be wiped at once with a cloth or chamois. Lacking lemon juice, the housewife must resort to more or less harmful mineral acids to remove stains from her linen or to cleanse various delicate articles. Iron rust and ink stains may be removed from linen by rubbing with lemon juice and salt and then exposing the spots to the sun.

Without the juice of the lemon My Lady Beautiful is at a loss for various simple lotions and jellies, harmless and invaluable for whitening and softening her skin.

Clear, strained lemon juice rubbed on the face will lighten freckles. It must not be used, however, just before going out in the sunshine, for the skin will freckle worse than ever. For most complexion uses the clear juice will be found too harsh. It should be combined with alcohol or glycerin. Add to the juice of one lemon one ounce of glycerin and two ounces of water or violet extract or rose water. Shake thoroughly to mix the ingredients and keep in a closely corked bottle. Rub over the hands while still wet after washing. Dab them lightly with a towel instead of wiping them.

Here is a recipe for a simple shampoo made of lemon: Pour the strained juice of three lemons over two ounces of salts of tartar, add two quarts of warm water and use as an ordinary shampoo. This will make the hair soft and fluffy, and is an excellent cleanser. It is a good idea to boil the juice, cooking the skins with it. This makes a stronger solution of the lemon. A few drops of perfume added will leave a faint scent upon the hair. The mixture of salts of tartar should never be allowed to stand. It should be mixed fresh for every shampoo.

There is no excuse for rough or stained hands nowadays, no matter how much time is spent in the kitchen. A slice of lemon, or a skin from which the juice has been squeezed, rubbed on the hands will remove stains of all kinds.

Even the sick room pays tribute to acid ellipse, and much of comfort and healing depends upon its cheapness. Lemon juice purifies the blood, tones the system and cools the whole body, preventing a host of ailments that have their origin in the liver.

Malaria succumbs before the plentiful use of the lemon, and as an ante-breakfast tonic lemon juice blended with hot water is said to be an almost certain cure for obesity.

The juice of a lemon in a cup of strong black coffee without sugar will often cure a sick headache, and hot lemonade with flaxseed taken after a chill or a wetting will often prevent a serious illness.

Lemon juice and sugar mixed very thick makes a common remedy for coughs. A better way is to put a large lemon in the oven and allow it to remain until thoroughly baked, when it will be soft all the way through. Add enough honey to the pulp to make a thick syrup. Sugar will answer the purpose, but honey is more medicinal. Keep the syrup warm and take a teaspoonful every fifteen minutes. This is warranted to relieve hoarseness and colds in short order. Chronic bronchitis may also be relieved by the use of lemon juice, honey and hot water. Diarrhoea is said to be cured very quickly by the use of lemon juice and pure honey—the strained juice of two lemons to two teaspoonfuls of honey. For heartburn, take the juice of a lemon and one-half teaspoonful of baking soda in one-half glass of cold water. Drink while it is effervescing. Lemons in almost any form are good for people with rheumatic tendencies.

A poultice made of bread crumbs soaked in lemon juice will cure the most obstinate corn. Bind a fresh poultice on the corn each night, removing it in the morning and substituting a thin slice of lemon during the day.

Chilblains, if the skin is not broken, should be rubbed with a slice of lemon sprinkled with salt. For tired and swollen feet rub with lemon juice and alcohol mixed in equal quantities, after a hot bath.

Old-fashioned housewives had many recipes for utilizing the lemon. They made their own lemon syrups and flavoring extracts, lemon rind sweetmeats, lemon preserves and marmalades which they guarded carefully for those special occasions when only the best they could offer was good enough. Lemon honey and pickled lemons were old time goodies; lemon custards and jellies are quite as popular to-day as they were many years ago.

LEMON WATER ICE.—Pour one cupful of hot water over three-fourths cupful of honey, add the grated rinds and strained juice of four lemons and two cupfuls of cold water. Strain and freeze.

LEMON MARMALADE. — Wash three pounds of lemons, then pare them and cut the peel into very slender chips. Put the chips into a small saucepan, add two cupfuls of water, and boil for thirty minutes. Now take all the white part from the lemons and cut up the pulp roughly, put it into a preserving pan, add five cupfuls of water, and boil for one and one-half hours. This is counted after it begins to boil. Stir it frequently; then strain through a hot jelly bag without pressure, add the skins and the liquid with them. Now measure the liquid, and for each cupful allow two cupfuls of sugar. Return to the pan and boil for thirty minutes, pour into jars, cover and label for use.

LEMON SYRUP.—Peel the rind from one large lemon very thinly, taking care not to remove any of the white pith; put this rind into a saucepan, add four cupfuls of water, place on the fire, and simmer for fifteen minutes; then add the strained juice of the lemon, and simmer for another fifteen minutes. Strain through cheesecloth, return to the pan, add two pounds of lump sugar and one-half ounce of citric acid, and simmer until the sugar is thoroughly dissolved. When cold, bottle for use.

LEMON POSSET.—Two eggs, four cupfuls of water, two cupfuls of fruit juice, the rind and strained juice of one lemon, two tablespoonfuls of soft bread crumbs, sugar and powdered nutmeg to taste.

Put the bread crumbs into a saucepan with the lemon rind and the water and boil until the water is reduced to about one-third. Take out the lemon rind and add the strained juice and the fruit juice. Beat up the eggs thoroughly and stir them into the crumbs, etc.; reheat the mixture but do not allow it to boil. Add a dust of nutmeg and sugar to taste, and serve as hot as possible.

LEMON MILK SHERBET.—Mix the strained juice of three lemons with one and one-half cupfuls of sugar and add gradually four cupfuls of milk, stirring constantly to prevent the mixture curdling. Freeze and serve in glasses. Should the milk seem to curdle slightly as it is poured over the lemon juice, do not discard it, as it will not harm the sherbet.

Every woman who buys Bonds stands behind a soldier.

Alma College is Not a School "Mill"

Have you ever thought how near some of our educational institutions approach a grist mill? In goes the raw material, and out comes the finished product, always the same even drab monotony. Any originality that may at first have existed is forever ground out. The system is always the same —on, on, on grind the wheels.

This unifying process is what the teachers of Alma College are guarding against. They aim to train and develop and educate the pupils as individuals, not a class. The school provides wide choice in the matter of studies, and in each department each student is trained individually and her particular possibilities considered. Isn't this the school in which you would like your daughter educated?

There is a quiet, refining influence within the College. The everyday association with the teachers leaves its indelible stamp upon the lives of the students and Alma days are a period of true character formation.

For further information, write to

REV. R. I. WARNER, D.D.,

Alma College
St. Thomas, Ontario

For Christmas
A GIFT OF A
Waltham Watch

There are several Waltham models that are particularly su table for gift purposes, where the desire is to make a really memorable presentation. The Ladies' Convertable Bracelet watch illustrated above is one. This dainty little watch has the "disappearing eye," an exclusive Waltham feature, enabling the watch to be worn on chain, brooch or wrist, in any way that fashion may dictate.

Ask your jeweler to show you also the Waltham "Colonial A" a beautiful thin model watch for gentlemen.

To Remove Stains from Windows.

To clean paint or putty from windows use 3 parts of caustic potash, 1 part slacked lime water to make a thick paste, rub over the windows to clean them.

Mrs. E. G.,
Wynyard, Sask.

Laundering Lace Door-Panels.

When you wash your door-panels, of lace or net applique to fit door-glass, wash, starch, stretch, and tack on door while wet.

A Fuel Saver.

A covering of wood over the hot-water tank, with sawdust packed tight in the intervening space, is a fuel saver. Make a small fire in the morning and the tank will keep hot all day.

To Increase the Number of Jelly Glasses.

When one has not enough jelly glasses when making jelly, this plan will help out. If you have any long-necked bottles, tie a woollen string around the bottle an inch or two below the neck. Dip this string in coal-oil, then set fire to it with a match. The neck will crack about a quarter of an inch above the string and may be removed. Fill with jelly. Cover the jelly with paraffin wax and tie paper over the top. These jars hold nearly a quart of jelly.

X. Y. Z.

Snugly Snapped In.

It is impossible to ride in any comfort if one is chilly, and it is sometimes difficult, and always tiresome, to hold robes in position, especially if, as often happens in driving facing a wind, one desires to bring the robe up rather high to protect the shoulders.

For this purpose we have devised the following scheme of our own:

We purchase what are known to the hardware and harness dealers as small "snaps" and "dees," the former about an inch and a half long. These are fastened one to each end of a narrow strap of leather by means of rivets. The strap is then fastened, near the centre of its length, to a corner of the robe, and the robe may be held in any position desired by simply hooking this strap about one of the ribs supporting the top of the automobile, or to the folding brace.

We had these straps sewed to our blanket robes at a harness shop with a small length of leather strap on the opposite side of the robe to sew through to prevent tearing of the robe in case of a strain on it.

On the fur robes rivets were used, instead of the sewing.

A short length of strap with a "dee" attached could be fastened to the back of the seat, in any position desired, into which to catch the snap attached to the robe.

It takes only two or three seconds to unsnap or snap the robe into position, and one hand will do the work.

If You Are Buying Woollen Goods

And want to make sure you are not getting a mixture of wool and cotton, burn a sample. If the material contains any cotton the flame will run along the line where the cotton is.

Removing Stains from Linen.

Coffee and fruit stains may often be removed entirely from an otherwise clean table-cloth by pouring boiling water through the stain, but many scalded fingers have resulted from the process. Almost always, too, the wet spot spreads in the linen, making a good deal of ironing necessary before the cloth is fit for the table again. Keep a pair of wooden embroidery hoops in the china-closet and when a spot is to be scalded out of the table-cloth, fit the hoops over and under the cloth around the spot as for embroidering. Then hold the hoop at one edge and pour the hot water through. Only the section of linen enclosed by the hoops will become wet and this may be pressed out in a jiffy.

Mrs. T. H. Willis,
Bathurst, N.B.

A Feminine Suggestion for Driving Screws.

Men-folk tell us that we cannot drive a nail, but here is a suggestion for setting a screw in some out of the way place or starting a nut on a bolt which is beyond the reach of wrench or fingers. Stick a piece of gum on the end of the driver, and then set the screw in position on the driver. You can then move the driver about and the screw will not fall off. And you can start it in the most out-of-the-way place imaginable. To start a nut on a bolt use the same idea, stick the gum on the end of a screw-driver, bolt, or piece of wood, press the nut down into the gum and start the nut wherever you please.

To Make Lamp Chimneys Stay On.

Cut into four pieces, each an inch long, some small rubber tubing (the kind that milliners use to cover the stems of artificial flowers will answer the purpose admirably) and fit a piece on each of the four spring posts of the burner. When fixed in this way, a lamp may even be turned upside down without the chimney's falling out, and the tubing will last for months, as the heat from the lamp does not reach the lower part of the chimney to affect the rubber in any way.

Mrs. Brown,
Hamilton, Ont.

Home-Made Plate-Warmer.

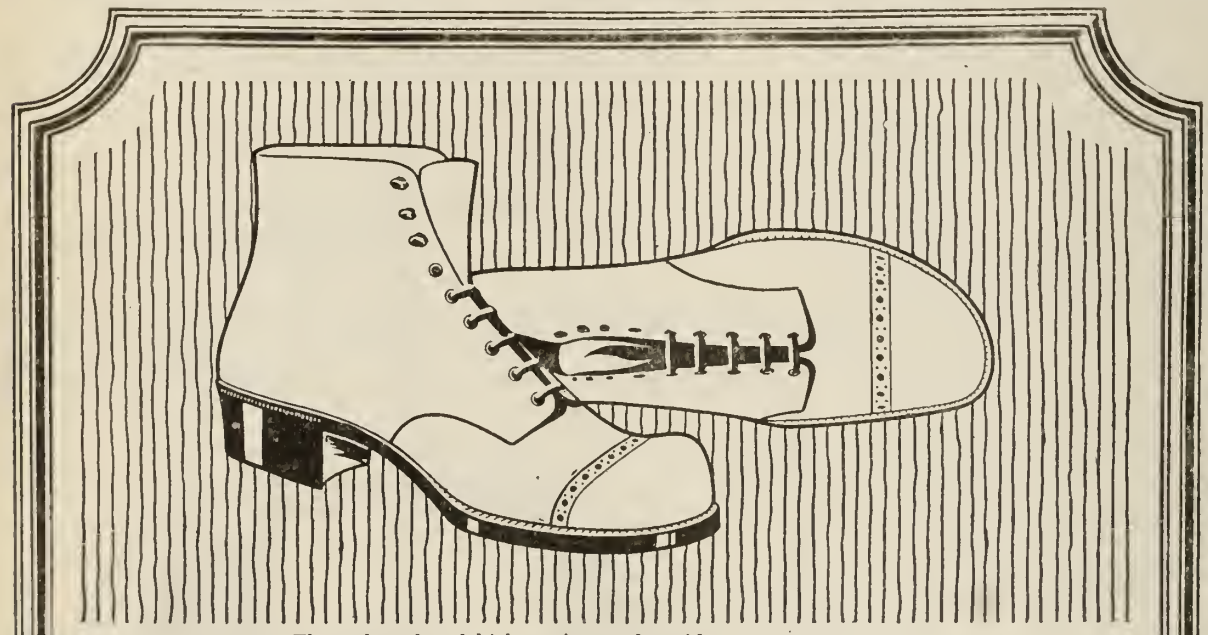
A wire letter-basket firmly wired to the top of a steam or hot-water radiator in the kitchen makes a most serviceable plate-warmer. The plates may be put in the basket after breakfast, covered, and left till noon. This is a much safer way to heat fine china than in the oven, where an excessive amount of heat will break them.

To Clean Marble.

Wet marble to be cleaned with cold water, then wash with a solution of one-half cupful of oxalic acid to one quart of cold water. Let this solution remain on the marble for three or four minutes, then wash well with clean water. If the marble is not perfectly clean, wet with water and apply the oxalic acid solution again. Be sure and have the marble wet before applying the acid, and wash thoroughly with clean water after the solution has remained on for three or four minutes, as the oxalic acid will eat into the marble. The marble should be cleaned in the sun, if possible.

"Anne."

Glass for Cooking Utensils.



Although glass cooking-dishes have been on the market a comparatively short time, hundreds of homes have installed them. They are not only splendid for casserole cooking, puddings, pies, and so on, but are attractive to look at, besides saving time in serving and minimizing the number of dishes to be washed.

"Housekeeper."

Washing Laces.

Mix the dry particles of starch with enough cold water to make a smooth paste and add cold water until it looks like milk and water, boil in a glazed earthen vessel until transparent. While the starch is cooling squeeze the laces through soap suds and rinse in clear water. If you desire them to be clear white add a little bluing; if ivory white, omit the bluing; if yellow-tinged, add a few teaspoonfuls of clear coffee to the starch. Run through the starch, squeeze, roll up in towels, and clap each piece separately until dry. Pull gently into shape from time to time and pin upon the ironing board. When dry, press between tissue paper with a hot iron, punch the openings and pick each loop on the edge with a large pin until it looks like new; doing your laces in this way you save rough usage and labor.

Mrs. D. S. Lindsay.
Jarvis, Ont.

The medium broad high toe is popular with many men who want a roomy wide-fitting shoe. Blucher: black or brown leathers, $6 to $10

The High Cost of Whims

THE United States Government has found it necessary to issue strict orders regulating the styles of shoes. Why? Because the high cost of fads imposes a burden all along the line—upon manufacturer, dealer and consumer, and upon the Government itself.

Such action may be avoided in Canada, if you—the consumer—will co-operate with the manufacturer in reducing the demand for extravagant styles—if you will buy prudently, for service rather than for effect.

To do this will be a direct benefit to you. You will get better and longer service, more comfort, and your shoes will be quite as neat and attractive. You will need fewer pairs of shoes in the course of a year.

More than that: you will help to cut down needless extravagance, to reduce superfluous stocks on the dealers' shelves, to keep prices down, and to release essential supplies of leather for our forces overseas.

A.H.M. War-Time Selections offer Special Service Value for Men, Women and Children. Ask your dealer for them.

Try Steaming Your Food

By MARION HARRIS NEIL,
Author of "Economical Cookery."

Explaining The New Process of Food Preparation

Beef Loaf with Steamed Vegetables.

Steam Pressure Cooker.

Meat Roly Poly.

Steamed Fish.

STEAMING is cooking in moist heat or heated vapor, *i.e.*, cooking over or surrounded by boiling water. Although in some respects the results of steaming are the same as in boiling, the steaming process is more gradual than boiling, and is for many reasons to be recommended. Steaming is regarded as one of the most satisfactory and convenient processes of cooking many articles of food, and is especially recommended in invalid cookery, and for institutions where cookery on a large scale has to be performed daily. Besides being economical, it is also a simple process, whereby the best flavor and nutritive juices of whatever is being cooked are well developed without loss of substance. The actual loss in weight of meat cooked by steam is slightly less than by boiling. Meat, potatoes, fish, soups and green vegetables, etc., are often cooked by steam. In all cases the water, or other liquid, such as stock, liquor, etc., is to be brought to the boil, and after a period of from fifteen to thirty minutes the steam should be somewhat reduced, so as to allow the contents of the steamer to cook more or less slowly until the articles, solid or liquid, to be steamed are quite done and fit for serving. Exception to this rule is made in case of vegetables—potatoes and greens—when full steam is required during the whole process of cooking.

An everyday kitchen steamer, fixed to the top of a large saucepan, with a close fitting lid, is generally all that is required for steaming food.

There is probably not a utensil in the kitchen more important for gradual—namely, slow—cooking than a modern steamer.

Apart from the old-fashioned potato steamers, there are several improved designs which are so arranged that several articles, indeed three or four courses. can be cooked in one steamer; the utensil is constructed so that each article of food is in its own compartment, so that while the steaming process goes on, the flavor of the other articles does not affect the contents of the compartment above or below.

A good steam cooker is a positive blessing to every home, as it is so useful and economical. It saves food. as nothing is lost by evaporation; there is nothing burned; it is a saver of fuel, which is also important. and it is easy to manage and keep clean.

A great variety of food can be cooked at the same time with very little attention.

Steaming. though a slower method than boiling, renders food lighter, and therefore more digestible. If a steamer is used, all that is needed is to fill the lower division with water, place a perforated upper vessel over this, and, when the water beneath boils, put the food in the upper part, fixing on the lid tightly. If there is no steamer, use an ordinary saucepan large enough to hold a mold or whatever is being steamed. The water must boil steadily all the time or the cooking will be checked.,

Care is needed to see that the water does not boil away as only a small amount is used. If the water is getting low, boil a little more in a kettle and pour that into the saucepan.

A steam pressure cooker for the home is a comparatively new utensil. It is one of the modern inventions that will soon save enough to pay for itself. The saving of fuel is very considerable, for, with many foods, only a few minutes instead of from one-half to one hour are required. Other foods need only thirty minutes or more, instead of hours.

When one realizes that even a tough chicken can be rendered tender in thirty-five to forty-five minutes, cabbage in ten minutes; a six to eight pound ham cooked in fifty minutes, dried beans in thirty minutes, it is easy to understand why and how the pressure cooker saves time.

Much can be done by the housewife during the time saved, either in the way of other work or entertainment. During the time the food is cooking, it is not necessary to watch it all the time to avoid burning, boiling over, getting dry, or to stir it to prevent it from sticking. The odors are retained in the cooker, and all the valuable elements of the food are conserved, instead of much being wasted during the process of cooking. With this method of cooking, cheaper foods, such as the cheaper cuts of meats, may be utilized with very satisfactory results. The flavor of the less expensive meats when cooked under pressure, is equal, if not superior to that of the higher priced meats when cooked by the ordinary methods. The cooker is made of heavy cast aluminum with a tight fitting lid of the same material. The steam gauge is of standard make, calibrated to thirty pounds steam pressure on a dial sufficiently large to be read across the room.

Steam pressure canning outfits are very valuable aids for canning. Fruits and vegetables may be canned in glass at very little cost of fuel. The articles are placed in the cans and cooked from six to eight minutes for fruits; fifteen to forty minutes for vegetables. At the end of that time they are thoroughly cooked and perfectly sterilized.

People living at high altitudes especially appreciate the cooker, since in such places so much more time is required to cook any kind of food in open vessels. It is almost out of the question to cook dried beans satisfactorily at an altitude of ten thousand. Boiling meat is another all-day undertaking, but with the pressure cooker, altitude makes no difference.

POT-ROAST IN PRESSURE COOKER.—Four or six pounds of shoulder of beef or other cut. Heat the cooker and brown the meat on all sides; add one teaspoonful of salt. one bay leaf, and a small sliced onion. Remove from the fire for a minute or two, and add one-half cupful of boiling water. Cover and fasten all the bolts so that no steam will escape, shut the pet-cock, and with a quick, firm fire run the pressure up to twenty pounds. Keep the pressure up to this point for fifty minutes, then shut the fire off. Let the steam off if desired, but if there is plenty of time the pressure may be allowed to run down, in which case on a reasonably tender cut of meat it is not necessary to hold the fire quite so long.

If vegetables are to be added, cook the meat ten minutes less and add vegetables, then run the pressure back to twenty pounds and hold ten minutes, unless the vegetables are large, then hold for fifteen minutes, and let off steam.

MEAT ROLY POLY.—Three pounds of round of beef, two sheep's kidneys, 1 teaspoonful of salt, one-half teaspoonful of pepper, one tablespoonful of corn flour, one-half cupful of stock or water, one tablespoonful of tomato catsup and suet pastry.

Wipe the meat with a damp cloth and trim away all skin and any superfluous fat. Cut it into narrow strips suitable for rolling up. Split the kidneys, remove the skin and the inside fat, and cut them into small pieces. Mix corn flour and seasonings on a plate and dip the pieces of meat and kidneys into this mixture, coating them on all sides. Roll up the strips of steak with some of the kidney and a small piece of fat inside each. Grease a pudding mold or bowl. Take some suet crust and roll it out to one-fourth inch in thickness and line the mold or bowl with this, pressing it well in so as to take the form. Be careful, also to get it smooth and of an equal thickness all over. Trim off round the edges and roll these scraps into a round to form a cover. Fill in with the prepared meat, and pour in the catsup and stock or water. Double down the edge of the pastry which lines the mold over the meat, and wet it with cold water. Place the round piece on the top and press the edges well together. Put the lid on the mold or cover a bowl with a greased paper and steam steadily for five hours. Serve in the dish it was cooked in. A small pitcher of boiling gravy should always be sent to table with the roly poly, as it will require filling up when the crust is cut. A few parboiled and sliced potatoes are sometimes mixed with the meat. Chopped onions may also be used for flavoring. Almost any kind of meat may be used for filling, or a mixture of meats. Small meat puddings may be turned out of their molds or bowls and have a little hot gravy poured round them.

STEAMED FISH.—Fish cooked by steam retains its flavor better than by boiling, especially in smaller pieces of fish. The fish is placed in a steamer which fits on to a saucepan and success depends upon keeping plenty of water boiling under it. Slices of fish, small skinned fish, or fillets of fish can be cooked to perfection both as to flavor and substance by steaming. If it is only a small quantity of fish which requires cooking it may be steamed on a plate. Grease the plate and lay the fish neatly on it. Season to taste with salt, pepper and paprika and squeeze a little lemon juice over the top. Put a piece of greased paper on the top and cover with a second plate, or the saucepan lid. Place this on a saucepan of boiling water and allow it to remain for thirty minutes, or until the fish is sufficiently cooked. The liquid on the plate should be served with the fish or made into a sauce with a little flour and butter substitute, and then poured over the fish.

This is an excellent way of serving fish for an invalid.

BEEF LOAF WITH STEAMED VEGETABLES.—Steaming is one of the most satisfactory ways of cooking vegetables, and this method should be adopted instead of boiling whenever possible. The old-fashioned method of boiling them in a quantity of water and then throwing away the water has much to condemn it, as so many of the valuable properties are lost in the water. When vegetables are steamed they should be served with a good sauce or with a little melted butter.

For steaming potatoes, first wash and brush the potatoes well in cold water, then pare or scrape and cut them to an equal size. Put them into a steamer and sprinkle with salt and steam from fifteen to twenty minutes, the time will depend on the size and kind of potato. When they can be pierced easily with a skewer they are ready, remove from the steamer and stand in a warm place until the potatoes are dry. Turnips, onions, etc., are steamed in the same way. Serve the vegetables round the beef loaf.

To make the beef loaf:—Mix one pound of chopped meat, with one tablespoonful of chopped onion, one teaspoonful of salt, one-half teaspoonful of pepper, one-half cupful of bread crumbs and one-half cupful of cold water and place in a greased pan. Cover with a greased paper and steam for one hour. Turn out and serve with the vegetables.

STEAMED RAISIN PUDDING.—Cream four tablespoonfuls of butter substitute with one-fourth cupful of honey or syrup, add two well-beaten eggs, one-half cupful of barley flour, one-half teaspoonful of powdered ginger, two teaspoonfuls of baking powder, one-half cupful of corn flour, one cupful of cleaned raisins and the strained juice of half a lemon. Mix well and pour into a greased mold, cover with a greased paper and steam steadily for two hours. When ready turn out and serve with whipped evaporated milk or whipped cream, or any preferred sweet sauce.

Natural Wool Underwear for Winter

FOR the hard, long-drawn-out Canadian winters, the soft warmth of Mercury Natural Wool Underwear is particularly desirable.

The high-grade wools used are converted into yarns in our own factory. They are knitted by our special machines into form-fitting shirts, drawers and closed crotch combinations, which are guaranteed unshrinkable and durable. No better value obtainable.

Boys and girls, as well as father, mother, big brother and sister, can be fitted with these excellent Mercury garments — and the whole family insured underwear comfort for the winter season.

Look over Mercury Underwear at your dealer's and order what you need.

MERCURY MILLS, LTD.,
Hamilton, Canada

Mercury
Underwear

for men, women and children.
Also high-grade hose and half hose

The November Puzzle

By TOM WOOD

Each of the following squares contains a well known "Proverb." Can you tell what they are?

Two prizes will be given; first one dollar and fifty cents, and second one dollar, for the best solutions, judged according to neatness and accuracy.

All are eligible to compete in this contest.

Answers must be received on or before November 30th to be included.

Correct Solution of the September Puzzle:

No. 1—Okanagan.
No. 2—Annapolis.
No. 3—Mississippi.
No. 4—Gatineau

No. 5	No. 6
B A T S	V I N E
A C R E	I R I S
T R E E	N I N A
S E E R	E S A U

First prize is won by Miss I. K. Standeaven, Box 32, St. Marys, Ont., and the second by Harry G. Sweet, Walkerville, Ont.

Address all answers to the Puzzle Department, "Canadian Home Journal," 71 Richmond Street West, Toronto, Canada.

Remember Our Boys At The Front

To them the cigarette is the panacea for all ills. I have seen men die with a cigarette between their lips, the last favor they had requested on earth. If the soldier is in pain, he smokes for comfort, if he is restless he smokes for solace; when he receives good news he smokes for joy; if the news is bad, he smokes for consolation; if he is well he smokes, when he is ill, he smokes. But good news or bad, sick or well, he always smokes.

Music During The Great War

By H. G. STANTON

In Collaboration with Hector Charlesworth

PART II

(Continued from the October Issue.)

It is necessarily with the more intimate side of music, as it affects the home, that the music trades are concerned. The importance of music in inspiring military endeavor is admitted. No one will gainsay its importance also as a factor in making life more attractive and endurable for inmates of hospitals, and for the shut-ins of every description, not only in time of war, but of peace also. If music is deemed an essential or at least a highly beneficial thing for the wounded soldier, is it not equally so for the one who is sick at heart, through bereavement or anxiety? It is hardly necessary to point out that in this war the burden and suffering are not entirely borne by the soldier in the training camp, or in the battle line, or in the hospital. The homes of Canada are to-day filled with thousands of bereaved or lonely mothers and fathers, sisters and sweethearts, to whom music is perhaps the greatest of all solaces. The morale of these anxious and sorrowing ones must be considered by Canadians, just as it is considered in France, and even in Germany. It is to their consolation that the music trades, and especially the branch of them which deals in musical records, minister. It is one of the commonplaces of life to the salesmen in our music stores to have a woman in mourning come in to obtain records, and say that since she lost her son or her brother or husband, her phonograph has become such a comfort and a necessity to her.
